CHEVROLET

# "Bringing Home the Bacon"

Greater and greater grows the popularity of the CHEVROLET light delivery car on the farm and ranch. It answers every purpose.

No longer does the truck farmer get up the night before to get to the market—ten or twelve miles away—by daylight. Now he loads up and goes to bed. The alarm clock is set for a reasonable hour. The CHEVROLET does the rest at the proper time. It starts on the first press of the pedal. It goes along the road as fast as safety dictates—and farmer and produce are on the job to get the highest prices at the right time.

Neither does the dairy man nor the hog raiser worry about 'driving' his stock to market. Just chases them into a little chute, onto the bed of his CHEVROLET light delivery car, clamps on the side slats—and away they go. No draggly looking calves and pigs at the end of the trip. No worn out producer to take the first price offered him and drag his weary way homeward again.

*"Bringing Home the Bacon," or in taking it away, the CHEVROLET light delivery car, $735, like this one, at Pacific Coast terminals, does the work.*

Economy and efficiency! With the Chevrolet light delivery car they go hand in hand. With the CHEVROLET on the job farm work is no longer a dreary grind. It's a pleasure, with each task well done, and cheerfully, too.

Look at your neighbor with his CHEVROLET and compare his lot to yours, with your out-of-date equipment. He PAYS himself for being better off, for the CHEVROLET can be bought for the price of a good team—and the CHEVROLET doesn't eat when it isn't working.

Think it over, and then ask your neighbor how his CHEVROLET is behaving. Then our nearest dealer will make prompt delivery of the car you want.

CHEVROLET MOTOR COMPANY OF CALIFORNIA

CHEVROLET

# Turn Your Delivery Costs Into Profits

Getting produce to the market after it has been raised is one of the big problems of modern truck farming.

Maintaining a fleet of bulky, heavy trucks is not only needless expense, but it's foolish. Taking battered, abused pleasure cars and "converting" them into utility vehicles is a rank gamble; they MAY stand up and keep out of the repair shop.

The CHEVROLET light delivery car is the happy solution of your problem. Mounted on the famous CHEVROLET "490" chassis, it is sturdy and light, fast and powerful, easy to operate and cheap to keep up. The wonderful CHEVROLET Valve-in-Head motor has power to spare, whether for steep grade or heavy sand. CHEVROLET owners pay their repair bills with pennies, not dollars.

Back of it all stands the CHEVROLET organization, with its millions of resources and unfailing dependability, backing up CHEVROLET dealers in all their business dealings. The CHEVROLET is a product of the WEST, for WESTERN people. Its factory is in Oakland, California, assuring prompt service and immediate delivery of both cars and parts. CHEVROLET Service throughout its dealers' organization is the marvel of the retail automobile industry.

Blot out the Red Ink figures in your books with a CHEVROLET light Delivery Car.

## Mothering 92 Orphan Lamblets

By SOSTER I. ANTHON.

**"Today I took these pictures of the lamb orphanage handled by two of our Yakima girls, and I thought you might like to have them with the enclosed story."**

**These are the words accompanying a most unique story of how two Yakima girls mothered nearly a hundred orphan lambs. Two of these pictures are reproduced on the cover page of this issue of The Washington Farmer.**

Necessity is the mother of invention—but were you ever faced by the necessity of being foster-mother to 92 orphan lamblets in these days of war conservation?

When old Mother Nature dumped the 92 orphan lambs along with the hundreds of other lambs at the Wright sheep ranch, the two Wright girls, now Mrs. Kennedy Foresman and Mrs. Thomas Boyd, decided instantly that something must be done. Not in these days could the lambs be allowed to starve. It would be unpatriotic, most unpatriotic, and besides—they were such cuddly, stumbly little wigglers that no one would have the heart to let them die without making all sorts of sacrifices to keep them alive.

So the two girls hied themselves to their ready refuge in farming troubles, the state college leaflets of advice.

"Feed lambs warm milk every hour," read the directions, simple, lucid and explicit.

There were 92 lambs. There are 24 hours to the day. Ninety-two times 24 is 2208; it meant 2208 feedings daily for the two girls, for the men on the place were all too busy to bother about 92 orphans. Big as that number is, it is inconspicuously small when compared with many thousand.

"We've just got to save them," pronounced Mrs. Foresman. "With Kennedy a soldier, and the government asking for more meat, and all, we just can't let them all die. They will, if we don't do something."

"Well, it's certain we can't feed them every hour, the way the directions say," countered Mrs. Boyd, who has the distraction of a small toddler of her own and so naturally couldn't be expected to rave over the charming babiness of the lambs.

"Let's try feeding them every two hours at first," suggested the other. "That ought to be enough."

No sooner said than done. The girls invested heavily in nursing bottles, the ones with the big nipples, and holding as many bottles as possible in each hand, fed the orphans warm milk. It worked like a charm, but it meant steady work. Some of the lambs, in fact most of them, knew nothing about day and night. They wanted to be fed every two hours regardless of little matters like light and dark. It was all right for a couple of days and then two tired, coveralled girls faced each other in some desperation and exasperation.

"We can't keep this up," they agreed. "The book says they have to be fed like this for a month. We just can't do it. I'm so sleepy now I could drop."

But there, faced by the necessity, came the invention. After considerable scheming, the girls devised an automatic foster mother. It consists of a long trough with holes bored on each side. Big nipples are attached to the holes. The troughs are filled with hot milk, the lambs are led nippleward—and the lambs do the rest. It isn't at all like leading a horse to water; there's no trouble about getting the lambs to drink. They do it so lustily, with such sucking and guzzling enjoyment of their meal that they fairly quiver from stem to stern while their tails wiggle and waggle as though they were doing military gymnastics in double-quick time.

Now that the lambs are getting older, the period between meals is being lengthened and, when a few weeks have passed, the lambs will be turned out to pasture to become real gambolers on the green. At present they are noisily absorbing all the milk furnished by the five cows on the place and a daily purchase of 60 pounds as well. But how they are thriving! At meal times one can fairly see them swelling—and some of the increase apparently sticks for it would be hard to find huskier, heavier lambs than the 92 orphans though, under the circumstances, it does seem as if the number saved should be 99.

"We wouldn't have done it if the government hadn't wanted us to do our bit," explains Mrs. Foresman. "But my husband is a soldier and I thought I ought to do what I could here. Ninety-two lambs ought to give wool for quite a few soldiers' uniforms and some good mutton stew beside. It's our bit for the war."

### Spokane Fruit Growers.

Arrangements have been completed whereby the Northwestern Fruit exchange, with headquarters at Seattle, will sell and market in 1918 the entire crop produced by the members of the Spokane Fruit Growers' company. The Spokane company has 1200 growers as members, and operates 40 shipping stations. It penetrates into the Yakima valley and also serves the Columbia river basin, including White Bluffs, Hanford and Kennewick, and controls about 100 per cent of the Kennewick-Richland district. The company's tonnage for the coming season is estimated at 1500 to 2000 cars.

## Better Than Early Sowing

### *Thorough Preparation of Soil Pays Best*

By GEORGE SEVERANCE

The unfavorable fall of 1917 threw an unusual amount of work into the spring. With the urgent need for a heavy spring planting there is grave danger of hurrying in many crops with very poor preparation in order to seed an increased acreage in good season. It is poor patriotism to seed crops without sufficient preparation to insure reasonably good results. While we do not wish to encourage late sowing, especially, it is a matter of common observation that comparatively late seeding on well prepared soil is safer than early sowing on very poorly prepared soil. A prominent seed company seeded a considerable area of peas near Fairfield in the spring of 1916 from three to six weeks later than the majority were seeding and secured practically full crops. They informed the writer that they do not place nearly as much importance upon early seeding as upon proper soil conditions.

In my own experience many of the very best crops that I have had anything to do with have been seeded quite late upon well prepared land. Early seeding can never make up for poor preparation, but thorough preparation often enables a late seeded crop to produce a full yield. Thorough preparation takes more time, but it also lengthens the period of time over which the preparation and planting may be safely done and lessens risks. This is no time for taking heavy risks in seeding. Every blow in this great struggle should be thoughtfully planned and carefully executed.

Of course, in certain sections scarcity of moisture is so serious a limiting factor that very early seeding is imperative, and no possible soil preparation can ordinarily justify very late seeding. Again, shortness of season in some sections is such a limiting factor for certain crops that the range of time over which they may be planted is very limited. With the majority of crops and conditions, however, thorough preparation of the soil is more important than a definite time of seeding.

In the wheat region it is better to summer fallow land that can not be properly prepared before seeding. One hundred acres of wheat on well prepared land good for 20 bushels per acre, with 100 acres in addition of good summer fallow for the 1919 crop is manifestly better than 200 acres of wheat on very poorly prepared land good for 10 bushels per acre or less, with none of the land in good shape for the 1919 crop.

By proper preparation we do not mean an impractical ideal. Good preparation usually means a good job of plowing at moderate depth, about six inches in most places for spring plowing, harrowing close after the plow to break down the furrow before it dries, and enough additional tillage to work the loose furrow down onto the subsoil beneath, shutting out the open holes between and underneath the furrows, and to pulverize the furrows reasonably well if inclined to be lumpy.

**SWARMING OF BEES.**

The fourth article in the series of "Bee-Keeping for Farmers" will appear in next week's issue, that of May 9, the copy reaching the editorial office too late for this week's issue.

### OKANOGAN STOCKMEN.

#### J. E. Ford Is Chosen President.

At the third annual session of the Okanogan County Stockmen's association the following officers were chosen to serve for the coming year: J. E. Ford, Oroville, president; Bert Hart of Chesaw, vice president; Hugh Miller, Riverside, secretary and treasurer; E. F. Banker of Winthrop, J. M. Meyers of Conconully, Joe Gregory of Wauconda, Stanley Evans of Loomis and T. S. Anglin of Anglin, members of the advisory board.

There were several hundred stockmen in attendance.

Among those who addressed the convention during the two days' session were State Land Commissioner Clark V. Savidge, T. P. MacKenzie, assistant district forester, of Portland; Senator J. W. Faulkner of this city; John H. Roberts, manager of the Spokane Union stockyards; C. M. McAllister, C. E. Hanson, Harry Marble, Allan Wetsel, Walter A. Holt, George Ellis, R. C. Coglan and Robert Picktin.

George Ellis, U. E. Fries, L. E. McDaniels, Hugh Miller and Marion Warren formed the resolutions committee.

Among the resolutions adopted was one instructing the legislative committee to draft and properly brief a bill for passage through the next session of the legislature requiring that all estray stock be advertised as estrays in the official county paper for not less than three successive issues, said advertisement to begin within 15 days after the animal or animals are taken up, the description of the estrays to be full and complete as regards color, age, sex, ear or other distinctive marks, breed and where found, etc.

### Dairymen Organize.

Lewis county dairymen are effecting an organization of an association designed to work for the improvement of the dairy industry in the Chehalis valley. The immediate cause of the formation of the association is said to be a recent cut of the milk price by the milk companies buying the product of Lewis county dairy farms.

### Buys Land Near Ritzville.

James E. Alberg has bought 320 acres west of Ritzville for $64,000. The place is improved and in cultivation, and Mr. Alberg is making his home there.

ACCORDING to a Washington dispatch the creation of a labor administration, with a director in general of labor, is under consideration by President Wilson. The new office would take over much of the work heretofore performed by the labor department. The chief need of the new national labor administrator is indicated to be along the line of coordinating the activities of various labor and wage adjustment bureaus now operated by governmental departments. This is exactly along the line for which the Farmer has been contending vigorously for months. If a national war-time labor administrator is needed there is equal or greater need of a national wartime food production administrator who shall coordinate the multitudinous agencies now engaged in speeding up food production.

The government has a labor department with a cabinet officer at its head, just as it has an agricultural department with a cabinet officer also at its head. National department bureaus do not seem to be adapted to the speeding up process. The food production campaign, as a national issue, is yet in crying need of the ablest available executive in the country, who shall bring order out of the more or less chaotic and wasteful conditions now prevailing. The campaign for a national war-time food production administrator remains an issue of far-reaching import.

# With More of Farm Energy at Washington, Ships Would Have Been Built Long Ago

A farmer who ran his farm as the government has managed its shipbuilding program would wind up in the poor farm. As a study in procrastination here is a record that makes a patriotic citizen grit his teeth. When Europe went to war in 1914 it was apparent that the United States would need a fleet of merchant ships, as we had been dependent before on foreign fleets to move our surplus products to market across the sea, and the war needs of the fighting countries would surely withdraw them from our shores.

Congress slept on the subject for about two years, and after long discussion the bill creating the shipping board became a law on September 7, 1916.

That was 600 days ago.

Then the president took 106 days to appoint the members of the board.

The board organized on January 31, 1917, 40 days after its members were appointed, and 146 days after their appointment and organization was made possible.

And all this while ocean freight rates were soaring and it was costing the grain growers of the United States more and more to move their wheat to the markets in the old world.

It was April 17, 1917, 11 days after the United States declared war, and 222 days after the shipping board was created, that the emergency fleet corporation was organized.

On July 24, 1917, after 98 days of the emergency fleet corporation's existence and a long period of quarreling between the members, Chairman Denman of the shipping board and General Goethals, general manager of the fleet corporation, were forced out of office.

Three hundred and ten days had then elapsed since the president had signed the shipping board measure. Edward N. Hurley then became chairman of the board and Rear Admiral Capps succeeded General Goethals as general manager of the corporation.

In one year less one day the emergency fleet corporation had five general managers—Goethals, Capps, Harris, Piez—and now Charles M. Schwab, probably the right man at last, but appointed 586 days after congress put into the hands of the government the power, by degrees made absolute, to create the fleet that every man knew we must have whether we went to war or not.

Can you beat it for circumlocution, procrastination and general somnolence?

Some people think the farmer's notions are slow, but they know nothing about farm life. Against the foregoing record of indefensible delay we are going now to set down the faithful record of a single busy day in a farmer's life.

Up at 5 o'clock, starting the kitchen fire and doing the morning chores while the good wife prepares the breakfast.

Afield at 6 o'clock and in continuous action till noon.

One hour for dinner and rest.

Back in the field at 1 and going steadily till 7, or maybe till 8.

Supper and the evening chores, and then the family climbs into the automobile to attend a patriotic meeting at the schoolhouse or the hall, a mile or two or five away.

Back home at 10:30 or 11, to wind the clock, bring in a bucket of fresh water, lock up for the night, and say your prayers.

We need more of farm energy at Washington. If we had had it there since this war started, the ships would have been built long ago.

# Farm Service War Flag

Foster the spirit of patriotism of your boys and girls on the farm by giving each one of them a star on the Farm Service War Flag in just recognition of what they are doing to speed up food production. This flag is for all who deserve it. The "patent applied for" is only to prevent its use by those who do not deserve it. Farmers have responded liberally in buying Liberty bonds; their sons are in the military or naval service of their country; some of them are in France already and some are preparing to go thither; and this is giving evidence of the high patriotism not only of the boys who go, but of those who stay behind. Farmers also have responded to the patriotic call for increased food production, and there is every reason why the patriotic farmers should have some insignia to display in their windows of their homes, to nail to their gateposts, to fly from their automobiles, giving evidence of patriotic service which is just as essential for success of the war as that of making or carrying arms.

Every farmer, every farmer's wife, every farm boy or girl who is speeding up the food production in these days of war is doing a patriotic duty and deserves a flag. The flag is entirely distinct from the war service flag which you hang in your window for the absent son who has gone forth to serve his country in army or navy.

# Power Farming Demonstration

## *For the Pacific Northwest, Pullman, May 29-31*

A power farming demonstration for the Pacific northwest will be held at Pullman, Wash., this spring, May 29, 30 and 31. This demonstration is in charge of the state college of Washington cooperating with the United States department of agriculture, the tractor and implement dealers of the northwest and the Pullman Chamber of Commerce.

At the present time the greatest possible food production is demanded. The available labor is scarce. Horses can not furnish enough farm power. The extensive use of labor and horse saving machinery is urgent. The farmers of the northwest are progressive and anxious to farm all their acres to the best advantage, but they can not justly be expected to purchase and use new equipment before seeing it in actual operation, so that they may decide whether or not the implements will operate successfully on their own farms. As a matter of education and information the demonstration will prove of great value to the agricultural interests of the Pacific northwest.

**What Demonstration Will Do.**

It will bring together a large aggregation of tractors and plows, tillage implements, harvesting machinery, motor trucks and modern labor-saving machinery in general. This demonstration will be more complete than the machinery section of a state fair, and will be of much greater value to the farmers as it will show the machines in actual field work. Here every one can see and compare the work of a large number of tractors in one field, an opportunity that can be had only at such a demonstration. Since both level and hill fields will be farmed it will be possible to draw better conclusions as to what type of tractor will be successful on individual farms.

The public will be shown the use of tractors in connection with belt-driven machinery such as silage cutters, threshers and similar farm equipment. The latest harvesting and grain handling machinery will be shown and demonstrated. In short, machinery that will save man and horsepower will be on demonstration so that all who attend will see with little expenditure of time the possibilities of doing their work more efficiently with modern equipment, and also to quickly compare the different machines for doing any particular class of work.

**How It Will Be Conducted.**

Over 200 acres of land in one body near Pullman is available for the tractor demonstration. This ground will be plowed by the demonstrators. During the forenoon the companies are at liberty to make individual demonstrations in fields assigned to them. At this time demonstrations of belt-operated machines and implements other than tractors will be made. In the afternoon the regular public demonstration will be held, during which all the tractors will plow on assigned plots in one large field. After plowing part of the afternoon the plowed ground will be gone over with tillage implements such as harrows. No demonstrations of other machines will be permitted while the tractors are operating in the afternoon.

Something of interest will be going on all the time, so that it will be to everyone's advantage to attend the demonstration the entire time.

The demonstration grounds are about two and a half miles from Pullman on a paved road. Automobile and truck service will be maintained between the city and the grounds. A large number of people can be accommodated as regards rooms and meals in town. As the weather is usually excellent at this time of year many will bring tents and camp in the grove adjacent to the demonstration field. A lunch counter will be on the grounds, so that it will not be necessary to make trips to the city for meals.

Pullman is readily accessible to all the northwestern states, being located on the O.-W., R. & N. and the Northern Pacific railroads. Pleasant and easy automobile trips can be made to the demonstration from Washington, Oregon, Idaho, Montana and Alberta. A parking place for automobiles will be in charge of a watchman.

Everyone in the northwest who is interested in agriculture and is following the rapid development of modern farm machinery with its wonderful time and labor saving possibilities should not miss the great opportunity of seeing this machinery at work side by side in one large field.

For other information communicate with the Department of Agricultural Engineering, State College of Washington, Pullman, Wash.

## Thank America for Wheat Saved.

Cablegrams expressing the thanks of the French, Italian and English governments for the willingness of the American people to reduce their wheat consumption have been received by the food administration from the food ministers of the allied countries.

# Washington Young Men In War Service

From the Twice-a-Week Spokesman-Review.

**EARL FREYTAG, Leavenworth, Wash.** — Was born in Ellensburg November 1, 1886, and has lived with his parents, Mr. and Mrs. Charles Freytag, on their farm near Leavenworth. He entered the service October 7, 1917, and is now with Sg. 437, care Polson Log Co., Camp 10, Hoquiam, Wash.

**VIRGIL B. BELL, White Salmon, Wash.**—Enlisted at El Paso, Texas, December 13, 1917. He has made two cruises on the U. S. S. Huntington, and is very proud of his ship and her crew. His parents, Mr. and Mrs. F. L. Bell, and brother Wendell P., live at White Salmon.

**DONALD L. NILES, Washougal, Wash.** — At the age of 19 years enlisted in the hospital corps of the U. S. army, March 22, 1917. He is now located at Fort Worden, and is very anxious to "go across the pond." He is the only son of Mr. and Mrs. Schuyler Niles at Washougal.

# Nonpartizan League

The Nonpartizan league sends out from its national headquarters at St. Paul, Minn., the following platform for the state of Washington, adding that "the Nonpartizan league is organizing the farmers of your state that they may act together to secure political power in proportion to their population.

1. State-owned packing plants, canneries, creameries, milk condenseries, terminal elevators and flour mills.
2. State-owned warthouses and storage plants for eggs, fruit, potatoes and other farm products.
3. Exemption of farm improvements from taxation.
4. Rural credit banks operated at cost.
5. A more equitable system of the grading of grain.
6. Equal taxation of property of railroads, telegraph, telephone, electric light and power companies, and all public utility corporations as compared with that of other property owners.

As to "disloyalty charges" the national authorities of the Nonpartizan league say:

Obviously no group of men, no matter how loyal, leading in the organizing of farmers to obtain political power as outlined above, could escape the charge of disloyalty at this time. The anti-farmer interests are unscrupulous enough to use it against any and all who oppose their domination over the livelihood of the people. The charge, therefore, means nothing without proof before the duly constituted courts of the state or nation. The farmers are not disloyal before being organized and certainly will not be when organized. None of the commonly used proofs of league disloyalty have been sustained by the courts and are in fact without basis. No one on the league lecture or organization staff has been found guilty of any unpatriotic act. One of the league organizers, whose arrest for disloyalty has been made the excuse for unlawfully interfering with league meetings in some parts of Minnesota for the last three months, was acquitted by jury trial early in April. The people of Washington have probably heard of these arrests for political purposes, but arrests are not convictions and our respect for constituted authority ought not to go so far as to throw us off our guard when officials use their office for political persecution.

**Run Out of Town.**

W. B. Edwards and A. Knutson, organizers for the nonpartizan league, were taken from their rooms in the hotel in Winlock, western Washington, about 2 o'clock Friday morning by a company of 50 citizens, loaded into their automobiles and sent out of town. Knutson was given a taste of tar and cotton, no feathers being handy. The men were taken following a two-hour conference in the hotel, in which Knutson is alleged to have divulged the inner workings of the league to Edwards, who is a comparatively new man to the organization. The entire conversation was overheard by four witnesses and the facts brought out led to the expulsion of the two men. Alfred Knutson, the Washington state manager of the National Nonpartizan league, has his office in Spokane.

**Alfred Crowe Jailed.**

Alfred Crowe, organizer for the nonpartizan league, was arrested at Walla Walla Saturday and held in jail under instructions from federal officials. Crowe is charged with representing he was a government official in his soliciting work among farmers, exhibiting a badge marked "deputy sheriff." Crowe is said to have secured hundreds of members for the organization.

# Shorthorn Sale at Ontario

## *Average of $256 for Bulls; $268 for Females*

By E. L. POTTER

The sale of the Northwest Shorthorn association at Ontario, Ore., April 25, with an average of $256 for bulls and $268 for females, was in every way a success. There were new consignors to the auction and many new buyers. The Shorthorn breed received a material boost in the Snake River valley and many good cattle were placed where they will do a lot of good to the industry, to the community and to the owners. There are many small Shorthorn breeders in this vicinity who profited materially by the sale. Many range men also learned for the first time that there is no better place to buy bulls than at the sales of the Northwest Shorthorn association.

It is quite likely that an association sale will be held next year at the time of the next meeting of the Cattle and Horse Raisers' association at Bend. It is also to be hoped the sale at Ontario may be made an annual event. There are a lot of buyers in that part of Oregon and Idaho who do not come to the Portland, Lewiston or Spokane sales, and also many possible consignors do not care to ship their cattle so far.

The consignment consisted of a few nice females and a large number of good range bulls with a few herd headers. None were in show condition. Four bulls and one female brought $400 or more. The top of the sale was $495, paid by Guy Galloway of Weiser, Idaho, for the champion bull, Gloster Knight, consigned by Joe Turner of Meyers Falls, Wash. Gloster Knight was a very blocky, meaty red bull and a general favorite. Charles Peterson of Crane, Ore., paid $445 for Cumberland's Goods, another good, red bull consigned by Mr. Turner. This bull was first in the yearling class. The second prize yearling bull, Hercules Director, consigned by Day & Rothrock of Spokane, Wash., was taken by W. A. Payton of Baker, Ore., for $425.

The champion female was a beautiful red heifer consigned by W. J. Townley of Union, and sold to G. W. De Lay of Hot Lake, Ore.

A very large proportion of the offering consisted of good range bulls from 11 to 15 months old. These sold readily at from $145 up to $350, with the bulk bringing $175 to $275. Rutherford Bros. of Malheur bought eight head at an average of $176, and W. B. Kurtz of Boise, Idaho, bought 15 head at an average of $240.

### THE SALES.

**Consigned by A. D. Dunn, Wapato, Wash.:**

Scarlet Duke 602142 (red bull), calved December 18, 1916; W. B. Kurtz, Boise, Idaho, $295.

Charity King 262230 (roan bull), calved December 4, 1916; Byron Vandecar, Baker, Ore., $350.

Scarlet Comet 602140 (red bull), calved January 17, 1917; Frank Flitner, Ola, Idaho, $280.

Scarlet Crest 602141 (red bull), calved December 31, 1916; North Powder Cattle & Horse Range association, by W. J. Townley, Union, Ore., $275.

Superior 602994 (red bull), calved January 9, 1917; W. B. Kurtz, Boise, Idaho, $185.

Red Judy 662993 (red bull), calved September 17, 1916; H. E. Kinney, Cambridge, Idaho, $200.

Julia Prince 602992 (red bull), calved September 3, 1916; W. B. Kurtz, Boise, Idaho, $270.

Beauty Queen 542340 (roan cow), calved June 5, 1916; W. W. Green, Union, Ore., $335.

Caroline 538209 (roan cow), calved April 20, 1916; C. C. Yount, Payette, Idaho, $265.

Dunbro Beauty 2d 613659 (roan cow), calved October 22, 1916; G. L. Cruikshank, New Plymouth, Idaho, $295.

Hazel 592254 (red cow), calved August 10, 1916; W. A. Hall, Caldwell, Idaho, $130.

Red Cassie 592261 (red cow), calved August 15, 1916; M. E. Nesbitt, Payette, Idaho, $340.

Rose Lavender 592265 (roan cow), calved October 5, 1916; William Pearson, Weiser, Idaho, $285.

**Consigned by Day & Rothrock, Sprague, Wash.:**

Hercules Director 605954 (roan bull), calved April 26, 1917; W. A. Peyton, Baker, Ore., $425.

Golden King 605953 (red bull), calved February 14, 1917; W. B. Kurtz, Boise, Idaho, $260.

Young Dale 611137 (red bull), calved February 15, 1917; Frank Flitner, $300.

Red Dale 611132 (red bull), calved March 5, 1917; W. B. Kurtz, Boise, Idaho, $255.

Blenz's Best 632191 (roan bull), calved May 1, 1917; H. H. Tunny, Ontario, Ore., $375.

Butterscotch Lad 632192 (red bull), calved April 10, 1917; W. B. Kurtz, Boise, Idaho, $255.

My Choice 632198 (red bull), calved March 9, 1917; H. E. Kinney, $325.

Palouse King 632209 (roan bull), calved May 2, 1917; Byron Vandecar, Baker, Ore., $350.

Count Victor (roan bull), calved March, 1917; Albert Campbell, New Meadows, Idaho, $375.

Old U. S. A. 632199 (roan bull), calved April 2, 1917; A. R. McDonald, $405.

Selma 2d 475558 (red cow), calved September 10, 1915; W. E. Green, Union, Ore., $380.

**Consigned by Joe Turner, Meyers Falls, Wash.**

Cumberland Lad 616182 (roan bull), calved September 15, 1916; W. B. Kurtz, Boise, Idaho, $365.

Minnie's Chief 629611 (roan bull), calved December 20, 1916; H. E. Kinney, Cambridge, Idaho, $300.

Gloster Knight 594546 (red bull), calved June 24, 1916; Guy Galloway, Weiser, Idaho, $495.

Gay Charmer 570847 (red bull), calved March 25, 1916; Ed Walker, New Plymouth, Idaho, $350.

Jilt's Challenger 570462 (red bull), calved August 12, 1916; North Powder Cattle & Horse Range association, by W. J. Townley, Union, Ore., $290.

Groundhog's Pride 617348 (roan bull), calved February 2, 1917; W. B. Kurtz, Boise, Idaho, $285.

Carlton 598841 (roan bull), calved August 13, 1916; W. B. Kurtz, Boise, Idaho, $285.

Cumberland's Goods 618181 (red bull), calved September 20, 1916; Charley Peterson, Crane, Ore., $445.

Orange Rose 488943 (red cow), calved May 24, 1915; J. W. Smead, Caldwell, Idaho, $305.

Young Mary 238702 (roan cow), calved Febrruary 20, 1914; S. G. Tucker, Notus, Idaho, $450.

**Consigned by W. O. Cummings, Mt. Vernon, Ore.**

Admiral Ward 608305 (red bull), calved April 19, 1917; W. B. Kurtz, Boise, Idaho, $165.

Sunburst 608317 (red bull), calved May 24, 1917; T. Brosnan, Ontario, Ore., $150.

Prince De Rohan 608314 (roan bull), calved April 12, 1917; Joe Alexander, Durkee, Ore., $185.

Robin Hood 608316 (roan bull), calved April 27, 1917; Rutherford Bros., Malheur, Ore., $200.

Cap Christy 625530 (red bull), calved April 20, 1917; Rutherford Bros., Malheur, Ore., $200.

General McArthur 625531 (roan bull), calved June 15, 1917; Joe Alameda, Durkee, Ore., $195.

King George 608476 (roan bull), calved December 23, 1916; Rutherford Bros., Malheur, Ore., $170.

Pere de Orr 608478 (red bull), calved November 5, 1916; J. W. Watkins, Caldwell, Idaho, $135.

Old Gold 608477 (red bull), calved September 14, 1916; Rutherford Bros., Malheur, Ore., $170.

R. B. Cant R. 562783 (red bull), calved May 6, 1916; Rutherford Bros., Malheur, Ore., $145.

Robert Garrett R 562784 (roan bull), calved March 2, 1916; A. McWilliams, Ontario, Ore., $185.

Dean Hole 608308 (red bull), calved March 31, 1917; Rutherford Bros., $175.

Paul Neyron 608311 (roan bull), calved April 14, 1917; Rutherford Bros., Malheur, Ore., $170.

William Sheen 608318 (roan bull), calved May 10, 1917; Byron Vandecar, Baker, Ore., $200.

Excelsa 608309 (red bull), calved April 20, 1917; Rutherford Brothers, $175.

**Consigned by W. J. Townley, Union, Ore.:**

Royal David 561166 (red bull), calved January 29, 1917; M. S. Nesbitt, Payettem, Ore., $310.

Mound's King, 381st 561637 (red bull), calved April 9, 1917; W. B. Kurtz, Boise, Idaho, $255.

The Mound's Rosebud 561170 (red cow), calved March 20, 1917; G. W. De Lay, Hot Lake, Ore., $400.

Gay Mary 352d 575167 (roan cow), calved March 27, 1917; W. A. Hall, Caldwell, Idaho, $180.

Violet 330th 612686 (red cow), calved April 7, 1917; W. A. Hall, Caldwell, Idaho, $170.

The Mound's Fairy 612685 (roan cow), calved April 17, 1917; G. L. Cruickshank, New Plymouth Idaho, $215.

**Consigned by G. W. De Lay, Union, Ore.**

Prospector 621833 (red bull), calved April 19, 1917; J. H. Ross, Weiser, Idaho, $150.

Rixson 624083 (red bull), calved April 2, 1917; W. B. Kurtz, Boise, Idaho, $190.

Cypress 2d 621863 (roan cow), calved June 1, 1917; J. W. Smead, Caldwell, Idaho, $180.

Darling 621863 (roan cow), calved April 25, 1917; W. A. Hall, Caldwell, Idaho, $160.

May Queen 605123 (red cow), calved May 18, 1917; John B. Fisher, New Plymouth, Idaho, $200.

**Consigned by Sherman & Hutchinson, Union, Ore.**

Welcome's Guest 633197 (red bull), calved April 16, 1917; W. B. Kurtz, Boise, Idaho, $200.

General Sherman 558784 (roan bull), calved April 30, 1916; A. McWilliams, Ontario, Ore., $200.

Lord George 646024 (red, little white, bull), calved February 22, 1917; Byron Vandecar, Baker, Ore., $300.

**Consigned by W. W. Green, Union, Ore.**

Linwood Lad 634576 (red bull), calved March 7, 1917; W. B. Kurtz, Boise, Idaho, $150.

Linwood Boy 634575 (red bull), calved March 28, 1917; W. B. Kurtz, Boise, Idaho, $155.

**Consigned by A. D. Bideler, Union, Ore.**

Marsh Violet 2d 520036 (red cow), calved May 8, 1916; J. W. Smead, Caldwell, Idaho, $200.

### World's Tallest Chimney.

Japanese have built the world's tallest chimney, a reenforced concrete structure 570 feet high, which stands upon a hill that is 430 feet higher than the copper smelter which it serves.

### War Garden Contest.

The war garden plans submitted to The Washington Farmer made one of the most valuable and interesting features of our paper. In awarding the prizes it is only just to say that there was some difficulty in deciding between the better plans, they were so generally excellent. The first prize is awarded to Mrs. Winnifred Buckingham, South Bend, Wash.; second to Mrs. J. M. Foye, Valleyford, Wash., and the third to Jennie Simmons, Tolt, Wash.

### Community Church Plan.

"Two towns in the Wenatchee district are to be chosen where we will establish our first community church plant in the Columbia River conference," is announcement made by the Rev. Robert Brumblay, district superintendent of the Methodist Episcopal church. The board of missions will make a proposition of furnishing each an equipment at a cost of $10,000 or more, one of these going into the wheat regions and the other being located in the irrigating belt. At each of these plants the church suggests such features as gymnasiums, shower baths, swimming pool recreation room and reading room will be equipped.

### Raspberry Pickers' Pay.

The Puyallup and Sumner Fruit Growers' association will pay 50 cents per crate for picking both the shipping raspberries and the raspberries for canning. This is 15 cents per crate higher than was paid last year. The directors also recommend that the growers pay at the end of the season to every picker doing satisfactory work and who stays through the entire season a bonus of 5 cents per crate.

# Fine Response by the Farmers

## *Patriotism a Virtue That Takes Deep Root in the Soil*

The Liberty bond organization at Chicago launched its campaign a fortnight ago with an unwarranted and foolish assertion that the farmers of the United States were financial slackers, and that farming communities were less patriotic than city people. The facts are an eloquent answer to that slander.

**"The outstanding fact of the third campaign so far," says an Associated Press dispatch from Washington, "is the liberal outpouring of subscriptions from farmers and other residents of rural districts, and the comparative slowness of big city communities. All the states which have gone over the top and won honor flags are largely rural."**

The country is shaming some of the cities and vindicating the Farmer's confident prediction that the rural districts would come in strong on patriotic service.

The reason for seeming early-hour apathy in the country in previous Liberty bond campaigns was easily apparent to those who knew the true heart of its people. They are scattered over wide areas and lack the means of quick assemblage that are given to town and city communities. Organization of necessity proceeded more slowly. But when the country people do form their organizations they are more closely knit than the city organizations and less subject to disintegrating influences.

There are still in the country, of course, a number of people who have not yet responded loyally to their government's call, but their position will become more and more unpleasant as the war goes on. It is more difficult to dodge one's duty there than in the city, where one can conceal his affairs more easily from his neighbors.

But there is another reason for this fine response by the farmers as noted in the news from Washington. Patriotism is a virtue that takes deep root in the soil. The farmer and the farmer's wife, and their sons and daughters, too, looking out over their broad acres, have a deepened consciousness of ownership of the land. Their farm is a visible part of "the land of the free and the home of the brave." When their voices lift in patriotic song the words have for them a deeper meaning than they can have for the city dweller. Even the children thrill to the inspiring line:

"I love thy rocks and rills,
Thy woods and templed hills."

More and more it will become apparent, as the war goes on, that the country is aflame with patriotic spirit and pulsating with action. After this superb response to the government's call for Liberty bond subscriptions we shall hear no more the unfounded assertion, occasionally made by persons who did not know the real spirit of its people, that the farmers and business men of the rural regions were less patriotic than the dwellers in the cities.

### There Is No Honor.

In doing the easiest thing.

# Cattle and Horse Raisers

Following the United States supreme court's action in sustaining the validity of the Idaho law providing for priority range rights on the part of cattlemen, comes the Cattle and Horse Raisers' association of Oregon, with a resolution petitioning the Oregon legislature for a similar statute. The resolution was adopted by the association at its meeting just held at Ontario,

Other resolutions of importance to the live stock industry received the approval of the association. Among them were the following:

**Asking the secretary of the interior to suspend the operation of the stock raising 640-acre homestead act until after the war and that preference be shown our soldiers and sailors in the matter of rights.**

**Indorsing the work of the marketing committee of the National Live Stock association and appropriating $300 for expenses.**

**Pledging the loyalty of the association to the government in this time of stress and appropriating $1000 for the purchase of Liberty bonds for the organization.**

**Asking the legislature to enact a law providing that no cattle or horses be assessed until animals shall have reached the age of 12 months.**

**Asking the animal husbandry department to furnish serum for the prevention and cure of blackleg and that the government be required to discontinue sending out vaccine, which has proved unsatisfactory.**

**Asking the legislature to abolish the indeterminate sentence law, as the statute in question is said to have worked a hardship in cases where cattle rustlers have been involved.**

Bend will be host next year. All the old officers were reelected. They are: President, William Pollman; first vice president, George H. Russell; second vice president, W. H. Daughtrey; treasurer, William Duby; secretary S. O. Correll; brand inspector, Gerry Snow.

Too much can not be said of the most excellent team work accomplished by the people of Ontario.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## The Poultry Feed Situation

In the northwest states poultry feed costs more than human food. At the present time corn, oats and barley are selling for more than wheat. The food administration says that wheat must not be fed to poultry, except a small percentage of feed wheat, and poultrymen must use corn, oats and barley at higher prices.

Poultrymen can do without wheat. They can make up a wheatless ration that will produce as many eggs as a ration made up mainly of wheat. With the byproducts of wheat, bran and shorts, and corn and oats or barley, supplemented with the usual animal foods and green stuff, there is no necessity for feeding wheat.

But with cheaper corn, oats and barley, there would be more and cheaper human food. Congress would help the drive for more poultry and eggs by regulating the prices of these cereals as it has regulated wheat, and give poultry raisers cheaper feed. At the present prices of feed and eggs only those poultrymen who have heavy laying strains will make a profit. A great many will have to produce eggs at a loss or kill off their hens.

They are willing to sacrifice profits and keep their laying hens, if necessary, but some way should be found for remedying this situation.

Another point should not be overlooked. At the present prices of feed grains nothing but a strong patriotic impulse will keep farmers from sowing barley and oats in place of wheat.

There is a double reason why the prices of feed grains should be put on a parity with wheat.

J. D.

## The Irrepressible Loafer.

Everywhere there is a movement to put the habitual loafer to work, and a highly commendable movement it is. There should be some system devised if possible whereby every person who eats during this strenuous wartime could be made to earn by hard toil that which he eats. It is suggested that the closing of places where loafers lounge would help relieve the farm labor shortage. Possibly it would; probably it would not. At any rate the help would be insignificant. No farmer wants on his place in the guise of a hired man the man who is accustomed to spend his time in idleness. The farmer must pay $60 or more a month with board and lodging for hired help. The loafer is not worth the lodging alone, even though his quarters be the hay mow or the strawstack. While few farmers are deluded by the idea that they can secure help from the pool hall crowd or other habitual idlers, it is well for those few who may be so deluded to get rid of the idea at once. It may be that the loafer, like the poor, will be with us always. Certain it is that the only way to make a working man of him is to deny him every civil privilege, including food, until he reverses his entire system of life.

## Red-Blooded Boys

Ellensburg high school has been noted for several years along progressive agricultural lines. Now Mr. Zimmerman, who heads the agricultural department of that institution, has organized a class in farm motors. Not only is this class the largest in his department, but the teacher reports that "the boys are very enthusiastic about their work."

In the beginnings of manual training west of the mountains it was reported that the boys became so much interested that they broke into the school work shop Sundays. Red-blooded boys everywhere enjoy healthful work that brings results. It is easier for anaemic boys to sit quiet, learn their lessons, commit words, and not disturb the equanimity of the teacher during school hours.

## Sour Soil.

It is not a hard task to find out whether your soils are sour or not. The test is made with litmus paper, which may be bought at any drug store. Take a small amount of the soil you wish to test, wet it and make it into a ball; break it in halves, lay a strip of the blue litmus paper across one-half and press the two pieces together again. Leave it there half an hour or so and then remove the paper. If it has turned pink, the dirt has acid in it.

Drainage and lime are partial correctives of sour soils, but before applying cures make sure your tests are fair and are taken in the right places and at the right depths. One test is not enough to prove much on a large farm, for one spot may be sour or sweet and still not be the same as most of the field in which it is in, let alone a whole farm.

The adding of milk to butter and the churning of it or mixing the two together does not increase the quantity of butter. It merely swells the bulk. The buttermaker removes all the buttermilk he can. To mix any kind of milk in the butter undoes the work. It sours quickly in warm weather and is illegal for selling purposes. If one wishes to mix milk and butter it can be done for home use, but it needs no machine to do it. It can be mixed with an egg beater or simply with a fork.

Many of the garden seeds may still be tested before planting. If we are going to do our own testing we usually take from 50 to 100 seeds and plant them in a flat box of earth. They are planted as deeply as they would be if put out of doors, and the conditions are as nearly favorable as the most perfect season could be a little later on. We find out just how many of the seeds planted will develop into plants.

"If we are to have a band in Leavenworth we will have to teach the younger boys. The older ones have joined the army. We must have a band to meet the soldier boys when they come back from France." These are the words of James McDans, band master, who already has secured a number of new recruits and is after 20 more to organize the new band.

A reasonable price and a fair price which returns a good profit is what all breeders should strive for. This will best promote the interests of the breed, be it horses, cattle, hogs, sheep or chickens.

It has been the conclusion of years of observation that the man who does his best, and is always ready to take advantage of the weather when it does change, is the man who wins out.

## Washington Gleanings

A war savings contest for the boys and girls of Clarke county began April 22, and will end May 31.

Thomas P. Horn will be superintendent of the poultry department of the Southwest Washington fair.

The employes of the North Bank roundhouse at Vancouver are planting four acres to war gardens this season.

The Wahkiakum County Council of Defense was recently organized with William Stuart of Cathlamet as chairman.

Four medical men have been called from Monroe for war service, leaving the city practically destitute of physicians.

At a public auction at Dayton recently the farms of the late Joe Rose were sold, one bringing $125 an acre, and the other $112.75.

W. E. Weir, principal of the McKinley school at Toppenish has been appointed supervisor of the Boys and Girls' club work during this summer.

The Farmers' Elevator and Produce company of Valleyford has been organized with a capital of $15,000 to erect a grain elevator at that place.

In order to rid the city of the surplus of dogs, the Hoquiam officials are offering two thrift stamps to each boy for every dog he brings to them.

A Leghorn hen belonging to Sam Helton of South Bend, laid an egg which was eight inches around the long way and 6 1-4 inches around the other. It weighed over a quarter of a pound.

Earl Bell, a corporal in Company E, 361st infantry, stationed at Camp Lewis, has been granted a three-weeks' furlough to assist his father, John Bell, a prominent Centralia rancher, to get in his spring crops.

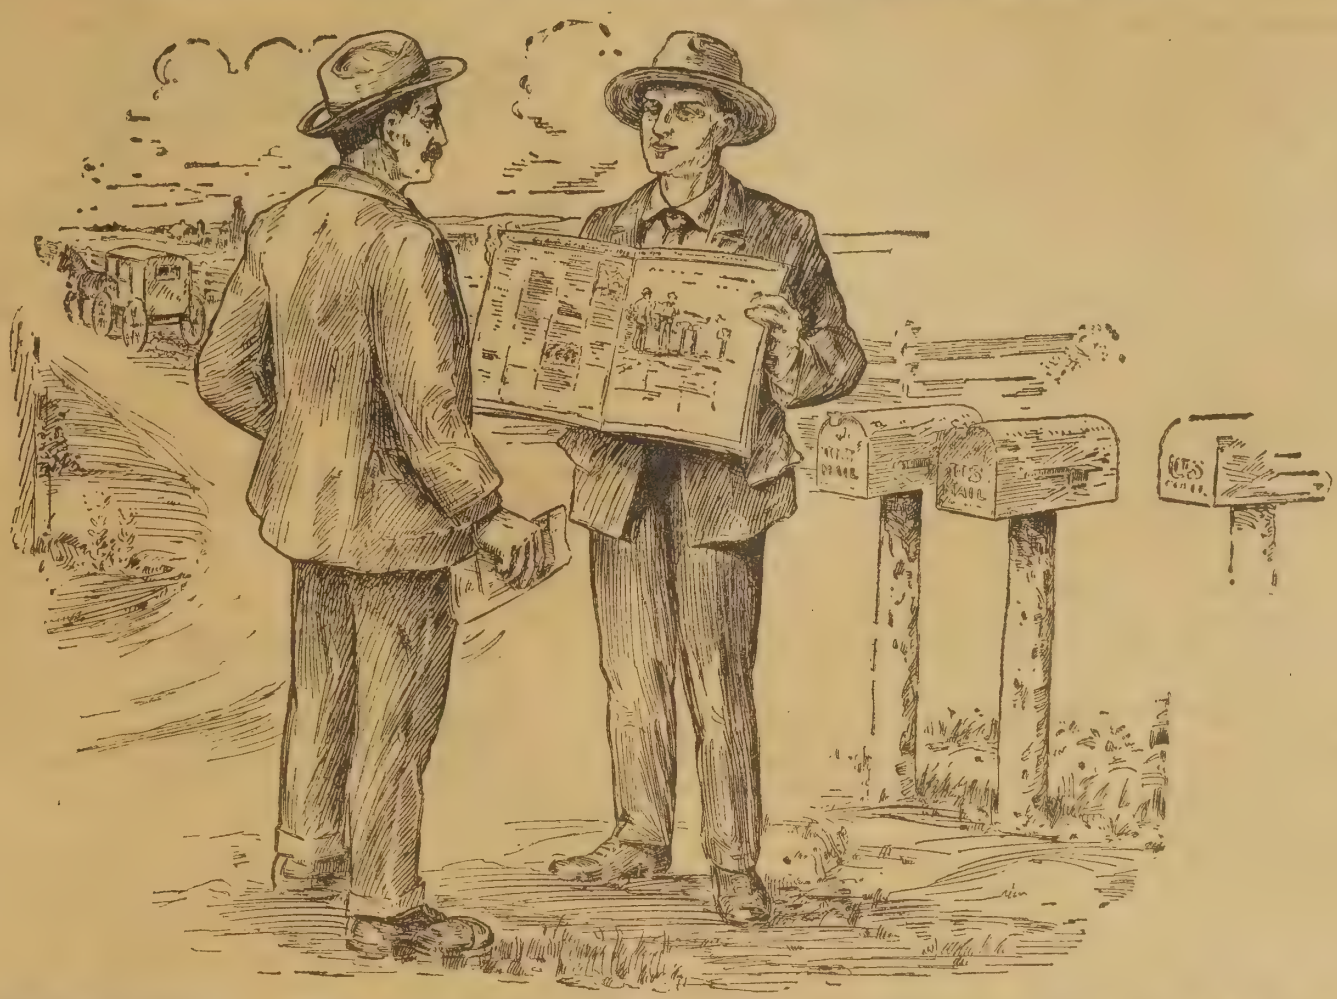
Mason county farmers recently sold three cars of potatoes to Camp Lewis, receiving $1804.09 for them. The total cost of handling and transportation was $3.43 1-2 per ton. The price received was $25 f. o. b. American Lake.

The sum of $500,000 has been requested from the government for construction of living quarters for employes of shipyards at Vancouver, Wash., two hotels of 600 rooms each, apartments, flats and numerous cottages to be built.

City Commissioner Charles A. Fleming of Spokane has been elected head of a committee to work out details for a state-wide crusade against diseases arising out of the social evil by the state health and public officials, who are meeting in Seattle.

The California Packing corporation at Yakima recently closed a successful season of handling Yakima fruit. The plant has been in operation since September 10, handling 7,000,000 pounds of fruit, mostly cull apples, for which it paid an average of $8 a ton.

Arrangements have been made for planting 20 acres of beets near Prescott and five acres near Waitsburg in Walla Walla county. Both plantings are in the nature of experiments to determine if sugar beets can be successfully grown on the non-irrigated wheat lands.



In a voluntary rate adjustment announced by the O.-W. R. & N., effective May 28, Spokane will receive a great reduction in live stock rates from southern Idaho and eastern Oregon points, and be placed on an equity with the Portland market from the same territory, overcoming a rate advantage Portland has enjoyed for years.

A conference of all the county food administrators of the state of Washington, as well as all other officials connected with the work, is called by Charles Hebberd, food administrator for Washington, to be held at Spokane on May 8. This, the first conference of its kind called, is to take up many phases of the work that need urgent attention.

With a recent purchase of 652 acres of land seven miles southwest of Lind, Adams county, John C. Lawrence & Co. of Spokane have increased their holdings in that part of the state to over 6000 acres. The new place is improved with a good house and barn and has 320 acres sown to spring wheat. The price was $22,000 and the land was purchased from G. O. Barnhart.

Eighteen hundred sacks of sphagnum moss, approximately 90,000 pounds in its moist state, are drying in the parks of Ilwaco here as the result of an excursion to the sphagnum beds west of Ilwaco by three companies of Fort Canby soldiers and hundreds of residents of Long Beach and Ilwaco. This was the first concerted effort to fill the demand made by the Red Cross for material for 500,000 sphagnum pads by July 1, and the sphagnum needed for surgical dressings was found in such quantities that L. L. Bush, superintendent of the moss-gathering campaign of Pacific county, believes that all the moss needed by the Red Cross can be supplied here.

# PLEASE TELL YOUR NEIGHBORS ABOUT THIS BARGAIN

## His Neighbor: "Here's One Place Where You Get More for Your Money."

When we introduced the "direct-to-the-consumer" idea in our subscription business we hoped to have hearty cooperation from our readers and we are not disappointed. The new system is working splendidly. Thousands of our friends have taken advantage of the big saving which our offer makes possible; and we expect many new subscribers this summer.

Much of this success is due to the efforts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those whom they feel will be interested in a high-grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appreciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices below.

Your state farm paper deals with all phases of farming in your state, but it does much more. It brings helpful facts and clean entertainment to young and old. It is a home paper in the best sense of the word.

## A Real Saving

**Following Rates Now in Effect for Subscriptions to The Washington Farmer**

**25c FOR ONE YEAR**

**50c FOR THREE YEARS**

**$1 FOR FIVE YEARS**

YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

May 2

**The Washington Farmer,**

Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

**Enclosed is $..... for ..... years subscription.** In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# Performance Register

## Would Quicken Dairy Industry

By D. R. HUBBARD.

When president of the Idaho State Dairy association and at other times the writer has urged the formation of a performance register for cows. Cow-testing associations are becoming quite prevalent over the Pacific northwest. Activity of farm advisers in organizing these societies and assisting in the work gives added value to this branch of extension work.

The farm adviser will become more of a personal factor in advancing better farming and be drawn more closely as a friend to the better class of dairymen.

The performance register would not only give added value to the service, but would make the results more permanent and vastly increase interest in testing cows.

Its greatest good would come in a desire of the farmer to breed his best cows to high-class, purebred sires. It would cause him to discriminate more carefully in the selection of such sires; to watch the results of such breeding, and increase the demand for and use of the best sires obtainable. It would quicken the betterment of dairy herds and give more pleasure to all concerned in the dairy industry.

**Benefit to Vender and Buyer.**

The performance register would, by its certificate of performance and registration, be of great value in standardizing the dairy cow for the benefit of both vender and purchaser.

Prepotency of the pure bred is a word very much played with by friends of the industry, and the "scrub" is greatly discredited as compared with registered and pedigreed stock. It is well known, however, that there are many "pedigreed scrubs," and prepotency of power to reproduce high quality in the offspring is only a relative term.

Many dairy herds of the older sections show a strong line of uniformly good milkers, all from "Old Brin" or "Roany" or some other dead, but not forgotten, maternal ancestor of the herd.

It would not be difficult to fix a minimum production of butter fat and milk, to make a cow eligible to registration. Cow-testing associations could authenticate the performance, and the certificate would be a matter of satisfaction quite as acceptable as the facts it announced.

The probable breed of the cow could be in the certificate, and this dam and her progeny by a purebred sire of the breed for, say four generations, would entitle a female to registry as purebred, provided the line carried the minimum performance to and including the fourth female.

For instance, if the minimum is 10 pounds of butter fat in seven days or 40 pounds in 30 days at a given age, and is carried for four generations with purebred males of a certain breed, the fourth female becomes a purebred by performance, and is entitled to registry in the purebred association of that breed.

**Improve the Breed.**

The effect would be to greatly improve the breed as compared to present rules, and create a greater interest in purebred cattle.

A male from the fourth cow and a purebred sire of the breed would be entitled to registration. This would start many good dairymen to aspire toward a purebred herd, and it would prompt many breeders of purebred cattle to keep test on and thereby improve their own herds.

The association could be at some central point in the Pacific northwest, and it could be kept in touch with cow-testing associations through farm advisers or officers of such associations. Local testing associations should issue certificates even for a lower standard, whenever a cow has been tested, as it will, in a measure, fix the value of the cow and be of especial service to those who are buying dairy cows, whether at private or public sale. This will mobilize and make effective the work of cow-testing associations and greatly increase popular interest in this form of herd improvement.

# Ferndale Cow Tests

During the month of February 385 cows were tested in the Ferndale Cow Testing association. The average pounds of fat per cow was 26.3. The average pounds of milk per cow was 628.8; $11.45 was the average cost of feed for each cow. Thirty-six cows produced each 1000 pounds of milk or more and 35 produced 40 pounds of fat or more. The average pounds of fat of highest herd, owned by Walter Jensen, was 32.7.

The following cows produced more than 50 pounds of fat during the 30-day period; N. P. Sorenson's pure bred Holstein, 1428 pounds of milk, 62.8 pounds of fat; J. H. Hermsen's grade Holstein, 1377 pounds of milk, 60.6 pounds of fat; C. W. Ritter's grade Holstein, 1326 pounds of milk, 58.3 pounds of fat; Jay Vail's grade Holstein, 993 pounds of milk, 54.6 pounds of fat; L. J. Sinnes' grade Holstein, 1179 pounds of milk, 50.7 pounds of fat; N. Jacobson's pure bred Guernsey, 936 pounds of milk, 50.5 pounds of fat; Vander Griend Bros. pure bred Guernsey, 1146 pounds of milk, 50.4 pounds of fat.

The following are the five herds that have the highest average of fat production for all months tested: B. S. Hillier, 32.7 pounds; Nels Jacobson, 31.4; E. W. Baer, 31.4; Allen Duncanson, 30, and Jay Vail, 28.9.

Victor Morgan is the official tester of the association.

## Care of Herds Tells.

As the end of winter feeding approaches the difference in general appearance and production between the herds properly fed and cared for and those poorly managed is strikingly apparent, says Elmer O. Leonard, official tester of Clallam county, Washington. A considerable number of cows have freshened in the last three months. Of these only those kept up in fair shape are making creditable returns.

**Sheep Killed by Dogs.**

Investigations by the department of agriculture in 15 states show that of a total of 6,836,492 sheep, 34,683 were killed by dogs in one year and were paid for by the counties.

**Poor Roads a Loss.**

The farmers of the United States have been allowing $300,000,000 in real money to escape from thieir pockets each year because of poor roads, according to the testimony of experts.

BAG BALM
MADE BY THE KOW-KURE PEOPLE
The great heal-ing ointment that thousands of dairymen swear by. Used with quick effect on Caked Bag, likely to occur when a cow freshens; also splendid for all udder sores, cuts, chaps, bruises, cracks, bunches or inflammation. Bag Balm protects, penetrates and induces quick, normal healing. Keep a box on hand constantly.
Sold in big 50c. packages by feed dealers and druggists. Write for free booklet, "Dairy Wrinkles."

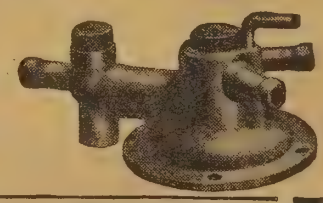
GALLOWAY

He Taught Us How

UNTIL recently most of us thought milking to be simply a matter of pull, pull, pull. Some think so yet. But it's not. If you watch a calf's tongue when he swallows you'll see the difference.

He gets his mouth full of milk—then he swallows. And as he does, his tongue massages the teat backwards from tip to udder.

That's Nature's provision for the prevention of congested blood in the teat as a result of the calf's sucking. Sucking draws the blood to the tip of the teat. The tongue massages it back to the udder.



EMPIRE MILKING MACHINES

with our new Super-Simple Pistonless Pulsator accomplish the same result. Stops the sucking and lets air flow in between the rubber lining and the walls of the teat cup.

This makes the rubber lining gently massage the teat *from tip to udder*, just like the calf. This action occurs regularly from 48 to 52 times a minute.

With our pistonless pulsator, there are no more leaky pistons resulting in irregular, nerve racking action. The suction is always uniform and gentle. Soothes the cow and results in far greater milk flow. Our local dealer will gladly show you the "Empire" without obligation. Call on him. Write for our new 1918 catalog No. 48

# Veterinary

Dr. S. B. Nelson

**Lumpy Jaw**—I have a cow, a Jersey, that has had a kernel or lump about the size of a hen's egg under the left jaw which has been there for about two weeks. Have put liniment on it several times, but it seems to stay about the same. It seems hot and feverish, but the cow seems as well as usual, having a good appetite. What more can I do to relieve this condition? Also, at times I notice small lumps at the root of the teats, which is now showing on one of them, which are sore and tender. What can I do for this? Is there any danger of contracting disease from using the milk? We are boiling it for fear that such might be the case.—C. W. F., Jordan Valley, Ore.

It is possible that the lump, which has appeared on the underjaw of your Jersey cow may be due to the Actinomycosis fungus, and is a disease generally known as lumpy jaw. It would be advisable for you to write to your state veterinarian at Salem, Ore., and possibly ask him to see your cow or send a deputy to determine whether or not she is affected with a contagious disease. Small lumps on the teats may, or may not, be related to the trouble on the jaw. Only a personal examination could determine that.

**Richest Milk for Lambs**—Can you recommend a formula for lambs that are disowned by the ewe? Mine all die about the third day. They seem to have convulsions and their necks contract and become very stiff. I give them cow's milk diluted and warmed, using a nipple over bottle. Should sugar be used in the milk?

SUBSCRIBER.

American Falls, Idaho.

The milk of the ewe is richer in fat and in casein than cow's milk. It also contains less water in proportion to the amount of solids. For that reason lambs should be fed the very richest whole milk that can be produced, milk which will test 4.5 per cent to 5 per cent. I would suggest that if you have the trouble any more which you had with the lambs you mentioned that you add a half-teaspoonful of castor oil to the milk about the second day. Do not add sugar, as there is very little difference in the sugar content between the milk of the ewe and the milk of the cow.

**Cow Has Warts**—I have a cow that has been affected with warts on the teats that grow out like a root. A. C. Mt. Vernon, Wash.

Cut off the warts with a dull pair of scissors and apply tannic acid to the wound once daily.

**Use of Hind Legs Lost**—I have a pig that has partially lost the use of its hind legs. It eats heartily and is growing. What is the best thing to do for it?—J. E. G., Starbuck, Wash.

Give your pig according to its size from one to two ounces of castor oil. Then give the next day and for three days following 10 to 15 grains of potassium iodine in the feed once daily.

**Milk Is Bloody**—I have a cow which freshened the 20th of February, but have been unable to use the milk as it is bloody. The milk from the front teats being much worse than from the back. She gave about a gallon of milk up until within two weeks of calving and then dried up quickly. I feed shorts, carrots and clover hay. Have been told there was no cure for this ailment, but can notice an improvement in the last day or two. Would appreciate any advice you may be able to give me in regard to same. D. H. McKenna, Wash.

Try giving your cow one teaspoonful of sodium hyposulphite in one quart of water night and morning.

**Pigs Sick Three Months.**—I have three pigs that weigh about 100 pounds. They are stiff on their front and hind feet, and when they have to walk or move they squeal. They have been sick for three months. They eat well and are in good condition and sleep in a dry house. Please let me know what I can do for them.

J. B S., Oakesdale, Wash.

Try giving your pigs each two ounces of castor oil. The next day give them each one drachm of sodium salicylate, morning and evening, in the feed for three days. After that give them each 10 grains of potassium iodine in the feed once daily for four or five days.

**Mare Is Hard-Mouthed.**—I have an 8-year-old mare that is hard-mouthed. I have used severe kinds of bits without success. The mare is not vicious only when driving or working. It is almost impossible to hold her, or to turn around. Please let me know what kind of bit you would advise me to use.—E. S., Oakesdale, Wash.

I would suggest to you that you have the mare's mouth examined and see whether or not there are sharp points on the front molar. If there is not, it is possible that by making a very large easy bit, taking a straight bit and having it covered with a heavy leather that she will quit pulling as she does now. The condition is either habit, which if changed to a very easy bit may stop, or it may be that her teeth hurt her and so she bites to have the pressure hard against her teeth, which helps to stop the pain.

**Mare Too Weak to Work**—I have a 16-year-old mare that has been weak all winter. She eats only a little alfalfa hay and eats only the fine hay and leaves the coarse hay. When she lies down she can not get up by herself. Somebody has to help her, and when she does get up she is stiff and seems sore all over the body. She is lame when she starts to walk, but after she walks a little while she does not limp so much. She is too weak to work. I am feeding her a mash of one gallon of bran twice a day and I put in the mash a mixtrue of iron sulphate, saltpeter and ginger and give her a teaspoonful of nuxvomica twice a day. I rub her once in a while with white liniment on the back and on the legs. She had the teeth filed about three months ago, but she does not seem to chew the hay very well. She eats only a little and drinks little. For the last four years she had scours, but this winter she is constipated. I turn her out in the field in daytime and she eats what grass she can get. The grass is very short yet. Please tell me what I had better do with her. She is a good-sized mare and weighs 1300 pounds. The legs are not swelled and it does not make her sore when I rub with the hand. I do not know what the trouble is, but believe it is paralysis or rheumatism.

J. J.

Finley, Wash.

It is most difficult for me to make a diagnosis of the trouble affecting your mare. I am afraid that she has a number of troubles somewhat complicated. I am going to suggest to you at the present time to try giving her one dram of potassium iodine in a pint of water morning and evening for five or six days and see if that will help her.

**Plan System of Inspection.**

A standard system of inspection by which federal food administrators may keep a check on commercial bakers is being worked out by the department of agriculture and the food administration.

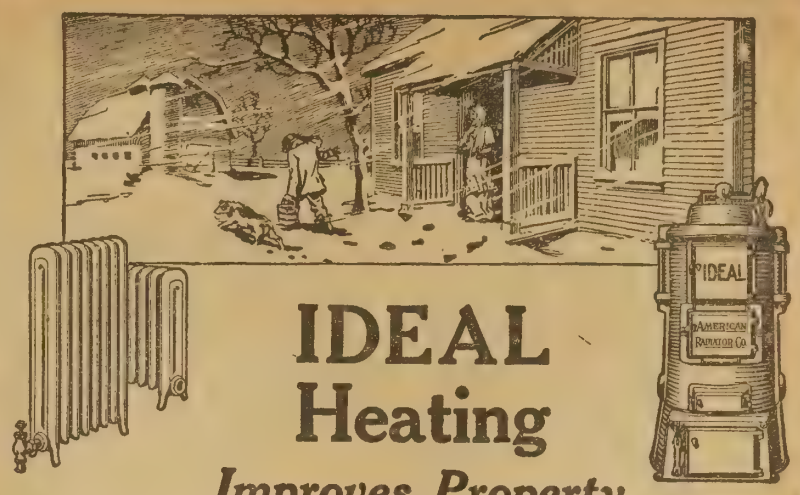
ICE FOR FARM AND DAIRY

LATHAM'S AUTOMATIC ICE MOLDS. a perfect invention. Plan now to make your own ice next winter. Write for information on ice houses and ice making to WARREN LATHAM, Spokane, Wash.

NEW WORLD LIFE

Know Where You Stand

In these uncertain times, one likes to feel that WIFE and BABES, at least, are *safe.*



CARRY YOUR POLICY IN NEW WORLD LIFE,

the big Northwestern company with the Surplus to its Policyholders that mounts up to $1,611,340.26.

New World Life

Spokane

A splendid opening for a local representative in your district.

IDEAL Heating

*Improves Property*

Spend money for *permanent improvements* to your house and get the comforts and enjoyment that your present prosperity entitles you to. Land values have increased about 100% in the last five years. *Is your home modernized to keep up with this increase in value?* Do you still shiver in a drafty, damp house with old fashioned methods of heating?

IDEAL heat is best economy

There is no use trying to make yourself believe that wasteful, old fashioned heating is economy—for how often do you hear of it resulting in illness, overwork and discouragement?

AMERICAN & IDEAL RADIATORS BOILERS

Heat the whole house with *least* fuel—burn the cheaper fuels of your locality. IDEAL Boilers will do it and are scientifically made to extract the *greatest heat* for warming the whole house like one room.

IDEAL Boilers and AMERICAN Radiators never wear or rust out—they last longer than the building and are the far sighted investment for family health and comfort and conserving fuel.

*Easily put in any farm house*

IDEAL Boilers and AMERICAN Radiators come in sizes to fit any cottage or farm house. Cellar or water pressure not necessary. Thousands of farm houses are so equipped. Cut down the work in your household and give your family IDEAL heating with its fuel savings and cleanliness.

An IDEAL Boiler and American Radiators heat this Farm Home, saving fuel every year and giving the family a mild, balmy temperature in all weathers—thousands like this in every State.

Write for complete catalog free. "Ideal Heating" is full of pictures and information telling all about radiator heating. Get it at once—no obligation to buy.

Sold by all dealers. No exclusive agents

B-K

Clean and Clear as Water

Awarded Gold Medal Pan.-Pac. Expo.

For Retained Afterbirth

When a cow fails to "clean" promptly, she should be flushed out with B-K. A retained afterbirth neglected may cause Abortion or Barrenness.

B-K as a douche brings the afterbirth naturally—saves removing by hand. B-K kills the infecting germs and foul odors—heals the uterus—removes slime and acid—no straining—no irritation. B-K is much more effective and safer than lysol, carbolic acid, Lugol's solution and oily coal-tar disinfectants, which do not cleanse the uterus, but make it more acid.

If your dealer does not have B-K, send us his name.

FREE BULLETINS: Send for complete information—"special trial offer" and bulletins No. 52, "Contagious Abortion," and No. 136, "Calf Scours."

"The Laboratory That Knows How"

### INFLUENZA.

### Control an Army Remount Depot.

Secretary Dinsmore of the Percheron Society of America has received a letter from an experienced horseman who has had more than six months' service in an army remount depot in dealing with influenza among the army horses. The method finally adopted in practically all the remount camps and one that is declared to be giving good results everywhere follows:

The final method and the one which seemed to be the best—at least, both per cent of sick and per cent of death rate dropped a good deal—might be summed up as isolation and sanitation. Cars were disinfected before shipment and one side closed. Plenty of fresh air was admitted through the open side, but no draft straight through. Corrals were disinfected by a special crew constantly at work with hand spray pumps. All corrals (feed racks, grain troughs, water troughs and fences) were gone over weekly and sick corrals three times each week. A veterinarian with a crew of men went through the new corrals twice a day. (I forgot to say that as stock came in it would be put in a corral for quarantine. Probably three days' arrivals could be put in each corral. They were held there for 10 days. These I have termed "new" corrals.) All animals showing symptoms of sickness were caught out and transferred to isolated influenza corrals. The influenza corrals each held around 500 head.

### DRAFT HORSES

### For War, City and Farm Use.

Draft horses are urgently needed for war, city and farm use. Not more than 1,000,000 of the 21,000,000 horses on the farms and ranches of the United States will, at maturity, weigh over 1600 pounds and classify as drafters. No other nation has draft seed stock in sufficient supply to produce a draft surplus of consequence. The United States alone can be counted upon to produce the draft horses, which the world needs.

Exports of horses to Europe for war purposes from September 1, 1914, to January 31, 1918, a period of 41 months, totaled 983,899 horses, valued at $207,283,114, and 343,435 mules, valued at $67,390,991. In addition to this, the United States army purchased more than 300,000 head of horses and mules between June 1, 1917, and March 1, 1918.

Additional purchases for war use depend on the length of the war, transport space available and number of troops used. One horse or mule is reckoned on every four men put in the field, exclusive of cavalry.

Presenting these facts, one can readily see how Wayne Dinsmore, secretary of the Percheron Society of America, is led to remark: "The breeder of good Percherons never faced a more favorable future."

### British and Irish Wool Clip.

The British war office announces that the price of the 1918 British and Irish wool clip has been fixed at 60 per cent above average price ruling in June and July, 1914; 35 per cent over 1914 prices was the basis of payment for the 1916 clip, and 50 per cent the basis of price for the 1917 clip. Schedule of prices for each grade will be drawn up by central advisory committee and will indicate definite maximum prices. Actual price received by farmer will depend upon quality and condition of his particular clip.

#### Meat Supply Declines.

English market reports, received by the food administration, show the amount of home-grown meat of all kinds coming to the principal markets has averaged since January 1 less than a fourth as much as for the same period of 1916. Hogs have shown the greatest decrease.

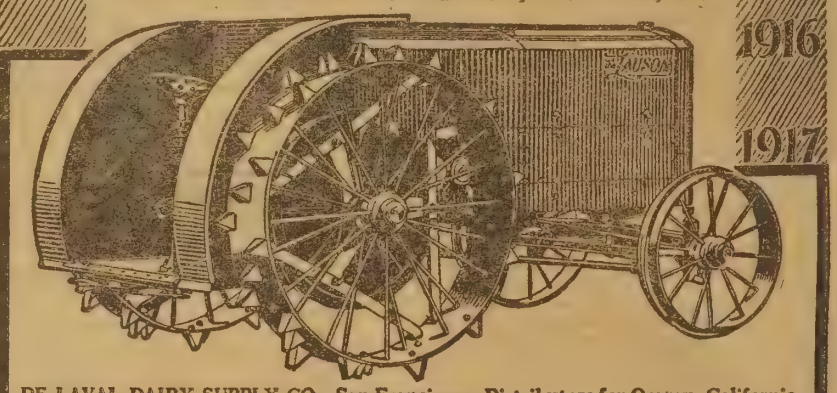
## Backed By Twenty Years of Experience

Every test made in the twenty years we have been building LAUSON farm engines helped to make the LAUSON Kerosene Tractor better. We looked to the future—five, ten years ahead, and worked slowly. The LAUSON reputation demanded a tractor of unquestioned reliability.



To those who know LAUSON engines, we say, "Here's a tractor that merits your confidence because it comes from the same plant as the engines you have found doubly serviceable." To others, we say, "Try it."

**The LAUSON 15-25 FULL JEWEL TRACTOR**

has a powerful *Heavy Duty Four-Cylinder Valve-in-Head Engine.* It is of medium weight, well distributed and built to meet the requirements of the average farm. Ample power for 3 to 4 plows, large ensilage cutter or 24 to 28-inch thresher. Burns kerosene, distillate or gasoline and operates economically. Note that all parts are enclosed from rain and dirt—a great advantage. It is a simple, thoroughly tested and practical machine for all farm tractor or belt work. Hyatt Roller Bearings throughout. Automatic type Steering Knuckles enables short turns and easy control. Driving gears enclosed, running in oil.

*Built up to a standard—not down to a price. Write us or our distributor for name of Lauson dealer in your locality.* 51D

*A little thing like being under fire can't stop them from taking a chew of Gravely!*

## When He Gets that Pouch of Real GRAVELY Chewing Plug You Sent Him

A man's first impulse is to share a good thing. Real Gravely Plug has been spread all over America simply by the Gravely user offering a small chew to his friends. Tobacco like that is worth sending. It means something when it gets there.

Give any man a chew of Real Gravely Plug, and he will tell you *that's* the kind to send. Send the best!

Ordinary plug is false economy. It costs less per week to chew Real Gravely, because a small chew of it lasts a long while.

If you smoke a pipe, slice Gravely with your knife and add a little to your smoking tobacco. It will give flavor—improve your smoke.

SEND YOUR FRIEND IN THE U. S. SERVICE A POUCH OF GRAVELY

Dealers all around here carry it in 10c. pouches. A 3c. stamp will put it into his hands in any Training Camp or Seaport of the U. S. A. Even "over there" a 3c. stamp will take it to him. Your dealer will supply envelope and give you official directions how to address it.

**P. B. GRAVELY TOBACCO CO., Danville, Va.**

*The Patent Pouch keeps it Fresh and Clean and Good —it is not Real Gravely without this Protection Seal*

Established 1831

# 640-Acre Homestead

## Also to Classify the Remaining Public Lands

After expressing the loyalty of every member of the Cattle and Horse Raising association of Oregon, William Powlan, the president of the association, in his annual address said:

It is very gratifying to me to announce at this time that the stockmen did not wait for a maximum or minimum price to be fixed on their cattle—but when the president said, "we need more meat and food supplies," the cattlemen last year increased the number of cattle in the United States by 3.5 per cent, or nearly three million head. And the catlemen and horsemen of Oregon did their full share in bringing about this increase.

Report of the senate committee at a hearing recently held in Washington shows that there are now in the United States 43,546,000 cattle of beef breeds, and 23,284,000 of dairy breeds.

The stockmen of Oregon have had a splendid winter and have gotten through the winter on less feed, though at a higher price, than for many years. There is every indication for a larger calf crop than we have had for many years. This, coupled with the fact that a good grass season is in sight, should make us all happy.

The outlook for prices for summer beef to me are excellent, and never looked so good as at the present time. While it is true that the cost of growing and fattening cattle has increased not less than 50 per cent in the last two years, yet I believe that by good, careful management there will still be a profit in cattle. Without good management you could not hope to make a profit regardless of price. It is not necessary for me to say to this bunch of men that the price of success is, work early and late, practice self-denial and attend to your own business. This is a rule that must be followed by all successful men, and especially by the man who is just starting in business, regardless of the nature of his business.

The forest service is doing all in its power to increase the grazing and improve the range to those who have grazing permits on the forest reserve, and I would advise cooperation upon your part with the department, believing you will find it more than anxious to assist you.

Now just a few words about the 640-acre stockraising homestead bill which became a law December 29, 1916. The appropriation necessary to make the classification and designation of lands thereunder was not granted until June, 1917. Up to the present time the work of the geological survey has been confined to the examination of the lands applied for under the law. In a few states this work has been completed and some designations will probably be made shortly. It has been conservatively estimated that the amount of land possible to be homesteaded under this act will not exceed 10 per cent of the unappropriated unreserved public domain. I believe it would be a good thing to urge congress to grant necessary funds to classify the remaining public lands so that they may be put under the supervision of the forest service, in order that there will be no trouble in the future as to the grazing of same between the stockmen.

It was a year ago at La Grande that I was appointed on the state board of food conservation. Last fall in making a trip with a number of stockmen through eastern, central and southeastern Oregon I talked to you on food conservation. To me this was then, and is now, one of the most vital points toward winning this war. I knew it was late in the season last year when I mentioned this important question to you, but it is early in the season now and I desire to repeat and, if possible, emphasize more strongly the great need of every individual conserving to the limit all his foodstuff. Now is the time to become active with your gardens and grow everything you need for the coming winter. It is absolutely necessary for you to grow practically all of the foodstuff you are going to consume. It should not be necessary for one of us to buy a can of goods or a pound of dried fruit of any kind during the coming winter. We should can and dry vegetables and fruits we will need. This will enable us all to have more money for Liberty bonds and trift stamps and to aid in all other war movements. Don't forget that we must all lay aside a goodly share of our earnings for war work so that when Uncle Sam says he wants to borrow a few billion dollars from his people, we can quickly respond without having to call a directors' meeting to consider the matter.

I attended the Wyoming Cattlemen's association meeting at Kemmerer on April 11 and 12 and while there I arranged for inspection of our association cattle in all the principle markets east where they maintain inspection, on a basis that we inspect for the Wyoming association in places where we maintain inspection. The work is to begin as soon as we can supply their inspectors with brand books. I also took up with some of the packers in California, when recently there, the subject of inspection in San Francisco. Those with whom I talked were in favor of it and say it would be no trouble if the California association will take hold. We hope to make an arrangement for inspection there this year. Seattle inspection must be had regardless of any other association. We must have inspection there this year and will probably deem it esesntial to have inspection in Spokane in the near future.

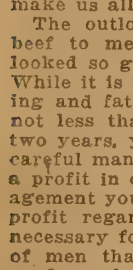
The coming year for this association will present many problems of importance, among which will be the completion of the inspection work which I have just mentioned.

Let us all continue this year to follow closely the orders and requests of our president and our government no matter what they may be and work vigorously to the end that we may produce more cattle and send more beef across the Atlantic to feed our boys who are gallantly fighting for the old flag and cause of freedom so dear to our hearts.

### Norway Encourages Development.

The Norwegian government has appropriated $7,000,000 to assist intensive agricultural development. Of this amount, $4,500,000 is to maintain low maximum prices for cattle feed and fertilizer.

### Attention to Farmers.



Perhaps never before were the farmers of America receiving so much attention at the hands of the government as now. In the matter of the necessity of farm machinery, the government has given the raw materials for its manufacture a rating in class B1, next to the materials for the making of munitions. The farm implement manufacturer thus is placed in a position to secure quick shipment of such material as he requires, and also is promised special haste in the shipment of his goods when completed. This gives farmers less hesitation about placing an order for agricultural machinery than is experienced by other lines of industry outside of munition making.

### Navy Uses More Vessels.

There are now four times as many vessels in naval service as a year ago. The estimated pay of officers and men in the navy for the first year of war was $125,000,000.

### Uncle Sam Putting Out Big Guns.

Our 14-inch guns weigh nearly 95 tons and are over 58 feet long, costing $118,000.

# Facts you should know about the market for live stock and meat

*In Swift & Company's 1918 Year Book. Sent FREE on request. Write for copy*

THIS book presents, clearly and frankly, a study of live stock buying and meat selling—a description of the market conditions that determine the prices you get for your live stock.

It describes the producing and marketing steps from your farm to the table of the consumer. It explains also how the part played by Swift & Company enables you to obtain for your live stock the highest market figures.

The full value to you, of this part played by Swift & Company—how it affords you a ready cash market for your live stock, and how it passes along the meat products to the consumer on the lowest operating expense and profit and with highest efficiency—is shown in this book.

Write for your copy of Swift & Company's 1918 Year Book now—a postal will do. Every page presents facts that you as a stockman and farmer should know.

JAMES DRYDEN,
Editorial Contributor.

## Egg Prices.

Egg prices are now probably at their lowest for the year. I understand cold storages are now buying eggs at 35 cents. They recognize that eggs are about as low as they should be considering the cost of production. That means that prices will likely be higher next winter than they have been the last winter. But nobody can tell in war times. It is not safe to predict. Meantime as a patriotic duty let us raise some chickens to help win the war while the boys are fighting our battles in Europe. It is reasonably certain that good laying pullets will pay a good profit next winter.

J. D.

## May be Wry Neck.

To the Editor: I have about 50 White Leghorn hens, most of them last summer's chickens. They seem to have a diarrhea. They get kind of droopy at first and later stretch their heads back and twist it from side to side. They die in a day's time. I am feeding them oats and boiled potatoes in a mash, with shorts and ground oats. They have free range and plenty of fresh water. Could you give me some advice? G. E., Olympia, Wash.

From the description given your fowls probably have what is called wry neck. This usually follows an overfat condition and lack of exercise. Heavy feeding of boiled potatoes and mash may have something to do with it. Try epsom salts at the rate of a quarter of a teaspoonful to a fowl. Dissolve the salts and mix in a mash of bran and shorts. Let them go about a day without feeding so they will be hungry, then feed it, giving them all a chance to eat it. Feed the oats in a deep straw litter, and feed the mash at night, so the fowls will take more exercise during the day.

J. D.

## Question of Breeds Again.

To the Editor: (1) What breed of chickens holds the record for laying? (2) will you name three or four of the best laying breeds? (3) Will you name two or three breeds of chickens comprising both size and good layers? (4) What breed or breeds of chickens have been demonstrated to be the most profitable on the farm? (5) Which is considered the most profitable, to have all one breed or several different breeds on a farm? (6) Of the different varieties of the Leghorn breed which is considered the best layers, the brown, the white or the buff. How can I get government bulletins on chicken raising?—M. W. M., Hay, Wash.

1. The White Leghorns probably have produced more good layers than any other breed, but there are good and poor layers in all breeds. Heavy production is more a question of breding than of breed. In selecting stock, the important thing is to select from a strain that is known to produce good layers.

2. If I should name three or four good laying breeds, there would be thirty-and-four breeders who would protest that I should have mentioned their particular breed among the three or four best. But if a vote were to be taken among commercial or utility breeders the majority would mention the following best four and probably in the order mentioned: White Leghorns, Barred or White Plymouth Rocks, Rhode Island Reds, and White Wyandottes.

3. The last three breeds mentioned above.

4. On the general farm the Barred Plymouth Rock has been more generally used than any other breed. The Rhode Island Reds and Wyandottes are of much the same type.

5. Usually it is best to keep one breed on the farm.

6. The white is the most popular variety of Leghorn. There are by far more whites than any other variety, and for that reason a better selection of good layers can usually be made from this variety. Their laying qualities have been very much improved by breeders during the last few years.

Write to the secretary of agriculture, Washington, D. C., for a list of poultry bulletins available, and then send a request for those you wish. If you can not get them, try a letter to the congressman or senator.—J. D.

## Cooperative Egg Selling.

By MARIELLA LADD.

Better eggs and better prices have followed the introduction of the egg-circle plan of selling in Canada. Perhaps the Farmer readers will be interested to know what these circles really involve to their members.

Each circle is organized for the express purpose of marketing eggs of the best possible quality and obtaining for them the best possible price. Each is governed by a board of directors who elect an executive committee of three and appoint a business manager on whose capacity and faithfulness much depends.

Only those are accepted as members who are approved by the board and who promise to obey the following regulations:

1. To deliver all eggs not used for their own housekeeping purposes or for breeding purposes at a time and place fixed by the directors in good condition, that is, unbroken, clean, fresh, of good size, and not more than one week old.

2. To stamp each egg before delivery with the association stamp which belongs to the association and must not be used for private purposes.

3. To use only false eggs as nest eggs.

4. To keep poultry houses and especially nests clean and sweet.

5. To gather eggs at least twice a day and keep them in a clean, dry, well ventilated room at a temperature not exceeding 60 degrees Fahrenheit.

6. To remove male birds from all pens from which eggs are to be marketed.

Fines may be imposed on members who fail to observe these rules. Entrance fees are charged to meet expenses.

It will be seen from the requirements above enumerated that successful cooperation depends greatly on the efforts of producers. Only by absolute faithfulness to rule can a superior article be guaranteed. This guarantee is the first essential to an advance in price. It is found, however, that where members do their duty and where they also choose the right managers, they soon educate the public to know the wide difference that exists between an egg that is perfectly fresh and one that has lost flavor and weight through haphazard handling.

## Hurt Hen to Fly?

To the Editor: I would like to know if it hurts a laying hen to fly or make her stop laying any. I have the White Leghorn hens and I have a window about three feet from the floor, and thye have to fly out that window in order to get in the outside pen.

D. K., Colville, Wash.

It will not hurt a hen to fly—unless she flies into a neighbor's garden. Nature gave the hen wings to fly with that she might get away from wild animals, but they are not of much utility now. They use them now for flying up to the roosts and down again; that's about all the use they are now. Flying down about three feet from the roosts or the window will not hurt the hens or stop them laying. If they light on hard ground or boards their feet would likely be injured. This causes bumble-foot and other troubles.

THE SELF-OILING WINDMILL
has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods everybearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws. Write AERMOTOR CO., 2500 Twelfth St., Chicago

## GRAPE INDUSTRY

### Large Field in the Northwest.

For several years I have believed that grape growing in the Columbia river basin would become a very important industry. I have not yet been able to prove to my own satisfaction the position I occupy on that question, but I have been gathering the information from all available sources and I still hold my former opinion. The winter of 1916-17, while visiting in western Texas, I found that the grape growers there were making large profits on certain varieties of grapes grown in that country and shipped into the eastern markets before the crop in general was ready for marketing. The same may be said to be true in California, but there are certain kinds of grapes for which the soil and climate are well adapted in the Columbia river basin. I would not think for a moment that we could compete with California in growing raisin grapes, nor would I think it profitable to undertake the growing of grapes for the manufacture of wine. With the growth of prohibition throughout the United States, the wine-grape growers of California have found that industry unprofitable and are digging up the vineyards formerly devoted to it. However, in the growing of table grapes and grapes for the manufacture of grapejuice or sweet wine there is still a large field for profit.

I have made investigation in reference to the profits received by the growers of table grapes in California, and I find that in 1916 they made very little profit and that many of them lost money. In 1917 the profits were large, running as high as $1500 net per acre. It was not at all uncommon for growers to make $700 net per acre, and in fact this seemed to be about the average profit. Experiences in failure often teach as valuable lessons as successes, and the question naturally arose, why should there be losses one year and exceedingly large profits the next? Of course, these differences can not be attributed all to one cause. Where there are extremes either of success or failure there are generally combinations of causes, and that proved to be true in the grape industry of 1916 and 1917. There were differences of market conditions, differences in the methods of marketing, and differences, also, in climatic conditions as well. During the year of 1916 the weather was not favorable during the packing period, because there was so much rain. This caused many of the growers to pack their fruit while it was damp, and even if the fruit were dry, as was true in some cases, it was injured by damp sawdust in which it was packed. When it reached the markets it was moldy, and in some cases decay had already begun. When the causes were discovered there was a combined and organized effort made on the part of the growers to remedy that difficulty for the crop of 1917. They came together and discussed the question, gave out general information on the subject, and in 1917 they were careful to provide for themselves a means of drying the grapes sufficiently to evaporate all the surface water and to dry the sawdust in which the grapes were packed. Then the organization sent information to the grape dealers in the east informing them of the precautions they had taken to pack their fruit in the best condition and to prevent molding or rotting. As a result the high prices already indicated were obtained, and profits that are making their land exceedingly valuable.

## Second Crop Berries

By L. T. HALL, King County, Wash.

A second crop of strawberries is not a probability unless irrigation and mulching are practiced. For second crop berries, we believe that twin row planting is the better way, ex. plant two rows of berries a foot or 10 inches apart and from 16 to 18 inches apart in the rows and having a space wide enough for horse cultivating between the twin rows. This allows the mulching of one ordinary row with very little addiition to mulch two rows. Outside of leaf mold, strawberries require very little fertilizer, but do require a soil digester. Too much fertilizer results in much plant and little fruit. As soon as the first crop is picked the strawberry plants should be mowed and the tops raked and burnt. This burning is to kill insects. Then the field should be gone over with soap powder such as "Gold Dust." Mix one teaspoonful black pepper with each 25-cent box of soap powder and put one-half teaspoonful in the center of each hill. This is to kill the brown borer, which is the larva of a small beetle. Next cultivate and hoe the patch. Then mulch with straw, dried ferns, or dried leaves or the threshings of peas. This last is really the best as it produces when decomposed just the fertilizer the berry seems to need. Chicken guano or rabbit ordure used sparingly may also be applied. Now turn on the water and irrigate at regular intervals according to your temperature and climate, putting the water on after or near sundown. Your second crop will be ready to pick about the middle of August and if frost does not prevent may still be yielding in November.

### As to Explosives.

Before a dealer can sell any explosives he must have a license. Before a purchaser can purchase any explosives either from a dealer or a manufacturer he must have a license. Before a customer can secure delivery from a railroad company of any explosives shipped to him he must show the railroad agent his license. This federal war measure has created a false impression in some quarters that the government wants to restrict the sale of explosives. This impression is all wrong. The use of explosives for putting more land under cultivation is in line with the department of agriculture movement for increasing food production. This license matter is a very simple proposition. The license costs but 25 cents, and can readily be obtained from licensing agents located in every county. All that is necessary to do to secure appointment of licensing agents is to write to F. S. Peabody, Bureau of Mines, Washington, suggesting the name of a reputable lawyer. American citizen, such as a notary public or justice of the peace.

# Farmers Are Optimistic

## Weather Is Favorable in Most Sections Though Some Report Damage to Fruit by Frost. Stock Doing Well.

LEAHY, Douglas County, Wash., April 20.—The spring has been exceptionally favorable for sowing and planting spring crops and the acreage will be about normal. Labor and machinery are no serious handcipa to spring work here. The outlook for crops and fine stock is very favorable at the present time. The ground is in ideal shape and the weather fine. As everything is sky high, I think it will cost as much as we will get, to produce a bushel of wheat, unless the crop is better than the average in this community. W. A. GRAY.

### Fruit Damaged by Frost.

GRANDVIEW, Yakima County, Wash., April 19.—The frost has damaged peaches, pears and cherries. There is some wheat sown and some are planting corn. This is not a wheat country, but mostly alfalfa and orchards. Labor is not plentiful, but we are doing without. Young stock are being sent out to the range for the summer and are in good condition.

E. H. FAULKNER.

### More Hogs and Cattle.

OMAK, Okanogan County, Wash., April 20.—This section is devoted mostly to fruit culture and great attention is being given to conservation of moisture. There is every indication of a good crop this season. Everybody is trying to raise more hogs and cattle and to increase all farm products. There is a scarcity of help, which is making spring work a little behind, but not enough to do much damage so far. J. O. WOODS.

### Outlook Is Favorable.

COLVILLE, Stevens County, Wash.—This spring has been favorable to seeding, especially in the valley, which is subject to overflow. Land which was under water at this time last year can now be seeded. The cold weather has hindered the growth of grass and cereal crops. The outlook at this time is favorable, though a warm rain will be needed shortly. A. R. HAHNER.

### Work Is Well Advanced.

FARMINGTON, Whitman County, Wash., April 20.—The early spring here is making the farmers happy. Wheat seeding is about finished. Some different from last year, when spring plowing began about May 1. Our district over-subscribed its Liberty bond issue by about a third. Our district is the most northern of Latah county, Idaho, the crea mof the Palouse country. Land has advanced about 25 per cent in price this last year. And why not? Our normal wheat crop is around 45 bushels per acre. Prices are good and farmers are all optimistic.

E. O. SIMMONS.

### Pastures Are Better.

SHELTON, Mason County, Wash., April 20.—Up to yesterday spring conditions were exceedingly unfavorable for plowing and seeding Today brings our first cherry blossoms and vegetation is quickly responding to warmth and sunshine. Grazing has improved so that those whose stock got little or no hay during the last 30 days are being relieved of the depressing spectacle of lowing cows and yearling calves wandering through pasture woodlands in search of food. The grass responds quickly to warmth and sunlight and the cows again chew their cud.

SCOTT HAYES.

### More Wheat, Corn, Sugar Beets.

WAPATO, Yakima County, Wash., April 22.—The acreage of wheat, corn and sugar beets will show a heavy increase. In the 1917 season this county raised enough beets to supply one factory; the crop of 1918 is expected to supply three factories. The extra beet acreage will undoubtedly curtail the 1918 crop of alfalfa. Our particular section is largely a fruit district and there have been two heavy freezes that have been disastrous to the peaches and pears. While the loss is spotted, it is in some districts total. Apples have been hurt, but whether enough to affect the crop can not yet he told. Ranchers are doing as little work as they can and curtailing expenses wherever possible. Laborers are getting $50 to $60 and board, and while there is no particular shortage at this time, it is expected there will be when the crops begin moving.

J. F. M'CURDY.

### Large Acreage of Corn.

EUGENE, Lane County, Ore., April 19.—We have had a fairly favorable season for seeding a large crop acreage. The labor situation is somewhat serious. The conditions regarding farm machinery is going to become more severe this year than previously. The condition now for crop and live stock production in this county is excellent, except in regard to sheep. The number of sheep in this county is lower than in times past. The First National bank of Eugene here is considering plans, however, to help the farmers increase the number of sheep in the county. It is difficult to say what the wheat production will cost this year. Machinery is much higher and labor is more than double. This will mean increased cost, which under the varying prices at present, is difficult to estimate. One of the most noticeable instances in the increased crop production is the large acreage of corn that will be planted this year. The corn acreage for the coming year will be more than double. I believe this is a result of the successful corn show held here this last year. I think one is safe in saying the corn show was worth $5000 to the county last year.

N. S. ROBB.

### Weather Favorable to Seeding.

YAKIMA, Yakima County, Wash., April 18.—The spring in this county is especially favorable to the seeding of large crop acreage. While I have not had an opportunity to make definite survey of crop conditions, I believe it is safe to say that we have quite a large increase in the wheat acreage on irrigated land. This is especially true of the Indian reservation and the early seeded wheat is up in excellent condition. The conditions of labor and machinery have not proven any great handicap during the planting season. Wages are, however, considerably higher than in former years. I think we

# Get the War News

**Twice-a-Week Spokesman-Review, One Year**
**The Washington Farmer 3 Years, Both for** **$1.00**

THIS liberal offer puts within your reach a paper which you and your family will surely want in these stirring war times.

We recommend The Twice-a-Week Spokesman-Review to our readers because its news is complete and reliable. Its semi-weekly summary of the war will keep you up-to-date without your having to wade through a great deal of reading matter. The Twice-a-Week pays particular attention to the events of special interest to the people of the Pacific Northwest; covering the progress of the draft, troop movements, and all other details in which you are particularly interested. Names of killed, injured and missing will always be given as soon as issued by the military authorities. In addition the Twice-a-Week brings you a reliable summary of the general news of the day and many entertaining and instructive features for the family.

Purchased in any other way The Twice-a Week will cost you $1.00. For that $1.00 you can now get The Twice-a-Week for a year and your state farm paper for three years as well. It is a remarkable offer at any time; especially so in these war times.

# Huns Take Kemmel Hill

## *French Offer Heroic Resistance*

Kemmel hill, a height which has been looked upon as the key to the southern side of the Yyres salient, and one of the most important strategic positions on the northern battlefront in France, has been taken by the Germans. After a defense which will become one of the heroic chapters of the war, the hill was surrounded and the French forces entrenched on its slopes were overcome.

The loss of the hill, which is admitted in an official statement by General Haig, brings to the allies a realization that the whole Yyres position is in peril from the German drive northward from the lowlands lying to the west of Armentieres.

The entire allied line in France and Flanders still stands firmly. Nowhere have the Germans been able to make a further dent in it. Hard fighting has been in progress on the Ypres sector around Voormezeele and to the south at Locre. Both places have several times changed hands, but at last reports Voormezeele had been recaptured by the British, but the Germans had obtained another foothold in Locre.

### The Last Reserves.

"In the end it will be a question of who has the last reserves," said General Delma Radcliff, chief director of the military operations in the London war office in a review of the western front situation. These reserves are now in the hands of General Foch, in whom both armies have the fullest confidence. He has so far employed only a small proportion of his available reserves, and this is a great augury for the future.

The Germans, in their attack on the northern battlefront, have occupied Kemmel Hill, General Radcliffe stated. He declared it was perfectly possible for the allies to hold onto the Ypres sector even with the Germans on Kemmel Hill, but that it was not convenient to have them there, and it was hoped to eject them.

"The net result in the Kemmel sector so far is that the Germans have gained about 2000 yards on a front of about 1200 yards. This gain is not large, but it involves very important ground, and there is no question that it is a very serious loss.

"There is nothing definite about the loss of Kemmel Hill, but it is one of the most important tactical features, as the hill is an observation point for all the ground to the north. It still remains to be seen, however, whether it will remain in the enemy's hands.

"Our line to the north is all right, and it is entirely possible to hold on to the Ypres sector even if the enemy is on Kemmel. But his presence there is not convenient, and we hope to get him off."

### A Daring Raid.

"A striking feature of the week was the daring and brilliantly performed raid of the British navy upon the submarine bases at Ostend and Zeebrugge. Immense damage was inflicted that will not improbably prevent further use of these bases by the submarines. A new and carefully adjusted campaign against them has begun which will deprive Germany's naval arm of power to interfere with the entente's transport of armies, munitions and other supplies. The encouragement afforded us by the success of this raid also has more immediate bearings. It may become feasible to land large forces in the rear of Germany's northern forces and outflank them from the coast.

"In all the fighting since April 23," General Radcliffe says, "we see the Germans at their old game of striking at the junction between the British and the French. It is still clear that the enemy's intention is to wear out the British army. He has been unable to break the line of defense of the British and French.

"There is no reason to alter the view that a big offensive on a far greater scale than ever is still to be expected between Arras and Amiens, with the object to drive in and separate the British and French."

### Wilson Wins.

Victory for the administration in the long senate fight over the bill to confer blanket authority on the president to reorganize government departments and war agencies was forecast Saturday in the defeat by narrow margins of amendments exempting the federal reserve board and the interstate commerce commission from the operations of the law. Opponents of the bill concentrated their strength on these amendments. The first was rejected 41 to 37 and the second 42 to 35. Democratic senators Chamberlain, Gore, Hardwick, Hitchcock, King, Reed, Smith (Ga.), Thomas, Underwood and Vardaman voted for the amendment, while republican senators Baird, Colt, Jones (Wash.), McLean, McNary, Nelson and Warren voted against the amendment.

### Third Liberty Loan.

Nineteen days of the third Liberty loan campaigning closed Saturday night, with the government assured of $2,178,877,050, or 70 per cent of the $3,000,000,000 minimum required. To reach the minimum by Saturday night, when the campaign closes, it will be necessary to maintain this week a daily average of $117,000,000, and to reach the desired oversubscription of $5,000,000,000, $445,000,000 is required for this week. Three districts, Kansas City, Minneapolis and St. Louis, had oversubscribed by Saturday night.

### Quit War Tasks.

It is understood at London that Lord Northcliffe, chairman of the London headquarters of the British mission to the United States and director of propagandas in enemy countries, has tendered his resignation on account of ill health, also that Baron Rhondda, the British food controller has resigned, having been absent from his position for some weeks owing to illness; also that Lord Rothermere, who is a brother of Lord Northcliffe, has resigned as secretary of state for the air forces as a result of ill-health.

### Embargo by Holland.

Holland has placed an embargo on the exportation from the Dutch East Indies of tin, tin ore, cinchona bark, quinine, quinine salts and kapok, all of which are needed in large quantities by the United States for war purposes. It is suggested that this embargo has been placed in retaliation for the American requisitioning of Dutch ships.

### Counter Revolution.

While no telegrams have been received from Petrograd for several days there are rumors from Finland that Grand Duke Alexis Nikolaievitch, son of the former emperor of Russia, has been proclaimed emperor, with Grand Duke Michael Alexandrovitch as regent, the real leader in Russian affairs. In well informed circles this is taken to indicate that Germany is intending to carry through a well-formulated plan for restoring the monarchy in Russia.

## Big War Map for Two Subscription Orders

A splendid four-page war map of the battle front in France, originally published in the Spokane (Wash.) Spokesman-Review, will be sent to any one who secures and mails us one new subscription to The Washington Farmer.

This map is printed in four sections and when pasted together, according to directions furnished, will give you a map 64 inches long and 21 inches wide; presenting the details of the great fighting territory in such a way that you will be able to follow every detail of the big battles which are now brewing.

# Tobe and Mandy Sigh for U. S. Clerks

By CHARLES C. HART

"I was thinking this morning," said Tobias Simpkins, Clackamas county farmer, "as I was climbing the ladder with one hand and holding the lantern in the other hand, cautious-like so that it would not overturn and set the barn afire; hoisting myself, so to speak, by the bootstraps into the mow to throw down hay for the horses, I say I was thinking.

"That's right, I was thinking about the poor government employe in Washington, how he must be tossing and writhing in his dreams at that very minute of having to get up in the next three or four hours to be at work by 9 o'clock.

"Everybody nowadays almost is pleading for the starving Belginans, but charity, I'm telling you, ought to begin at home. Anyway my sympathy goes out, and it's going to keep on going out, for those poor government clerks, 50,000 of them in Washington, who are fighting desperately, single-handed and alone, as it were, to escape being forced to work eight hours a day.

"It's some labor crusher in congress —Borland I hear is his name, a fellow from Missouri—is trying to get a bill, or amendment or something, through congress to increase the working hours of these clerks from seven to eight hours a day.

"But going back to this morning, if anybody had seen me rubbing liniment on Prince's spavin, and a better, truer, more patriotic workhorse never lived, they'd a thought I was pitying Prince, but I wasn't. Not on your T. T. (Tin type).

"As I said before I wasn't sighing about Prince at all. Indeed no; I was 'all het up,' as Jed Thomas says. Just as I was on the edge of saying something out loud about the slavedrivers in congress who want to make Uncle Sam's clerks, the flower of the nation's manhood and womanhood, work from 8:30 in the morning to 5 o'clock in the afternoon instead of 9 to 4:30, Mandy let out an awful yell. Mandy was milking the cows in the cowshed built off the end of the barn, like as if this was the barn where we are sitting and the leanto kitchen was the cowshed.

"Well, you bet I took my hand off Prince's spavin and set the balsam down and rushed to the door of the cowshed to see what had happened to Mandy. A rat from the corncrib had strolled into the cowstable by way of taking his morning constitutional, and, being new on the job, a city rat perhaps, did not expect to meet up with any one at 4 a. m. Before he knew it, Mister rat found himself lost in the glare of the lantern. Blinded by the light, he began to tack, which took him at right angles square into lantern.

"Mandy saw the rat just as the rat saw the lantern and she must a squeezed the milking parts a little hard just then, because Rose—that's the cow's name—turned her head enough to see the commotion out of one corner of her off eye. Without a second thought she joined in the excitement with a strong right hoof to Mandy's forehead, countering just above the left eye as the prize-fighters would say.

"The bucket of milk, the lantern and Mandy all upset at the same time. The rat vanished into No Man's Land, which is a very large area of a farm barnyard in the darkness at 4 a. m.

"I picked Mandy up and untangled her right foot from the milking stool, and her ankle being sprained, I carried her to the house. We poulticed her ankle and her forehead, but for two days she tussled with a brain fever and was out of her head most of the time. As she came out of the fever, I was sitting by the bed holding her hand. She looked at me and saw my careworn countenance with grief written in every one of my old weatherbeaten wrinkles. She said:

"'Tobe, you're a good man, too good for me. You're worried—worrying about me just as though I was worth worrying about.'

"I looked straight at her and I said, 'Mandy, my flesh has been with you through these two terrible days that you have struggled between life and death, but my heart, Mandy, has been with those poor government clerks in Washington. It takes a good constitution to bear what you have gone through in the last two or three days, Mandy, but it requires the fortitude of Job to withstand the contemptible attacks on their daylight freedom that our government workers are going through in Washington in these dark days.

"Then I told Mandy about what some busy body was trying to do to the toilers in Washington and she cried and said she was ashamed of herself to let the kick of an ignorant and, at other times, phlegmatic cow put her to bed for two whole days—two days wasted for nothing except brain fever and a sprained ankle—when our boys and girls, and uncles, and grandfathers in government employ in Washington are enduring so much and complaining so little.

"So saying, she yanked the bandages off her pate and got up and walked and at 8 o'clock that night, when we turned in from work—for we usually quit earlier than our neighbors—I found Mandy doing the churning, which I told her she could do just as well the next day. But no! She said there would be no more saving daylight in our family until there was better news from the working front in D. C.

"I'm a changed man. Why, yesterday afternoon I was plowing a piece of new ground when the plowshare caught under a root and the plow handle kicked me like a Missouri mule in the grain sector. That's made me sick many's the time, but yesterday it never fazed me. You may know what it means to be kicked by a plow handle, but if you don't, my advice is, don't experiment.

"Two minutes later a horsefly about four inches from tip to tip got to buzzing around Prince's right flank. As I left the plow to turn my aircraft defenses on the big fly, Prince's tail came swinging around in the same direction. As I swatted the fly the swish of that tail caught me square across the nose and brought the blood out of my left cheek. It didn't pain me, just for pitying those clerks, but I'm not turning the other one.

"It was then 4 p. m. and in my mind's eye I could picture the poor government clerk leaning out of the window of some office in Washington, praying for the clock to strike 4:30 that he or she might turn away from seven miserable hours of—of waiting—waiting for 4:30.

"Jed and Alice Thomas came over to see us last night to ask Mandy and me to help them with some propaganda work. Their little girl, Marthy—I call her 'little' because I knew her as a baby in the cradle and she has never got married—had written them to get the neighbors to write to our congressman urging him to stand by the clerks.

"Marthy used to work for a lumber company in Portland and commute back and forth morning and evening on the traction cars which run right by the corner of the Thomas farm. Martha had it nice, but she got it into her head that she would like to go to Washington to work because she thought it would be great stuff to be where she could yell 'hello' to the president every day and see all kinds of statesmen and diplomats and congressmen and other queer things, and live in a flat, and nothing could hold her.

"The lumber company paid her $80 a month and Jed and Alice charged her nothing for board, but the United States would give her $100 a month. That looked big to Marthy, and besides it was high sounding to her to be able to say she was 'going east.'

"The lumber company offered to raise Marthy's wages, but nothing would do her but to go to Washington. Yesterday Jed and Alice got a letter from her, as I said before, telling about congress trying to perpetrate the eight-hour outrage. She said that heretofore on some days of the year grand opera singing had been given for the clerks at the theaters in Washington at 4:30 in the afternoon, the time that the department let out, and that if the Borland bill passed it would interfere with her opera education. She said, too, that it had always been nice for the lady clerks to go to the hair combers between the time the department let out

(Continued on the following page.)

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Just What Shell Shock Is, and How It's Now Treated

Dr. Hirshberg.

Shell shock, surgical shock, wound shock and similar serious, often fatal, states which have been associated with such wounds as compound fracture of the skull, scalp wounds, deeply penetrating wounds, perforation of the skull, head and abdominal wounds, became such a terrible menace to the armed forces of the allies that in August, 1917, the medical research committee of Great Britain appointed a special Anglo-American committee on investigation to attempt to discover some correct method of treatment of surgical shock and allied conditions.

Professor E. H. Starling of England was made chairman, with Professors W. B. Cannon of Harvard, A. N. Richards of the University of Pennsylvania, and half a dozen other physiologists. The researches were made in hospitals at casualty clearing stations a few miles back of that part of the line where there is and has been constant fighting for more than three years. Only the most serious cases of shock, those which could not be reasonably moved any farther back, were observed.

The essential study of shock had to do with the elevation or fall of the normal blood pressure. Scalp wounds with shock had a slight rise whereas compound fracture of the skull usually registered over 140. If the membranes—the meninges—which cover the brain were also torn, a low blood pressure was registered—often as low as 60. Perforating wounds of the skull exhibited blood pressures as high as 310 if the wounds were very deep into the brain.

**Care of Cases.**

It was in regard to the inquiry as to the effect of operations on the skull under an anesthetic that the attention of the scientists was directed toward blood pressure as an important clue to the solution of shell shock. A man with a severe skull wound, torn meninges, and perforated brain was operated on two hours after the shell hit him. It was not the custom then to take the blood pressure, so his prssure was unknown. The condition of the patient before operation appeared most promising, but changed rapidly for the worse. His unconsciousness deepened, his temperature dropped like a shot and death occurred.

Obviously, it was no easy matter to discover any explanation of such a rapid change. The time was too short for blood poisoning to set in; the heart was all right. There was not enough hemorrhage to cause death, nor did the injury itself touch any vital spot.

Then began a study of blood pressures in all head and abdominal wounds. Operations, too, were delayed for 24 hours and 48 hours with advantage, as was quickly learned from the blood pressure readings. General anesthetics, too, were changed to cocaine, morphine and hyoscine

Since this plan was adopted the surgeons have had no more disasters such as were very common—like the one mentioned.

Patients seen on arrival at a clearing station within six hours after receiving a shell wound in the abdomen had a blood pressure as low as 50; the pressure rose as the shock passed off. Warmth, rest and morphine help to bring about this condition. After 10 hours, however, loss of blood and infection, called sepsis or blood poisoning, again send the pressure downward.

**Blood Transfusion Best.**

"Normal salt solution," as a remedy or treatment for hemorrhage and shock, has brought disappointment. "Physiological" salt solution, it has been found, dilutes and increases the volume of the blood a bit, but it irritates the kidneys, skin and lymph channels, causing them to excrete it so quickly that presently the quantity of blood is less than ever and more concentrated than it should be.

Low blood pressure—hypotension—due to the profound shock of lost blood, sepsis, gas and pain, has been successfully combated by this combination:

| | Grammes |
|---|---|
| Chloride of lime (calcium) | 0.075 |
| Chloride of sodium (salt) | 1.325 |
| Gum acacia ..... | 2.000 |
| Sterile water ..... | 100.000 |

Direct blood transfusion for 15 to 22 minutes, which allows about a pint to a pint and a half of blood to enter the victim's veins, elevated the depressed tension very quickly and permanently.

The happy conclusions drawn from these researches are that excellent results follow the transfusion of blood into the victims of profound shock.

Injection of the calcium gum solution will produce an immediate rise of pressure in the shock of blood poisoning or hemorrhage or both. This may be enough to tide the patient through the operation, which is often his only chance to live. It permits the source of infection also to be sought and removed.

## Shall We Pray?

To the Editor: In these days of darkness when all the world seems to be in the hands of some sinister and deadly power upsetting and perverting all the principles of God, it is becoming more and more evident that people everywhere are turning to God in prayer. Humanity in its stress is groping for light, for courage, for hope. Much of this effort is erratic and confused, but the instinctive motive behind it all is a recognition of the divine spirit, the truth unchanged, unchanging and eternal.

In this strange and ghastly conflict between nations recognized as Christian, is it not possible to include in our prayers the very principle that is to free the world from oppression? Can we not pray for the enemy in this wise, "Lord give them light; give them understanding of eternal truth and righteousness; give them each and individually a strong and overwhelming desire for justice and peace and purity; a desire to do unto others as they would have others do unto them; give them the wisdom to give their cloaks to those who have taken their coats, and to those who have smitten them upon the one cheek to turn the other also, even the climax of all the prayers ever prayed, 'Lord forgive them for they know not what they do' "?

And while we pray for the enemy, shall we not ask for our own nation and people and all the world besides, these same things? The press of our nation is daily pouring forth floods of news describing man's inhumanity to man among the members of our own democracy. The periodicals and the newspapers of other nations are doing the same. Surely then we have sore need of all the light and wisdom there is, and the place to get it is at the very source of all light and peace and good. The way has been made so clear and straight that we have only to ask and it shall be given us. I sincerely believe that if even half or two-thirds of all professing Christians were to pray in this way world democracy would very shortly be an established fact.

In the meantime it is just as necessary to back up our prayers by unceasing activity in every coordinating line. Not activity in shrieking anathemas and bitter criticisms at those in authority who do not agree with us, but in serenely and earnestly doing with our best ability every task and duty set us by our government. It is entirely possible to "render unto Caesar that which is Caesar's and to God that which is God's."

If this were not so these words would not have been left on record by the one and only personality who knew the unfailing ways of peace and comfort and joy, and left such clear and unmistakable directions for humanity to follow, that no one need miss the way.

Only let us pray as Christ prayed, perform cheerfully all duties set for us by those in authority over us, remember the widow and orphan and know for a certainty "that neither angels, nor death, nor powers, nor principalities, nor kaiser, nor king can separate us from the love of God and all the good things of mind, spirit and body that this implies."

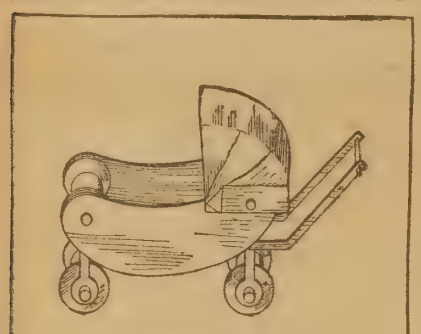
### Spool and Carboard Toys.

Did you ever see a better small doll's baby-carriage than that shown in Fig. 1, with its rounded ends, All that you need to make one like it are four common thread spools, wooden pegs cut of the right diameter to fit loosely in the spool eyes, and one-half inch longer than the spools, a piece of letter paper, some tacks, and glue.

Figure 2 shows details for making the carriage body. Slip two of the short pegs into the holes of a pair of spools (A, Fig. 2), making their projecting ends of equal length. Then cut the bottom strip B four inches long by the width of the spools, bend it slightly as shown, to give a curve to the carriage bottom, and tack the ends to the spools.

The sides C are of cardboard and should be one and one-half inches wide at the widest point, by the length of the carriage body. Punch holes through these sides in the right places for the ends of pegs A to stick through. Before fastening the side pieces to spools A, you must attach the wheels, Figs. 3 and 4. Cut the cardboard uprights D 3 1-2 inches long and 1-2 inch wide; then after cutting holes through each near the ends, for the spool pegs to slip through, cut down the width between the holes to about 1-4 inch (Fig.



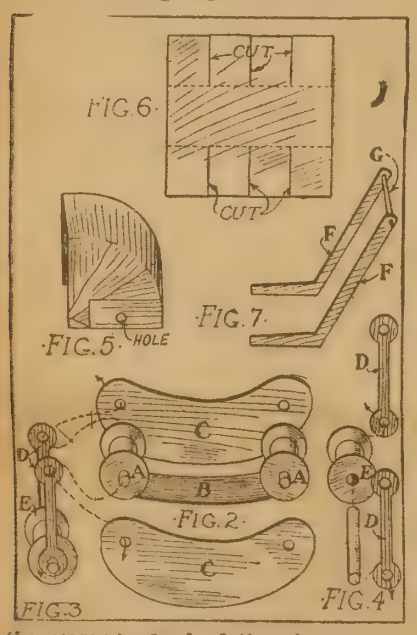


FIG. 1

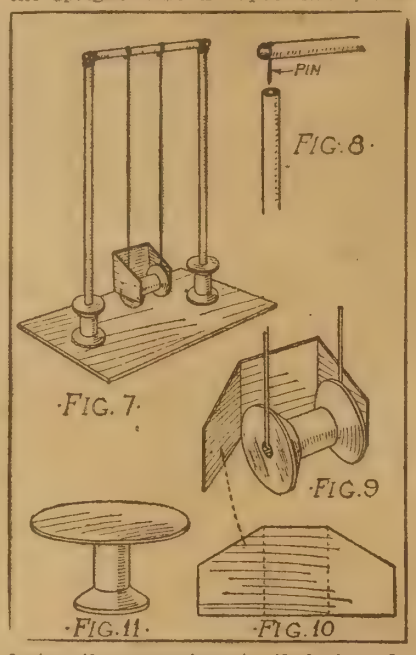
4). Slip the lower ends of uprights D over the pegs in spool wheels E, then the upper ends over the pegs in spools A. Glue the upper ends to the ends of spools A, then slip the carriage sides C over the pegs of spool A.



The carriage top (Fig. 5) is made of a piece of writing-paper about 4 1-2 inches square (Fig. 6), slashed in three places along two opposite edges for a distance of about 1 1-2 inches, and then folded over as indicated by dotted lines. Bring together the ends of

the slasned edged of the piece of paper, as shown in Fig. 5, coat them with glue, and press together until the glue has dried. Punch a hole through each side of the top as shown, for the projecting ends of the spool peg to slip through.

The carriage handle is made of two cardboard strips (F, Fig. 7) and a match (G). Stick the match through holes made near the ends of strips F, and glue the lower ends of the strips to the inside face of sides C (Fig. 1).

The doll swing shown in Fig. 7 has a cardboard base with two spools fastened to them four inches apart to support the framework. Tack the base to the ends of the spools. The framework uprights are tightly rolled tubes of paper 10 or 12 inches long, and the top crosspiece is another paper tube four inches long. Stick the lower ends of the uprights into the spool holes; then

fasten the crosspiece to their tops by running pins through the crosspiece and down into the upright ends (Fig. 8), and then lashing with thread as shown in Fig. 7.

The swing seat is made of a spool with a cardboard back fastened to it (Figs. 9 and 10). Suspend the spool with thread from the top of the swing crosspiece.

For the pedestal table shown in Fig. 11, mark out a cardboard top with a cup or saucer, and after cutting it fasten it to a spool with tacks.

# Tobe and Mandy Sigh for U.S. Clerks

(Continued from the preceding page.)

and supper time, and then she wrote something about something she sometimes goes to at 4:30, which she called a 'tea dansant.' I suppose that's something to do with the Red Cross, for it sounds like French; maybe it's bandages for the hurt boys in the trenches.

"Mandy was deep touched and so was I and last night neither of us could sleep for pondering. Finally about 3 o'clock Mandy nudged me and said, sobbing:

"'Tobe let's get up and write that letter to Washington before milking time. Mandy wrote the letter because the two front fingers of my pencil hand were skinner raw trying to teach a 2-days-old calf how to drink milk out of a bucket. I tell you taking a new calf away from its mother and putting it on the bucket is no fun. This is what we sent:

"'Dear Congressman:

"'As parties who voted for you at the last election, honored sir, we ask you to vote against the Borland bill, which aims to drive our United States workers into slavery; which would make our government offices a sweatshop and the rest of the nation ashamed of ourselves.

"'This question hurts us first thing when we get up before daylight every morning we talk about it at the supper table every evening. You don't know how hard it makes it for us to go back to the field after supper to finish the day's work. It is with heavy hearts that we turn in from our daily toil at dusk to do the chores, because we can't help thinking about the Borland bill, which will do so much to undo the Magna Charta and the Emancipation Proclamation.

"'Congressmen get elected and get to Washington and then forget about the wants of the folks back home and what's burning deep into our hearts.

"'Marthy Thomas, a neighbor girl, is one of the persons that will be helped if you vote right on this bill. We trust you to stand up for humanity.

"'Thank you for the calabash gourd seed sent last November and for the farmer's bulletin on "The Rearing and Education of the Mountain Goat," and the other one on "Farm Work as a Cure for Insomnia." Very respectfully,

"TOBIAS AND AMANDA SIMPKINS."

"P. S. Why not let McAdoo run congress? Ask Hoover if gourd seeds make a good substitute for white flour, and tell Wilson he's a brick the way he's going after Germany. Also thank Senator McNary for trying to get the farmers $2.50 a bushel for their wheat.

"'T. AND A. S.'"

# Farmers Are Optimistic

(Continued from page fourteen.)

might have been quite short of labor in some sections of the county had it not been for the fact that we had an open winter and a great deal of the plowing was done before the ordinary spring season opened. With the exception, perhaps, of a chance for short water supply in one or two districts the crop outlook for the county is excellent for this year and the live stock conditions are about as usual. I have not been in the county long enough to have any definite check on the cost of producing a bushel of wheat and putting it on the market so could not give you any information on that point. J. N. PRICE.

### Crop Outlook Bright.

BICKLETON, Klickitat County, Wash., April 13.—The weather this spring has been ideal for farming, no storms to speak of, and the ground is dry on top, but moist enough underneath. Farmers are about through seeding on the lower levels; around Bickleton they are just fairly started. Fall grain looks excellent. If it does not burn later on it is sure to be a large crop. No grain froze out this winter, even volunteer barley and oats lived through; weeds also did well. Mustard seed will lie in the ground three or four years, and when it comes an open winter like we had this time it will come up. There is a shortage of labor here, but not serious as yet. In harvest time it will be more keenly felt. Horses are higher than last year, and barely enough for farm work. Tractors do not seem to give satisfaction here. Several that bought them have gone back to horses or mules. More combines are being bought this year. There will be about 50 this year in eastern Klickitat, and I don't believe one will be pulled by a tractor. Machinery is so high this year that most every one is trying to make their old do another year. A 70,000-bushel elevator is being built at Mabton, and about a third of the wheat here will go there this year that last year went to Roosevelt, as there does rot seem to be any indication of one being built at the latter point. Every one has changed their clocks here, but it creates considerable confusion among the farmers. Most ranchers find it impossible to come in to dinner at 11 o'clock, and quit work with the sun two hours high.

BERT H. FAULKNER.

### Reseed to Spring Grain.

CENTERVILLE, Klickitat County, Wash., April 20.—The ground here is drying out fast, without any rain to speak of, and there is the usual rush to get the plowing done. There is a good deal of reseeding to spring grain.

While a good deal of grain is in fine condition, there is an inclination to reseed all the poor grain, as there is plenty of seed to be had. The labor question is a bad one. With some it will be impossible to get their work done because of no help to be obtained. Every engine that can be used for plowing purposes is being worked to the limit. The live stock condition is all right here; and a good many more than usual of the small farmers have a small bunch of sheep on hand. The cost of producing a bushel of wheat this year will naturally be considerably advanced. With a prospect of $6 a day harvest help the expenses will be high. It will be almost impossible to get the help at any price, the way I see it, as it is impossible to get a man to plow now at any wage, and it will be harder at harvest time. The fruit here, so far, is in good shape.

CLARENCE A. LESTER.

### Cattle in Fine Condition.

SOUTH BEND, Pacific County, Wash., April 5.—There does not seem to be any lack of patriotism among our farmers generally speaking. They are doing their utmost under often times trying situations with the labor problem. This is one of the biggest spruce sections in the United States, and men are needed in the logging camps and shipyards so badly that our farmers are working harder than ever to meet the shortage. One of our enterprising young farmers at Marlo has purchased a milking machine and a tractor. Dr. Garret, state veterinarian, completed a test for tuberculosis. He tested 51 animals and found that 98 per cent were free from tuberculosis. At a recent auction on the Dehinmen ranch good grade cows sold at prices ranging from $110 to $175, an excellent price for cattle. This winter has been an ideal winter for cattle. Some of them have been left to range all winter, and many are sleeker and fatter than those fed in the barns. We have been having a week of sunshine, and it has given opportunity to plow and sow the spring crops. The ground has dried out considerably in one week's time. We have had a few heavy frosts, but these did not damage the fruit buds, for the buds had not developed enough. The cranberry growers have an expert on the bogs tsudying, the plants for pests and diseases. An effort has been made to interest the boys and girls in pig clubs, rabbit clubs, garden clubs and canning clubs. The commercial club of South Bend has a committee composed of the county agriculturist, one of the ministers and the club secretary to look after this work. The children in the country are better organized than the children in town. One of the owners of the local cannery urges the children to raise vegetables and fruit for the cannery. He thinks children will be more interested if there are profits for them.

MRS. WINNIFRED BUCKINGHAM.

### Are Doing Their Best.

RAINIER, Thurston County, Wash., April 15.—As far as I know, every farmer is working to the utmost to raise as big a crop as possible this year. If we can get the weather to go with it we will have a bumper crop. If patriotism was lacking anywhere the third Liberty loan has put it into the shade, and great enthusiasm is shown everywhere. In the little town of Rainier the chairman just told me that he turned in to the county board on April 13 $25,100 for Liberty bonds, and applications were coming in right along; and Thurston county has gone over her allotment outside of what the state purchased. We had a very open winter, but since March 1, for the most part, it has been cold and rainy, and some heavy frost, with sleet April 14. Farm work is getting along in pretty good shape. Pastures are growing slowly, too much frost for much growth of grass. Fall sown vetch and wheat are doing well. Stock has come through the winter in good shape. About all the farmers are keeping all the dairy cattle they can take care of.

L. F. DAVIS.

### Promise Good Crops.

LA CONNER, Skagit County, Wash., April 13.—There seems to be no lack of patriotism in this community except in very few cases, and the people seem to be waking up to the fact that this country is really in this for keeps, and in nearly all cases they mean to stand back of the government to the last. The farmers are going the limit with their crops. This is not a wheat section and only small tracts are being put in. The strongest crops are oats, hay, field peas and garden seed. In the last named there are cabbage, beets, spinach, turnips, parsnips and mangel seeds. The spring work has been progressing very favorably and indications that large crop acreage will be put in without any handicap except that of labor, and that is causing no little trouble. The crop outlook at the present time is very promising, and in case of a contract crop the grower seems to have little fear of a failure. IVAN ALEXANDER.

### Spring Work Begins.

OMAK, Okanogan County, Wash., March 23.—After an open winter we are having an early spring, and pruning is pretty well along. Cultivation will soon begin. Work teams are scarce. Tractors are coming into use more every year, and farmers are getting more useful machinery and autos. The higher prices for farm product is making farm life more attractive. An unusual effort will be made this season to raise food, and this section will do all it can to supply the demand. Farm labor is scarce, and many will be handicapped for money to carry on the farm work to produce a crop. J. O. WOODS.

### Must Awake to Needs.

CATHLAMET, Wahkiakum County, Wash., April 5.—There is no lack of patriotism in Wahkiakum county as far as our farmers are concerned. No doubt the war situation is not felt as keenly here as elsewhere because this community is not thickly populated and is isolated from the rest of the world. While it is somewhat difficult for our people to practice food conservation it is not due to any unwillingness on their part. Gradually we find the people becoming more interested in the various activities of the war. A. T. FLAGG.

**American Sector on Firing Line.**

American troops permanently took over a part of the firing line as an American sector in January, 1918.

## The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.

By LEWIS B. MILLER.

Copyright, 1914, 1915, by Lewis B. Miller.

**Synopsis of Preceding Chapters.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination — a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their saltmaking and hunting. After exciting experiences with a buffalo herd and with a bear in a cave, they find their first fresh sign of Indians — moccasin tracks in the snow. And then, in the dead of night, a scouting party visited them preparatory to an attack. The attack followed soon, and would have resulted in the capture of the boys by the savages had not a violent earthquake frightened them away. It was only a short time, however, till they were in the hands of the savages, led away capive. They remained captive for some time, narrowly escaping being burned at the stake by their enemies. Ben was saved by Watermelon, a big, fat squaw, who claimed him as her husband. From both Watermelon and her savage tribesman Ben and Jodo escaped, but only to battle with terrible cold and starving wolves during their flight.

### CHAPTER XIV.

**Out at the Cave's Back Door.**

Ben awoke from time to time; but it was not till the sun had sunk low that he sat up and stretched himself, then got to his feet and walked out toward the mouth of the cave. When he looked down at the water, their borrowed canoe was where they had left it. He could not catch sight of the sun, but some tree-tops gilded by its yellow light meant that it was setting. When he returned to where their things were, Jodo was awake.

"What now, Ben? Shall we paddle back to the Osage as soon as darkness comes on, and then on down the river? Or shall we stay here tonight?"

"That's just what I've been debating. I'd like the best in the world to be at our camp on the Big Niangua, and to get to doing something there's money in. But if we hurry on back, I'm of the opinion we shall find the Osages there waiting for us. Of if not that, they'll be coming in a day or two, and they won't give us any peace. It'll be fight or run again. If we had Spunky and our pack-saddle and traps, I'd be in favor of making a circuit of a hundred and fifty or two hundred miles, like we started to do, and——"

"And maybe the Indians would overtake us again, like they did do."

"Yes. And maybe we'd be too sharp for them next time. But as we haven't either our pack-mule or our traps, I'm thinking we'd better linger by the way for a few days, till the Osages have time to visit our camp and find out we're not there. After that maybe they'll leave us in peace till we can close our winter's work and paddle away toward sunrise."

"Perhaps that's best. We're likely to get captured again if we return to our old stamping-ground just now."

When night had come on, and the light from the cave's mouth had almost faded out, the two in hiding, who did not care to sleep again, longed for a light. They could have kindled a fire, but so small was their supply of fuel that it seemed not worth while. And even a small fire would doubtless fill the cave with smoke. So they walked up and down in the dark, or sat on their bed and talked.

"If we stay here tomorrow, Jodo, as we shall have to do if we spend the night here, I'm in for getting out and looking up a few pine-knots. Then we can explore the cave while we've nothing better to do. I'm wondering if it extends far."

"Not very far, I'd guess. But we wouldn't dare try to explore it without a light. There's always danger in a cave—danger of getting lost, or falling over a ledge, or dropping into a hole."

Well on in the night, when they felt that they could sleep again, they lay down on their bed. For a while they kept talking, but at last they became silent, and both were half asleep, when they were aroused by soft but very distinct footfalls coming through the cave. Suddenly the footfalls ceased, as if the approaching beast had just discovered them, and a hoarse growl startled the cave's stillness! Both sat up instantly, wide awake.

"Must be a bear!" Jodo was feeling for his weapons.

"Bear or panther it sounded like!" And another growl answered Ben's words.

Both now leaped to their feet and stood with cocked rifles, listening for any evidence that the wild beast was approaching, but it was no nearer. Ben was thinking of trying to strike a light, when the footfalls were heard again, this time in retreat. Ben groped around till he found a loose stone, which he hurled toward the footfalls. Another growl was heard, now a good distance away. The two found other stones and threw them, only to awake the echoes of the cave.

"If I'd even guessed that varmint was in here, I couldn't have slept so soundly today."

"Neither could I, Jodo. We were in danger all the time and didn't know it. That beast might have come along any minute and landed kerplump on top of us!"

"I'm wondering how the creature got in here. I doubt if he could climb the cliff; and I doubt if he'd try it with that water under it."

"I doubt it, too. And if he didn't come in there, the cave must have another outlet."

"Well, no matter how the varmint got in here, we can't both go to sleep at the same time hereafter."

"No, I should say not. In fact, I couldn't sleep unless I knew somebody was on guard. So you can lie down whenever you feel drowsy, Jodo. It won't bother me to keep awake the rest of the night."

"I don't feel sleepy now. Later I may take another nap."

For a good while they sat and talked, to keep each other company. Finally Jodo fell asleep. Now Ben sometimes sat on the edge of their bed, and sometimes sprang up to tramp to and fro on the rocky floor. He had to depend wholly on his ears to warn him of the approach of danger. But the remaining hours of darkness passed without further cause for alarm.

When daylight came, Ben walked to the cave's mouth and look down. Their canoe was floating where they had left it. After gazing out a few minutes, he let their water-gourd down with their rope and drew it up full of water. When Jodo awoke, they ate their breakfast. After that Ben lay down to sleep, while Jodo stayed awake to watch.

While his companion was sleeping, Jodo, to relieve his restlessness, tramped back and forth, starting at the cave's mouth and walking as far back as there was light to see. Finally he seated himself on the edge of the bed, near his sleeping partner. He was thinking of his friends at home, and for some reason was feeling not a little discouraged and lonely. He wondered if he and Ben would ever see the settlements again. And even if they did, would they be able to take anything with them to pay for their winter spent in the wilds?

Suddenly his gloomy meditations were cut short by a not very loud, but very distinct sound. It came from beyond the cave's mouth. Perhaps his ears had deceived him, but the sound was much like the dipping of a paddle.

Startled the young fellow sprang to his feet, instinctively grasping his rifle as he did so. After listening a few moments, without hearing anything to confirm his suspicions, he stole noislessly toward the mouth of the cave. When near enough he stopped.

At the foot of the cliff, beside the canoe, floated another canoe with five Indians in it!

As it happened, none of the Indians was looking up at the moment, and Jodo dodged back without being seen. Swiftly he ran back through the cave and woke Ben.

Much surprised was that young man. Having found the stolen canoe under the cave, the Osages could scarcely fail to guess where their runaway captives were now hiding.

"What do you say they'll do, Ben?"

"That's not hard to guess. They'll try to get in here to us somehow."

"Yes, I've no doubt they will. They know we're not armed to speak of, and they won't be afraid of us. But can we keep 'em out?"

"We'll certainly do our best to."

Not thinking it prudent to put their heads out, they crept close to the edge and squatted down to listen. For a time they heard nothing. Finally, though, they saw something that startled them very much. It was a buffalo-hide rope that was being let down from above, past the mouth of the cave!

For a few moments they supposed that an Indian was about to come down the rope from the top of the cliff. But a little later the tightness of the rope told them that an Indian was coming up from the canoe below; and the rope's movements meant that he was being drawn up.

"I can stop that!" whispered Ben as he jerked out his hunting-knife and stood waiting.

The moment he caught sight of the Indian's black head, he leaned forward and drew his knife across the tightly-stretched rope.

Discovering Ben's knife, the Osage being drawn up uttered a fierce war-whoop. At the same time the Indians in the canoe below began to yell, and likewise those on the cliff above.

But it was all to no purpose. The buffalo-hide parted under the keen-edged knife, and the warrior dropped straight down, clutching at the rocky ledge as he fell! Ben leaned over, not in time to see the falling Osage strike, but in good time to see the canoe filled with Osages overturning, and to see all the Indians struggling together in ice water. There was now no danger from them and Jodo also came close enough to look down.

For the five Osages in the water the misadventure was no laughing matter. Between two upright walls of rock, they would have to swim more than a hundred yards downstream before they could find a place where they could climb out.

While Ben and Jodo were still gazing down, one of the swimming Indians glanced up and saw them. Their grinning faces must have provoked him, for he uttered a yelp of rage. Ben waved his hand at them, and called out the Osage word for cold.

"That disposes of those fellows for a time," he remarked, after the swimming Osages had disappeared. "The weather is pretty sharp today, and they'll have to start a fire and dry themselves before they can do much more. And they've all got their guns wet, or lost them altogether. They won't be dangerous for a good while."

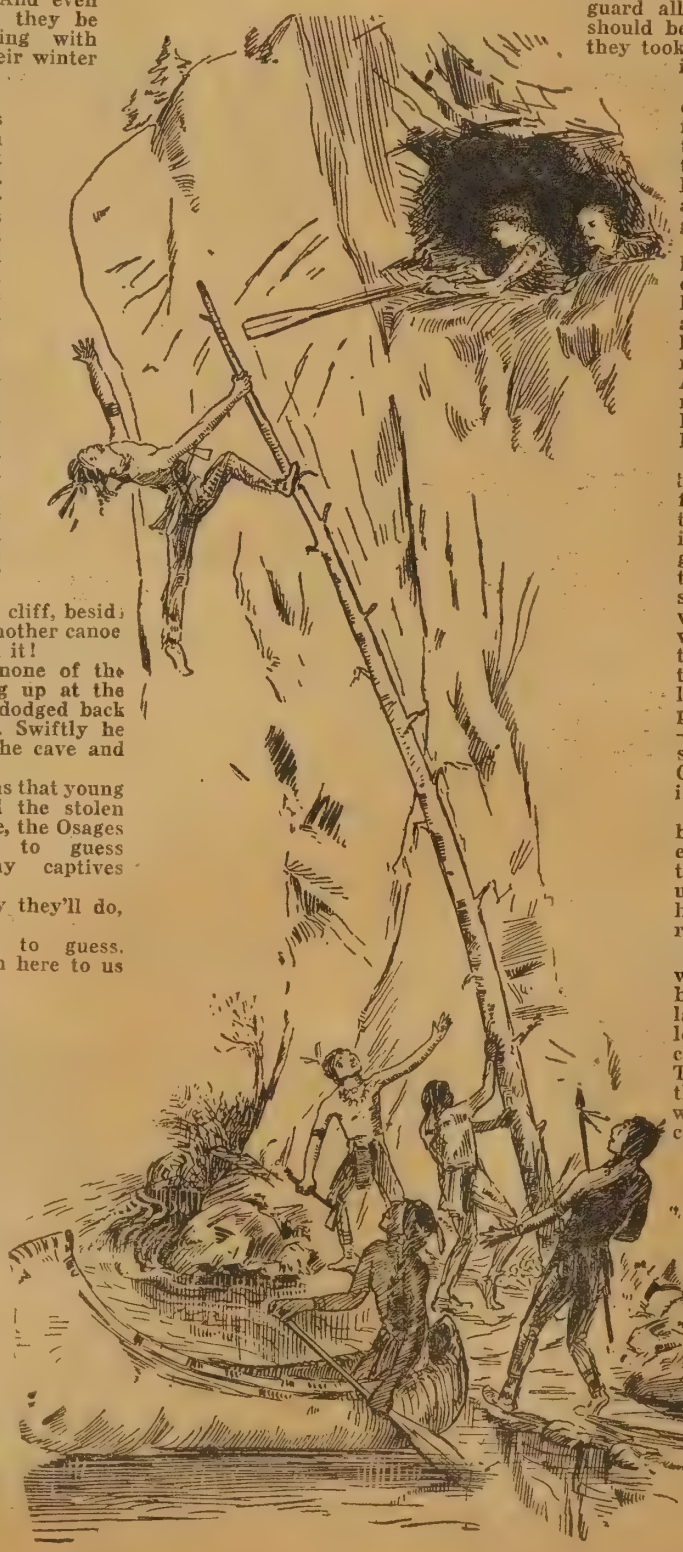
"No. They'll try again, and keep on trying again."

"And what can we do?"

"Use our heads to outwit them. But they'll probably starve us out before we can tire them out. That's their advantage."

Hours passed, and nothing had been heard or seen of the Osages. Jodo suggested that as one of the two in the cave would have to be on guard all the time now, the other should be sleeping all the time. So they took turns at watching and lying down.

During the rest of the day the Osages made no further attempts to get into the cave. Ben, suspecting that something would be likely to happen not long after dark, chose to stand guard first.



For an hour or two after his companion had lain down and gone to sleep, Ben walked restlessly back and forth in the cave; but he went often to the cave's mouth to look and listen. At length he began to hear noises in the water below. He crept to the edge of the ledge and peeped over.

Now he could make out two canoes down there, both filled with Indians. What they were doing or preparing to do he could not even guess. Later he discovered that they were pushing something up the limestone wall. He suspected what it was; and when the end of the pole came up a foot or two above the edge of the ledge, he knew that his suspicion was correct. The pole —an Indian ladder—had short limbs on it, and an Osage would soon be climbing it.

Ben did not wake Jodo, but crouched low and waited. He got hold of one of their paddles, intending to use that on any Indian's head that came within reach.

Soon he heard noises which told him that somebody was coming up the ladder. Peeping over the ledge, he saw a warrior climbing slowly, cautiously. The pole was standing in the water, but the Osage was coming from one of the canoes.

When the climbing Indian was so close his breathing could be heard. Ben put the paddle against the top of the pole and gave it a sudden outward push. And he kept pushing as long as he could reach it. Then he looked down and saw both pole and Indian falling away from the cliff. But scarcely had the splash occurred when two rifles crack-

The Indian fell with a crash down amongst his fellow redmen below.

ed from the top of the opposite cliff, and both bullets struck the rocky floor near the white man. But for the dim light he might have been killed.

Hastily he sprang back, out of sight of his enemies. Evidently the Osages were in a murderous mood, and stood ready to kill the fugitives if they could.

Jodo, awakened by the rifles, now came to join Ben. The two whispered together of the danger that threatened them.

"I think we can keep them from getting into the cave tonight, but I don't see how we can tomorrow, Jodo. In daylight, if we venture close to the cave's mouth, the redskins on the opposite cliff will see us and shoot us."

"If we just had plenty of powder and lead——"

"Yes, but we haven't any powder and lead to speak of. And even if we had, and could keep the Osages out, they could sooner or later starve us into surrendering."

"Then what can we do, Ben?"

"I'm thinking we'd better find the back door to this cave, if there is a back door, and get out of here and travel as fast as we can hoof it."

"And where shall we go?"

"I've been told that a few days' travel south of here one can find an occasional hunter's cabin. I'm thinking we'd better make for that country and try to obtain a supply of ammunition. After that we shall not feel so frightfully helpless."

"Well, then, the sooner we get started the better. We don't want to wait till we haven't any rations to travel on. But can we be certain that this cave has a rear outlet?"

"I don't know how else that growly beast got in here."

"But will the beast let us get by him?"

"When we go with a light, he'll be apt to keep out of our way. If he doesn't, we shall have to shoot him. He may be out himself. It's night-time, hunting-time with him, and the chances are that he is out."

"Well, we've got sticks enough to make a light. They're not good material for torches, but maybe they'll keep blazing till we get through."

"All right, Jodo. You gather up some of these leaves and go back there, entirely out of sight of the entrance, and strike a fire. When the sticks get to blazing well, let me know. I'll stay here and see that no redskins get in till we're ready to start."

"I will. But be careful, Benoni, and don't get shot. That would be dreadful, even if you were only wounded."

Jodo gathered up their few sticks and some leaves and went on into the cave. His companion sat down near the edge of the ledge to keep watch. Hearing paddling below, he found a good-sized stone and hurled it down. The canoe was quickly in retreat. He listened for it to return, but failed to hear it.

Soon Jodo came running through the darkness to report that the fire was burning, and that if Ben did not hurry the cave would be filled with smoke.

"We must leave the buffalo-robes and the water-gourd, but we'll take the lariat."

"Why leave the buffalo-robes, Ben? Raw as the weather is, we can't sleep warm without 'em."

"I know. But we've got to travel light and travel fast, or the Osages will run us down before we can reach a hunter's cabin."

"But we haven't much to carry. If you can take care of all the blankets. I can fold the robes up and make a small, tight package of them, and fasten it on my back. I've got deer-skin strings enough."

"All right, then; we'll try to take them."

Soon each had his pack on his back. With his rifle in one hand. Ben took up three of the blazing sticks, holding them together so that they would keep blazing. Jodo gathered up the sticks that remained. Then they started.

The cave, as they advanced in it, wound first in one direction and then in another; but it continued of about the same size, and apparently on the same general level.

When the fugitives had hurried on a few hundred yards, they heard a loud growl ahead. Peering into the darkness, they could see eyes shining, and could make out the faintest outline of a wild animal—a panther. Both stopped suddenly.

But Ben started on. "He'll get out of the way before these lights come very close, I'm guessing."

He was right. The beast stood growling till they were only a few yards away. Then he turned tail and fled, growling as he ran. Soon he was out of sight.

On the fugitives hurried. Not till they had traveled nearly a mile was there any change. Then the air felt colder, and they came to where the passage way was almost choked by boulders. Over the boulders they climbed, to find themselves under the open sky. They were on a steep hillside, and a mountain rose behind them. They had come under the mountain.

A snow-drift lay just outside of the cave, and they promptly thrust their blazing sticks into it, to extinguish them. The panther must have fled out of the cave, for they failed to catch sight of him again.

The stars were shining, and in the leafless woods there was light enough for the two fugitives to see their way. In all the open places the sunshine had melted the snow, and they would avoid the snow-patches as far as they could, at least for the first mile or two.

Fifty yards down the hill-side to a ravine, now dry, they hurried. Then they climbed a high, wooded hill. From the top of that hill they got their bearings, and were soon tramping southward as fast as they could walk. Very important was it that they should be many miles away when daylight came.

(To be continued.)

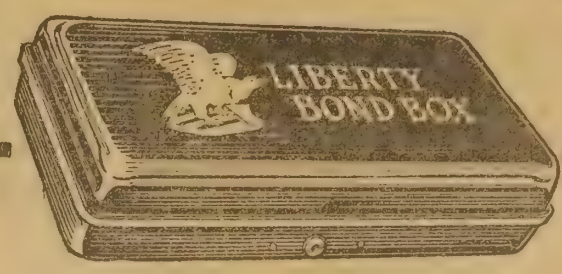
## What Big Brother Saw in One Day

How many of us, in these days of stress, take time to pause for a brief moment now and then, to see the beautiful things by which we in America are surrounded—especially those of us whose privilege it is to live in rural districts, close to nature, where God's handiwork is most apparent?

It seems to me that there never was a time in all the history of the present generation when an inventory of our daily blessings and the right thinking that follows would do as much to bring about that peace of mind which is so much needed during the troubled days which we are experiencing.

Desiring to encourage that idea among our children we planned a little contest between two of them, Big Brother, who is 9, and Little Sister, who is 6. To make the contest more spirited we offered a small cash prize, with war savings stamps in view, to the one who at supper time on the following day submitted a written list of the largest number of beautiful objects or activities which had come under his observation during that day. We explained that there is beauty in many of the most ordinary things we see every day if we would only look for it.

Well, the contest started the next morning. Both Big Brother and Little Sister were up early. Big Brother, of course, had the advantage. He was older in the first place and could make a note of the things he saw beauty in as he went to school and about his play. Little Sister was compelled to whisper her findings to her mother, who faithfully made note of every one. There was great activity as supper time drew near. As we had expected, Big Brother won. Here is the list of things beautiful which he observed in one day. The list is just as he prepared it:



Saw morning star.
Saw boy help mother.
Saw boy help a bird with a broken wing.
Saw sunshine.
Saw dew on lawn.
Saw dew on hedge.
Saw robin building a nest.
Saw daffodil.
Saw peach blossoms.
Saw green fields.
Saw apricot blossoms.
Saw hyacinths.
Saw girl smile at me.
Saw a boy laughing.
Heard a meadow-lark sing.
Saw the green hills.
Saw mountains with snow on their caps.
Saw the blue sky.
Saw a United States flag waving.
Saw a girl give a boy a sheet of paper.
Saw sun when nearly down.
Saw a bluebird soar among the clouds.
Saw a robin on the lawn.
Saw the bees getting honey out of the fruit blossoms.
Saw all the children shout and laugh after school was out.
Saw James and Helmer playing in the sand pit, laughing.
Saw tulips.
Saw cloud shaped like a carrot.
Saw mother love Frederick.

Surely, Big Brother and Little Sister, too, have a little different outlook on life, even for the one brief day they spent preparing lists of the things that seemed beautiful to them. We are quite certain of one thing: That the little contest filled our home with more simple joy than had been found there for a long time. R. W. F.

### Winter Wheat Acreage.

The government reports 42,170,000 acres of winter wheat sown, the largest acreage in history, but under conditions not as favorable as last year. However, a crop of 582,000,000 bushels is within the possibilities. Last year's crop was 418,000,000 bushels.

# For Your Valuable Papers You Need This Strong Box

## Now a Necessity in Every American Home

In years to come, when your Liberty Bonds and War Savings Stamps mature, you will want to be able to put your hands right on them. Now that you have sacrificed to buy them, in justice to yourself insure them against being lost or destroyed by putting them in this strong, permanent box. There is room enough to include your insurance and other private papers.

Made of Bessemer steel, handsomely finished in black hard-baked enamel and decorated with national emblem in gold, the safe-box is artistic and indestructible. The size is 11½ inches long, 5½ inches wide, 2½ inches deep. The box locks securely, and we supply you with two keys.

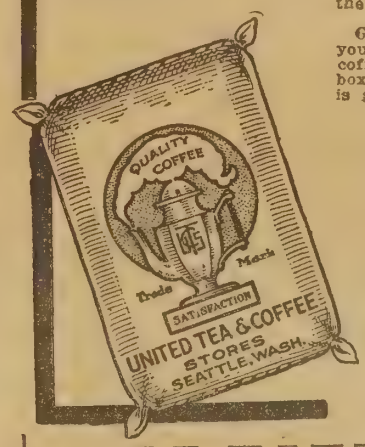
John F. Janssen.
Who cut one-third off the price of coffee?

## JANSSEN, the COFFEE MAN, Will Distribute 1000 of These Boxes

### *Read This Unusual Offer:*

Because I know that this box is needed in every home, and because the fine flavor of my coffee will make each purchaser my permanent friend, I am going to distribute 1000 of these boxes to patriotic families, as follows:

**10** pounds "Extra Choice," a perfectly delicious blend of high grown coffees—better than the most, and as good as the best 45-cent coffee on the market together with one of these handsome steel boxes..... **$3.95**



For two years I have unreservedly guaranteed the quality and safe delivery of this coffee, and have never received a single order back.

## I PAY ALL THE POSTAGE

The price includes parcel post on both the box and the coffee to any place within 300 miles of Seattle.

Guarantee—Your money will be quickly returned if you are not satisfied with either the extra choice coffee or the enameled Bessemer steel Liberty Bond box. The goods are securely packed, and safe delivery is guaranteed.

**The Cloth Bag Makes Splendid Toweling.**

**A BIG STOCK TO SUIT YOUR TASTE**
No matter what your preference in the line of tea, coffee, chocolate or cocoa. I am sure I can satisfy you. Write for free price list showing our complete line.

UNITED TEA & COFFEE STORES.

## "Summer Boarders"

By LISSIE C. FARMER.

The farmer's wife who wishes to swell her income during summer months by keeping "summer boarders" will find most of her patronage coming from salaried people, and women with children. These people come to the country for a change. Do not make the mistake of trying to give them just what they get in town, but rather, in the place of expensive salads, for instance, give them plenty of fresh cucumber, onion, lettuce and tomato combinations; hot and cold slaws with sour cream dressings; chow chow; pickled beets, potato salads, etc. All of these things the country woman can secure from her own garden, and with plenty of ripe fruit, yellow cream, fresh butter and eggs, chicken, and fish from the neighboring stream, the ideal bill of fare for city-tired people has been attained.

Save work, as far as possible. Serve as many raw combinations as you can, to save the heat and worry of cooking. Save laundry work by serving breakfast and luncheon without a tablecloth, substituting mats and doillies. Have plenty of wild flowers, greenery and grasses in the dining and living rooms. Big clusters of fir and cedar branches and oak and maple leaves are a delight to the eye. A screened-in and vine covered porch is a great comfort during hot weather. Choose large bedrooms, if possible, and don't clutter them up with knick-knacks.

Women and children are apt to cause annoyance if the other boarders are unmarried people, but as the former often stay the whole summer through, it is worth while to make a place for them. Often tents or shacks, with board at the farm house, will solve the problem. A fairly substantially built tent house, usually facing north or east, and with a bunk built against the wall, makes a very comfortable summer home. If the renters are to do their own cooking, often the cook-stove can be set up outside the tent. The heavier articles of furniture and cooking utensils should be furnished by the farmer, while the boarder will bring silver, linen, etc. Many mountain and beach resorts are adopting this plan. Keeping summer boarders or lodgers is a good line of business for the woman who manages it right.

### Cafe au Lait.

For the grownups French coffee, or cafe au lait, is a nourishing drink as well as a stimulating beverage.

Make strong black coffee, and while hot add to it one-third or one-half as much scalding milk. Cover and set in boiling water until needed. Add cream when served.

### CLOTHING TO SAILORS
### Must Be of "Regulation" Make

Hundreds of articles of clothing fashioned by loving hands at home must be disposed of by men undergoing training at naval stations as a result of the recent enforcement of rules prohibiting the wearing of non-regulation clothing.

The order which prohibits the wearing of the clothing also prohibits the possession of it, and hits a number of knitted sweaters, helmets, gloves, etc. The order, a copy of which has been posted at the San Diego training station, according to word received here, says in part:

"Men are cautioned that nonregulation clothing is not to be worn at any time on his station. Only clothing regularly drawn from 'small stores' will be permitted."

Practically every man on the station has some article from home which is affected by the ruling, it is said.

The trouble arises with the comforts made by individuals who do not take the trouble to obtain the Red Cross specifications.

### Fruit for Dessert.

By using fruit for dessert instead of rich pies and puddings you will conserve wheat flour and fats as well as sugar. Besides, the fruits are more wholesome and often less expensive. Bake or stew your fruit with corn syrup instead of sugar. The result is very good. For stewing use one-half cup of syrup to one pound of fruit. When dried fruit is used, soak it first in water overnight and cook for 10 minutes.

### War-Time Mucilage.

Get a large mouthed bottle, an ink or vaseline bottle will do. Gather the gum from cherry trees, put it in the bottle and cover with cold water and it is ready for use in 20 or 40 hours or less. As it is used, from time to time, add more water and in this way the children can use it freely with no cost to you. We have used it three years and it fills the bill.

MRS. I. RIGG.

Cheney, Wash.

### Drying Corn and Peas.

To the Editor: As it won't be long until we can dry corn and peas I will tell how I dry them. The corn I cook, then cut from the cob, put on a frame on which a flour or sugar sack has been tacked. Put corn on, cover with cheese cloth and it will dry so much quicker than when put on a table or shelf. The peas I shell, but don't cook. They dry quickly.

### Bullets Never Touch Him.

England has one army man who appears to have a charmed life. He is Captain George C. Foulds, who is now lecturing in this country. Foulds went to the Flanders front in 1915 and has gone through every big battle of the war without a scratch.

## Crochet and Tatting Designs

By WINIFRED WORTH.

**Novelty Braid Yoke.**

Here is something that really deserves the name novelty. You will be much pleased with the results of this design.

Take braid the desired bust measure.

Make 1 dc. in first L. 1 ch. 1 dc in next. Continue across. Going from one cone omit the 1 ch. finish both sides the same, crochet together. For shoulder strap take braid desired length crochet as the other. Attach shoulder straps.

To make beading crochet 1 dc. 4 ch. 1 dc. over 4th spoke. 4 ch. 1 dc. over 4th spoke. Continue around yoke.

**For Edge.** The first hole 1 sc. 3 ch. 1 sl. st. in same hole. 4 ch. 1 sl. st. in same. 3 ch. 1 sl. st. in same. 2 ch. 1 sc. in next hole. 3 ch. 1 sl. st. in same. 4 ch. 1 sl. st. in same. 3 ch. 1 sl. st. in same. Finish arm hole the same.

**Edge for Bottom of Yoke.** 1 dc. in first spoke, 2 ch., 1 dc. in 3d spoke. Continue.

Knit vest yokes are very popular. One of them is shown in the next instalment.

YOUR

# LOCAL HOME PAPER

AND

# THE WASHINGTON FARMER

## For the Price of Your Home Paper Alone

Through a special clubbing arrangement with a large number of newspapers in Washington, we can now send you **The Washington Farmer** and your Local Home Paper at the regular subscription price of your home paper.

## THE HOME PAPER

You alone know the great value of your local town paper. The part it plays in local affairs, the news of the happenings of your community, the gossip, social and commercial life that you wish to keep posted on. It brings the story of the home boys at the front who are fighting for you and our country.

## THE STATE FARM PAPER

The Washington Farmer is your family paper. It keeps you posted on the agricultural developments of your state. It is a complete family farm paper—all the farm news, latest and best serial stories, department for every member of the family—feature sections of every branch of farming, dairying, stock raising, fruit growing, etc. Also colored comic pages and a children's and family page. It is the biggest and best farm paper published in The Pacific Northwest.

**The Washington Farmer Is Issued Every Week**

We are pleased to state that by subscribing now to any of the following papers and paying the regular annual subscription price of that paper your payment will also include subscription to The Washington Farmer.

## Hot Milk Drinks.

Hot milk is the most restful of drinks when one is tired, and a sleep-inviting drink before going to bed. Hot milk is an agreeable change to offer children and a real addition to the supper meal. Why not hot milk between meals, instead of the customary piece of bread? Bring the milk to a simmer, but don't allow it to boil.

### How to Make Good Cocoa.

It is a truism that children should have milk, yet some dislike it. Cocoa, the universal favorite, is a solution. Cocoa and bread is a good supper. For children less cocoa can be used than the recipe calls for—they like it just as well.

1 teaspoonful cocoa
1 teaspoonful sugar
1-2 cup water and 1-2 cup milk or 1 cup milk.

Mix sugar and cocoa and stir in enough boiling water to make a paste. Add one-half cup boiling water, cook 15 minutes. Add milk, heat and serve. If all milk is used, boil the cocoa and sugar with just enough water to make a thin paste. Then add the milk.

### Short-Lived.

"Did you ever hear of an idle rumor that didn't work overtime?"

"Only one."

"And what was that about?"

"Someone who didn't know Mr. Grabcoin very well started a report that he would give away $10,000 to the deserving poor."—Birmingham Age-Herald.

### Time He Was Taxed.

Scoutmaster (on overnight hike with troop)—Bill, why eat so much grub?

Scout Bill (between bites)—I'm trying to produce a well-stuffed skin for the taxidermy merit badge.—Boy's Life.

What a multitude of horrible deeds have been done by men, of which animals have never been guilty!—Our Dumb Animals.

## Home-Made Soap.

To the Editor: I saw your article on making home-made soap in the last issue of The Farmer. As I have very good success making soap from pork cracklings and bacon rinds or rusty bacon after the streaks of lean meat have been removed, I think perhaps my recipe will prove more practical than one using clarified fat.

To each three gallons of water add one can of lye that will stand the boiling process. Heat this to boiling point in iron kettle, then add six pounds of fat and boil until all fat is dissolved. Try a little by cooling; if it hardens, it is done, if not, boil it longer. Remove from fire and cool, then cut into cakes and put to dry.

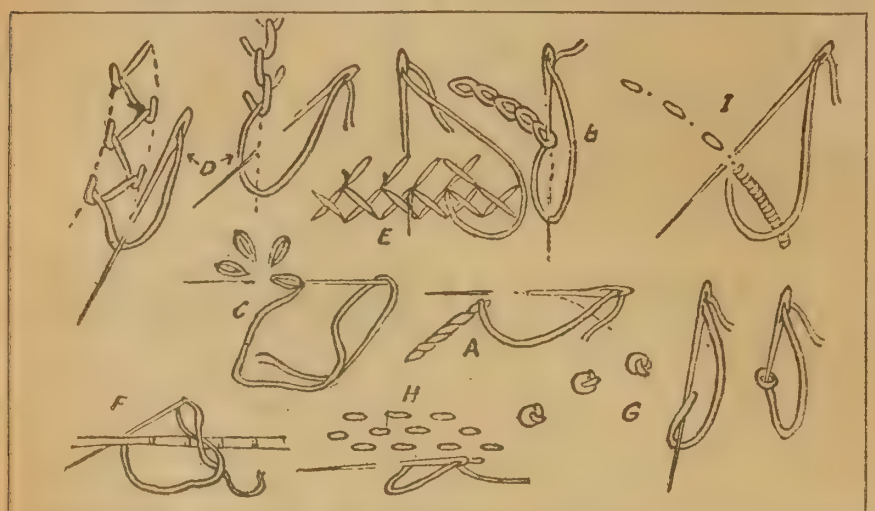
# Inexpensive Trimming for the New Garment



The decorations of a garment need not be elaborate or expensive, says Mary E. Robinson of the University of Missouri in her bulletin, "Principles of Sewing." Self-trimmings or simple embroideries add to the appearance.

A garment may be made very attractive and money may be saved if the trimmings used are of the same material as the garment itself. Following is a suggestive list of self-trimmings.

**Pipings, binding, folds, cordings, shirrings, tuckings, plaitings, pockets, bound buttonholes, buttons, reversed hems.**

If the right colors and materials are chosen, a touch of simple embroidery often adds to the distinctiveness of a garment.

**The outline stitch,** Fig. A, is made on a line from left to right, the stitch being longer on the right than on the wrong side. The thread must be thrown on the same side each time so that the effect will be regular.

**Decorative stitches—A, Outline; B, Chain; C, Lazy Daisy; D, Feather and Briar; E, Cross; F, Couching; G, French Knot; H, Darning; I, Satin.**

**The chain stitch,** Fig. B, may be used as an outline stitch. In making this stitch, a succession of blanket stitches are made one after the other. This stitch may be used for decoration or as a padding for satin stitch embroidery.

**The lazy daisy,** Fig. C, is a variation of the chain stitch. Two stitches only are needed for each petal of the daisy. The first is a chain stitch, the second is taken through the material to hold the first in place.

**Feather and briar stitches,** Fig. D, are variations of the blanket stitch. These stitches make beautiful and effective trimmings. The feather stitch is made with a slanting stitch toward the center, first on the right and then on the left side. The briar stitches are made more nearly parallel, but they alternate on the right and left.

**The cross stitch,** Fig. E, may be made over the threads in loosely woven materials, such as scrim or canvas. In fine materials canvas must be basted into place, the stitches made over this and the canvas removed; or if a pattern is stamped upon the material no canvas is needed. The stitch is made by taking the needle from the lower left-hand corner of the square to the upper right-hand corner, making a slanting stitch. Then a stitch is taken on the underneath over to the upper left-hand corner, brought through the material to the lower right-hand corner, thus making a second slanting stitch which crosses on top of the first and completes one cross stitch. The needle is again brought up at the lower left-hand corner of the next square and the operations repeated.

**Crouching,** Fig. F, is a decorative stitch, which may combine different shades or colors very attractively. Two threads are used in making this stitch. One is held in place on the material with the right hand. The second thread is used in making the stitches which hold the first thread in place. These stitches are made over the first thread and at right angles to it and are made one-fourth to one-half inch long on the wrong side.

**The French knot,** Fig. G, is made by bringing the needle through the material where the knot is desired; the thread is thrown over and under the left thumb, or over the needle, making a loop; the loop is pulled down to the material, and a small back stitch is taken, thus bringing the needle out where the next knot is to be. French knots are very attractive used alone or in combination with other stitches.

**Darning,** Fig. H, is a succession of parallel rows of short, regular stitches. This stitch combines well with the outline or satin stitches.

**The satin stitch,** Fig. I, usually has as its foundation the chain or outline. If the material is especially sheer the stitches are the width of a thread apart. The padding is always made at right angles to the direction in which the satin stitches are to be be made.

# Kulture Is Not New

"Every village they have passed through has been the victim of what is only organized pillage. Every city has been practically sacked, ransacked on system; its citizens plundered, its civil officials terrorized, imprisoned, outraged or killed. The civil populations have been, contrary to the usage of modern warfare, forced to serve the invading armies, brutally put to death, reduced to wholesale starvation and desolation. Vast tracts of the richest and most industrious districts of Europe have been deliberately stripped and plunged into famine, solely in order that the invaders might make war cheaply. Irregular troops, contrary to all the practice of war, have been systematically murdered, and civil populations indiscriminately massacred, solely to spread terror. A regular system of ingenious terrorism has been directed against civilians, as horrible as anything in the history of civil or religious wars. Large and populous cities have been, not once, but 20, 30, 40 times bombarded and burnt, and the women and children in them wantonly slaughtered, with the sole object of inflicting suffering. All this has been done not in license or passion, but by the calculating ferocity of scientific soldiers."

The above was not written, though it might have been, yesterday, last week, last month, or last year. It appeared in the English Fortnightly Review, February, 1871, shortly before the surrender of Paris. Frederick Harrison, the writer, is still alive. Its statements were true then, are true now. Julius Caesar in his Commentaries narrates events which show that even before the time of Christ the Germans demonstrated the possession of all of the rudiments of their modern "kulture." It is no new thing; and hundreds of thousands of men will have died in vain in this war if this sinister thing is not absolutely and utterly exterminated forever by the forces of civilization arrayed against it.

# Men Are Dying Today

As we go about our daily tasks in peace and safety men are dying every minute on the battlefields of Europe to save civilization. Our own gallant soldiers are shedding their blood in France, and our sailors engulfed in the waters of the Atlantic as they go in defense of America's rights and honor.

Upon our performance of the work committed to us depend the lives of thousands of men and women, the fate of many nations, the preservation of civilization and humanity itself; and the more efficient and prompt we people of America are in doing our part, the more quickly will this war come to an end and the greater the number of our soldiers and sailors who will be saved from death and suffering and the greater number of the people of other nations released from bondage and saved from death.

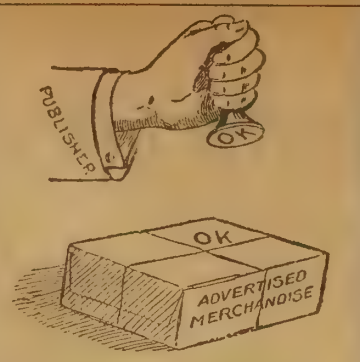
To work, to save, to economize, to give financial support to the government is a duty of the nation and to the world and it is especially a duty to our fighting men who on land and sea are offering their lives for their country and their countrymen.

## Salmon Pudding.

One can of salmon. Remove bones and skin. Fill a pie dish with alternate layers of bread crumbs and salmon, top layer, bread crumbs. Place small pieces of butter on top and moisten pudding with a little milk in which one egg has been beaten. Bake in a moderate oven 35 minutes.

### Sardine Toast Sandwich.

Two slices of bread one-half inch thick, toasted and buttered. Have ready minced sardines. Place layer between toast, and on top put two poached eggs. Garnish around plate with shredded lettuce slightly salted and peppered.



### Parkin.

Two tablespoonsful fine oatmeal; 1½ tablespoonsful corn syrup, 4 oz. shortening, 2 oz. brown sugar, ½ oz. ginger; a little milk, sufficient for one cake.

Method—Rub the shortening into the oatmeal, and add the sugar and ginger. Stir in the syrup with a wooden spoon. Rinse out the syrup vessel with sufficient milk to make the mixture smooth, but not to drop too easily from the spoon. Have ready a meat tin, lined with greased paper. Pour in the mixture and bake in a steady oven one hour. When the parkin is quite cold, cut into squares. Place in an air-tight biscuit tin and the parkin will keep for months. F. W.
Weston, Ore.

### Snake Starts Fire in a Grocery Store.

A snake, dropping from a bunch of bananas in a Cincinnati grocery store, so frightened Miss Edna Meader, a clerk, that she knocked over a stove, setting the store afire. Several customers who caught sight of the snake also fled, without attempting to extinguish the fire. A negro boy passing by took in the situation at a glance, used a bucket to extinguish the fire, then carried the snake by the tail into the street.

## Goods With a Reputation

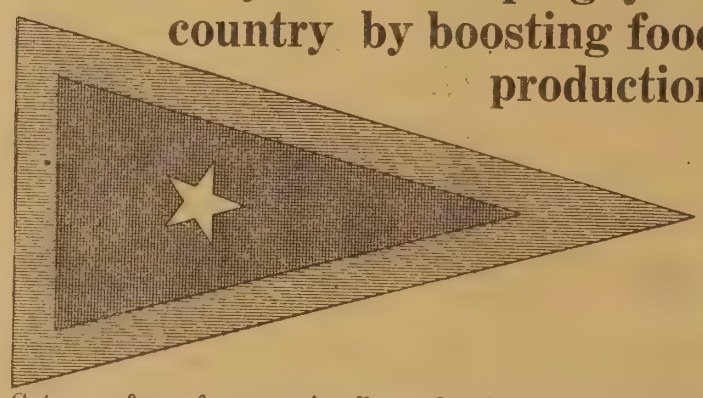
The following from the "Christian Herald" voices an important principle regarding advertising:

"Everything costs so much!"

We hear it on every side. More than ever we must spend with care—must make our money go as far as possible—must know what we are getting.

We do this when we buy goods with a name—goods with a reputation—advertised goods.

Advertised goods are standardized. The maker's name or trademark is a bond of quality. He must live up to the claims he makes or he can not continue to advertise, because;



(1) People will not "come back" for more.

(2) Publications that value their readers' interests will not accept his advertising.

When you buy goods advertised in this paper you are practicing true economy. The advertiser stands back of them to see that you are satisfied; and we stand back of the advertiser.

# FARM SERVICE FLAG

## Display one of these pennants to show you are helping your country by boosting food production

Get one of our farm service flags, showing a big star to represent your farm and smaller stars for each member of your family who is helping produce food. This is the big, new idea in service flags. It is distinct from the war service flag; as it applies exclusively to the farm. Described as "appropriate" and "attractive" by the department of agriculture. In securing your order state the number in your family who are aiding in food production and we will supply the correct number of stars without extra charge.

## AWARDED FOR SUBSCRIPTIONS

**Offer No. 1.**

***Paper Pennant***

A pennant, 9x22 inches, printed on heavy enamel paper in full colors, will be postpaid to any one securing and sending in ONE NEW subscription to this paper. (One year 25c, three years 50c; 5 years $1.)

**Offer No. 2.**

***Bunting Pennant***

A pennant, 9x22 inches, made of cotton bunting (just the thing for the auto, front porch or the flag pole), will be mailed postpaid to any one sending us THREE SUBSCRIPTIONS TO THIS PAPER. Secure three of your neighbors under our special bargain rates and receive a bunting "Farm Service War Flag."

**THE WASHINGTON FARMER**
**SPOKANE, WASHINGTON.**

### Feel Lonesome Without Their Pets.

Dear Aunt Nellie: I am very interested in the children's letters. I have read all the letters in The Farmer. I am 11 years old and in the sixth grade. My sister's name is Lela and my brother's name is Gerald. Lela is 11 and Gerald will be 9 soon. Well, dear friends, I am going to tell about the Red Cross here. They had a sale, and it brought them $600. I have knit two squares. My sister has started a square. We knit the squares all together and make a quilt of them. I have a little calf. Her name is Daisy Bell. We three children have two young colts of our very own. Their names are Fern and Chief. They are a nice little team of bays. Uncle had a sale February 25. He has 20 horses left and 11 cows, 150 chickens, a 75-horsepower caterpillar, also a combine. It looked pretty to see the caterpillar pulling the combine. We have a dog. His name is Tip. He has tips on his toes, on his nose and tail. He is coal black, with a white strip down his breast. We have some Belgian hares. We had six big rabbits. We feel very lonesome when we live in town to go to school, without our pets. I forgot to tell you that our dog will talk. When we tell him to do anything he will go to the one we point to. He drives anything. Dear friends, I have something to say about doing our bit. Some people think Hooverizing with food and paper is silly. But when we stop to think, why we know we would want plenty to eat if we were over in France, or at these camps, and also we would like to have plenty of paper to write home to tell the folks and friends of our troubles and our good times. Now, who thinks the same as I do? Let me hear in their letter what they think of doing our bit. I am trying to do all I can, even if I am small in this world. My Uncle Andrew is taking The Farmer. That is how I get to read the letters—Delia Geneva Johnsen, Lock No. 101, Mansfield, Wash.

### Helen Tells About Her School.

Dear Aunt Nellie: I am going to write you about my school. There are 27 in each room. I have to walk one mile to school. The names of the children in my grade are: Blanch, Alice, Ella, Everet and Gerald. All of them are in the fifth grade. My sister is in the high school and my brother is in the eighth grade. My teacher's name is Mr. Parker. I like him very much. The girls at my school play ball most of the time. Sometimes we play hop-scotch. At our school the boys have one part of the school ground and the girls have the other half, but I would rather have the girls and boys together. We can play anti-I-over when we can both play together. The boys have all of the swings on their side and we can't swing in them. The girls have the pump on their side and the flag pole and the teacher's house. The boys have the barn and wood sheds on their side. The boys eat their dinner out in the woodshed and the girls eat their dinner on the cement steps and the sidewalk. I have red hair and gray eyes. I am 11 years old. My birthday is January 12. Have I a twin? If I have I would like to hear from them. I wish some of the cousins would write to me. I would be very glad to answer them.—Helen Schoenberg, Prosser, Wash.

### Sunshine in the Heart.

Dear Aunt Nellie: For my subject this time I will choose Sunshine. I suppose every boy and girl likes sunshine, do you? I do. I certainly think sunshine is needful all the time. In summer, sunshine makes flowers and grass grow and warms the world with cheer and happiness. I have read in books of low families live in dirty little nooks where no sunshine can reach them, I think that is miserable, don't you? I live in the country so whenever the sun shines we always have sunshine. Sunshine also kills germs and is the best cure for consumption. It also dries the ground and warms plants and trees in its kind way and helps them grow. If we had no sunshine this world would be dark and gloomy and very unpleasant to live in. There are two kinds of sunshine, one sunshine which shines and the other is sunshine in your heart. I suppose all cousins know what that means. I suppose that you all know that learning something good and worth while is getting good, pure sunshine in your heart. The missionaries put sunshine into many people's hearts by teaching them the good and right and teaching them the Bible, book of books. I hope that every boy and girl has some good pure sunshine in their hearts. I am 13 years old and my birthday is October 26. I have found one twin. Have I any more? I am in the eighth grade at school. I get out at 2 o'clock every day now because I only have two subjects to study, history and arithmetic. I am so glad when summer comes because then we can have lots of fun, go visiting, and take long rides to beaches and bays in the automobile. I take music lessons from Madame Edgren. She is a fine teacher. I have joined the Red Cross and have knitted one washcloth. I am making wristlets now. I simply love to knit. My sister and I got a beautiful piano for Christmas.—Elsa Mattson, age 13, R. F. D. 5, Box 32, Mount Vernon, Wash.

### Teacher Always Has a Smile.

Dear Aunt Nellie: When I saw Elva Green's letter I thought I would write too. I used to go to school with Elva when she lived at Lake Creek, Idaho. I wonder if she will remember me? I was 14 years old December 21. I am in the seventh grade. I hope to finish the eighth next year. I have one sister 11 years old. I have two brothers, one is 16 and the other is 20. My sister's name is Wauneta. My brother's names are Edwin and Freeman.

I like to go to school. We have one mile to walk. We have the nicest little teacher, I think, that could be found for miles around. Her name is Miss Newcomb. She always has a pleasant smile for us when we get to school. We live on a 20-acre farm right by Weller Siding, Idaho. The trains pass by going to and from Coeur d'Alene lake twice a day. We have three cows and two work horses. The cows' names are Lady, Jersey and Spot. The horses' names are John and Mollie. We also have three riding ponies. Their names are Jack, Daisy and Billie. We have a dog and his name is Jyp. This winter the girls in our school hemmed towels and handkerchiefs for the soldiers. I am a member of the Red Cross. I think every one should be a member and do all they can in every way to help win the war. We had a basket social and program at our schoolhouse about three weeks ago. We took in $88.25. Half of it went to the Red Cross; the other half to the school. Have I a twin?—Wynona Tella, Rockford, Wash.

### Cousin Julia Writes a Letter.

Dear Aunt Nellie: I have never written to the Children's Corner before. I will be 9 years old the second of June. I am in the third grade at school. I have two sisters and one brother. My sisters' names are Helen and Jennie. My brother's name is Edwin. We have two cows, a little calf, two little pigs and about 50 chickens. We are soon going to get some little chickens, too. My papa owns 10 acres of land here. May I join the Children's Corner? My papa gets the Farmer and I like to read the letters from the other children.—Julia Jacobson, Hobart, Wash.

### Went to Visit Mother.

Dear Aunt Nellie: I am 10 years old and in the fourth grade. I have brown eyes and brown hair. Have I a twin? This is the first time I have written to the Corner. I have one brother and one sister. I used to have four sisters. My mother lives in Seattle and I live in Freeland—that's an island. My other four sisters died, but my other brother and sister are adopted by a lady in Adrian, Wash. My mother was over to see me Tuesday and stayed till Thursday. I went over to see my mother at Easter. I have a mile and a half to walk to school.—Alice Pohlman, Freeland, Wash.

### Good Times With Her Chum.

Dear Aunt Nellie: We take the Farmer and I read the letters all the time. I will be 12 years old April 6. Have I a twin? If I have I wish she would write to me. I have gone to school every day and have not been absent or tardy in this year. There are about 12 pupils in my school. I go to the Grandview school. My teacher's name is Mrs. Mabel S. Preston. I am in the seventh grade. There are two in my class. My chum at school is Leta Houck. We have lots of fun together. I like her fine. I have one sister, whose name is Helen Fae. I may write again.—Clista Casey, age 12, Cheney, Wash.

### To Name the Island "Kilian G."

Dear Aunt Nellie: In my other letter I told you that I have two brothers, Hermann and Martin, who are up north with the Canadian arctic expedition and the explorer Steffanson. We had heard no definite news about them since September, 1916, until last month, when we received a letter. Today we received some letters. We got some mighty interesting news in them, too. One thing is that one of the islands which they discovered is to be named Kilian G. The Eskimos have some very funny names. Some of them are Gubluck and Split-the-Wind. My brothers think they will come out next fall. I also have another brother who is in the Norfolk navy yard on a submarine chaser. I have four brothers and two sisters. They are between 18 and 27 years of age. I am the youngest. My birthday was March 2 and I was 13 years old. I am not going to school this year because I am too young to go to high school, at least that is what we think. I belong to a gymnastic association here in Seattle and I go down to gym twice a week. I have much fun playing German batball, baseball, swinging Indian clubs, etc. We always talk German here at home. Both my mother and father were born in Germany, but they are American citizens now. I have to play the organ in our Sunday school because we have one here at home on which I can practice. I would like to correspond with Sallie Garry, as I am not corresponding with any one else. Do you think she will write to me?—Thusnelda Kilian, age 13, 2106 Ninth avenue, west, Seattle, Wash. (I think Sallie will be glad to write to you. Your letter is very interesting.—Aunt Nellie.)

### Glad That Olive Is Now a Cousin.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I wrote to the Corner once before, but I put on the wrong address so it never reached Aunt Nellie. I hope this won't be the last time I write. My papa gets the Farmer and I like it very much. The letters are very interesting. May I join the Corner? I have four sisters and two brothers. We have two horses, one cow, one dog, three calves and about 30 chickens. I go to school every day. My teacher's name is Miss Ruth Oslund. I like her fine. My sister and I play for the church. I am 12 years old. I will be 13, November 29. Have I a twin? I wish Lila Smith would write to me. I surely would answer her letters. I think I would like her very much.—Olive Ervin, Mead, Wash.

### Goes to Sunday School.

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 10 years old and I am in the fifth grade at school. My teacher's name is Miss Cecil Wallace. I go to Sunday school every Sunday. I have three brothers and four sisters, the youngest is a little girl 7 months old. We live on a 10-acre farm. We have 25 chickens, one pig and one cow.—Amanda Marie Johnsen, Fragaria, Wash.

**Plow an Acre an Hour—on Kerosene**

HUNDREDS are doing it and more with the "Allwork"—the light tractor that's different. Burns kerosene perfectly—has the largest 4 cylinder motor on any 3 plow tractor—mounted crosswise on the frame. Direct spur gear drive, no intermediate; belt pulley on direct drive from crank shaft extension. Four wheels; turns in a 12 foot radius. The

**Allwork KEROSENE TRACTOR**

is proving one of the biggest successes in light tractors. Its low upkeep cost, all around usefulness, ease of handling, great store of power make it the popular tractor everywhere. Built with the construction that insures years of good service—backed by an organization that can give you quick, dependable service. Satisfied owners everywhere. Write today for special folder.

# NEWS FOR BREEDERS

J. H. Quick of Castle Rock, Wash., will probably show Jerseys for the first time at the Southwest Washington fair, Chehalis. Mr. Quick has at the head of his herd a son of Rosaire Olga Lad, a fine individual, and a few high producing young cows. He is successfully dairying and is building up a pure bred Jersey herd.

George H. Brewer of Stayton, Ore., is a young breeder who is building up a herd of Jerseys. His herd sire, Minna's Baronet, is by the bull that heads the J. M. Dickson & Son herd—Baronet of Ashburn. His dam made an official record of 480 pounds of butter, beginning under 2 years old, and has since increased her record. She is a granddaughter of Golden Glow's Chief. Mr. Brewer's cows are of Dickson and Doerfler breeding, and he is now proving them by giving them official records. One senior yearling will go close to, if not over, 400 pounds of butter for her year, and at least one mature cow over 600 pounds. H. A.

## Improve Their Herd.

A. V. Bradrick & Son, Holstein breeders of Palouse, Wash., have been making a change in their herd from grade stock to registered stock. They have recently added 23 head of pure-bred animals purchased in the Yakima valley. Nearly all of the milking cows are A. R. O., three of them with better than 26-pound records. They purchased seven A. R. O. cows from H. C. Davis and Buchart Bros. of Granger, Wash. Several excellent animals were purchased from the C. S. Mead herd of Zillah, Wash. The Bradrick herd is headed by King Segis of Brookside, a son of King of the Pontiacs. The photograph herewith is that of Olive De Kol Pieterje Walker,

one of the cows purchased from the Mead herd. She has a record of 26.4 pounds of butter after going through a severe attack of milk fever.

## Glenwood, King of Edgemoor.

Glenwood, King of Edgemoor, the Guernsey bull shown herewith, was recently sold by Dr. Clarence True Wilson to Carl Hunt of Tillamook, Ore.

(Continued on page thirty-one.)

# Gile's Guernseys Go at Auction

ASTORIA, OREGON, MAY 23, 1918

## 53 Head—Registered Guernseys and Grade Guernseys

On account of labor conditions this herd must be sold and will be taken from the Chicona Farm at Chinook, Wash., to Astoria, Ore., for the convenience of those coming by train. It consists of cows in milk, bred heifers, young calves, and a number of excellent young registered Guernsey bulls. Of the offering 25 are registered Guernseys and represent the best blood line of the breed and are excellent individuals. The herd of Guernseys from this farm has done much to make the breed famous both as producers and show winners.

Complete catalog will be issued giving details as to the offering and how to reach the sale. Send request to E. A. Rhoten, Salem, Ore., Sale Manager, and one will be mailed when published.

COL. J. W. HUGHES, Auctioneer.

A. L. GILE, Proprietor, Chinook, Wash.

## JERSEY CATTLE

### Breeding for Heavy Production

Bull calf, dropped Sept. 5, 1918. Sire, Rosaire Dolly Lad, son of Rosaire Olga Lad, out of a daughter of Oonan 23d's grandson; dam, Rosaire Queen Esther, also by Rosaire Olga Lad. This makes calf a double grandson of the great Rosaire Olga Lad, sire or over 30 register of merit daughters, two over 900 lbs. Solid color, good individual, fair size. Priced to sell. This ad will appear only this one time.

**E. P. Casey. GLEN THELMA FARM. McMinnville, Ore.**

### A Richly Bred Sire

LA CREOLE'S OXFORD DOLLY BOY.

Thirty months old. Dam, Morrow's Select, by Golden Glow's Chief, sire of 34 Register of Merit daughters, one a world's record. Morrow's Select is the dam of two R. of M. cows, one 820 pounds butter in a year, and has a record herself of 828 pounds. The bull's sire, Oxford You'll Do Jr., is a great show bull, sire of four R. of M. daughters, 10 more on test, all will qualify, and he is still a young bull.

**La Creole's Oxford Dolly Boy** has type and is a siring type. He has production back of him and his offspring will be producers. **"The bull is over half the herd."** Write for full pedigree and price.

**W. O. MORROW, Independence, Ore.**

### Jersey Home Dairy

**Young bulls, winners at Washington State Fair, make good herd sires. Attractive prices for quick sale.**

**Erickson Bros. Prop.**

**North Yakima, Wash.**

### ASHBURN FARM

REGISTER OF MERIT JERSEYS.

In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.

**J. M. DICKSON & SON, Shedd, Ore.**

**GOLDEN GLOW HERD**

Winner of 1st and 2d prize in butter test, Oregon State Fair, 1917, (all breeds, 20 entries); breeder and owner of grand champion cow in show ring, 1916; breeder of grand champion cow, 1917. Breeder and owner of world's champion 3-year-old, with 1115 lbs. butter, 80 per cent fat. Every female a daughter, granddaughter or great granddaughter of Golden Glow's Chief, sire of 34; 14 over 700 lbs.; 32 over 600 lbs..

**PICKARD BROS., Marion, Ore.**

BREEDER OF

**GOLDEN GLOW'S CHIEF 61460**

35 daughters average 533.9 lbs. fat. Sire of world record Junior three-year-old. Two of his sons heading our herd. Some choice bull calves out of cows with records up to 856 pounds for sale. Sold out of bulls over six months old.

**LADD FARM, Oswego, Ore.**

### All High Record Blood

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.

**ED CARY, Carlton, Ore.**
Station, La Fayette, Ore.

### BUY A REAL SIRE

We are offering a choice bull calf by St. Mawes of Ashwood and out of a daughter of the great Holger. This youngster carries the best blood in Jerseydom and is fit to lead any herd. Price on application, but don't delay, as he will cost more after his dam completes her present register of merit test.

**M'ARTHUR & STAUFF, Rickreal, Ore.**

### LAST BULL SOLD

Three register of merit cows, freshen in March, two in April. Baby bulls are sold so reasonably you can't afford to buy a bull of service age. Raise your own bull and save money. Prices, pedigrees, photos, etc., sent on request. Can spare a few good register of merit cows.

**JOHN B. STUMP & SON, Monmouth, Ore.**

### WAIKIKI FARM

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

**IRA P. WHITNEY, Manager.**
Route 7, Spokane, Wash.

**TWO GOOD YOUNG BULLS**

One dropped February, 1917, sire, Minna's Baronet, whose dam made 439 lbs. butter in a year as senior yearling. Young bull's dam now on official test, will make about 60 lbs. fat (70 lbs. butter) third month and good record for year; milked twice a day. The other bull by St. Mawes of Ashburn. Full particulars of either on request. Bargain prices.

**GEO. H. BREWER, Stayton, Ore.**

### We Have a Herd Average of 700 Lbs.

85 per cent BUTTER for 11 head. Sold six bull calves in the past 4 mos.; 3 of the last ones brought $250 each. These were sons of our herd bull, G. P. St. Mawes; just one bull calf left.

**F. A. DOERFLER, Silverton, Ore.**

### This Is a Bargain

Rockwood Stockwell, sire Stockwell of S. B., dark brown color; A No. 1 individual; 5 years old. I have four of his daughters in milk. All test over 5, one 6 per cent, and all are heavy milkers. Only $100.

**R. S. KEATLEY. Castle Rock, Wash.**

### ANOKA FARM JERSEY

We are offering a nine months' old bull from a young cow that is making good. His sire is a grandson of St. Mawes Poppy, with record of 1120 lbs. in one year. Priced low for quick sale.

**R. B. SEELY, P. O. Sherwood, Ore.**
R. R. Station, Wilsonville, on Oregon Elec.

### OAK RIDGE JERSEY FARM

Thirty years breeding Jersey cattle. Young bulls from Register of Merit dams. Also a few choice females.

**RILEY E. HULBURT, Albany, Ore.**

### Lady Slipper's Oxford Lad

Dam, Gertie's Son's Lass; official record, 642 lbs. butter as a 2-year-old. She a daughter of Gertie's Lily. 845 lbs. butter at 9 years old and 582 lbs. at 15 years old. Sire, Lady Slipper's Oxford, sire of three R. of M. daughters, one 520 lbs. as a 2-year-old. His grandsire, Oxford Majesty, has more and higher producing daughters than any other Island bull.

Lady Slipper's Oxford Lad was dropped April 1, 1916, is solid light fawn color; excellent individual. Only $150. This ad will not appear again.

**J. H. TAYLOR, Montesano, Wash.**

## POULTRY

### TRAP-NESTED BARRED ROCKS

All hen-hatched and hen-raised. Every hen trap-nested. First pen has, I believe, for past two years highest Barred Rock av. egg record in the world. All other pens practically same blood lines.

Pen 1, 12 hens, av. over 240 eggs, crossed to yearling cock, parents av. 260 eggs, $5 setting of 15. Pen 2, 25 yearling hens, av. over 200, crossed to 2 sons of No. 44, 708 eggs in 3 yrs., $5 setting of 15. Pen 3, about 20 hens and pullets, with reserve cocks and cockerels, same breeding $3.50 per 15. A few cocks and cockerels from $5 up.

**IRVINE P. GARDNER. Riddle, Ore.**

**PARKS BRED-TO-LAY BARRED ROCKS.**

My pen, 5 Barred Rocks, at Pullman laying contest laid in Nov. 88, Dec. 100, Jan. 104 eggs. Eggs from this winter-laying strain, $1.50 15; $8 per 100.

**F. J. WIRTNER, Mica, Wn., R. 1.**

**S. C. AND R. C. RHODE ISLAND REDS.**

Cockerels, $2.50 to $3.50; eggs from S. C. R. I. Reds, heavy winter layers, $1.50 per 15; $7 per 100. Flemish Giant does, $1.50.

**W. T. WILSON, R. 3, Weiser, Idaho.**

**When you write to advertisers be sure to say that you saw their adveriesment in this paper.**

## DUROC-JERSEY SWINE

### SPRING DUROCS

I am now booking orders for weanling pigs, pairs or trios, unrelated. These pigs carry the very best blood lines procurable. Tracing their ancestry back to Inventor, Climax II., Top Notcher, Tip Top Lad and Proud Advance. All prize winners in state and interstate shows.

Also have a few very fine gilts, either open or bred.

**CHAS. G. SPRONG, Grandview, Wash.**

**DUROC SOWS FOR SALE.**

A few choice Duroc gilts, bred to farrow early next May, daughters of grand champion Richards Defender and bred to Junior Champion Richards Pathfinder. No better breeding east or west. Also a few good boars ready for service. Price very reasonable. We furnish pedigree and guarantee satisfaction, or will refund your money and pay express both ways.

**RICHARDS LIVE STOCK CO., Virginia, Ida.**
Home of the Champion Durocs.

**ROOT & MASON,**

Breeders of early maturing, easily fed type. Some choice stock for sale. Defender and Overbrook strains.

**Highland Fruit and Poultry Ranch.**
J. Nonnenmacher, R. F. D. 3, Yakima, Wash.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, April 29.—Corn prices averaged much higher today, owing to clearer knowledge of the attitude of the food administration in regard to hedging sales. The market, however, failed to hold the advance, and closed unsettled at the same as Saturday's finish to 3-8c up, with May at $1.27 5-8 and July at $1.49 5-8 to $1.45 3-4. Oats lost 78c to 2 1-4c net, and provisions 15c to $1.

The reassuring development from a bullish point of view was that the government does not make it obligatory on grain handlers to hedge holdings. Unfavorable weather tended also to lift the market.

Favorable crop conditions together with slowness of eastern shipping call made the oats market collapse. Advances due to corn strength were thus far more than offset in the last trading.

Selling pressure on pork carried down all provisions. The market had no aggressive support.

**Chicago Futures.**

| | Open. | High. | Low. | Close. |
|---|---|---|---|---|
| Corn— | | | | |

## Portland Market.

PORTLAND, Ore., April 28.—The potato movement has continued active in most parts of the country the last week and seems to be feeling the effects of the national campaign now being carried on for an increased consumption of potatoes. It has resolved itself into the task of "eating them to save them," for so many million bushels are still held in storage that a great economic waste is impending.

An increased demand is being felt in the northwest, but for a different reason. Stocks are cleaning up to a certain extent. That is, most of the first-class large lots have been moved here and in Washington. There are undoubtedly several hundred cars left in small lots which could be shipped if the price warranted the work of getting them ready for market. Also, the British Columbia stock is reported exhausted.

**Quotations.**

BUTTER—Cubes, extras, 37 1-2@38c; prime firsts, 37c; prints, extras, 44c; cartons, 1c extra; butterfat, No. 1, 43c delivered.

VEAL—Fancy, 19c per pound.

PORK—Fancy, 23 1-2@24c per pound.

POTATOES—Oregon Burbanks, 75c@$1 per hundred; new California, 9@10c per pound.

## Seattle Wheat.

SEATTLE, April 27.—The car situation has improved to such an extent that shipments of wheat to the east are being hurried by the food administration grain corporation, and millers are moving the holdover to Minneapolis territory in increased volume. M. H. Houser, agent of the grain corporation in this territory, has advised the merchants' exchange that there is now a plentiful supply of boxcars at interior points, and that those who are not receiving as many per diem as they can unload should notify him at once. He has also asked that he be notified of the name and address of any person who is not inclined to haul the wheat in.

Assembling of cars for the new crop grain haul will be begun by the government about July 15, it is stated, and advantage is being taken of the lull in the interim to clean up all wheat holdings in this state.

From present appearances Seattle mills will be ground out of flour by June 15 unless the program of bringing in Australian wheat is carried out. The state grain department is advised that a cargo is now on the way across the Pacific, to be discharged at Tacoma for the local grind on government flour contracts, the millfeed to remain here.

Interior mills, by reason of the call of Agent Houser, are likely to be closed out of wheat very soon.

## Seattle Market.

**BUYING PRICES.**

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

# News for Breeders

(Continued from page twenty-eight.)

The bull's sire is by a full brother to Dairymaid of Pinehurst, that has a record of 910 pounds of fat in a year, as a 4-year-old and out of a half sister to her, with 616 pounds of fat as a mature cow.

His dam, Florham Dame, is the highest record daughter of Ne Plus Ultra, the May Rose bull whose daughters are in demand at present. She has a record of 685.8 pounds of fat. Ne Plus Ultra has 11 daughters that averaged 492 pounds of fat as 2-year-olds, and 14 of his daughters sold for an average of $1375 at the Florham sale.

H. A.

## Damsel Madge.

Damsel Madge, the young Jersey cow shown herewith, is owned by L. A. McCormick of Tillamook, Ore. She is fresh with her first calf and the second month produced 60 pounds of butter fat, or a little over 70 pounds of 85 per cent butter, as reported by the cow testing association to which Mr. McCormick belongs. It is a few such good purebred Jerseys as this that Mr. McCormick thinks justified him in taking a share in Poppy's Golden St. Mawes, the $1700 Jersey bull.

H. A.

## Cannon Dispersal Sale.

C. H. Cannon of Salem, Ore., will disperse his entire herd of Jerseys June 11. Most of the cows are by a 50 per cent Golden Glow's Chief bull, a few Melia Ann's King strain, one Faxhall, one by Emanon of Lakeside by a Morecan dam and one of St. Mawe's 2d. While there are only a few official records, it is a good working herd that has proved itself at the pail and churn. Mr. Cannon's ill health at this time of almost impossibility of securing labor is the one cause of the sale. H. A.

# Want Ads

### SITUATION WANTED—Male 21

MAN WITH SMALL FAMILY WANTS place on poultry ranch, to learn the business. Would run small ranch for absent owner, or would take place on stock ranch. Educated, reliable, experienced in general farm work. Permanent place wanted. Box 41, Fort Washakie, Wyo.

WE SPECIALIZE IN TIMOTHY, ALFALfa, clovers, seed for forage crops. Write for prices. Mark Means Co., Lewiston, Ida.

SUDAN GRASS SEED FOR SALE—MAKES excellent late green feed, 30c per lb. Wm. Neuenschwander, grower, Gaston, Ore.

IDAHO ACCLIMATED SEED CORN; WELL tested, desirable Yellow Dent. Write H. C. Baldridge, Parma, Idaho.

ACCLIMATED SUDAN GRASS SEED; ALL hand-picked, 25c per pound. Ira P. Holcomb, Metolius, Oregon.

### FARM LANDS—FOR SALE 651

NO PAYMENT DOWN.

WE SUPPLY THE LAND AND ASK NO PAYMENT UNTIL YOU CAN MAKE SAME FROM CROPS. IT STANDS TO REASON WE MUST HAVE GOOD LAND TO OFFER YOU THESE TERMS. OUR LAND IS LEVEL, THE SOIL A SILT LOAM, NO BETTER LAND FOR ALFALFA, MILO MAIZE, FRUITS, NUTS, ETC. WATER FOR IRRIGATION IN ABUNDANCE WHENEVER NEEDED; GOOD DRAINAGE, CLIMATE AND TRANSPORTATION, SCHOOL ON TRACT; ON STATE HIGHWAY, WITHIN 3 MILES OF RED BLUFF, TEHAMA COUNTY (BANNER COUNTY OF CALIFORNIA). PRICE $150 PER ACRE. SEND FOR BOOKLET AND MAP.
F. D. BURR CO.
219 Montgomery street, San Francisco, Cal.

WONDERFUL FARM OPPORTUNITIES—Eastern Washington, northern Idaho and northwestern Montana hold most of the records for the best yield in the United States. The same work will bring you more per acre than in the middle west. There are attractive opportunities here for the farmer, dairyman, stockman and market gardener looking for land at a reasonable price, in a well-watered country with mild climate. Farm land bought now is bound to increase in value. Write for our free folder, "A Farm Home for You." Tell us the kind of place you want. Farm Development Bureau, 618 Chamber of Commerce bldg., Spokane, Washington.

LOOK HERE, MR. WORKMAN!
YOUR COUNTRY NEEDS YOU ON A FARM.
And we are offering you a 40-acre ranch at $25 per acre; 10 yearly payments; in the best agricultural part of Snohomish county; paved roads, railways, mills, factories, schools; plenty of work for the laboring man; the best proposition on the market for the man who wants a farm. Send for illustrated literature. BROWNELL LAND CO., 904 Third ave., Seattle Wash.

FULLY EQUIPPED STOCK RANCH
$2000 BELOW VALUE.

160 acres beaver dam land; all tillable except 2 acres; 80 acres in meadow; 5 head of horses, 8 head of cattle; all farm machinery; good 2-story house, barn, wagon shed, garage, blacksmith shop and other outbuildings; good well and creek. Price $5500; $4000 cash, bal. long time.

This is one of our many.
JAMES W. BOOTHE & CO.
510 FIRST AVE. SPOKANE, WASH.

682-A. IMPROVED WHEAT FARM; SEVEN miles south of Hartline, Wash.; on Sunset highway; good land; all in cultivation except 15 acres; 300 a. in summer fallow; all fenced; large house, fine barn, good outbuildings; plenty water. Only $45 per acre. $6000 cash will handle. A. L. Tucker, Coulee City, Wash.

SPOKANE VALLEY, OTIS DISTRICT.

5 acres, planted to best variety commercial apples, 9 years old; sprayed and pruned and in A1 condition. Lowest rates for irrigating in the valley. Price $3500; easy terms. See House and Land Association, 514 Riverside ave., Spokane, Wash.

240-ACRE FARM NEAR LYLE; ¾ UNDER cultivation; ¼ now in grain; 10-acre orchard; other crops; good buildings; fences; water and soil. Price $40 per acre, including ½ crop. D. D. Bathrick, Lyle, Wash.

CALIFORNIA STOCK RANCH. SISKIYOU Co.; 320 a. (can be divided); 159 a. in cultivation; 290 a. tillable; open range; 6-room house, large barn, furniture, stock, tools included. No trade. S. E. Hummel, Tecnor, Cal.

FOR SALE—FIVE ACRES; FOUR MILES from Boise, Idaho; on paved road; all in fruit; twenty-five hundred dollars. Write for terms. Wright Stacy, Boise, Idaho.

2600 ACRES LOGGED-OFF LAND, CLOSE to Astoria; finest of small fruit, vegetable and dairy land. Only $25 an acre. L. A. Larsen, Astoria, Ore.

WE ARE AGENTS FOR THE BEST LAND in South San Joaquin Irrigation district on the easiest terms. Address Ripon Nursery Co., Ripon, Cal

# Farmer Responds to Far Cry

## *Hastens Production to Feed the Stricken and to Strengthen the Soldier Boys*

The desperate hunger of women and little children in war-stricken France and Belgium makes an overpowering appeal to the American farmer. Also, when he is told that the nation with the last sack of wheat will be the nation that will win the war the American farmer is likewise on his job. He may grumble now and then about the stumbling blocks that are placed in his pathway. He may be less effusive and demonstrative in his patriotism, but he is loyal to the core when it comes to doing things for the soldier boys in France or when the cry of the widow or orphan is heard afar off.

As those who read this issue of the Farmer will see, as well as those who have been reading the Farmer for months back, well know that farmers of the Pacific Northwest have been doing their level best in increasing food production. This same sentiment of loyal war food production service on the part of the farmers generally throughout the country is voiced by Mr. Hoover in a recent address when he became quite optimistic over the prospects of an 800,000,000 or 900,000,000 bushel wheat crop this year.

However gratifying may be the cheering words of Mr. Hoover, yet this is no time to slacken a single effort in the way of the largest possible food production. Not long ago R. E. Prothero, the president of the British board of agriculture, the man who has planned, organized and directed the food production campaign in England, said: "The nation with the last sack of wheat will be the nation that will win the war." Mr. Prothero pointed out in the same interview that it is to the American farmers that the allies are looking to be saved; that the wheat needs of America herself are greater during war than during peace, adding, "The world when it fights must have more to eat."

Here is another paragraph of Mr. Prothero's utterances which should sink deeply into the heart of every American citizen though it is directed especially to the farmers of America: "The task before him (the American farmer) is titanic and the responsibility is immeasurably the greatest in all history, for if the American farmer does not find that last sack of wheat with which the war is to be won beyond all dispute the German farmer will."

The farm family that sends one or more of its members into the war service deservedly receives recognition in a war service flag with the stars indicating the number of those who have responded to the call of the nation.

The same family that is speeding up war production, doing its best under more or less difficulties, often because one or more of its efficient workers are in war service, deserves and should receive unstinted recognition for helping to produce that last sack of wheat and should have its own peculiar service flag. Turn to pages 16 and 17 of this issue and look at the **Farm Service War Flag** designed by the Farmer and

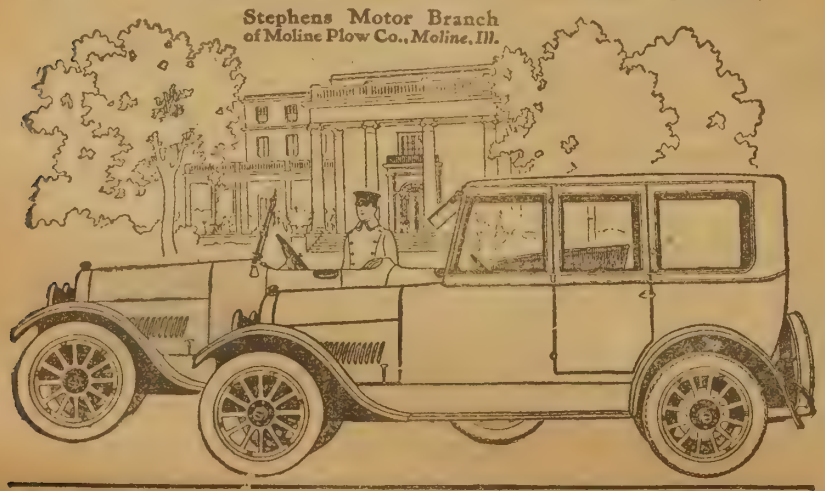
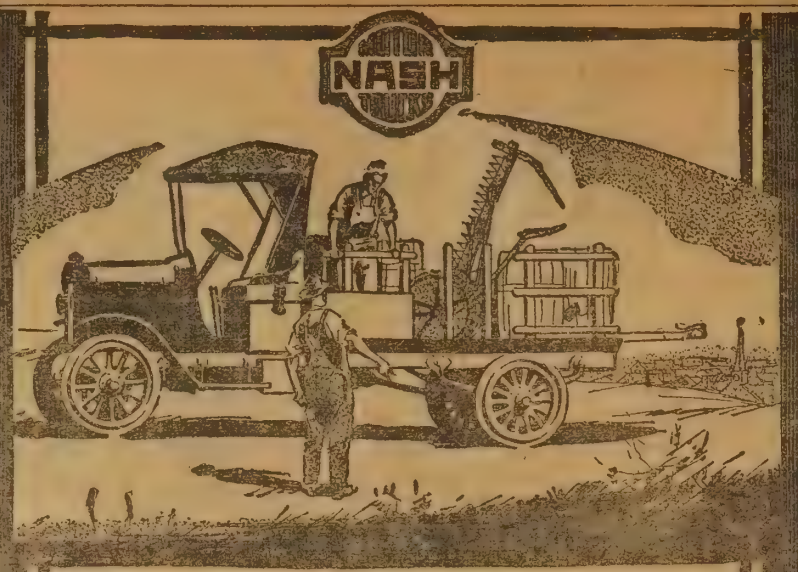
# STEPHENS *Salient Six*

## POWERFUL ECONOMICAL

*With Perfected Overhead-Valve Engine*



The Stephens Salient Six perfected overhead-valve engine converts every drop of fuel into power.



Its manifold in the cylinder head surrounded by heat thoroughly vaporizes and dries the gas so that it is in ideal condition for burning. Large valves then feed it into a small, perfectly cylindrical combustion chamber, where it is completely consumed, with every ounce of its energy exerted directly against the piston.

The Stephens Salient Six is built in five models, all of them beautifully, conservatively distinctive—latest examples of the coach builder's art. They have ideal balance and spring suspension, giving superb riding qualities. Their beauty, style and comfort are the lasting expression of judgment and good taste. *It is a pleasure to demonstrate.*

QUICK AND ECONOMICAL TRANSPORTATION

# Nash Trucks Get Supplies Quickly

Nash trucks keep work moving on the farm by getting supplies from town most quickly. They double your loads and cut by half the time to town. And they are most dependable and economical.

Equipped with M&S automatic locking differentials Nash trucks are unusually suited to the farmer's needs. They get through where other trucks without this important feature cannot go. The driving wheels cannot spin. This saves fuel and tires.

They also have unusually strong internal gear drive axles. This type of axle is simpler, lighter and delivers more power to the driving wheels, especially at low engine speeds.

Nash trucks have many other superior mechanical features which our transportation expert will be glad to explain to you in detail.

## For Housing, $60,000,000

### *Added to $50,000,000 for Ship Workers*

The housing question is now one of the most important factors in American war program. Only a month ago the emergency fleet corporation received an appropriation of $50,000,000 with which to provide houses for shipyard workers. Now the government is about to appropriate $60,000,000 more for housing facilities for industrial workers, including government clerks in the District of Columbia. The British government learned this lesson early and quickly started house building. It has already spent $700,000,000 in providing housing facilities for industrial workers, and it is now planning to spend $1,300,000,000 more.

**MUNITION OUTPUTS IMMENSE.**

According to fragments given by Colonel Samuel McRoberts, chief of the procurement of the United States ordnance bureau, Springfield rifles are now being made at the rate of 11,250 a day and there are 600,000 on hand. Of 2,500,000 Enfield rifles under contract 1,050,000 have been delivered. The volume of rifle manufacture is the greatest in the world, and so far exceeds immediate needs that some rifle factories have been diverted to machine guns. Forty thousand motor vehicles are being produced for the artillery faster than they can be shipped, at a cost of $175,000,000. Powder plants are making 650,000,000 pounds of explosives and produce smokeless powder at the rate of 1,300,000 pounds a day.

**WOOL PRICE FIXED.**

The United States war industries board officially announces that the government will allow dealers in raw wool a commission of 3 per cent for ungraded and 3 1-2 per cent for graded wool. It also makes official the price of raw wool to the producers to be that prevailing July 30, 1917. A new price, to be made effective August 1, will be fixed at a conference two weeks before the expiration of the three months' price. W. D. McKellar of Salt Lake City, buyer for a Chicago wool concern for many years, has been appointed to supervise the national distribution of approximately $390,000,000 worth of wool for the entire clip of the United States.

**ARMY, $15,000,000,000.**

The total army appropriation for the fiscal year 1918-19 submitted to congress by Secretary of War Baker is approximately $15,000,000,000, exclusive of the amounts carried in a separate fortifications bill covering coast defenses and heavy ordnance. Secretary Baker says his trip to Europe has opened his eyes to the magnitude of operations. There is a general sentiment among the members of the military committee to provide for 3,000,000 men more, and that a motion might be made to increase the number to 4,000,000 or 5,000,000. A provision giving the president authority to draft any number of men probably will be written into the army bill.

**FOOD PRODUCTION.**

The emergency bill authorizing the department of agriculture to spend $19,730,893 to increase production of food was ordered favorably reported Saturday by the house agriculture committee.

**BIG SHEEP PROBLEM.**

Unless the sheep industry of the United States adjusts itself to the changed economic conditions of the day production will continue to decline in the proportion it has in the past, in the opinion of the committee on statistics and standards of the chamber of commerce of the United States, which has completed an investigation of the industry. The principal remedies suggested in the committee report are the use of sheep grazing of the agriculturally worthless and cheap cutover timber lands of the country; the more general and systematic raising of sheep on the farms, and continued use of the great ranges of the west to their full capacity.

**THIRTY BILLIONS IN CEREALS.**

Thirty billion dollars' worth of the six chief cereals used for food—wheat, rye, barley, oats, corn and rice—is annually produced by the farmers of the world, according to the yearbook just issued by the International Institute of Agriculture, covering 10 years of agriculture throughout the world. "We find," declared the author of the book, "that the ascertainable yield of wheat throughout the world exceeds a thousand million quintals (one quintal being 3.67 bushels), and represents at present value more than $10,000,000,000. The yield of maize is nearly as large as of wheat and is worth $5,000,000,000. The yield of potatoes is over 1,500,000,000 quintals, and of beet sugar more than 500,000,000 quintals."

**FUR AUCTION, $6,250,000.**

The annual April international fur auction at St. Louis resulted in a total sale of $6,250,000 for 10 days. The last day was devoted to selling of musk rats, Argentine and Patagonia fox and beavers; 800,000 muskrats brought $750,000 and 12,500 sold for $175,000. The largest collection of silver foxes, 1200, offered in the last 12 years, was auctioned for $362,000. The 180,000 skunk skins brought $625,000. About 2000 Russian sable skins were sold for $250,000.

**FAVOR PROHIBITION.**

Responsive to inquiries sent out by Edwin Rawden of the anti-saloon league, 82 out of a total of 122 candidates for election to the next Oregon legislature say they will vote to ratify the prohibition amendment to the federal constitution, indicating the success of the prohibition measure in the legislature.

## Farm Lighting System

### *Eliminates Much of the Housewife's Drudgery*

The contest among women and girls of the farm home on the advantages of the automobile, a farm lighting system, or a farm water system closed May 1. The awards will be announced soon.

To the Editor of the Washington Farmer: We have found the electric lighting system a very valuable thing in our home and almost an essential one.

Besides being a means of lighting the dwelling house and outbuildings, it furnishes current for the iron, the washing machine, the carpet cleaner, and a host of other things. It does away with so much of the housewife's drudgery connected with the farm that it makes life worth while on the farm. It eliminates the beating of rugs, and the spring house cleaning as in the old-fashioned way.

Smokey lamps, lanterns and candles should be a thing of the past if electric power can be had. The gas that comes from the lamp is very injurious to the health and a lamp is also a dangerous affair, a great percentage of fires in the farm home having been caused by a lamp or lantern. For instance, we had this occur in our home before we had the electric lights. In the bedrooms we kept the matches on the dresser for lighting the lamps, and some one had laid one in the window for convenience, near the bed. During the day the window, which had been raised, fell and caused the match to light. It at once set the pillows afire, then the bed clothing, and we only discovered it in time to save the house from burning. The bed was completly ruined and I suppose if the walls hadn't been plastered the house would have burned. Therefore, I believe that the electric lights would prove much more satisfactory, and I believe, in the long run, cheaper. The work of caring for the lamp is also eliminated.

MISS CECILE STUBBLEFIELD.
Clarkston, Wash.

### Finds Auto Invaluable.

To the Editor of The Washington Farmer: I would not do without the automobile, because it would often mean going without the mail, as we are not directly on the mail route. We are two miles from school, and if we had not the machine the heildren often would be late. It also save them from many drenchings, as when a storm comes up I can get them quickly.

The car makes possible quick marketing of perishable articles which otherwise would be lost, thus saving us many dollars a season, as we're 18 miles from market.

It also makes it possible for us to attend grange, lodge and other places of benefit and recreation which we did not before having a machine.

For quick repairs and supplies at harvest time it is invaluable. A passenger license last year brought us enough returns to give us many little luxuries and kept us in gasoline. We have had three machines, and we figure that each one has paid for itself.

An accident two years ago made quick medical aid necessary. The auto made this possible, and an ugly scar on our little girl's face was prevented.

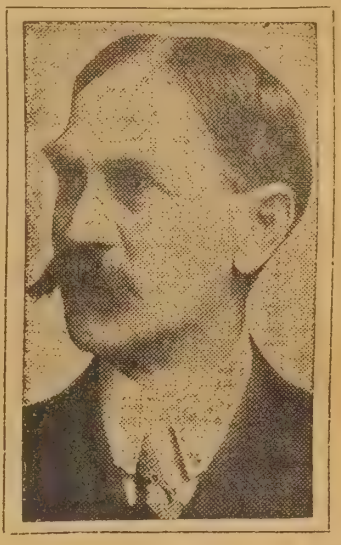
We could not do without our machine.

MRS. JOHN KNOPH.
Dungeness, Wash.

## E. H. Shepard

### Able Leader in Fruit Industry

After an illness from which he seemed to be recovering, E. H. Shepard of Hood River died in Portland, April 28



Edward Henry Shepard was born December 24, 1857, in Marysville, Cal. He was a graduate of the University of California. He came to Oregon as manager for the Sanborn, Vail art store. His health failing, he moved to Hood River and bought an apple orchard.

His business training made it clear to him that the fruit industry needed organization and he strongly advocated cooperative handling and selling. He took an active part in the formation of the Hood River Apple Growers' union and was its first manager. He was manager of the Hood River Fruit Growers' union, which handled strawberries and small fruit only. Both these unions merged with the Apple Growers' association of Hood River later.

He had learned fruit packing in California, and he formulated the first rules for grading and packing apples. These rules, amended and changed somewhat, were adopted by the fruit raisers of the northwest and are still used by them.

He realized the need of a fruit magazine, and was urged by his associates to start and conduct one. So about 18 years ago he founded "Better Fruit," of which he was editor and publisher at the time of his death.

"I did not know anything about printing or editing," said he a few months ago in speaking of the inception of the magazine, "but there was nobody else who would do it and it had to be done."

E. H. Shepard.

Mr. Shepard knew the value of publicity, but he had no desire for publicity for himself. He worked hard for the fruit industry and got but little out of it for himself. He worked unselfishly and sincerely for what he believed was right and best. He has done as much, probably, as any one man to advance the interests of fruit in the northwest.

He was a member of the American Pomological society, an honorary member of the state horticultural societies of Oregon, Washington and Idaho, and the only nonshipping member of the International Shippers' association.

Surviving Mr. Shepard are his wife, who is a member of the pioneer Failing family, and five daughters.

Further information will be found on page 16.

# War Time Farm Labor

## *If You Cannot Get the Best It is Up to You to Take the Next Best*

In these days when the world is upset by the engulfing of all the ways of peace it is good to be called to our senses by some sane words and to be made to remember that even daylight saving has not disturbed the length of the day nor changed the months of the year. Seed time and harvest are yet with us. Here is a sensible way of looking at the problem of farm labor. Colonel Clarence Ousley, assistant secretary of the department of agriculture, after discussing the furlough question, which has been treated fully in our columns, goes on to say:

**Town Men of Farm Experience.**

There is a widespread movement to mobilize town men of farm experience for a few days at a time, or for certain days of the week during the periods of labor strain, in planting, cultivating or harvesting. That was done successfully last year in many of the grain regions, and in some places the stores were closed for two or three days at a time and everybody joined in saving the crops. This is not the best farm labor; the town men are not "hard," but they can at least work a few hours a day, and in the aggregate they can furnish the necessary man-power for emergencies.

**Boys' Working Reserve.**

Many thousands of schoolboys between 16 and 20 years of age have been enrolled to do farm work. This is not the best labor, but it will serve in an emergency. In many places last year the boys, after a few days, learned to be quite skillful in certain farm tasks. If the farmers will be patient with them they can become very useful.

**Women on Farms.**

For many of the lighter labors on the farms, such as dairying, vegetable cultivation and fruit gathering, women can render efficient service. They have been successful in such endeavors in many places throughout the United States. Most important of all, women can relieve the men in the towns so that they may go to the farms temporarily or for a few days.

**Idlers and Loafers.**

In many places sheriffs and town marshals are rigidly enforcing local laws against vagrancy and loafing. In most towns it is against the law to loaf on the streets. A rigid enforcement of such laws will compel able-bodied men to find work of some sort, and whether they go to the farms or find other employment the effect will be to release labor and increase the man-power of the country. In view of the demand for labor it is proper for communities, by law or by public sentiment, to insist that every man, whatever his wages or his wealth or his condition, shall put in full time.

**Wartime Methods.**

It is not possible for us to wage a war of such proportions as that in which we are now engaged and at the same time maintain peace practices and indulgences. We must all sacrifice; we must all do things in other ways than the ways to which we are accustomed. If we can not get the best we must take the next best. War industries can not be suspended; shipbuilding must go on; munition plants must be operated; soldiers must go to France. With all these activities drawing upon our man-power in increasing volume it will become more and more necessary, from week to week and from month to month as long as the war lasts, for each of us not so engaged to readjust and reorganize as the circumstances require. More effective than any law that can be enacted by the national government is the force of public opinion. The best agency for the solution of these problems is the agency of community action. If the people of a community resolve that a thing shall be done they will find the means of doing it. There is no power in the government to creat labor, nor have we yet reached the point of national peril where it is necessary to conscript labor or to require farmers by law to grow certain crops. The truest test of a democracy is its ability to meet a local emergency without the compulsion of a national law. At any rate, it is impossible this year to organize a system of federal administration of agricultural labor, but it is easily possible for each state, each community and each neighborhood to solve its own problem. Notwithstanding labor difficulties last year, production was greatly increased; the situation this year is but little, if any, more difficult, but the more difficult it becomes the more necessity there is for united community action.

### Let No Flour or Meal Spoil.

To prevent losses from spoilage in certain flours and meals during hot weather, the United States food administration has issued instructions regarding their storage. Special care should be taken of the following products:

Bran, shorts and middlings, corn products containing the outer coating and germ (such as so-called water-ground cornmeal and grits), oats and oat meals, graham and wholewheat flour, rye flour, barley flour, peanut meal and soy bean meal.

These products should be kept moving and used as soon as possible. When storing is necessary keep in a cool, dry, well ventilated place. Raise bags of flour and meal sufficiently from the floor to exclude rates, mice and insects, also to permit cleaning the floor under the bags. When many bags are stored, arrange them in tiers, leaving space between the tiers to allow abundant ventilation. Large stocks should be reduced as much as possible before hot weather.

### Farming a Community Affair.

FARM AND RANCH: When the land produces townspeople laugh until their faces are red. They have good reason. Prosperous farms make prosperous cities and towns. When the farmers fail the towns fail. This proves that communities have an interest in the farms—that farming is not an individual matter so much as it is a community affair. The day is coming when every community will take an active interest in farm problems as community problems.

# Unlawful Associations

## *The I. W. W. Included in New Senate Bill*

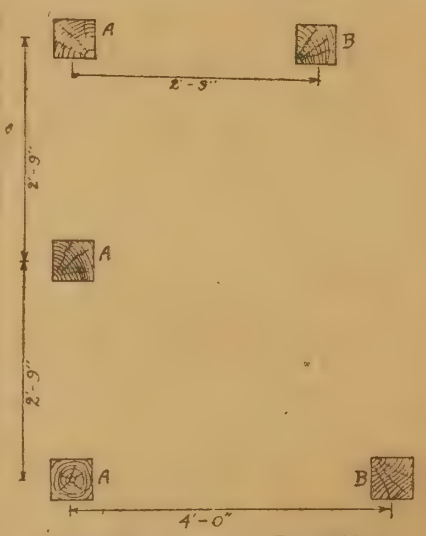
If congress should pass and the president approve a bill that has just been adopted by the senate judiciary committee, the I. W. W. will either have to go out of business or alter its vicious principles and tactics.

This bill, which was framed by Senator Walsh of Montana would make such organizations unlawful, with a maximum penalty of 10 years' imprisonment and $5000 fine for membership, management, circulation of their literature, advocacy of their present doctrines or rental of rooms for meetings. The principal prohibitory clause of Senator Walsh's bill provides that—

**"Any association, one of whose purposes or professed purposes its to bring about any governmental, social, industrial or economic change within the United States, by the use, without authority of law, of force, violence or physical injury to person or property or by threats of such injury, or which teaches, advocates, advises or defends the use, without authority of law, of force, violence or physical injury to person or property, or threats of such injury to accomplish such change or for any other purpose and which during any war in which the United States is engaged, shall, by any means prosecute or pursue such purposes, or professed purpose or shall so teach, advocate, advise or defend, is hereby declared to be an unlawful association."**

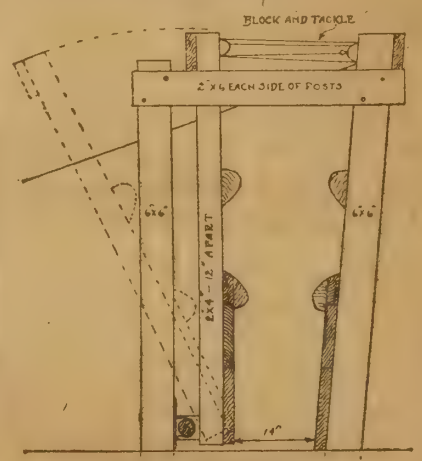
If Washington were alive and president today, this bill would have his cordial approval. In his farewell message to the American people he expressly warned them against just such organizations as the I. W. W. He pointed out that the people had a government of their own creation and approval, and if changes should be deemed advisable, an orderly, fair and effective way had been provided for them. He admonished his countrymen to beware of any organization that should try to overawe the courts and the duly constituted officials of the government.

Very likely this bill will be opposed on the floor of congress, and fallacious arguments will be heard against it all over the country. I. W. W. sympathizers will try to make it appear that the rights of the people are being invaded and that some one wants to oppress the workingmen. Both contentions are false. The truth is that the I. W. W. itself constitutes the real menace to the rights of law-abiding citizens, and the enactment of this bill would not interfere in the slightest with any lawful labor organization.



Federal officials say that 70 per cent of the members of the organization are aliens—subjects of foreign governments. These men have not thought enough of our institutions to become citizens, and many of them are undoubtedly in sympathy with Germany.

People who show such instant concern whenever a suggestion is made to curb the vicious activities of the I. W. W. would show themselves to be far more patriotic if they thought more of the safety of our soldiers in France and less of the so-called "rights" of this bolshevik organization.



PLEASE find enclosed a money order for 75 cents, for which please send me as a premium the Farm Service War Flag, bunting pennant.

VENORA DUNNING.

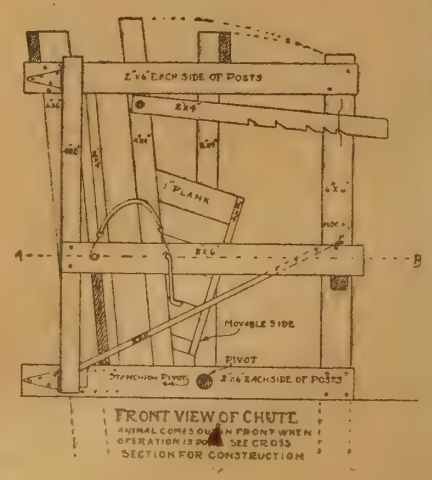
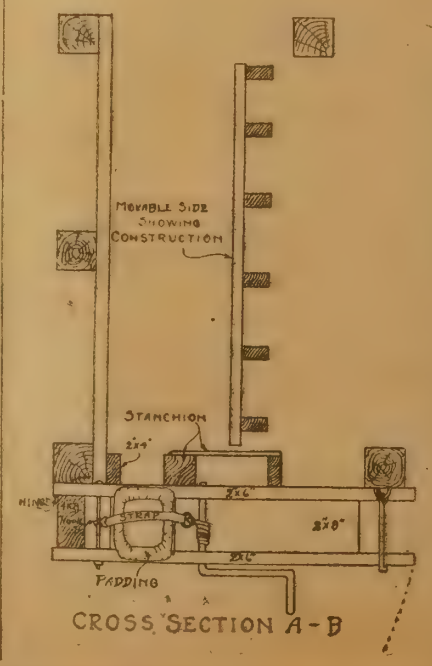
# Building a Dehorning Chute---*By E. L. Potter*

GROUND PLAN OF POST HOLES.
POSTS 6"x6" OR 6" ROUND, 6' ABOVE GROUND.
POSTS A, A, A, LEAN OUTWARD 6"
OTHERS ARE PERPENDICULAR.



REAR VIEW OF CHUTE
NOTE BLOCKING TO KEEP ANIMAL FROM WORKING UP OR DOWN. TOP BLOCKS ARE 1" LOWER IN FRONT THAN BEHIND SPACE BETWEEN BLOCKS MAY BE BOARDED BUT NOT OPPOSITE THE HIPS



The accompanying drawings show in full the construction of a modern dehorning chute. The dimensions indicated are suitable for cattle weighing from 700 to 1200 pounds, and will work best on cattle weighing from 900 to 1000. No claim is made for originality. On the contrary every point has been proved in service. The only new feature of the chute is the blocking on the sides to keep the animal from working up or down. The absence of boarding on the side opposite the hip bones is also important, as this puts the pressure on the fleshy portions of the body and not only holds more firmly but does not skin the hips.

It will be noted that the front opens so that the animals may come out forward after being dehorned. A bar may be placed across behind the animal to prevent him from coming backward instead of forward when he is released.

The same chute may be used for branding, by cutting away the sides where the brand is to be used.

# Food Products Inspectors

## *Condition of Fruits and Vegetables on Arrival*

A season's crops dumped or sold to cover freight, a good reputation for honest packing at stake—how many are the troubles of the farmer which are told in the telegram, "Rejected account arrival in poor condition. Advise disposal." A lifetime reputation for honest dealing, a trade relation with an entire community lost through misunderstanding—how many are the troubles of the dealer. A lawsuit against the railroad lost, or justifiable claim for damages not presented to the railroads—how many are the financial losses to all parties because no evidence of condition of arrival can be presented.

The growers' association may inspect the produce when shipped, the railroad may inspect it in its yards, the dealer may be perfectly honest in his decision to reject—but no court can accept without question inspection made by persons who have financial interests in the decision.

To meet this situation the U. S. department of agriculture (bureau of markets) has designated food products inspectors in the more important markets. These inspectors are authorized to investigate and certify to shippers the condition as to soundness of fruits and vegetables, as provided for in sectioon 8 of an act of congress approved August 10, 1917. The findings of the inspector will be considered as prima facia evidence by any court.

To date 34 cities have been designated by the secretary of agriculture as cities in which federal inspections may be obtained. In case a shipper desires inspection in a city to which an inspector has not yet been appointed, it may be possible to secure it by telegraphing to the food products inspector, bureau of markets, department of agriculture, Washington, D. C. In the Pacific northwest inspections may be obtained from the following inspectors:

Butte, Mont: L. J. Case, inspector, Unitel States bureau of markets.

Portland, Ore.: R. L. Ringer, inspector, chamber of commerce.

Seattle, Wash.: F. E. DeSellem, inspector, United States bureau of markets.

Spokane, Wash.: R. M. Rutledge, inspector, 424 Postoffice building.

Application for inspection must be made by the shipper or the shipper's agent. Inspection certificates are issued on written or telegrahic applications, but inspection may be made on verbal requests, provided a written request is made before the certificates are issued. No charge is made for this service.

# Patriotic Acts Speak Loud for Farmers

The loyalty of the farmers of the Pacific northwest is well expressed by the following paragraph from one of the correspondents of the Farmer:

We have no slackers among the farmers. While some may criticize the government's mistakes, its delays and its red tape, it does not prevent an honest endeavor to do their best. Our county, like most of the counties in this state, has oversubscribed its levy on Liberty bonds and will double its quota before it closes.

A widespread inquiry among our correspondents, scattered over the four states, shows a similar patriotic attitude. For instance, from our Idaho Falls correspondent, in the extreme southeastern part of that state, comes the word:

While some feel that in addition to fixing the price of wheat the government should fix the price of commodities the farmer has to buy, yet at the same time they are not complaining about this and are working faithfully to produce maximum crops on increased acreages, in addition to which the farmers have subscribed very liberally to the third Liberty loan, some communities reporting as high as 85 per cent of their population subscribing for bonds.

From the extreme southern section of Oregon, in Josephine county, our correspondent writes:

Once in a great while we hear some one commenting upon some of the mistakes that had been made by the government officials in the prosecution of their work, but they are pretty generally forgotten when it comes to the response, either in financial assistance or in production.

From Multnomah county, in northwestern Oregon, comes the word:

There is absolutely no lack of patriotism among the farmers in this community. I have traveled over the northwest rather extensively and find farmers from the 10-acre tract to the large farms intensely interested and full of the highest loyalty to the country.

Here is a word from Klickitat county, in southern Washington:

I have just canvassed our school district and every patron of the district has done his best, with regard to Liberty bonds, having secured over $700 in a very small district, this being our first try at the Liberty bond as a district.

Here is a sample from western Washington:

Mason county has its patriots as true blue as the sun anywhere shines upon, and the general standard of patriotism is high, as the record of "over the top" has shown in every call which the government and the various societies have made since the declaration of war.

One of our Okanogan county correspondents declares that "it is only the idle man who is grouching and knocking against his country," adding

Farmers are very busy these days and are using every means to grow all the land will produce and when people are hustling there is no lack of patriotism.

"There seems to be no lack of patriotism in this community," is the report from a Douglas county correspondent in central Washington, adding:

Farmers are all doing their utmost to produce maximum food crops. Everybody seems to be awake to the situation and willing to overlook hardships and do their utmost even to the extent of personal sacrifices.

PLEASE send me one of the 9x22 flags. Enclosed you will find 25c for one subscription.

Colton, Wash.

# Notable Progress

## Is Seen in Wenatchee Valley

By PAUL E. TRIEM.

Another year of achievement has begun in the Wenatchee valley. Progress is in the very air. The power sprayers and cultivators are evidence of it. Only a few years ago all the spraying was done with hand outfits. Now the standard machine is the high pressure pump, operated by gasoline power, and having a capacity sufficient to keep several men busy.

The city streets and the country roads are dotted with automobiles, autostages, and auto-trucks for heavy farm hauling; while here and there a bigboned mule team stolidly drags a cultivator or a manure spreader. The buckskin cayuse of a few years ago seems to have left the valley in company with hard times, and prosperity and twentieth century farm power have come in together. An additional change is seen in the attitude of the fruit growers toward their product. A get-together meeting recently held in Wenatchee by the Wenatchee and Yakima traffic associations illustrated the same trend of public opinion. The meeting was called to consider ways and means of moving the 1918 fruit crop. Local rivalries were forgotten, and these two fruit districts worked shoulder to shoulder in formulating plans which will work out for the advantage of the entire northwest. "Let nothing be wasted, and the raw material of soil and water and men's labor, to the finished product, the fruits of our orchards," is the spirit of this community in war time.

Cull apples have been used for cider making since the first orchard was planted, and with the spread of the dry movement the market for this product has increased. Cider, however, is only a part of the apple; a profitable disposal of the pomace has up to this time been apparently an unsolvable problem. Now the dairy industry makes its bow to Chelan county and says, "Let us have that pomace. We can turn it into milk!"

Orchards or parts of orchards are coming out in places, to make way for alfalfa and cows. Mike Horan, for instance, has a fine herd of grades, with a sprinkling of purebred Ayreshires. And there are two purebred herds near Wenatchee, which seem destined to play big parts in the future of the dairy industry in Washington: One is the J. T. Compton Holstein herd, the other the sturdy bunch of Ayrshires owned by E. W. Van Tassell.

Mr. Compton, who is one of the well known farmers of eastern Washington as well as a leading member of the grange, follows a rule established by many practical dairymen: Raise all the feed you can on your own farm. Alfalfa and silage corn are produced on the place. The corn chosen is a variety brought into the county many years ago by the missionaries.

Pride Fayne Valdessa, No. 187266, a young bull of grand conformation, who traces his descent from world's record producers on both sides, was purchased last year to head the herd of 25 registered Holsteins.

The E. W. Van Tassell herd of Wenatchee has been built up largely from stock secured from that thorough-going Ayrshire breeder, J. W. Clise, of Seattle. The animals are doing wonderfully well in their eastern Washington home, and under the management of H. Stellingwerf, farm manager for Mr. Van Tassell, they may be depended upon to give a good account of themselves in future O. A. R. work.

On the Van Tassell farm, apple pomace takes the place of silage. About 35 pounds per head is fed daily, in connection with alfalfa hay and mixed mill feed. The pomace is stored in a pit.

## Grain Standards.

The public service commission of Washington announces a hearing in the assembly room of the chamber of commerce in Spokane at 10 a. m. Friday, May 17, 1918, on the advisability of establishing and promulgating the same standards for the grading of wheat and corn as have been established by the U. S. department of agriculture, to become effective July 15, 1918, such standards so established to be known as Washington grades. The commission announces that "all persons desiring to be heard will be heard and may give such testimony as they may desire to offer at said hearing." It is especially desired to have the farming interests well represented

# A. C. Townley

## Given a Hearing at Washington

WASHINGTON, D. C., May 1.—President A. C. Townley, of the nonpartizan league, was given a hearing today before the senate committee on military affairs. He had asked for an opportunity to appear before the committee to answer recent accusations made before the same committee, by Judge John E. McGee, member of the Minnesota public service commission, that leaders of the organization were unpatriotic and some of them disloyal.

When Mr. Townley came into the committee room the senators saw a man of pleasing personality, amiable, not at all controversial, and possessed under heckling; a man with magnetic eyes, big domineering nose and mobile mouth. At times the laugh was on the witness, and at times on members of the committee.

It was on Townley when he told of a calf in Minnesota, whose hide brought only $3, while the farmer who sold it had to pay $100 for a lesser amount of hide contained in a harness. In an earlier day, Mr. Townley argued, the hide would have brought $6 and the harness $25.

Senator Weeks declared that calfskin was not made into harness, Senator Hitchcock that the figures were all wrong and Senator Reed demanded to know the exact date when calf skins sold for $6 and harness for $25.

"I am sorry I talked about that calf," said Townley, getting a laugh, "let's talk about people." So they proceeded to talk about him, intimating that he wasn't much of a farmer or else he would know more about calves and harness. Mr. Townley explained that he had farmed successfully for several years, and then lost all he had made in a later year cbeause it cost him more to raise farm products than he could sell them for.

"Like my experience in raising potatoes last year," said Senator Weeks. "They cost me $2.50 to raise and I sold them for $1.25." "You and I are both farmers," retorted Townley, admitting the Massachusetts man to fellowship in the lodge.

The laugh was on the senators when, in answer to a question why the Nonpartizan league had bought only $5000 worth of Liberty bonds, the witness asked in return why the republican and democratic parties had not invested. Representative Baer of North Dakota and Representative Jeannette Rankin of Montana showed keen enjoyment over this retort.

Extracts from the book of Lindberg, now nonpartizan league candidate for governor of Minnesota, were read to the witness, for his approval or condemnation. One phrase was "We have been dragged into this war by the intrigue of speculators."

Mr. Townley pleaded that he did not know what Lindberg meant by this. He also pleaded that Lindberg was not a leader of the league, and hence did not belong in the discussion. He drew a distinction, which the committee declined to accept, between a league leader and one who had been indorsed for office by the league. Another phrase from the Lindberg book, asserting that "wealth was so greedy for greater fortunes" that it had dragged this country into war, was read by Senator Reed, who wanted to know if Mr. Townley believed that, but the witness had no responsive answer.

To similar questions about some more similar statements, particularly ones charging organized wealth with responsibility for America's participation in the war, Mr. Townley replied that he would have to study them before making answer.

"Do they not strike you at once as being statements inclined to give aid and comfort to the enemy?" demanded Senator Reed, but Mr. Townley fenced and would not respond directly.

Senator Reed read Lindberg's phrases asserting that the people were being "driven as cattle to buy government bonds, subscribe to the Red Cross," and the like, and asked Mr. Townley if he approved that.

"I do not approve of the interpretation I get from your reading of it," was the reply.

It came out in the testimony that the league has about 50,000 members in North Dakota, about the same number in Minnesota and about 100,000 scattered through the 11 other states, in which organizations have been perfected, a total of 200,000 members, each paying into the league treasury $3 a year, giving a gross revenue of $1,600,000 a year. Mr. Townley testified that about 25 to 30 per cent is lost through members failing to pay their dues.

### As You Like It.

Treat the other fellow just as you would like to be treated.

# Washington Boys in War Service

WAGONER JOHN A. SCOTT, Mabton, Wash.—Entered the military service in April, 1917. He is now serving in the same company as his brother, "somewhere in France" with the 161st infantry, 41st division. He is 25 years old and a son of J. A. M. Scott of Mabton, Wash.

CORPORAL C. R. HAIGHT, Lakeside, Wash.—Enlisted at Faribault, Minn., May 31, 1917. He is at present stationed with Company B, 136th infantry, Camp Cody, Deming, N. M. His parents, Mr. and Mrs. B. L. Haight, reside at Lakeside, Wash.

HARRY MARK DEAN, Cheney, Wash.—Enlisted at Spokane in June, 1917. He is now doing his "bit" for his country "somewhere in France" With Company I, 161st infantry. Private Dean has been in France several months. His parents, Mr. and Mrs. George Dean, reside on a rural route from Cheney.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## *Necessaries Before Luxuries*

As the summer wears away we shall have many reminders that the nation is at war; reminders that will reach down and grip our pleasures and conveniences, and take toll from our purse in various ways.

Automobiling may become a dwindling activity. Pleasure motoring is all but stopped in Europe now, forbidden in some countries by law, and practically made prohibitory everywhere by high prices for tires and gasoline.

Gasoline and tires are going up in this country, and no one can foresee the end. Importers of rubber have been notified that it is the intention of the war trade board to restrict imports of that commodity, as the government is face to face with the necessity of conserving cargo space as much as possible. Rubber is but one item, and it is the announced policy of the government to curtail as far as possible all future importations of luxuries and nonessentials. There has even been talk about cutting off imports of tea, but officials at Washington deny that they intend going that far.

Necessaries before luxuries is the order of the day, but the policy of the government is to bring about a gradual change, lopping off at first only those nonessentials that the country can well afford to spare.

## *Who Started This War?*

Who started this war? Germany. If further proof were needed, it is now supplied by the written memorandum of Prince Lichnowsky, who was the kaiser's ambassador to London before the outbreak of hostilities. Prince Lichnowsky is now practically under arrest for his candid revelations, and the kaiser is furiously angry with him.

He plainly states that while he and Sir Edward Grey, then the British foreign minister, were discussing means of preserving the world's peace, Germany was not only resolved upon war with France and Russia, but was reckoning upon war with England. "Thus ended my mission in London," he says. "It was wrecked, not by the perfidy of the British, but by the perfidy of our policy."

Our readers will recall that the assassination of the archduke and duchess of Austria, at Serajevo, in the spring of 1914, was the match that fired the fuse that blew up the world. Lichnowsky says that this assassination was merely a pretext for war. It afforded Austria an opportunity to make impossible demands upon Serbia (Serbian conspirators were accused of plotting the assassination) and thus drew Russia to the defense of the Serbian government. It has long been apparent, however, that Germany was inciting Austria, and that the kaiser's government was engaged in a desperate game of intrigue to start hostilities and have an excuse for the invasion of Belgium and the attack upon France.

The kaiser's former ambassador to England now confirms that fact beyond all further question. Austria was merely Germany's catspaw.

No wonder the German emperor is furious and has put his former ambassador under arrest, for these truthful revelations give the lie to his hypocritical assertions that Germany is fighting a defensive war.

## *Bees and Spraying*

A warning word comes from Dr. A. L. Melander of the State College of Washington. He fears a widespread destruction of bees in the Yakima and Walla Walla valleys, as well as in other sections of the state where beekeeping supplements fruitgrowing, unless the apple growers start to practice spraying for the codling moth before the petals are out of the apple blossoms.

Dr. Melander says that the misunderstanding as to when to spray is ruinous not only to the bee industry, but also to the apple industry, since the bees play an important part in pollenization.

Apple blossoms containing the petals contain also the bacteria, the nectar sought by the bees. By the time the petals fall the nectar is gone and the bees no longer frequent the trees. Moreover, arsenical spraying that is done when the petals are fallen will not harm the bees.

Another argument advanced by Dr. Melander for later spraying is that, after the petals are fallen the stamens of the blossoms open, so that the spray can more easily get down into the calyx cup, where it is needed to kill the worms.

The honey bee not only needs protection for the benefit of the orchard, but just now it can give help toward averting an international sugar famine.

The boy between 16 and 20 years old can do a real service by joining the Boys' Working Reserve, if he does not have an occupation that is contributing directly to the production of food or other war necessity. By so doing he becomes part of a federal organization, subject to call for farm service where it will do most good.

Formed of the blood of many nations, the American has a distinct personality. He is effervescent and yet capable of great fixity of purpose. He is quick and yet he has elements of persistency. No race is so adaptable; in none are the principles of freedom and high ideals more firmly rooted.

The proposal to raise the price of wheat to $2.50 a bushel did not get through congress. Some of us think it should have, but everybody is agreed that the greatest crop possible must be grown, regardless of the price. There is something in the world bigger than money.

War savings certificates enable everybody to take some part in financing the world war, in which the United States looms larger day by day.

ORDERS for The Washington Farmer's farm service war flags are just beginning to come in. Already among those received are orders from Soap Lake, Spokane, Big Lake, Odessa, Roy, Espanola, Richland, South Aberdeen, Lakeside, Amber, Pateros and Nasel, Coulee City, Shelton, Mold, Ferndale, Centerville, Rockford, Wheeler, Benge.

## *Washington Gleanings*

Mondovi is to have a new grain elevator.

Excess flour is being returned to the local dealers.

Methow Valley News: Our new cheese factory is now in operation, in full blast.

The apple tonnage of Omak was well above the 550 car mark for the last season.

The Yakima Potato Growers' association recently elected W. B. Myers president.

Fred Johnson of Attalia has had to reseed 30 acres of beets on account of the dry spell.

The Orondo Community Packing company has ordered material to increase the size of the plant.

Game Warden C. H. Rhode has just planted 100,000 silver trout in Waits lake in the vicinity of Chewelah.

Sprague has organized a home guard, with I. J. Putman, captain-commandant, to guard against I. W. W., fires and treason.

Big Bend Empire: Chris Aasen is going into thoroughbred stock this spring. He has purchased thoroughbred horses, cattle and hogs.

The annual picnic of the Horse Heaven grange will be held at the home of Thomas Horrell, May 25. Mr. Horrell lives on the old William Hayden place.

With the object of promoting rural and community life the state superintendent of public instruction has called a Grant county conference at Ephrata May 11.

Grangers of Whatcom county are planning to construct a large warehouse where buying and selling produce may be done cooperatively, and on a larger scale.

Fire totally destroyed the big furniture manufacturing plant of the Chehalis Furniture and Manufacturing company at Chehalis, April 19, entailing a loss of $110,000.

F. H. Krug, local manager for the Kennewick-Richland Marketing union, believes that the strawberrry yield this year will be one of the largest in the history of the valley.

A number of experiments in the cultivation of wheat, oats, kale and bluebell peas are to be carried out in Whatcom county this year under the direction of H. B. Carroll, county agent.

Returns of $2.12 net on Delicious, $1.72 on orchard run Winter Bananas, $1.31 on small sized extra fancy Jonathans and $1.09 on fancy Jonathans have just been made to Paul Dittman of Cashmere.

News comes from Prosser that 20 valuable sheep dogs near the Mercer sheep camp in the Rattlesnake have been immunized from rabies. Recently a number of dogs in that vicinity were bitten.

Dayton Courier Press: Fred Cushing started his farming outfit to Endicott Thursday. There were five wagon loads of machinery and implements and 100 head of work animals in the outfit that made the trip overland.

Toppenish Review: Some of the local farmers have raised the question of the right of the townspeople to clean their yards of cans and rubbish and then dump them along the roadway or by the fences of the farmers' fields.

The Waitsburg Patriotic league has adopted a resolution urged by the Progressive club of the town asking that the various clubs, lodges and societies pledge themselves not to serve food of any kind unless at a meal during the duration of the war.

Roadbuilding costing about $102,000 and extending over seven and a half miles is to be completed this summer in the Lake Quinault district, on the Olympic highway. The work will be done with federal forest road aid and state and county funds.

In the Waterville high school the gas engine class has just built an air pump engine. The boys have put on a kerosene attachment and say the engine can be run at a cost of six cents an hour, having a capacity of 375 gallons per hour from a 50-foot well.

Nine Allender, eighth grade pupil of the Okanogan public schools, was declared winner of the Okanogan county spelling contest, when she attained a grade of 100 per cent in the written and oral tests given her in competition with a class of pupils from different parts of the county.

At the county rural conference at Goldendale, April 20, there was a parade in the afternoon by the Goldendale Canning and Garden club and the Town Boys' Farm club. They marched down Main street carrying their hose and rakes and from there to the church, where they sang several songs and gave some club yells.

# Brunt Borne by British

## *Losses Estimated at Nearly 250,000*

The British military experts in Washington declare that everything points to the German offensive being continued almost immediately, and should the brunt of the attack again have to be borne by the British the situation undoubtedly would be serious unless sufficient troops are available to bring relief to the British divisions. It is believed that any German advances in the direction of the channel ports will be made at great cost to themselves and over the bodies of the British army, who have so often in the past shown bulldog determination in the defense. British losses in men killed, wounded, captured and missing on the western front since the German offensive began March 21 are estimated by the British military experts in Washington at nearly 250,000. The entire combatant forces of the British army have been almost continuously engaged. As an example of what the British have gone through the 21st division fought continuously from March 21 to March 28, and lost 4000 infantry men out of a total strength of 9000. Later, to drive back a German attack in which five German divisions were engaged, its losses increased to 6000. Statistics such as these bring home the terrible ordeal through which the British army is now passing.

**STUBBORN DEFENSE.**

A sober and long-headed look into the future confirms the belief that no matter what temporary successes may come to German arms, at an enormous cost of German lives, that it is no nearer downing France and England than it was six weeks ago. The capture of Kemmel may have made it more difficult for England to retain the Ypres salient, and the rear of those positions was threatened, but evacuation is not inevitable. On the 26th the French and the British prevented the Ypres situation from becoming a great German success. On the 28th and 29th German armies on three sides of Ypres hurled themselves against the Franco-British fronts, but these held like ramparts of granite and steel. Nowhere was Germany able to make a dent. Its frontal attacks betrayed German disbelief that Ypres can be outflanked from the south, and it appeared as if British withdrawal were not contemplated, for Haig gave no sign of retirement, and the British and the French showed strong faith that they can hold on. In 1914, when Germany's army was more efficient than it is in 1918, the English at Ypres withstood every German attack.

**AUSTRIAN DRIVE AGAIN.**

Vienna dispatches report Emperor Charles leaving for the front, and announce greatly increased activities along the Austro-Italian line. Meanwhile Austria-Hungary is confronted with a critical economical and political situation at home. The crisis in Vienna is marked by the dismissal of the Austrian parliament by the emperor's order, and the declaration that forcible measures would be taken to make a resumption of its sessions impossible. A statement issued makes it clear the government was embarrassed by the divisions in the legislative body over the grave food situation and the racial grievances in the Austrian body politic, and desired a free hand in the next few months.

**IS GREAT HONOR.**

One of the curiosities of the great world war comes to light in a letter of a youthful British soldier from Bethlehem to a friend: "I am on guard at present, and it is a great honor. I can tell you that I am guarding the birthplace and manger of our Lord. It is a wonderful place, and I never thought when I used to read about it that one day I should stand and guard it. The birthplace is marked by a 14-pointed silver star, presented by the French government. The stable is hung with lamps from all different countries and they look beautiful, and, I might add, they are always alight. The manger itself is cut in natural rock, but marble has been put in to keep it in a good state of preservation."

**THIRD LIBERTY LOAN.**

For the third time within a year the American people have heartily oversubscribed a war credit. As the third Liberty loan was closing Saturday night the treasury announced the campaign had been "an overwhelming success." Although $3,000,000,000 was the formal goal of the campaign, official reports, including only a small proportion of today's avalanche of pledges, showed the total as $3,203,655,400, and there were indications that the aggregate would be increased to nearly $4,000,000,000 this week, when banks have time to tabulate the multitude of last-minute applications. Official estimates placed the number of subscribers at between 12,000,000 and 15,000,000—far above the 10,000,000 of the second loan or 4,500,000 of the first loan.

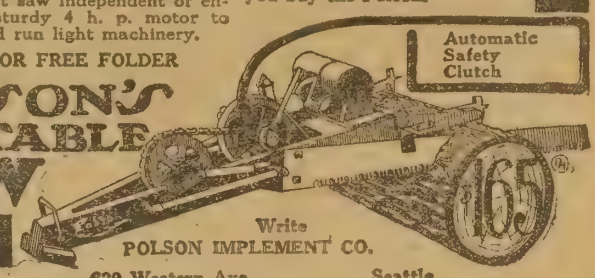
**FOR $2.50 WHEAT.**

The senate has again formally recorded itself in favor of increasing the government minimum guarantee in the price of wheat from $2 to $2.50 a bushel, despite the reection of the proposal by the house. It insists on this wheat clause in the agricultural appropriation bill returning the measure to conference. Advocates in the price increase admit there is virtually no probability that the house conferees will yield.

**Dependable!**

Here is a portable drag saw that you can depend upon.

Will do the work of 20 men sawing cord-wood shingle bolts, clearing land and cut from 15 to 30 cords of 4-foot wood per day.



Built especially strong for heavy duty work and backed by one of the oldest implement houses in the West.

Equipped with Safety Automatic Clutch so you can start saw independent of engine and use sturdy 4 h. p. motor to pump water and run light machinery.

You make no mistake when you buy the Polson.

In answering advertisements please mention this paper.

**The Ball Tread**

The weight of the machine rests on the polished steel balls—they roll easily—requiring little power—leaving the most of the energy generated by the engine for hauling the load.

Solid, well-built road-beds, with heavy steel rails, enable the modern railroad engines to haul freight trains of more cars, and heavier loads than ever before.

It's the same with the **Ball Tread Tractor** gliding on its steel balls—big loads are easy to haul.

Every part of the **Yuba** is accurately machined, and made from the quality of steel best suited for the hard usage; for plowing deep, turning up new, fresh soil to give greater fertility; for working day and night, in all kinds of weather, in all kinds of soil; for economy in labor and time.

# Freshen in the Fall

By A. B. NYSTROM.

The dairyman who supplies a small retail trade must have a definite supply of milk all the year round. He must also have the same quality of milk at all times. The best practice for him is to have his cows freshen all through the year, so that only one or two are dry at any one time. The best practice for most dairymen, however, is to have their cows freshen in the fall. This gives a high flow all winter, and when grass comes on in the spring there is a tendency for a rise in the flow, thus maintaining high production throughout the greater part of the year. Winter prices are always higher than in summer. The reason for this being that many farmers milk cows only during the summer months. Fall calves are more easily raised than spring calves. The dairyman has more time to look after them in the fall, and by the time spring pasture is ready fall calves will be old enough to use it. Pasture does not benefit spring calves; it may even cause scours and set the calf back a month or two.

If the cow has been properly fed during pregnancy the calf will be strong and vigorous at birth. Most of the trouble in calf raising comes from lack of proper development before birth. The cow should get nutritious, succulent feed of a laxative nature all through pregnancy, and especially when she is dry. The practice of turning dry cows to a straw stack giving them no other feed is not giving the calf a fair chance, to say nothing of the detrimental effects on the subsequent milk producing ability of the cow.

The calf should be taken away from its mother soon after it is born. Some dairymen allow the calf to run with the dam two or three days. This practice is commendable if the udder is caked, as the manipulation given by the calf will help to increase the circulation and carry away the congestion. However, if you think you will have difficulty in teaching the calf to drink from a pail it is best never to allow the calf to touch the cow.

In any case, the calf must have the "first milk" or colostrum, as it is called. This acts as a purgative and puts the digestive organs of the young calf in the proper condition to handle the normal milk which comes later. Feeding three times a day to calves less than a week old is a good practice, being careful to feed in small quantities and have strictly clean, warm milk fresh from the cow.

The amount of milk to feed varies with different calves. A weakling can only use six to eight pounds per day for the first week, while a stronger one will be able to handle from 10 to 12 pounds daily. Feed whole milk alone until the calf is 10 days old. Then begin adding a calf meal in small quantities, increasing the amount very slowly from week to week, decreasing the amount of milk slightly until it is getting about eight pounds of milk and eight to 10 pounds of the substitute daily. This amount of milk should be fed on the average up to 10 weeks of age.

Some calves will not respond to the substitute as well as others, and all calves will do better on the calf meal when a little milk is given with it.

If skimmilk is plentiful it is wise to keep feeding it until the calf is 4 to 5 months old. However, most calves will grow well on the substitute alone after they are 10 weeks old, provided they have never had a setback, have learned to eat grain and hay and are in good, thrifty condition.

## Form Clarke County Association.

Through the efforts of County Agent Newhouse, a Cow Testing Association has been organized in Clarke county, Washington. Four hundred and isxty cows were secured at the rate of $2 per cow per year. The herds for this association come from the districts around Washougal, Brush Prairie, Battle Ground and Heison.

The offices were elected as follows: LeRoy Dobbs president; A. J. Stickney, vice president; George Anderson, secretary; William Chandler, treasurer; Kasper Jenny, E. H. Austin and F. C. Schumacker, directors.

LeRoy Dobbs, president of the association, is an enthusiastic Jersey breeder of Washougal. The vice president, Arthur Stickney of Vancouver, is a member of the firm of Stickney Bros., Jersey breeders. They are using a milking machine at the present time which enables them to maintain their herd of 30 cows with no additional help.

The Holstein breeders are represented by having Kasper Jenny as a director. The sire in the herd of Mr. Jenny is a grandson of the famous bull, Colantha Johanna Lad.

We should watch with interest the work as done by this the first Cow Testing association in Clarke county, Washington.

F. M. COLCORD,
Dairy Field Agent.

Puyallup, Wash.

## Bitterness in Milk.

Will you please tell me what causes buttermilk to taste bitter, also the butter to have a queer taste? The milk is set in a clean, cool cupboard, with nothing else in except milk. The cow has been fed on timothy hay and chopped oats, with plenty of fresh water to drink. Her calf is about 4 months old. C. C. S.

Bitter milk is usually caused by abnormal fermentation. The organisms that cause it gain entrance to the milk either through a diseased udder or through contamination after the milk is in the pail. A dirty barn, unscalded utensils, unclean strainer cloth, and unsanitary milk houses are frequently responsible for the trouble. Thorough sterilization of all utensils and thorough cleanliness in the stable using small topped milking pail will tend to eliminate the trouble.

It is not likely that the feeding of the cow is at fault. A. B. N.

## First Prize on Cheese.

Hugh Barber, cheesemaker at the Fairview factory, Tillamook, Ore., won first prize at the National Dairy Show for this factory. Mr. Barber has won first twice at the Calofornia state fair and first in 1915, 1916 and 1917 at the Oregon state fair. Butter fat prices at this factory (and all the Tillamook factories) for January was 65 cents a pound. The average test was 4.4, making the price per hundred pounds for milk $2.86 with the whey back. When I was there, April 3, one farmer was delivering over 1000 pounds a day, or $855 worth for 30 days. And it is a fact that when the flush season is fairly on some dairymen deliver as high as 1500 pounds a day. H. A.

### Small Coinage Short.

The Japanese are short of small coinage and are beginning to feel the absence thereof quite as much as people in the United States. Their government has decided to issue small paper notes of 50, 20 and 10 sen denominations. The Japanese sen is equal to one-half cent of our currency.

# Veterinary

Dr. S. B. Nelson

**Hard Lump Forms:** I have a cow about 7 years old that is about three-quarters Jersey. Was fresh about last October and about three months ago one of her hind teats got a hard lump at the base of the teat in the bag and the milk ducts of that teat are hard and rigid. The milk comes out of the teat all right. A year ago the state veterinarian tested our herd and pronounced them all right and healthy. I have been putting on salty grease and washing it in hot water and rubbing it. Will you tell me what to do for it?—O. W., Oakland, Ore.

It is quite possible that it would be advisable for you to secure the services of a local veterinarian, if that could be done, because the lump in the bag may be one of two or three things. Without a personal examination a person could not tell which. In the meantime, however, I am going to suggest to you that you apply at the base of the teat a little iodine ointment after each milking. That may gradually cause the lump to absorb.

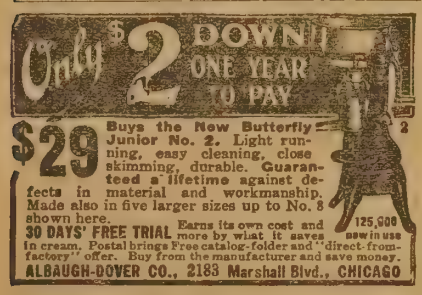
**Hard to Milk:** I have a cow just come fresh, but she is so hard to milk. What can I do to help her in this respect? J. G. M., Blackfoot, Idaho.

If anything can be done to relieve the condition you mention in the way of treatment, about the only thing is that you go to your jewelry store and purchase the very largest violin string that can be purchased. Tie a knot in one end of the catgut and cut off about two inches of it. Place this in a 10 per cent solution of carbolic acid for a little while. Then pick up the string, tying the little piece below the knot, not the long end, and dip the long end into boiling water, washing off the carbolic acid. Prior to this time dip the teat of the cows that are hard to milk into tincture of iodine, so as to disinfect them thoroughly. Dip them into about a half an inch, so as to be sure to have the iodine go up into the opening in the teat. This is very important. After this slip the string into the teat, and leave it until the next milking. This, of course, should be done after each milking. The catgut in the teat will swell, so that the string can not come out, and the knot in the string will prevent it from going up into the teat. The swelling of the string may gradually dilate the teat so that it will milk easier. If this is not the case, probably the best thing to do is to put one or more calves on her, and let her pay for herself and her feed in that way.

**Ration for Milking Cow.**—What is the best ration to give to a milking cow to get the best returns? She now gets pasture, oat hay, alfalfa, shorts, a gallon, and oil meal, 3 cups twice daily. Can you suggest something that will give more milk and butter fat? She is fresh since the third of April and gives about three gallons a day. She is a 15-16 Swiss Jersey. Who could grade her? I have no papers.—N. F.

You are feeding your cow a pretty good ration, but it might be advisable to increase the shorts that you are feeding, so that the cow will get about three pounds of grain ration for every gallon of milk she gives. That may tend to increase her milk flow. If the cow is not a purebred cow I doubt whether you could get the papers for her from either the Swiss or the Jersey association.

**Hydrophobia**—My dog caught a coyote and killed it. I do not know whether the koyote had hydrophobia or not. I have the dog tied up. I would like to know the longest period before he would develop the rabies. J. W. T.
Winona, Wash.



The shortest period from the time that an animal is exposed to hydrophobia or rabies is generally from 15 to 21 days. Many animals contract the disease and show symptoms from the 21st day—though authorities say that the average length of time before they show symptoms is 40 days. Animals have been known to show symptoms after several months, and even one year's time.

**Lampas**—I have a horse with lampas. What is the cause and what is the cure?—J. J. H., Port Angeles, Wash.

Lampas are caused by irregular feed or cutting the teeth in young horses, or indigestion in older horses. If your horses are young and they are cutting their teeth the irritation and swelling of the gums will disappear as soon as they have completed this. If your horses are older the chances are the cause is indigestion and you might give your horse a small purge of 6 drams of aloes and 2 drams of ginger made into balls. Two days later begin feeding your horse, beginning with only one-half of what you were feeding before, and gradually increase the feed. In the meantime, wash the swollen gums with a little saturated alum solution once or twice daily.

**Dead Tissue Somewhere.**—I would like some advice about a young mare. She was kicked by another horse about half way between the stiffle and hock on the front of a hind leg and with "neverslip" calks, which made a slight puncture and healed up at once. (This happened about two months ago). I didn't think much of the puncture, but used liniment for the lameness for several days, but the lameness did not leave. Then I used hot vinegar and salt one night and the next day her leg was swollen considerably and at night the punctured place broke open and pus started from it. I read in a veterinary book about punctured wounds, and so I sterilized my penknife and lanced it and used sterilized absorbent cotton on a small stick dipped in carbolic acid and water (15 drops to one quart of wtaer) and swabbed the opening as deep as I could get in, about 10 times, and new cotton each time. Then I swabbed twice similarly, using iodine; the next day the swelling was nearly gone and also the lameness and in two more days both were gone and have worked her steady since then, but the opening continues to run off pus. About a week ago I repeated the above treatment, lancing the second time, but there is no change yet. She is not lame in the least, instead is frisky on her feet and can pull her best. Around the puncture, about as big as a dollar, is a raised place which seems solid and is sensitive, and three inches away I can curry or brush and she pays no attention. I am afraid either of proud flesh or that the bone was injured. What would you advise me to do? There is no veterinarian within 25 miles of here.
A. J. C., Boyds, Wash.

The injury apparently was not a deep one, and there is under the skin and in the outlying tissues a little dead tissue somewhere. I think if you would be careful and follow the opening through which the pus is discharged into it gently and continue the treatment that you are giving, your mare will get well.

## Cheese and Butter Makers

Chr. Hansen's Preparations are used by champion cheese and butter makers everywhere, because pure, concentrated and simplest to use. Always dependable.

Hansen's Rennet Tablets for cheese making; Cheese Color Tablets; Danish Butter Color and Junket Buttermilk Tablets.

## *Eight Good Reasons Why You Should Buy a*

# DE LAVAL
## CREAM SEPARATOR

GREATER CAPACITY: New capacities have been increased 10%, without increase of speed or effort required in operation.

SKIMS CLOSER: The improved bowl design, together with the patented milk distributor, gives greater skimming efficiency.

EASIER TO WASH: Simpler bowl construction and discs caulked only on the upper side make the bowl easier to wash.

EASIER TO TURN: The low speed of the De Laval bowl, the short crank, its unusually large capacity for the size and weight of the bowl, and its automatic oiling throughout, make it the easiest to turn and least tiring to the operator.

THE MAJORITY CHOICE: More De Lavals are sold every year than all other makes of separators combined. More than 2,325,000 are in daily use—thousands of them for 15 or 20 years.

TIME TESTED: The De Laval was the first cream separator. It has stood the test of time and maintained its original success and leadership for 40 years the world over.

EQUIPPED WITH SPEED INDICATOR: Every New De Laval is equipped with a Bell Speed-Indicator, the "Warning Signal" which insures proper speed, full capacity, thorough separation and uniform cream at all times.

SERVICE WHEN YOU NEED IT: The world-wide De Laval organization, with agents and representatives ready to serve users in almost every locality where cows are milked, insures the buyer of a De Laval quick and efficient service whenever he needs it.

Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or, if you don't know him, write to the nearest De Laval office as below.

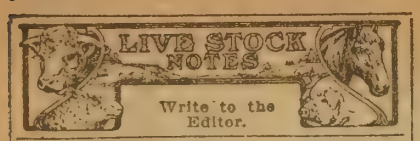
## For Calf Scours

B-K treatment is saving many calves. Scouring calves indicate a germ infection that is likely to run through your entire herd with serious losses.

The loss of one calf is bad enough, but nothing compared to your loss when the infection spreads—as it will unless checked. Then your year's work in building up your herd is wasted—your profits lost.



Leading breeders testify that B-K stops scours. It is powerful in killing germs. When used internally B-K kills the germs in the mouth, throat and digestive tract, heals inflamed membranes, relieves irritation. B-K may be given freely in drinking water.

If your dealer does not have B-K, send us his name.

FREE BULLETINS: Send for complete information—"Special trial offer" and our calf bulletin No. 136.

# Live Stock Situation

By R. A. BLANCHARD.

So much has been written on the condition and loss of our live stock that we are in a dilemma as to the true condition. The International Institute at Rome says there are 47,000,000 head of live stock more in spite of the war, of this there are 18,000,000 more cattle and 15,000,000 more sheep and 11,000,000 more hogs, crediting European Russia with the highest gain and Paraguay with the highest increase in cattle. The best statistics available, however, have given Europe a loss of 28,000,000 cattle, 54,000,000 sheep and 32,000,000 hogs.

In the United States we are all aware of a rush to market of unfinished cattle, especially in the northwest, due to the high price of feed and the somewhat hysteria among the small farmer, In one day the record for America was broken when Kansas City received 100,000 head. Dairy cows were sacrificed, and the history of the hog production and markets of 1915 were still fresh in the memory of the farmer. The only apparent gain from our best sources of local information indicates a slight gain in sheep. The packing houses show an increase in their amount of frozen meat as follows:

| | |
|---|---|
| Frozen beef, increase | 73.3 pct. |
| Cured beef, increase | 61.5 pct. |
| Lamb and mutton, increase | 8.6 pct. |
| Frozen pork, increase | 5.0 pct. |
| Dry sale pork, increase | 4.3 pct. |
| Lard, increase | 9.3 pct. |

The most accurate figures obtained seem to indicate a decrease instead of increase in the northwest. That the beef supply has fallen off 51 million in 1917, and slightly over 40 million in 1915, a decrease of one-fifth in eight years, is a matter of common knowledge. Range flock sheep increased from 22 million in 1850 to 51 million in 1910 and has fallen to 48 million in 1917, or a per capita of .93 to less than half today.

Here are some points to be considered in the light of the above information:

The history of one crop system has never been a success in any country, and the highest yields of grains have consistently been recorded where live stock has been kept, which returns 85 per cent to the soil fertility.

In our irrigated sections, where hay has been raised for shipping, the most economical use is made through feeding to animals, and the tendency and collective effort on the part of farmers to hold hay for high prices is a short-sighted policy, for without stock to consume the hay there would be no market.

With the inclination to dispose of live stock at immature stages, urge your customers to retain breeding stock, and especially the best of their herds. "No time like the present" means much to the breeder using the pure-bred animal. The Minnesota station declared that $700,000 was lost annually in that state by the use of scrub stallions.

Encourage the growth of forage and its use in feeding. Bean straw has a high feeding value and pea straw has been recognized for years. No farmer should burn an oat strawstack. Not only does he lose $18.37 worth of fertility from the soil (old prices), but the oat straw, when cut and mixed with cut alfalfa and molasses (in sugar beet countries), gives a most effective fleshing feed for live stock, especially when fattening for live stock markets.

The use of the silo should be universally urged. Green corn, with dry pea straw, etc., and a variety of other crops can be stored and saved economically.

The use of concentrates should be anticipated for next winter. Cottonseed meal, oil cake, soy bean meal, cocoanut meal, will become valuable in supplementing and making effective some of the forages and fodder. The prohibitive prices of barley, oats and millfeeds and the concentrates, together with information as to relative feeding values, will determine the choice of feeding.

## Three Oxford Wether Lambs.

Three Fisk farm Oxford wether lambs will be a part of the University of Idaho, 1918 show flock of fat wethers. These lambs are the pick of Mr. Fisk's lamb crop and will be fitted for the wether competition of the state fair circuit and of the fall fat stock show circuit. They are February lambs and are already big, husky fellows. They were selected on a recent trip to the Fisk stock farm at Spring Valley.

Mr. Fisk's 1918 lambs are a distinct credit to him and an object lesson for the Inland Empire. He has the remarkable percentage of 175, made up of singles, twins, triplets and a set of quadruplets.

These results, which will unquestionably prove highly profitable to Fisk farm, come from good farm flock practice. The ewes were strong and vigorous and were in good condition at mating time. The ram is thoroughly masculine and of excellent Oxford type. Shelter was available and the ewes were well fed during the winter. Finally and of greatest importance, Mr. Fisk knows how to care for the flock at lambing time and was constantly on the job.

With thrifty, vigorous breeding stock, proper feeding methods and good care farm flocks of sheep will be unquestionably successful in the Inland Empire country and, in fact, everywhere in Idaho and contiguous states.

We need not, all of us, anticipate the remarkable showing made by Mr. Fisk, We can approach this record. The more careful skill manifested in handling the flock the more satisfactory will be our returns when the year's work is summarized. E. J. I.

**Canada Reduces Wheat Consumption.**

Home consumption of wheat in Canada is now being reduced about 50 per cent to make possible an increase in wheat exports.

Make more Money
Pull big stumps
by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

# Swarming of Bees in May or June

## Article IV---By GEORGE W. YORK

In the north, in the month of May and June bees are likely to swarm, as that is their way of increasing. They usually wait till there are plenty of bees and honey in the hive before they swarm. Most swarms issue between the hours of 10 a. m. and 3 p. m. for first swarms; and from 7 a. m. to 4 p. m. for second or third swarms.

Bees are usually about to swarm if queen-cells are found with eggs or larvae about ready to seal over, when a swarm may issue in "a day or two after the first cell is sealed over, or as soon after as the weather will permit." The swarm after issuing usually whirls around in the air for a few minutes, and then the bulk of the bees will settle on the branch of a tree or bush, though sometimes they will cluster on a fence-post, trunk of a tree, etc.

The bees should be hives as soon as they have settled quietly, lest they leave for the tall timber; or, if another colony should cast a swarm at the same time, the bees of both swarms would likely unite.

If the queen should fail to accompany the swarm when it issues from the hive, because of her clipped wings, or for any other reason, the swarm will not skip out after clustering, but will return to its hive as soon as they find that their queen is not with them. Before bees swarm they fill themselves with honey, and then can be handled without much danger of their stinging.

**Limb of a tree, cut off with the swarm ready to hive.**

To hive a swarm when clustered on a limb, it may be cut off and carried to an empty hive previously prepared. The bees are usually shaken on the ground in front of the hive, when they will almost immediately begin to march in and "set up house-keeping." If the hive contains either empty drawn combs or comb foundation, it will help the bees greatly.

In case one does not want to mutilate the tree, the swarm of bees can be jarred off the limb into a large clothes basket, or light box, and then carried to the hive and dumped in front of it, as before suggested. Some spread a sheet over the top of the basket or box, pressing it down inside, and then after the bees have dropped on the sheet in the basket or box, the ends or parts of the sheet hanging over the edges of the basket or box may be thrown over the bees so as to cover them fairly well while being carried to their new home.

Sometimes, for unaccountable reasons, a swarm will leave their new home, but if a frame of brood and eggs from another colony is placed in the new hive it will help materially to prevent the swarm from leaving; and, if the queen should be lost, it will give the bees a chance to rear another queen.

In the olden days, it was thought helpful to beat tin pans or made any other kind of a noise or racket, in order to cause a swarm to settle. But as bees have no ears, all such fussing is of no avail whatever.

### Drone and Queen Trap.

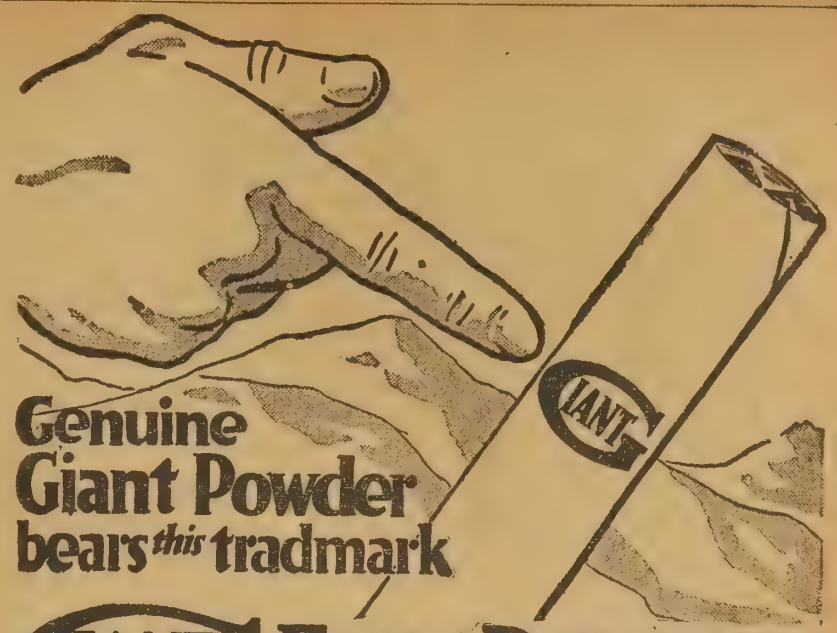
This is a small box-like arrangement made mostly of perforated zinc or wires placed a certain distance apart and put over the hive-entrance for the purpose of preventing the going out of the queen, but the worker-bees can pass in and out very freely. In case a colony swarms when there is a trap on the hive, the bees will return, as the queen can not accompany them. Neither can drones get through the trap, and so if there is a surplus of them they can be caught in the trap and destroyed.

### Prevention of Swarming.

There are many experienced bee-keepers who would give a good deal if they could entirely prevent the swarming of their bees. It is quite a nuisance at times. Some even think, or did think, that the swarming habit could be bred out of bees; but to do that would likely be well-night impossable. Nonswarming bees, I believe, are no longer advertised, though they were some years ago.

Destroying the queen-cells by cutting them out, may help a little to keep down swarming, but it isn't always easy to find all the queen-cells. It is quite a job to go through perhaps 50 or 100 colonies of bees and cut out all the queen-cells.

Some may ask, "How, then, would you get any increase of colonies if bees did not swarm?" That would be easy enough. Simply divide the strong colonies and thus make some more. This can be done as follows:



Suppose you have a colony crammed full of bees, in an eight-frame hive. Get an empty hive, and place it by the side of the colony to be divided, say with a foot or two of space between them. Then lift out 5 or 6 of the frames —with bees, brood and all—and put them in the new hive. But be sure that the queen is left in the old hive. If you take 5 combs out, then fill their places with five frames of comb foundation; and in the new hive put three frames of comb foundation.

Now, close both hives, by putting on the hive-covers. Carry the new hive several rods away from the old colony. Even then many of the old bees will return to the old home; but the young bees will remain in the new place, and as the brood is hatching all the time, it will soon be a fine colony.

As the new colony will have no queen, it is best to have ordered a queen for each new colony from some queen-breeder, and have her on hand before dividing any colony. In fact, the dividing should never be done till the queen is at hand, as it is often very difficult to introduce a queen to a colony that has been queenless one or more days. Next week I will tell how to introduce the new queen.

Genuine Giant Powder bears *this* tradmark

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

The Giant trademark is worth looking for, because it spells better blasting and more of it—done at lower cost. "Giant is powerful, nice to handle," writes Clarence Warner, Dayton, Ore., "and takes less powder to do the same work than other brands. I think Giant is just O. K."

Giant Farm Powders—Eureka Stumping and Giant Stumping—are made especially for western farm use. Every ounce of energy has exactly the right cracking, splitting and heaving action. More than half a century of such efficiency has made them so popular that other explosives are in error called "giant powders."

This indicates the superiority of the original. There is only one brand of Giant Powders. The Giant trademark is your sure protection against imitations.

The coupon (or a postal mentioning this paper) will bring you the big free book "Better Farming." It tells you how to do many kinds of farm work cheaper and better.

# Capons and High Feed

To the Editor: I raise capons mostly and have 10-pound birds ready for the market at 6 months of age. I have just sold the last of them. Owing to the uncertainty of buying feed, I have had to cut my flock down to just a few for breeding stock, and if reports are true I will have to sell them on account of feed. I live near McCleary, Wash., and buy my feed there. The stores keep saying they are unable to buy feed any more, so you can see that the poultry raisers around my part of the country haven't very much encouragement in the business. I intended this year to raise enough chickens to get 500 capons for the winter market, but with chop at $3.35 for an 80-pound sack, and no chance to get it, I have had to give it up. I expect to raise enough feed to keep my breeders through the winter. It seems to me that the poultryman is being forced out of business, with eggs down to 35 cents and feed going up. I am raising the Champion strain of White Wyandottes. They are laying 70 per cent, so I am not losing at the present time. If you know of any remedy for my situation I would like to hear it, for I would like to do some caponizing this year. The lowest price I sold for last year was 30 cents per pound, live weight. I got as high as 40 cents live weight in February.

A. G. HILL.

Olympia, Wash.

The above letter throws light on some of the troubles of the poultrymen at the present time. The feed is not only high in price, but in some sections there is difficulty in getting feed at all. The price of bran and shorts have been set so low, compared with other feed, that the demand is so great that there is not enough to go around. Mr. Hill is apparently a successful capon grower, as evidenced by the fact that he raises them to weigh 10 pounds at six months of age and then sells them for 30 and 40 cents a pound. On that basis there should be money in them even at present prices of feed, but his difficulty is in getting the feed. As a general proposition, the growing of capons is a business that the government is not encouraging at this time. There is now some shipments of corn to the west, and it is possible that the price may be reduced somewhat, but there is no telling. It seems to me that boiled potatoes may be made profitable use of in the feeding of capons, as well as other fowls. The price of potatoes is so low now that a liberal use of them will reduce considerably the cost of feeding. They should be boiled and mixed with bran and shorts and a good feed of the mash given once a day, or probably twice a day in the case of fattening fowls. There should, of course, be some hard grain fed once a day, but heavy feeding of potato mash will reduce the amount of grain fed. Do not feed too heavily on potatoes at the start; go at it gradually. J. D.

## Green Food Supply.

Now is the time to prepare for the green food crop during the dry summer months. Nothing will pay better than a little foresight in this regard. We have no right to complain about high prices of feed if we neglect to grow green stuff for the chickens. Kale for summer use should be planted in March or early April, and for fall and winter use it may be planted in June and July. It requires rich soil. Rape is also a good crop planted now for summer and fall. The farmer who has green alfalfa or clover all the summer does not need early kale or rape, but for fall and winter some fresh kale or mangels should be provided. Anyway, be sure that there is something green all the time for the fowls and plenty of it. It is throwing money away to feed high priced grain to laying hens when they have no green food.

J. D.

## Must Have Bone.

Just as bone in a horse is essential to power, so is bone in the chicken essential to good body development. It is therefore vitally essential that the feed which the growing chick gets should have in it the materials out of which it may manufacture bone.

All of the common feeds such as wheat, corn and oats have some mineral in them out of which bone can be made but they do not contain enough of it. It must be supplied in some other form. The surest way to supply it is to feed them ground or broken bone. It is possible to supply this on the farm without going to market for it, but even if it is necessary to buy a box from the poultry supply house, it will be a mighty good investment in the long run

## Test for Tuberculosis.

To the Editor: Kindly give me what information you can in regard to the method for testing fowls for tuberculosis. MISS M. M.

The test for tuberculosis in fowls is called the VanEs test, after Dr. VanEs, the discoverer. It consists of injecting avian tuberculin into the wattles or comb of the fowl. If the fowl is infected the wattles will show a swelling and discoloration. If not infected there is no swelling or discoloration. The reaction shows in from 24 to 48 hours. It is a simple test and requires only care and some practice in making the injection. The tuberculin can be obtained by writing to Dr. VanEs, experiment station, Fargo, N. D. He will also furnish necessary instructions. J. D.

## Result of Crossing.

To the Editor: Will you please give me the name for the breed here described? They are coal black with dark blue legs. They weigh about five or six younds each. They have black bead eyes and also have topknots and also have a comb that separates in the middle and lays out on each side of the head, and oblige. A. R.
Marshfield, Ore.

Answer—There is no recognized breed in this country or foreign countries that I know of, having all the characteristics mentioned. The birds are no doubt the result of crossing.

J. D.

## Mix Potatoes With Feed.

Potatoes are about the only cheap thing in the way of food for man or beast, unless it be eggs, which are reasonably cheap. Try some boiled potatoes, mashed and mixed with bran and shorts, or meal that has a good protein content, such as linseed oil meal, and cocoanut meal. Potatoes besides furnishing considerable real food, will replace green food largely. J. D.

*A Splendid Opening for a Local Representative in Your District.*

Hay-Field Economy

CHAMPION, Deering, McCormick, Milwaukee and Osborne Mowers, Rakes and Tedders long ago became necessities in American farming. Year after year they have entered meadow and hayfield and made ready many millions of acres of hay for barn and stack. On thousands of farms, mowers, rakes and tedders, with one or another of the above names, do their work with satisfaction and little attention, and are put away until next year.

When you buy a mower, rake or tedder with the name **Champion**, or **Deering**, or **McCormick**, or **Milwaukee**, or **Osborne** on it, you may be certain that it has every really good improvement ever made in hay machines. You may know that there is no skimping in any parts; there never was, in **International Harvester** machines.

Choose an International Harvester mower, rake, and tedder. This means good, easy hay making, long service, and prompt repair service if you need it. **Champion, Deering, McCormick, Milwaukee, Osborne**—safe names in the haying season. WARNING: This is a year of big demand, scant supply, and handicapped shipping. Act early and be certain. See the dealer—write to the address below for folders.

## TO PRESERVE FRUITS.

### For the Exhibitions and Shows.

For several years, about the time of the ripening of the strawberries, I have received one or more letters asking how to preserve fruits for exhibition. This year I have concluded to give information before, acting on the supposition that what the readers of the paper inquire about most, is of most value to them.

Fruits for preservation and show purposes should be put up when very firm, and for at least 48 hours after being put into the preservation fluid should be kept under a low temperature and in a darkened room. Following are some of the preservative formulas:

Formalin, one pint; salt solution, two pints; water, 17 pints. When made up, the solution weaker in formalin has also been used here satisfactorily. The proportions are: Formalin, three parts; salt solution, 10 parts; water, enough to make 100 parts.

For raspberries, the following mixture is recommended: Formalin, one part; glycerine, 10 parts; water, 89 parts.

Strawberries may be preserved fairly well in a saturated solution of common salt, and, better still, in a fluid composed of formalin, one ounce; alum, one drachm; glycerine, five ounces; water, three pints.

Red currants keep best in a solution of corrosive sublimate, one part; glycerine, 10 parts; water, 90 parts. The corrosive sublimate must be dissolved in hot water and the solution and fruit preserved in it should be labeled poison, as it is very deadly if swallowed. The glass stoppers of bottles and jars may be made perfectly tight by smearing the ground surface with a small amount of light-colored vaseline. This will also prevent in great measure the sticking of the stoppers when it is desired to remove them. G. L.

## PICKING FRUITS

### Knowledge as to Proper Time.

In his annual address as president of the Oregon Horticultural society Robert C. Paulus of Salem, Ore., pointed out that, while the picking of apples may be deferred too long, prunes are usually harvested too early.

Mr. Paulus urged the need in most sections of the state for more knowledge as to the proper time for picking various fruits, adding:

"There is also a need in most sections of the state for more knowledge as to the proper time for picking various fruits. Most growers who handle apples on a large scale know that apples, if left on the tree too long, exposed to the action of the sun, will ripen d great deal faster than if picked and stored slightly green, and deterioration starts in a great deal earlier necessitating a quick movement of the apples to the market, flooding the market and breaking it down when it should be the strongest if it does the grower any good. In the picking of prunes it has also been shown by experiments that the sugar content of the prune (which is one of the main factors in producing weight) increases rapidly in the last few days of ripening on the tree. Using the weight of dried fruit as a basis, the Oregon Agricultural college has found that in some instances a loss of 6 per cent of the total weight of the crop was caused by harvesting too early. In addition to this the immature prunes dried away more than the ripe ones. This resulted in an additional loss of 6 per cent in his crop, making a total loss of 12 per cent, or a monetary loss of $15 a ton, due to too early harvesting. Many of us, in our eagerness to get our prunes harvested before bad weather sets in, shake our prunes from the trees before the sugar has had sufficient time to form and we cause ourselves considerable loss on that account."

PLEASE find enclosed 5 cents for a farm flag. We live on our farm, four miles from Lynden and are trying to do everything to help this war along, for we must win. My husband and myself would like to have the flag in our window. We have the Red Cross and service flag and Hoover card in the window now.

MRS. F. A. PUGH.
Ferndale, Wash., R. 1.

## Spray! Spray! Spray!

The season is approaching when the fight of the apple orchardists against codling moth will begin. I can give no dates, because every particular community must be governed by local conditions and sometimes just a few miles distant or a few feet in altitude will make a difference in bud developments and the proper time for spraying. Every one must be his own judge about the time, and it is better to watch the press notices given out by the fruit inspector for any particular locality, but the watchword is "Spray! Spray! Spray! Spray with arsenate of lead to kill the codling moth as the kaiser sprays the nations with poisonous gases and German kultur, while the people fall and die like the petals of the flowers in an orchard.

PAIGE
The Most Beautiful Car in America

The Modern Farmer and His Car

Once upon a time, agriculture was a mere gamble with Fate. Ground was broken—seed planted—and the farmer spent the rest of his time hoping that the elements would take him into partnership.

All of that has changed now. The modern farmer has become a *business* man.

He employs the scientific information which is supplied him by our Government. He makes a study of his own local problems and plans his crops accordingly. He thinks in terms of markets as well as products, and, above all, he uses thoroughly efficient mechanical equipment.

He buys a motor car because sound analysis has convinced him that he can't afford to get along without one. Furthermore, he buys a good car—a *quality* car—because experience has demonstrated that inferior equipment is never economical.

Here, in a nutshell, you will find the reason why more than 70% of Paige production is sold in farming communities. It's a matter of cold blooded business judgment—the deliberate preference of intelligent men for a car that measures up to their requirements.

And here, incidentally, is the most convincing reason why *your* next car should be a Paige.

PAIGE-DETROIT MOTOR CAR COMPANY
247 McKINSTRY AVENUE, DETROIT

# Work for Maximum Crops

## Conditions Are Reported Favorable Now, Though Much Will Depend Upon the Weather During Next Two Months

RITZVILLE, Adams County, Wash., April 26.—Every farmer within my knowledge is putting forth every effort to produce maximum crops. The season has been favorable for seeding and ground worked up unusually well, but for some cause a few have failed to secure satisfactory stands and a very small percentage has been reseeded. There has been and is now, plenty of help and conditions for this locality right now might be said to be favorable for a good crop, but so much depends upon the weather for the next two months. It is very difficult to figure at this time, what the cost of a bushel of wheat will be as we are paying practically twice as much for feed, as before. Labor and machinery is higher than ever and no one can tell what it is going to cost to harvest, but would not be surprised to find the cost of producing a bushel of wheat practically doubled over normal years.

D. A. SCOTT.

### Farmers Need Rain.

PORT ANGELES, Clallam County, Wash., April 28.—The farm machinery and labor questions are of interest to all here. A few tractors are now being installed and others will follow if they prove of any benefit. The labor question on the farm is almost acute and the current topic among the farmers. The prospect for crops is good, but in places the farmers wish for rain, as the month of April has almost broken the record for a dry month in this part of the state.

J. P. CHRISTENSEN.

### Prospects Good for Wheat Crop.

OTHELLO, Adams County, Wash., April 24.—Some farmers are not planting any potatoes, as they claim it is cheaper to buy. There is a heavy seeding of grain. People are not generally going to any personal sacrifice as yet. Labor is sufficient so far. The prospect now is good for a crop of wheat. Plowing is progressing rapidly. The price of plowing is $2.50 per acre, and the cost of producing a bushel of grain now is, I think, double of the cost when we got labor at $30, now $60 to $75, and sacks at 27 cents; but the yield will be average. Taking all cost into consideration, the farmers will not get rich very rapidly. The writer last year raised a bunch of pigs and decided to feed a carload for spring market. We bought shorts to save wheat and fed them out, but the feed proposition here has been in such shape that we could not get shorts at all times. We hung on and fed those hogs when we knew we were going behind, but figured on a nice crop of pigs. But farrowing time was disastrous—saved 16 pigs and 13 sows, fed out the sows and sold them with the others at a total loss of about $300. We feel this to be a part of the sacrifice we must all make to win this struggle for humanity.

A. O. LEE.

### Spring Opens With a Rush.

CASTLE ROCK, Cowlitz County, Wash., April 28.—Spring has opened with a rush and conditions are favorable for seeding and planting potatoes. Corn has not been a decided success here in this section, but has proven one of the best crops grown for the silo, as it is easily handled and proves to be the one feed that produces results. Of course, there has been a shortage of help on the farms, but with the use of improved machinery and planning of the work, the crops are going into the ground; stock is taken care of and separator run by the home folks. Dairying is the main cash asset in the county. Potatoes have not proven a good marketable crop; any old price seems to be the thing offered for them now. Wheat can be raised here, but is not as profitable as other things in this section, as it is not a flour wheat and must be used for feeds which, in competition can not be handled at a profit. A few of the farmers are going to try to have homemade syrup from home-grown beets which, if it proves all right, will be a splendid thing, and will prove to the average man that he can live from his own farm products. A creamery organization has been under consideration for the county, which will act very much like an auditing system; it lets the creamery owner know what kind of work is being done in his creamery, and at the same time stimulates the maker to put forth his best efforts; gives the farmer confidence in what he is doing toward building up a uniform system, thus gaining the most for his efforts, doing away with the haphazard idea of handling his cream. Because of the almost universal presence of Rizoctonia (black scurf) and the frequent occurrence of scab and silver scurf on the potatoes, growers are dipping their seed potatoes. The common material used is formaldehyde and mercuric choloride. Because of the fact that formaldehyde does not control Rizoctonia, in addition to controling scab only, mercuric choloride should be used. The dyking district in and around Kelso is being cleaned up and plowing going on and a big crop of vegetables has been planned for the coming season. Woodland has a live organization that is trying to get an improvement district established for the lower end of the county, which will redeem hundreds of acres in and around Woodland.

C. C. BROWN.

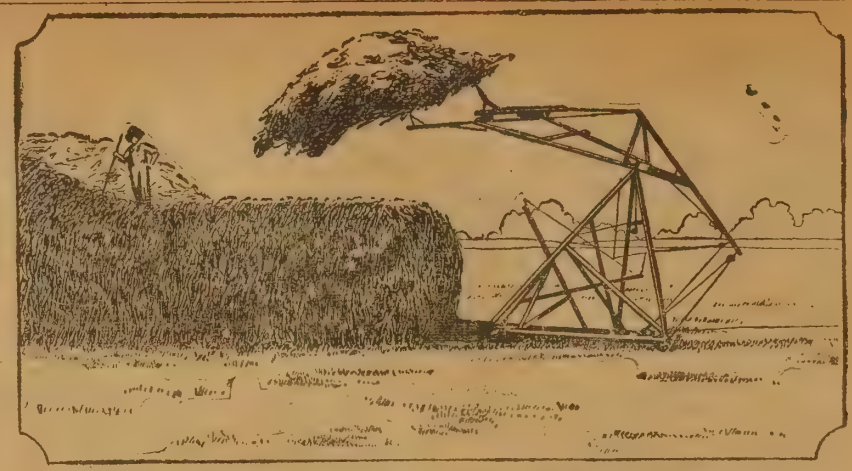
### Prospects Are Bright.

CHEHALIS, Lewis County, Wash., April 27.—On the whole the farmers of this county are producing the maximum of food crops. Nearly every one is awake to the situation and is doing his utmost to help win the war. The spring has been ideal for the seeding of a large crop acreage; labor is short in places but on the whole there seems to be very little cause for decrease in crop acreage due to shortage of help. The farm tractor is coming into general use and the outlook for crops and live stock in this section is very bright indeed.

A. B. NYSTROM.

**The Drone Bee.**

The drone bee does no work.



**Healthy Vegetables**

The U. S. Dept. of Agriculture recommends that you rid your seeds and soil of infection before planting, with the greatest known disinfectant—

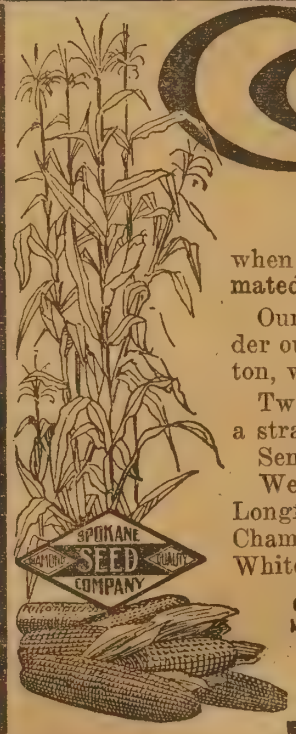
**FORMALDEHYDE**
*The Farmer's Friend*

It prevents potato scab and black-leg that attacks beets and other vegetables. It guards against onion rot and onion smut and smudge, cucumber root rot. It prevents mould in celery, lettuce, parsnips and other covered seeds when applied to the beds before planting. One pint bottle of our Formaldehyde costs 35 cents. Big scientific book with full directions sent free upon request.

PERTH AMBOY CHEMICAL WORKS
100 WILLIAM STREET NEW YORK

**USE MOLINE HAY TOOLS**
**TO STACK HAY QUICKLY AND CHEAPLY**

FOR handling large acreages of hay, Moline Sweep Rakes and Stackers are the quickest and most economical means of getting the work done, requiring a minimum number of men to operate, because of the many conveniences and automatic features in their construction. With Moline hay tools, there is no danger of breakdown during the busy season, their construction being extremely strong throughout, and their operation simple, positive and reliable.



The Moline Swinging Hay Stacker shown in the above illustration is thoroughly representative of the Moline line, stacking hay to a height of twenty-five feet quickly and with the least amount of labor. It is entirely automatic in its operation, the fork being lifted, swung, discharged and returned to position for another load without attention on the part of operator.

With the Moline Swinging Hay Stacker two men constitute a full crew—one to guide the horse and one on the stack. The man on the ground quickly and easily adjusts the stacker to dump the load at any desired point while the fork is on the ground, after which all he has to do is to lead and back the horse, everything else being automatic. The fork can be operated from either side of the stacker, with only a minutes work to change positions.

Other dependable Moline hay tools are Moline Overshot Hay Stacker, Moline Power Lift Sweep Rake and Moline Pipe Axle Sweep Rake. See your Moline Dealer.

# Snapshot Photography

## *How Accurate Is the Finder on Your Camera?*

By PAUL E. TRIEM

ARRTICLE IV.

From what has previously been written, it may seem that the possibility of making "snap-shots" and informal "just for fun" photographs is rather limited. To prove that this is not the case it may be worth while to describe some of the ways and means of snap-shot photography.

In the very beginning, you should make sure that you know just how accurate the finder on your camera is. When you are ready to take a picture and are looking into this little mechanism near the front of the camera, you see a small image of what you hope will be included in the final print. The fact is, however, that finders are not usually exactly accurate—that is, they do not register all that will be included in the print, or perhaps they go to the other extreme and include more than the lens really focuses on the film. It will pay you to learn once and for all just what the relation between the picture in your finder and the picture really included by the lens is.

The simplest way of getting this information is to photograph something in the nature of a large poster or advertisement, noting exactly what the image in the finder includes. A print made from this exposure will show you what the lens catches, and by comparing the two images, you will be able in future to tell just about what will be included in a picture by looking into the finder and making the allowances suggested.

After you have learned to use the finder, you are ready for real snapshotting. The usual method of making these quick exposures is to estimate the distance between the camera lens and the principle subject and to set the distance indicator at this estimated distance; next to see that the lens diaphragm is wide open or nearly so; and finally to estimate the exposure necessary, if the shutter provides more than one quick exposure. After making this complicated calculation and adjustment, the picture is snapped.

The trouble with this plan lies largely in the difficulty which most kodakers find in judging distance accurately, and in the hazy ideas in their minds as to the right exposure. Many over-exposures, under-exposures, and fuzzy, out-of-focus pictures result. The following simplified method for taking snap-shot pictures will raise the average amateur's record of successes many points, simply because it eliminates estimating distance, and reduces exposure time to a system:

If you are using a camera with a plate or film area not greater than post-card size or even 4x5, set your distance indicator at 25 feet and your exposure pointer at one-twenty-fifth of a second, or at "I" if the shutter is marked with just one automatic exposure. Next turn the pointer which indicates the diaghragm opening—this will usually be found below the lens, and shows the sized opening which is left available in the latter—to 16. You now have a universal focus, one exposure camera which will do justice to all objects not closer than six feet to the lens, provided exposures are made under good light conditions. Between the hours of 10 and 4 in the summer and 11 and 3 in the winter, with bright sunshine or light clouds, you will get snappy, fully exposed pictures by this method.

Probably some readers of this series will wonder why, if it is possible to give photographs of this kind one-twenty-fifth of a second exposure, I have advised in another place the use of a tripod, with the same lens opening and from one-half to a full second's exposure. Part of the reason is that the modern film or plate, as manufactured by the best makers, has a wonderful latitude of exposure. One-half second's exposure with the diaphragm at 16 probably represents the happy medium for out-of-door exposures, and under all reasonable light conditions will give what the professional photographer calls "fully timed exposures," with lots of detail in the shadows. Under the most favorable light conditions, however, such as those indicated in the above method, this time may be cut to one-twenty-fifth of a second, and still produce good negatives.

Just a word more on the subject of exposures: Insist on seeing all of your negatives, and compare these with the record of exposures I have elsewhere suggested your keeping. If you find that the exposure you are giving results habitually in dense, black negatives, shorten the exposure or diminish the light opening in the diaphragm. If, on the other hand, your negatives contain much clear glass or celluloid, so that the shadows print black, you may be sure that you are under-exposing. Give a longer exposure, or open the diaphragm so as to admit more light through the lens.

## Sidelights

**A Warning.**

"Oh, daddy! Isn't the world just too lovely for anything?"

"Er—yes—I suppose so. What's his name this time?"—Judge.

**His Circus.**

Willie—Have much fun watchin' the New Year in?

Tommy—You bet! 'Cause I was watchin' sister and her beau watch the New Year in.—Boston Transcript.

**Raised the Price.**

Food Administrator Hoover told at a meatless-wheatless banquet a story about a poultry profiteer.

"A woman entered his shop," said Mr. Hoover, "and asked the price of chicken.

"'Them birds in the winder?' said the profiteer. 'Wal, they're very fine quality stock. I can't let 'em go for less than 90 cents a pound.'

"'Indeed?' said the woman. 'Did you raise them yourself?'

"'Yep,' said the profiteer, absently. 'They was 70 cents yesterday.'"—Exchange.

**Wonderful Progress.**

She—How is your youngest daughter getting on with her music?

He—Splendidly! Her teacher says she plays Mozart in a way that Mozart himself would never dream of.—Boston Transcript.

**She Knew.**

A girl was asked to parse the word "kiss" and this was her result: This word is a noun, but it is usually used as a conjunction. It is never declined and is more common than proper. It is not very singular, in that it is generally used in the plural. It agrees with me.

**During the Coal Famine.**

Henry Watterson's paper tells this one:

"Say, John?"

"Well?"

"Did you feed the furnace?"

"You could hardly call it feeding, but I did give it a little light lunch, so to speak."

**Too Late to Change.**

"What were you saying, Homer?" asked a mother of her 6-year-old son.

"I was praying God to kill all the Germans; then our men wouldn't have to fight."

"Oh! you must not pray to God to kill all those men——"

"I can't help it now, mama; it will have to go, 'cause I have already said 'Amen.'"—Harper's.

**Dodging the Boss.**

A man named Dodgin had been appointed foreman in a brickyard, but his name was not known to all the employes. One day while on his round he came across two men sitting in a corner smoking, and stopped near them.

"Who are you?" asked one of them.

"I'm Dodgin, the new foreman," he replied.

"So are we," replied the other workers. "Sit down and have a smoke."—Pittsburg Chronicle.

**Corrected.**

At a dedication festival service at a country church the following announcement was made by the pastor:

"The collections today will be devoted to the arch fund, and not, as erroneously printed in the morning paper, to the arch fiend."—From Harper's Magazine.

**Why France Suits Him.**

"Have you heard from your boy in France," a man asked a Kansas farmer recently, relates the Kansas City Star. The boy is with the Pershing army "over there."

"Yes," was the reply.

"How does he like it?" the man continued.

"Bully," replied the farmer. "The kid is happy. He says he has nothing to do but drill 10 hours a day, and the Germans have dropped shells all around them, and he is expecting to go forward into the trenches anytime, but—the kid says it rains every day over there and they don't have to haul water to the stock. He sure is happy."

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Why Every Child Should Be Taught to Heal Own Cuts

Dr. Hirshberg.

You need not be "one of the first to fight" or a soldier in France to run a splinter in your hand, tear your skin, cut or otherwise wound yourself. The soil of Lorraine or the Champagne country is not a jot different in respect to its infective germs from the street dust and garden earth of America. Both contain their fair share of tetanus bacilli, lockjaw germs, gas infections and other poisonous bacteria.

Sores, cuts and wounds must be guarded as well "on this side" of the water as "over there." Blood must be stanched, pain relieved, germs unseen removed, and ever-present microbes kept out.

Every open cut in the skin of the human anatomy becomes immediately a gateway for man's eternally vigilant enemies, bacteria and microbes. Practically every injury which pricks, scratches, cuts or wounds the flesh is to be regarded at the outset as infected. It is absurd to say as many persons do: "My cuts heal easily, which proves that my blood is in good condition." Such a remark shows ignorance and contains several untruths.

Your blood may be almost perfect, yet the germs on the surface of the skin or in the pores may invade the wound and start it to fester. On the other hand your blood may be ever so poor and you may escape infection or blood poisoning by virtue of some antiseptic used as a disinfectant.

To be sure that a cut, scratch or other open injury heals cleanly without redness, pus or swelling, some definitely understood germ-killing combination should be applied to the wound and kept there.

**Don't "Take a Chance."**

If each person were practical enough to take to heart these facts based upon the principle that all openings thus made in the skin are infected or surely will be by the unseen dirt on your hands, in the air, on the food or in the water used, infection, blood poisoning and tissue decomposition would become almost as rare as smallpox or army typhoid.

The ideal way to heal all cuts should be taught to every child in the elementary classes of the public schools. If all boards of education would bestor themselves to this end the coming generation would almost annihilate lockjaw, wound infections and blood poisoning.

Instead of "taking a chance" that a scratch or cut will heal by itself, antiseptics should be used at once to destroy the ever-present bacteria anl prevent their development.

**The "Sure" Methods.**

Tincture of iodine, as popular as it is, is not powerful enough to make a large wound sterile, although for scratches it will do sometimes.

The skin around an open wound should be washed with a 14 per cent solution of salt water. This cleans away the blood and bleaches the skin. Then Dakin's fluid should be thoroughly used to irrigate the injury and douche the germs from the wound. Antiseptic gauze impregnated with Dakin's solution is then applied, and over it a thick layer of sterilized, nonabsorbent cotton. If the Dakin's fluid is not available the 14 per cent salt water is nearly as useful.

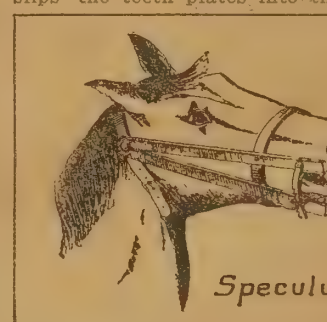
If the cut is a puncture, such as a nail, splinter, pin or other sharp instrument inflicts, the tetanus bacilli or lockjaw germs must be sought and routed out by means of deep injections of strong disinfectants, such as carbolic acid, to be followed at once by lockjaw antitoxins.

By the prompt use of tetanus antitoxin, the instant a puncture or any sort of wound occurs, the dread disease of lockjaw has been largely eliminated. For example, of 10,000 war wounds healed by Major Surgeon Picque of the French army not more than four delayed instances of lockjaw appeared.

## Inventions

By C. J. LYNDE, Macdonald College, Quebec.

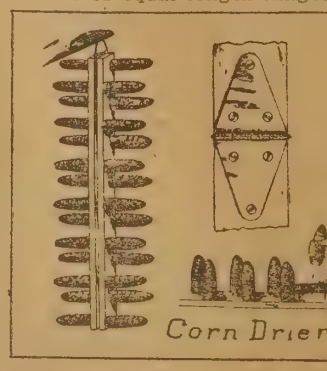
### Prevents Fence Breaking.



The object of this invention is to provide a yoke which will prevent

horses and cattle from breaking fences or jumping over them, and one which, at the same time, permits them to fraze freely.

### Speculum.



The operator in applying this device slips the teeth plates into the mouth

of the horse and then buckles the nose and neck straps. The notched bars keep the mouth open and leave a clear space for the tools.

### Simple Corn Drier.

This seed corn drier consists of two boards of equal length hinged togeth-

er; the spikes are ordinary wire nails driven through holes of slightly smaller diameter. You could make up a dozen in a very short time.

# In Time of War Prepare for Peace

"In time of peace prepare for war." In time of war prepare for peace. In what way shall American agriculture prepare for the readjustment that is surely coming when the kaiser is beaten to his knees, the Hohenzollern throne smashed into kindling wood, and our soldiers come home?

Most observers believe that high prices for farm products will continue for a year or two or even longer after the war, as time will be needed for the warring lands to settle back into normal life. But Julius H. Barnes, president of the United States food administration, grain corporation, believes that when that readjustment is made the American farmer will have to face keener competition than he faced before the war. Mr. Barnes predicts that after the war home markets must support home production so far as American agriculture is concerned.

Speaking before the trade convention at Cincinnati he said:

"In a broad way, we may assume at once that the markets for our surplus grain will be, after the war as now, in Great Britain and France and Belgium and Holland and Italy and possibly in Germany; but we may be well satisfied that in those markets we shall meet the keen competition of an impoverished Russia, of an India whose agricultural activity will have been stimulated by war prices; of a prosperous Argentina; and also the competition of the British possessions of Canada and Australia. And in those European markets we shall meet changed conditions.

"In France this year the area of arable land, excluding that in the occupied portions, has not been sown to an extent exceeding 75 per cent of what in the same territory was seeded to crops before the war. This is the result of the depletion of labor for farm purposes in France; but we are teaching France to repair that, and thereby we are building for ourselves the competition which will help to destroy the machinery advantage we have always held. We are shipping France farm tractors by the hundred, and we are teaching her to sow spring wheat in February. It may well be that after the war the thrifty agricultural population of France will have learned to use enough of American machinery to make that country once more independent of importation of wheat, as it has customarily been before the war.

"Belgium will always need to import grain, as her dense industrial population can not support itself, but the 20,000,000 or 30,000,000 bushels of wheat which she would require would not make her an active bidder among the other surplus wheat countries competing for her market.

"Italy can almost raise enough of food grains for her own requirements, and may easily do it under the stimulus of economic need at home.

"In Great Britain the steady market for wheat, which has hitherto absorbed 200,000,000 bushels of wheat per year, the food needs may be readily supplied by normal crops in Canada and Australia, and the normal shipping conditions which enable her to transport this wheat from her own colonies. Besides that, the submarine is teaching Great Britain to rely more and more upon her own crops, and the deficit in food crops in Great Britain, at the close of this war, may have shrunk to such a figure that it would no longer be so large and active a competitor for the surplus crops of the world.

"Germany, formerly a large user of foreign grain, has been self-supporting now for three years, and may have acquired the habit, which only the temptation of plenteous supply and low prices would displace. Remember that for these restricted consuming markets Canada, Australia, India, Russia, Argentina and our own surplus will compete as never before, and with the restoration of the shipping fleet of the world, that can face the longer voyage without menace to the national need, the trade advantage of our shorter ocean voyage will be lost.

"I am forced to the conclusion that within a certain space of time, after the close of this war, American agriculture must face the probabiliy that its home markets must support its home production. I do not think that this would be an evil, and it is quite probable that our foreign trade balances have so developed themselves along other lines that the old sustaining influence of the trade balances for grain crops may not be missed, or can be safely replaced."

# Milling and Distributing Profits

Flour milling and distributing profits were mounting rapidly when the government took a hand last year through the national food administration and the passage of the food control law. The federal trade commission, which has been investigating the food supplying industries, has placed in the hands of the president a report on wheat flour milling and jobbing that will interest both producers and consumers.

In the crop year of 1912-13, American millers and middlemen extracted a profit between them of 85 cents a barrel, divided as follows:

Miller's profits .....11 cents
Car-lot distributors .....22 cents
Small jobbers' profits .....52 cents

A total profit, between the farmer and the consumer, of 85 cents per barrel.

Then the jackscrews began to work all along the line, and in the crop year of 1916-17 profits had swelled to $1.93 per barrel, divided thus:

Miller's profits .....52 cents
Car-lot profits .....55 cents
Small jobber's profits .....86 cents

In four years profits grew 227 per cent.

Under present regulations, millers are allowed a maximum profit of 25 cents a barrel on flour sales, and also 50 cents a ton on feed sales, equivalent to about 1.7 cents a barrel of flour additional, or a total profit per barrel of a little less than 27 cents. In view of the fact that millers were making only 11 cents' profit in 1912-13, it is apparent that the government did them no injustice when it throttled down their legal profits to 27 cents.

This is profits, not increase in the price. It is what the miller is allowed to retain after he has paid all the increased costs of operation and manufacture.

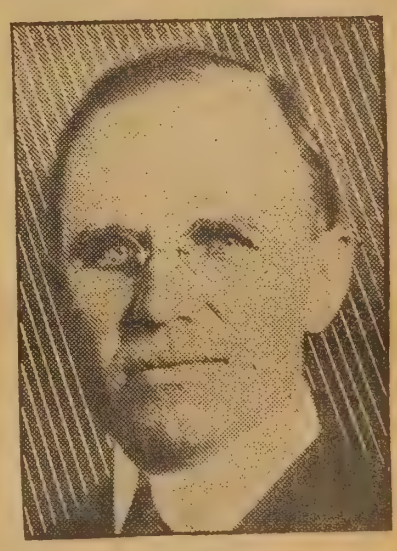
ARON H. HOVER, President



Central Montana Alberta Ranches Co.

SAYS:

"This is your final opportunity to secure a good farm home in the last great west.—

**Montana and Alberta,"**

the most favored section of "Uncle Sam's" splendid doman, adapted to tractor farming, harvesting with combines. Where there is no mud or dust, no stumps, no deep rock or gravel, but everywhere deep, almost black loam soil, ready for the plow. Every section level and all good land. Splendid water in wells from 10 to 200 feet deep. No gumbo and no alkali.

Aron H. Hover, Pres.

Don't get the idea that this is a lonesome country. From one ranch house window last week I counted 200 ranch homes, more than 40 windmills, and 5 towns. The kind of a country where opportunity waits for you and begs you to come. And 10 years ago there was not a house or fence in this vast country.

Our company has purchased control of hundreds of half sections at a low figure. That is why you, Mr. Farmer, can buy at such low prices NOW, for those who still own their land want small fortunes. BECAUSE WE BOUGHT EARLY, WE CAN SELL CHEAP. It must be good or we could not have sold $2,000,000 worth last year to farmers from Pendleton, Oregon; Walla Walla and Palouse, Washington; Nez Perce and Camas Prairie, Idaho, and the Ritzville country in Washington. Men who have farmed all their lives and know good land when they see it.

We only ask you to investigate. Talk to our agent in your town. Come in to our Spokane office and see the moving pictures of Montana and Alberta free. Let us bring Montana and Alberta to you. It don't cost anything to investigate. Come in or write us for illustrated literature, maps, and prices of either Alberta or Montana land.

# PLEASE PASS YOUR COPY ALONG

*SCORES OF OUR FRIENDS ACTED ON OUR SUGGESTION TO PASS THEIR PAPER ON TO A NEIGHBOR WHEN THROUGH READING IT. WE TRUST THAT MANY MORE WILL DO THE SAME WITH THIS ISSUE; AND CALL ATTENTION TO OUR MONEY-SAVING OFFER*

**As a war measure, we introduced the "direct-to-the-consumer" idea in our subscription business. Our plan was ultimately to do away with the subscription agent and to secure new and renewal subscriptions by dealing with our readers direct. We are glad to report that the new system is working splendidly. Already, thousands of our friends have taken advantage of the big saving which our offer makes possible.**

Much of this success is due to the efforts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those who they feel will be interested in a high grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appreciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices below.

## Send Us Two Subscriptions and Get a Prize

Scores of friends are sending in subscriptions to us without thought of reward. However, to show our appreciation for such cooperation, we are offering to send free of charge to any one who mails us *two* new subscription orders choice between a fine war atlas and a flag button for the coat lapel. To any one who secures *one* new subscription we will send a copy of the big war map originally published in the columns of the Spokesman-Review of Spokane, or a farm service pennant, 9x22 inches in size and printed in 3 colors on heavy enameled paper. Bunting pennant for 3 subscriptions.

## A Real Saving

*Following Rates Now in Effect for Subscriptions to The Washington Farmer*

*25c FOR ONE YEAR*

*50c FOR THREE YEARS*

*$1 FOR FIVE YEARS*

YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

May 9

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for ..... years subscription. In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

## The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.

By LEWIS B. MILLER.

Copyright, 1914, 1915, by Lewis B. Miller.

**Synopsis of Preceding Chapters.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination — a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their saltmaking and hunting. After exciting experiences with a buffalo herd and with a bear in a cave, they find their first fresh sign of Indians — moccasin tracks in the snow. And then, in the dead of night, a scouting party visited them preparatory to an attack. The attack followed soon, and would have resulted in the capture of the boys by the savages had not a violent earthquake frightened them away. It was only a short time, however, till they were in the hands of the savages, led away capive. They remained captive for some time, narrowly escaping being burned at the stake by their enemies. Ben was saved by Watermelon, a big, fat squaw, who claimed him as her husband. From both Watermelon and her savage tribesman Ben and Jodo escaped, but only to battle with terrible cold and starving wolves during their flight.

### CHAPTER XV.

**A Blizzard and a Wolf-Pack.**

Hour after hour, hour after hour, the two fugitives tramped, keeping the north star always at their backs. Not till long past midnight did they pause to eat some thing and rest a little while.

"Can they trail us where there's no snow, do you s'pose, Ben?" The two were sitting on some dry leaves, with their backs against the south side of a log, where the sun had melted the snow off.

"Some of them can, I've no doubt. But they can't follow a trail as fast as we can make it. And of course they can't trail us after dark. If we can't shake the varmints off, we ought to outtravel them by using plenty of the night. It'll keep us hustling, though. I don't know what the red heathen want with us, but they've set their fool heads to catch us."

"And we must set our wise heads not to be caught. I'm of the opinion that they don't want the Widow Watermelon to lose her husband." Jodo laughed.

"Deliver me from all such watermelons!" Ben didn't laugh.

Soon the two were up and tramping again. They were accustomed to much walking; and after being shut up in the cave for two days and a night, both felt that they could keep going long. Daylight came, and the sun rose and climbed far up the southern sky, before the fleeing pair halted for breakfast. The air was still not warm, but they found a sunny spot, behind a bank, and sat down, leaning against their packs.

For an hour or longer, after eating, they sat and rested. Indeed, encouraged by the warm sunshine, they even took a brief nap. After that they got up and tramped on. And they kept tramping, with their faces toward the south, for the rest of the day, and even till an hour or two after dark.

They found a deep ravine, and at a spot where the snow was gone they kindled a fire. Over that they broiled some pieces of what was left of their venison; and by the fire they slept till day was breaking. Then they got up, ate their breakfast, put out the fire by throwing snow on it, and set off southward again.

Just before sunrise they halted on the top of a lofty hill, and with their eyes swept the country behind them in quest of smoke. And they were not long in discovering a camp-fire.

To their relief, it was many miles behind them. While there was no way of making sure as to who had kindled the fire, there was little reason to doubt that Indians had done it—the Osages that were trailing the white fugitives.

So the two, knowing the danger behind them, tramped on as fast as they could, and avoided snow-patches as much as possible. Till noon they kept going, almost without a pause. And after a brief stop to eat and rest they were up and tramping again. And they kept hurrying on till the winter day had drawn to a close. They also made one or two attempts to tangle up their trail, so that the Osages would have trouble following it.

When night came down, the two stopped, kindled a little fire and ate their supper by it. After a rest of an hour, and a nap, they took up their bundles and weapons and marched on once more. And till midnight they kept marching, at their best gait. When they had started, after supper, the sky had been clear. But in time it became hazy, and then overcast with clouds. And gradually the clouds grew thicker, till there was not light enough for the travelers to pick their way, nor any stars to guide them in their course.

Now, of necessity, they stopped, in some thick woods. After kindling a fire, they lay down by it, and were both soon sleeping the sleep of exhaustion.

Later in the night Ben was partially aroused by something cold on his face. It was a snow-flake. He covered his head with the buffalo-robe and went to sleep again. By morning four inches of snow covered the ground, and the air was still thick with flying flakes. The weather had grown somewhat milder.

The fugitives breakfasted in the gray dawn, then put out their fire and tramped on again.

"This is glorious!" cried Ben. "We can't walk quite so fast as we've been walking, but we don't have to. Our trail has disappeared up to this point, and it'll soon be covered along here. And right here is where we're going to turn a little trick and throw the red wolves off the scent. East is our course from this point on, as nearly as we can locate it."

"How are we to know where east lies, such a gloomy day as this?"

Ben pointed to a tree. "Moss always grows on the north side. That's how Indians find their way in the dark—by feeling the trees. And there's no reason a white man shouldn't use the same expedient whenever it's needed. If the Osages hadn't taken our compass out of my ammunition-bag, we shouldn't have needed to use their compass."

All day long the two kept tramping, tramping. And all day long the white flakes kept settling down, sometimes rapidly, sometimes not so fast. Till noon the travelers' course was east. After that it was changed to southeast. If the Osages kept on south when they lost the trail, they and the fugitives would soon be far apart.

Several times Ben and Jodo noticed little droves of deer and elks; and once they saw a numerous flock of wild turkeys scratching in the snow under a big oak, for acorns. With their supply of food running low, the partners would have been glad of some fresh meat, but having only the powder and bullets in their rifles and pistols, they thought it unwise to fire a shot yet for a while. Animals of prey were everywhere in this country, and no telling when those bullets might be needed for self-defense.

Troublesome as was the walking through the snow, the two hardened young fellows believed that they

The terror of the wanderer in the wilderness.

tramped nearly 50 miles during this day. They had walked so hard that they thought it neither prudent nor necessary to drive themselves farther. So, as night was coming on, they camped down in a deep, wild gorge, kindling a fire under a great, overhanging rock. There, sheltered from both snow and wind, they ate and slept in reasonable comfort.

By morning the snow had almost ceased to fall. But the sky was still overcast with leaden clouds, and the air was bitingly, stingingly cold. They ate their breakfast before daylight. Then they wrapped themselves in their blankets, extinguished their fire to keep it from smoking, and tramped away toward the southeast.

A strong wind was blowing from the northwest, and in spite of vigorous walking the fugitives found it hard to keep warm. And all the time the weather was growing colder, colder. About noon they came to a good-sized stream; but it was frozen like a rock from bank to bank, and they had no trouble crossing.

A few miles beyond the river they came to a prairie, and pushed on across it. Out here the wind had full sweep. Some fine snow, mixed with sleet, was driving with it. The sting in the air seemed to be growing sharper every minute. Doubtless a thermometer would have indicated a temperature already several degrees below zero.

The prairie was several miles wide. When about halfway across, the two fugitives heard the long-drawn-out howl of a timber-wolf a good distance in the rear. They little more than noticed the sound at first. But later, when two wolves began to howl, and then more than two, Ben called his companion's attention to them.

"Sound to me as if they're trailing us."

"Do you think they're dangerous, Ben?"

"Well, they might be, this kind of weather especially, and out on this prairie. That is, if a good-sized pack of them should get together."

"If their number keeps on growing, there'll soon be a good-sized pack of 'em. I'll be glad when we strike the woods again. We can climb trees and wolves can't.

"It's little good tree climbing would do us such a time as this. Sitting on a limb, we should soon freeze as stiff as a poker and tumble off. A fire's what we want to depend on when we reach the woods."

"I've heard of wolves being so hungry and fierce that they'd venture right up to a fire."

The two travelers now tried to increase their speed; for the hungry pack on their trail were growing more numerous and drawing constantly nearer. At last, while crossing a high place, Ben and Jodo caught sight of the wolves. They were coming across a ridge more than a mile behind. There appeared to be 20 or 30 in the pack.

For a time the fugitives were fearful lest both night and the wolf-pack should overtake them out on the prairie. But they crossed another ridge, and soon found themselves in scattering woods. They hurried on, almost at a run, hoping to reach thicker woods, where they would be better sheltered from that cutting wind, before stopping to kindle their camp-fire.

Finally they reached thick woods, but were still hurrying on, in the hope of finding a deep ravine, when they caught sight of something that astonished them. It was a stone chimney standing in the midst of a little clearing. And it was standing alone.

Approaching in wonder, Ben and Jodo found the clearing fenched around with a peculiar kind of fence. The trees in the clearing had been felled, and then all rolled together in a rather high, long pile, the whole enclosing a circular tract of nearly an acre. And near the center of the tract stood the houseless chimney.

Hastily the two climbed over the ridge of brush and lodge and approached the chimney. Broad, and not very tall, it had a wide, deep fire-place in its south side. Soot in the fire-place meant that there had once been fire there, perhaps not so very long ago.

"This chimney and the log-pile fence and the thick woods around will make as good a shelter as we can find, especially with night coming on, and with that hungry pack yelping so close behind. I believe we'd better start our fire right here in this big fire-place. What do you think, Jodo?"

"I think yes! And let's be quick about it! That howling is getting frightfully loud! It makes me nervous! You strike fire into your spunk Ben, and I'll dig some dry leaves and twigs out from under that log-heap."

Ben hastily raked the snow out of the fire-place, then got down and, with flint and steel from his ammunition-pouch, began to strike sparks. By the time the sparks had caught in his piece of spunk and been blown to a blaze, Jodo came running with a double handful of leaves and twigs. Quickly both leaves and twigs were blazing, and Jodo was running back for larger fuel.

By this time dusk was at hand, and the wolves seemed to be but a few rods beyond the log-fence. And a frightful clamor they made.

Hastily, frantically the two now ran back and forth from the fence to the chimney, piling dry brush on the fire till it was blazing up brightly. Then they brought larger wood and laid it on, but were careful not to choke the blaze with it.

"What would you say became of the house that used to stand here?" inquired Jodo, after the fire had begun to roar and crackle and send its light far around.

"If the snow was out of the way, we could soon tell. Pretty safe guess, though, that it was burnt down."

"And who burnt it?"

"More likely to have been those Osage pests than anybody else."

"Who lived here?"

"It might have been a solitary hunter, or a hunting party; or it might have been a family. More probably it was a family; and they had some cattle or horses and cultivated a little patch of ground. Otherwise they wouldn't have made this clearing and piled up that fence around it."

"And what do you s'pose became of the family?"

"Well, they may have retreated toward the settlements, or the reds may have murdered them and burnt their house afterwards. If the ground was bare we might make out some signs. Maybe we can—Just look at that big wolf coming over the fence yonder! Oh, if we only had plenty of powder and lead!"

Ben caught up some blazing sticks and rushed toward the shaggy beast of prey with them. The animal retreated over the ridge of logs. But the whole pack were now yelping and howling in the thick woods that came up close to the enclosure.

Soon dense darkness had settled down. The night would be blackly dark as well as frightfully cold. Ben and Jodo kept visiting the log fence for more fuel, till they had a great fire roaring and crackling in the fire-place, and lighting up at least half of the fenced-in land. And every time either of the two went to the fence for fuel, he saw numerous fiery eyes glaring at him from the darkness beyond the fence.

In spite of the fire roaring in the chimney, so cold was the air that a yard or two away the snow was not melting.

Lucky we happened upon this spot," Jodo said. "Anywhere else we'd have had a hard job to keep from freezing. And we'd have had a hard job keeping off the wolves anywhere else."

"Yes. And from the noise they're making out there, we may have a hard job keeping them off even here."

"That high fence ought to be of some assistance to us."

"Not much. They can climb right over it, as easily as we could—more easily than they could over a high rail-fence. But we can see them as they come over, and after they get over. That's one advantage. Between the wolves and the awful cold, I doubt if either of us will dare sleep a wink tonight, dead-tired though we are."

"Don't I wish the house was still here!"

"It would certainly be a great protection to us this night. But wishing won't put it here. Let's be thankful for what we have, and do the best we can in the open air. We must try to—— Just listen to those hungry varmints out there! A great pack of them already, and more coming all the time, I'd say. They'll be bold enough to break over before morning. I'd feel safer if there was a tree or two inside here for us to climb, in case the blood-thirsty brutes get reckless and defy the fire."

"But there is no tree, Ben. And we'd freeze if we did climb one, unless it was right here against this fire, or over it. This chimney looks strong enough and solid. Some stone-mason put that up. If we have to climb anything, I'd rather get up on top of that. We could keep warm up here—or at least warm enough not to freeze."

Ben stepped back and gazed up at the stone structure. "That's not a bad suggestion, Jodo—not half-way bad. It's not very tall, the chimney, but tall enough to put us out of reach of the wolves when we get up there. The smoke will give us some trouble while we're sitting on top, but it will keep us warm. Yes, sir! The top of this chimney will be our place of refuge if the worst comes to the worst. And we'd better get something to help us climb."

They hunted around, and soon dug up out of the snow a rough, rather long pole. That they leaned against the chimney, at the back side.

"When we have to climb, Jodo, I'll hold the pole till you get up, and then you can hold it till I get up. But we'd better eat some supper while we can. We may be too busy later. And we mustn't forget to take our provision-bag up with us."

"Ben, s'pose you boost me up there and let me try it. Maybe we can't sit up there for the smoke."

"All right! Up you go!"

Ben held the pole with one hand and assisted the climber with the other. Soon Jodo was perched on the chimney-top and saying:

"The very place! A nice warm roost on a night like this! The wind whips the smoke away."

"Glad to hear it! Want me to reach you up some venison and corn?"

"No. I'll come down for supper."

Just then, hearing a snarl behind the chimney, Ben seized his rifle with one hand and a blazing brand with the other, and turned, to be confronted by a fiery-eyed wolf not 10 feet away. The brute had climbed over the fence and approached in the shadow of the chimney.

Straight at him Ben rushed. The beast of prey retreated, snarling and growling. Ben chased him over the fence. Then he came back and helped Jodo to climb down.

Very weary, they raked and swept away the snow before the fire, then spread down a buffalo-robe to sit on while they ate. The noise of the wolves was often so loud that nothing else could be heard. Practically unarmed, the young fellows shuddered as they listened to that howling, mingled with the snapping of hungry, fanged jaws just beylond the fence. And as they ate they had to keep turning themselves. For so intense was the cold that while half of one's body was burning the other half was freezing.

"Ben, I'm also sorry we're not in that Osage village still,"

"Undoubtedly we should be safer than here tonight, and more comfortable, too, probably. That is, if we'd never run away. Though I don't suppose an Indian wigwam is any too warm such weather as this. If we'd foreseen this frightful cold spell, we'd have put off escaping till later."

"Just listen to that blood-thirsty pack out there! Don't their teeth crack together! Those noises make my very blood run cold! No use shutting our eyes to the fact that we're in for a terrible night of it! And just look at those eyes glaring over the log-heap fence at us! The brutes won't keep out much longer."

"No. And we must be ready for them when they come. Jodo, I'm wondering if it wouldn't be safer for us to get our things together and mount this chimney while the way is clear. Otherwise we're likely to have it hand to hand with them pretty soon—knives and tomahawks against fangs."

(To be continued.)

## Motor on the Farm

**Muffler Paint.**

It is difficult to find a satisfactory paint for the exhaust pipe and muffler, because of the heat of those parts. Here is a highly recommended muffler paint: Boiled linseed oil 1-5 pound, Japan varnish 1-5 pound, turpentine 2-5 pound, lamp black 1 1-2 ounces, powdered graphite 1 1-2 ounces, powdered oxide of manganese 3-8 ounce. Mix the linseed oil and Japan varnish well together, then add in order, stirring all the time, the lamp black, the graphite and the powdered manganese. As the mixture thickens thin it down with turpentine, until the quantity mentioned has been used. This mixture should be used as soon as it is mixed, as it dries quickly. Every time the brush is dipped in it should be stirred. It is well to paint the muffler while it is hot, after having cleaned it thoroughly.

**Declutching at Corners.**

While it is a wise precaution to throw out the clutch when rounding a sharp corner, it also has a beneficial effect upon the tires. Whenever the car tends to skid, due to its deflection from a straight course, a cross strain is brought to bear on the tire treads, which is directly proportional to the weight of the vehicle and the radius of the curve and proportional to the square of its velocity. If the power is applied in rounding a curve the tendency to rip off the tires is further aggrevated by the backward drag due to traction. If the clutch is released, however, that factor is eliminated and the strain is thereby reduced.

**Oil for Small Parts.**

The brake mechanism seldom gets the lubrication it deserves. Oil is required on the pins supporting the brake shoes and upon the bearing points of the cams or toggle mechanism, which actuates the brakes. These parts usually depend for lubrication on the hand oil can. Beginning at the operating lever, every joint in the brake rod needs occasional oiling, as do the bearings of the compensating shaft.

## Washington County Fair Director

At a meeting of the county fair board at Forest Grove the following directors were elected for the coming year: E. A. Westcott, H. F. Wilson, Mrs. C. A. Brodersen, C. A. Littler, R. W. Feder, Mrs. Dorothy Seymour, George M. Littlehales, C. A. Brodersen, A. E. Scott, N. C. Jamison and N. A. Frost. The officers are A. E. Westcott, president; H. F. Wilson and Mrs. C. A. Brodersen, vice presidents; C. A. Littler, treasurer; R. W. Reder, secretary.

I AM sending you five cents to pay for mailing me a Farm Service War Flag, and if you furnish the extra stars please send me five, as we all help to run this farm. I really think the children will like their work better if they have the pennant to remind them that they are helping to win the war.

MRS. JAS. F. ETHELL.
Amber, Wash.

# Fruit Canning

## Time to Think About It Again

By LISSIE C. FARMER.

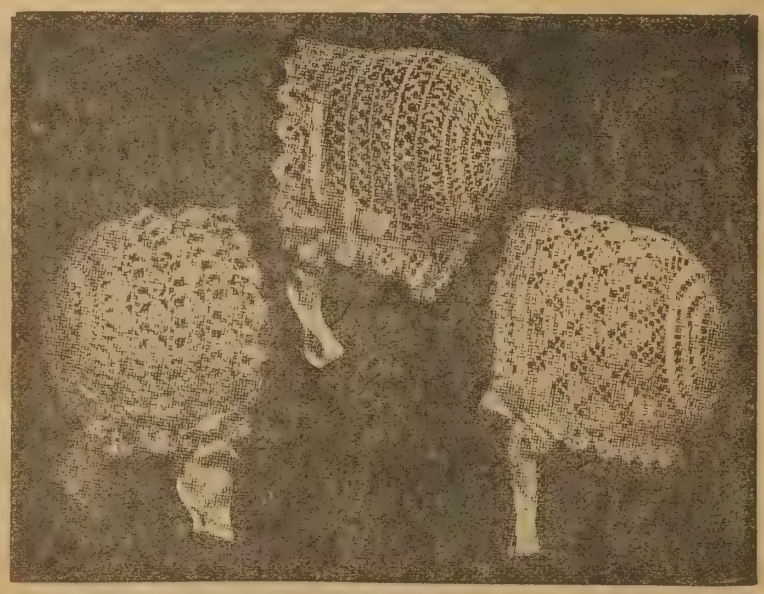
In my neighborhood, the old style Mason fruit jar is from 20 to 40 per cent cheaper than any other I can buy, while on the other hand the newer types require more heat for canning, and do not preserve their contents in any better condition. For these reasons, I would advise the woman who has a supply of Mason jars to use them.

Fruit for canning should be ripe enough to have a good flavor, but not ripe enough to mash easily. For the same reason, it should be picked into small containers, even for home use. It is better to wash fruit, by holding basket and all under a faucet or dipping it into a pail of water before hulling or stemming.

An oilcloth apron is a good thing to wear when handling fruit, as the stains can easily be removed from its surface, but you must be careful about getting it near a blaze, as oilcloth burns very easily.

Make a syrup for your fruit by pouring boiling water over sugar in the proportion of one cup of sugar to a cup of water and stir until dissolved. Boil hard for 10 minutes. For juicy and moderately sweet fruit this will be about the right amount of sugar and water. Set on the back of the stove a vessel partly full of cold water, and in this lay on their sides, so that the water will be both inside and outside of them, as many as possible of the glass jars to be used; also the zinc tops and rubber bands. Heat evenly by turning often.

While these things are in progress, finish picking over your fruit and paring it if necessary, It is best to do the cutting, peeling, etc., immediately before putting the fruit into cans, to avoid discoloration.



When the fruit is ready, pour the boiling syrup over it and set it on the stove. Push down the top layer of fruit occasionally. In a convenient position set the pan which is to hold your jars while you fill them, with cloths, a spoon and a silver fork close at hand. Do not use tin or iron utensils in fruit canning. As soon as the fruit begins to boil start in canning. Push the kettle containing the fruit back where it will just continue to simmer, but do not let it boil hard.

Have your jars as close to the fruit kettle as possible, and fill close to the top. Run the fork down one side of the jar and pass it around to break any air bubbles which may have gathered. Wipe the top, take a rubber band from the sterilizing pan and wipe it dry, fit it in place and screw a sterilized top down upon it. Turn the jar over, to see if the cover leaks anywhere, then set it aside before putting into storage for the winter. After the jars are thoroughly cooled the tops should be tightened still further.

The storage place for fruit should be cool and dark, but not damp.

# Crochet and Tatting Designs

By WINNIFRED WORTH.

**Baby Caps.**

What is more attractive than a neatly crocheted baby cap? Here are three beautiful designs to choose from:

**Shell Cap.**

Ch. 9, join ch. 6, wind thread around hook 14 times, catch thread through ring, catch thread again and draw through all loop on hook. Catch thread and draw through loop on hook; rp. 19 times; sl. st. last coil to top of 6th ch.

**2d Row**—Ch 3. 1 t., between 2 1st coils 3 p. of 3 ch. each on top of t., ch. 3, 1 dc. between next 2 coils; rp. (making 10 points of 3 p. each).

**3d Row**—Ch. 7, 1 dc in center p., around cap.

**20th Row**—Same as 8th row all around for outer scallop of cap.

**Maltese Baby Cap.**

Take up 3 loops, draw thread through 9 times, join. Ch. 2, join to 1 on side (draw thread) 2 on other (all around twice).

(Draw thread) 2 on side each side ch. 3.

1 row leave off 3 m. for crown.

5 rows for front join 3, ch. 3.

Edge. Join 2 loops ch. 5, take up 2 loops at time 7 times, ch. 1 join back ch. 2, put needle on underside, fold back, draw thread through 1 from each side until 5 on needle, draw thread ch. 4, 1 t. in dc. between points of previous row; rp. sl. st. to 4 ch. of 1st 7 made.

**4th Row**—6 t. under each 4 ch. around row, join.

**5th Row**—Ch. 5, sk. 1 t. of previous row, 1 t. in next t; rp. around.

**6th Row**—Same as 2d row, catching in each sp. and sl. st. to center p.

**7th Row**—Ch. 3, 1 dc. in center p. of each point of previous row.

**8th Row**—6 coils of 18 around hook to form shell in 2 point of 3 p., 1 dc. in 3d point shell in next; continue around cap in same manner.

**9th Row**—Ch. 9, 1 dc. in center of shell, ch. 5, 1 dc. in top shell, continue around cap sl. st. in 5th of 9 ch.

**10th Row**—Ch. 7, sl. st. m. 4th ch., make 2 more p., ch. 3, 1 dc. in 3d of 5 ch. of lower row, ch. 3, 1 t. in dc. of top of shell 3 p., ch. 3, catch in 3d of next 5 ch.

**11th Row**—Same as 7th row.

**12th Row**—Same as 8th row across all but 1 shell for back of neck.

**13th Row**—Turn, continue same as 9th row.

**14th Row**—Turn, same as 10th row.

**15th Row**—Turn, same as 7th row.

**16th Row**—Turn, same as 8th row.

**17th Row**—Turn, same as 9th row.

**18th Row**—Make points of 3 p. as in 10th row all around cap.

**19th Row**—Same as 7th row all through 1 at turns, open c. 2, join to loops and begin next scallop. Sew edge on.

**Lacet Baby Cap.**

**1st Row**—Ch. 5, join.

**2d Row**—Ch. 3, 15 in circle.

**3d Row**—Ch. 5, 1 dc., in each dc. ch. 2 between open row.

**4th Row**—Ch. 3, 2 dc. in each s., 1 dc. on dc. of last row.

**5th Row**—Ch. 5, 1 dc. in s.; continue this until 5 thick rows.

**11th Row**—Ch. 5, join (sk. 2 3 times), tu., sk. 3.

**12th Row**—Ch. 5, join all around twice (45 s.).

**13th Row**—Finish each row, 3 ch., 1 dc.

**14th Row**—Ch. 5, join ch., 2, 5 dc. in next s.

**15th Row**—Ch. 2, join ch., 5, join ch. 2, 5 dc. or shell.

**16th Row**—7 dc. or shell.

**17th Row**—9 dc. or shell.

**18th Row**—Ch. 2 between shells, for next shell leave off 3 shells in back and make 5 more for front.

**For Ribbon**—2 dc., 2 ch.

**For Edge**—Ch. 2, 2 dc., 2 ch., dc., 2 ch., join.

**2d Row**—Ch. 2, 1 dc. until 5 dc. ch. 2, join.

**3d Row**—Ch. 3, join, all around.

WE take your paper and like it fine. We find just what we want for the farm in it. It is good reading from start to finish, and we look eagerly for it each week. We have a fine garden. There are four of us who work the garden. We would like one of your Service Flags as described on page seven of the issue of April 18. We also have a large wheat farm and we are all glad to help raise food for the boys over there, as our motto is "We Will Win." The good old U. S. A. can't lose. Enclosed fine five cents. Please send us a paper pennant.

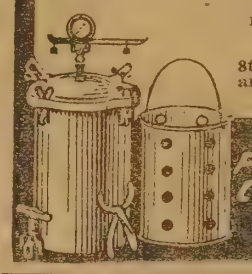
FRANK TIFFANY.
Centerville, Wash., R. 1.

## Store Eggs During May.

Housewives during the period of heavy egg production are urged by the food administration to store eggs during May. Information gathered by the food administration tends to show that eggs during the winter months, or the season of scant production, will be even higher in price than they were last winter.

"By storing eggs now by the water glass method, or any other method which assures preservation of the egg supply the housewife will not only assure herself a wholesome food product during the winter months, but will also aid the food administration in diminishing the use of other food products which can be shipped to our allies," says Food Administrator Charles Hebberd.

SANITARY CANNING OUTFITS



Home canning is more necessary and more profitable this year than ever before.

Steam pressure canning is the safe, quick and easy way. Our complete outfit saves time, labor and fuel, **hermetically seals** the cans and **sterilizes** the contents.

**Audit Bureau of Circulations.**

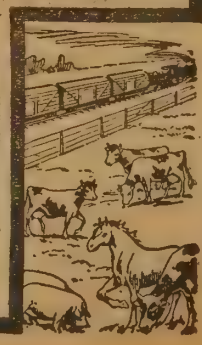
This is an association, nation-wide in its scope, not conducted for profit. Every publisher having membership in this organization pledges himself to sell circulation as a commodity, both as to quality and quantity. Advertisers using our columns are safeguarded. They know that we give all the circulation we offer.

Scenes of Prosperity

are common in Western Canada. The thousands of U. S. farmers who have accepted Canada's generous offer to settle on homesteads or buy farm land in her provinces have been well repaid by bountiful crops of wheat and other grains.

Where you can buy **good farm land at $15. to $30. per acre—get $2. a bushel for wheat and raise 20 to 45 bushels to the acre** you are bound to make money—that's what you can do in Western Canada.

In the provinces of Manitoba, Saskatchewan or Alberta you can get a



**Homestead of 160 Acres Free**

and other land at very low prices.

During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to the acre. Wonderful crops also of **Oats, Barley and Flax. Mixed Farming** is as profitable an industry as grain raising. Good schools, churches, markets convenient, climate excellent. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Can., or to

# Patterns

2086—Girls' dress. Cut in four sizes: 2, 4, 6 and 8 years. It requires 2 3-8 yards of 44-inch material for a 4-year size. Price, 10 cents.

2479—Girls' dress. Cut in five sizes: 6, 8, 10, 12 and 14 years. Size 12 requires 3 3-4 yards of 44-inch material. Price, 10 cents.

2480—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 6 yards of 36-inch material. The skirt measures a little more than 2 yards at the foot. Price, 10 cents.

2237—A popular model. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 5 1-2 yards of 44-inch material. The lower edge measures about 2 5-8 yards. Price, 10 cents.

2458-2459—A smart business dress. Waist, 2458, is cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require 2 1-4 yards of 36-inch material for a 38-inch size. The skirt, 2459, is cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires 3 yards of 44-inch material. The skirt measures about 1 7-8 yards at the foot. Two separate patterns, 10 cents for each pattern.

2468—Lady's apron. Cut in one size—Medium. It will require 1 1-8 yards of 36-inch material. Price, 10 cents.

2263—Dress for misses and small women. Cut in 3 sizes: 16, 18 and 20 years. Size 18 requires 5 1-4 yards of 44-inch material. The skirt measures about two yards at the foot. Price, 10 cents.

1307—Lady's corset cover and petticoat. Cut in 3 sizes: Small, medium and large. It requires 3 1-4 yards of 36-inch material for a medium size, without the ruffle, which will require 3 5-8 yards of embroidery. Price, 10 cents.

2074—Lady's "cover all" apron. Cut in 4 sizes, small, medium, large and extra large. It requires 5 1-2 yards of 36-inch material for a medium size. Price, 10 cents.

2472—Girl's set of under garments. Cut in 6 sizes: 2, 4, 6, 8, 10 and 12 years. Size 8 requires for the waist, 7-8 yard; for the bloomers, 1 3-4 yards; for the petticoat, 1 5-8 yards of 36-inch material. Price, 10 cents.

2471—Lady's bloomers. Cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 26 will require 1 3-4 yards of 36-inch material. Price, 10 cents.

2481—Girl's dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 requires 3 5-8 yards of 44-inch material. Price, 10 cents.

### BIRD BATHS.

It is not sufficient to put up houses for birds. We must also provide water for their bathing and drinking, to make our yard and garden attractive to them.

Small, shallow pans—individual bathtubs—are better than large, deep basins, because birds are timid bathers, and as a rule prefer tubs to themselves. And it is well to place these off the ground so the bathers will be and feel secure from neighborhood cats. In the illustrations I have shown two ideas for aerial baths, and also, two schemes for filling them.

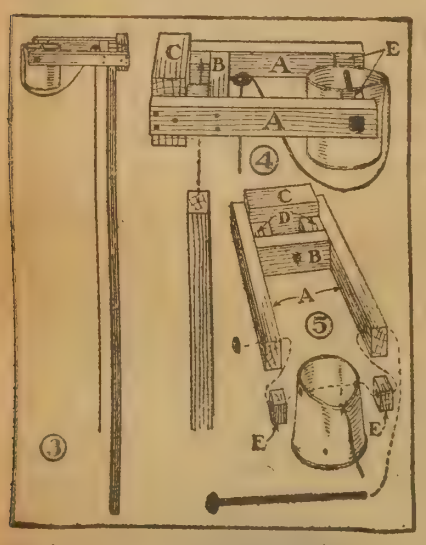

Fig. 1 illustrates a battery of four pan tubs. Get four saucepans five or six inches in diameter, and make a frame for each of just the right size so the rim will rest upon the upper edges (Fig. 2). By lapping the strips as indicated, A, B and C can be cut of equal length. Strip D must be enough longer to provide for nailing the frame to the post support. Nail one frame to each side of the support, and set the pans in them.

Fig. 1 shows the homemade filling

device, and Figs. 3, 4 and 5, details of its construction. Side strips A of the framework are 11 inches long, 1 inch thick and 2 inches wide; and the cross blocks B and C are 4 1-2 inches long—P of the width and thickness of strips A, and C a piece of 2 by 4. This framework is to be slipped over the end of a clothespole; therefore, in assembling its parts, fasten strip B at the right distance from C so a clothespole will fit snugly between them. Cut blocks D (Fig. 5) of the proper size to make the opening of the right width for the pole.

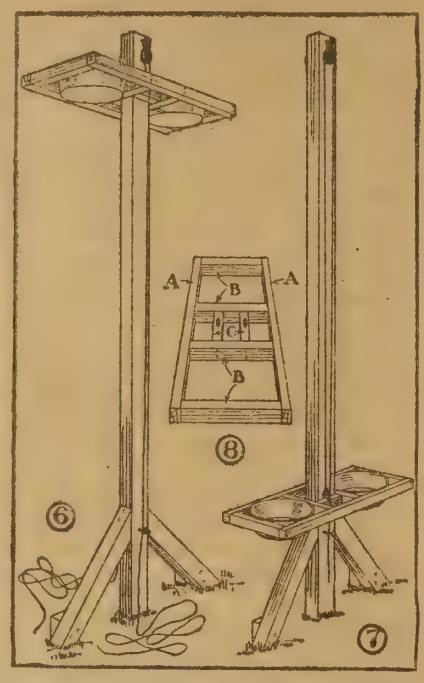

Fig. 5 shows how a can is flattened on its sides to form a spout, for the filling receptacle, and how holes are pierced through opposite sides for a

carriage bolt, by which to mount the can. Bore holes of the diameter of the bolt, through strips A near their open ends, and through two blocks E. Blocks E form washers to keep the narrow top of the can centered, so the bottom will not strike strips A when being inverted.

Fig. 4 shows how the cord for inverting the can is attached to the center of the top edge of strips C.

After slipping the framework over the post support, staple a pair of clothesline pulleys to opposite sides

spout, passed beneath and down through a screw-eye screwed into block B. You will readily see how, by pulling this cord, the can is emptied.

The duplex bath in Figs. 6 and 7 has a pulley arrangement for raising and lowering it. Fig. 8 shows the framework for holding the pans. The lengths of the strips A and B will be determined by the size of the pans; and the length of blocks C by the size of the post support, which must fit loosely in the center opening formed by them. Screw a screw-eye of the post, near to the top, on the same sides as the screw-eyes in strips C; then tie ropes to the screw-eyes in strips C, run them over the pulleys, and drive nails into the post near the base to fasten the rope ends to when the framework has been raised.

## FEDERAL FARM LOANS.

### Membership of 56,000 Farmers.

On April 15 the federal farm loan system had been in active operation just a year, and the farm loan board at Washington signalized the first anniversary by issuing a hopeful statement to the public.

About 2800 national farm loan associations have been incorporated. They have an average of 20 members, representing a total membership of about 56,000 farmer borrowers.

"The 12 federal loan banks have received applications for over 120,000 loans, amounting to about $300,000,000," says the board's statement. "Many of these applications have been rejected, reduced or withdrawn. About 80,000 loans have been approved, amounting to over $160,000,000, and on over 30,000 of these loans money has been paid to the farmers to the amount of about $80,000,000. Some loans approved were for reduced amounts which the borrowers declined to accept.

"Notwithstanding the unusual expenses incident to the operation of new machinery and to the appraisement and determination of title on many loans that have not yet been closed, the expense of the banks in doing business has been within such limits as to justify the expectation of the farm loan board that these banks will easily be able to operate on a difference of one-half of one per cent between the loaning rate and the rate which they pay on their bonds.

"None of the banks, of course, received any appreciable income from its business during the first half of the year, but during the last half the business of the Spokane Federal Loan bank, for example, was sufficiently profitable to come within about $10,000 of wiping out the excess of expenses incurred in the first half, and the volume of business on its books assures it a handsome surplus for the second year.

"Every borrower, when he takes out his loan, makes a subscription which increases the stock of the federal land bank to the extent of 5 per cent of the amount borrowed. These stock subscriptions of borrowers, in the case of several of the banks, are now so large that, in accordance with the provisions of the act, the retirement of the original stock of the banks, which was principally subscribed by the government, will begin within a few months."

### Wanted—A Big Fee.

"Well, old fellow, the doctor tells me that I simply have got to have my appendix removed."

"Dear me, is he so hard up as that?"—Life.

YOUR

# LOCAL HOME PAPER

AND

# THE WASHINGTON FARMER

## For the Price of Your Home Paper Alone

Through a special clubbing arrangement with a large number of newspapers in Washington, we can now send you **The Washington Farmer** and your Local Home Paper at the regular subscription price of your home paper.

## THE HOME PAPER

You alone know the great value of your local town paper. The part it plays in local affairs, the news of the happenings of your community, the gossip, social and commercial life that you wish to keep posted on. It brings the story of the home boys at the front who are fighting for you and our country.

## THE STATE FARM PAPER

The Washington Farmer is your family paper. It keeps you posted on the agricultural developments of your state. It is a complete family farm paper—all the farm news, latest and best serial stories, department for every member of the family—feature sections of every branch of farming, dairying, stock raising, fruit growing, etc. Also colored comic pages and a children's and family page. It is the biggest and best farm paper published in The Pacific Northwest.

**The Washington Farmer Is Issued Every Week**

We are pleased to state that by subscribing now to any of the following papers and paying the regular annual subscription price of that paper your payment will also include a subscription to The Washington Farmer.

Review Building. Spokane, Wash.

### Maurine Goes a Mile to School.

Dear Aunt Nellie: I am 11 years old. My birthday is September 25. Have I a twin? If so I wish she would write to me. I live on an 80-acre farm three miles west of Rockford. I have two sisters and two brothers. Their names are Hazel, Margaret, Garner and Fred. We have two horses, Prince and Maud. We have one cow named Jersey, one calf named Buster and we have four pigs. Papa takes the Farmer and we all enjoy reading it. My sisters and I go a mile to school. I like to go. I am in the sixth grade in arithmetic, grammar, spelling, history and physiology and in the seventh I take geography and reading. We have a dog named Prince and the cat's name is Toodles. I feed our calf sometimes. My teacher's name is Miss Hazel V. Morris. Her sister taught our school last year. The name of our school is Sylvan district No. 98.—Maurine Reedy, R. F. D. 2, Rockford, Wash.

### Will Fix Her Playhouse Up.

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 6 years old and in the second grade at school. My teacher's name is Mrs. Ramser. I like her very much. My papa writes for The Farmer, so I thought I would write to the Corner. I like to read the letters. I have one sister. My birthday is October 7. Have I a twin? We have 20 chickens and one horse. I will be glad when summer comes. Then I can have my big playhouse fixed up. We had a program at out school on Washington's birthday. I have a doll and if you squeeze him he will say "Mama." I hope my letter will be in print.—Dorothy Palmer, Bossburg, Wash.

### Cousin Dora Makes a Discovery.

Dear Aunt Nellie: Last November papa subscribed for the Farmer and it was last month that I discovered the Children's Corner. I was always going to write to you, but never had a chance till now. I am in the seventh grade at school. May I become a cousin? I am 12 and will be 13 August 20. If I have a twin I wish he or she would write to me; I just love to receive letters and would like to hear from any of the cousins. I have one and one-half miles to go to school. I wish I did not have to go so far because it makes me tired. I have three brothers, but no sisters. I wish I had a sister. My brothers' names are Thomas, Charles and Johnnie. Johnnie is younger than I am, but the other two are older. Thomas is going to join the navy in the spring. I belong to the Red Cross and I can tat and crochet. I am going to learn to knit after a while. We live on a 30-acre farm and have two horses, Bill and Skookums. We have six cows, Reddy, Blossom, Daisy (my cow), Bessie, Josephine, Glendeline. Papa has two pedigreed hogs. Their names are Mitchell's Queen and Curly R. The last is a little curly-haired pig.—Dora Estella Mitchell, R. F. D. 2, Box 67, Ridgefield, Wash.

### Piano Was Surprise for Marie.

Dear Aunt Nellie: I read the Corner every week and enjoy it very much, so I thought I would try to write, too. May I be a Cousin of the Corner? I would like very much if I could. My complexion is fair. My hair is brown and my eyes are a grayish blue color. I am 12 years old. My birthday is September 8. Have I a twin? If so I would be very glad to hear from them. I am in the sixth grade in school. My teacher's name is Miss Ethel Viola Stone. I have six brothers and one sister. My brothers' names are John, Henry, Edman, Alvin, Bennie and Ernest. My sister's name is Esther. John just got married a short time ago. I live on a 960-acre farm. We did have 1170 acres, but we sold 210 acres to my brother John. We have about 25 head of horses and about 30 head of cattle. Say, I want to tell you a surprise. Last Friday when I came home from school mama took me to the parlor and there stood a nice, big piano for me! My, I was so glad I didn't know what to do! And now I am going to take music lessons.—Marie Krom, Penawawa, Wash. (You are a cousin now, Marie, and we want you to write often.—Aunt Nellie.)

### Some Riddles With Their Answers.

Dear Aunt Nellie: This is my first letter to the Children's Corner. I like to read the cousins' letters very much. Tell Cousin Elva Green that I think I can answer some of her riddles: A potato has eyes and can not see, corn has ears and can not hear, a shoe has a tongue and can not talk, a watch never stops running. I am 12 years old and my birthday is January 17. Have I a twin? If I have I wish she would write to me. I have two brothers and no sisters. My brothers' names are Kenneth and Veron. Veron is 15 and Kenneth is 13 years old. We are not having much snow here this year and I am glad of it because I do not like snow very well. I will ask some riddles. I will put the answers, too, so the cousins can ask their parents to guess: What is it that goes around a button?—A billy goat. There is a house and there are no doors, no crack, no chimney and no windows, and there is a man in the house, how does he get out?—He breaks out with the measles. Keep care of yourself, Aunt Nellie, and all of the cousins.—Vera Elanora Garton, Box 34, Chelan, Wash.

### Twins Find Plenty to Keep Busy.

Dear Aunt Nellie: My twin sister wrote a letter last year so I thought I would write this time. We live on a farm and I find lots of things to do to keep me busy. I enjoy living on the farm. Last summer my twin sister and I had a garden of our own and besides we helped mama to tend her garden. We want to have a little garden again this year. I am learning to milk cows and learning to knit and I want to learn to crochet and my twin sister and I are going to take music lessons this summer. I am very anxious to learn to play music. I love to go to Sunday school and church also. We are 10 years old and our birthday is June 26 and we are in the fifth grade. We have a pony to ride, but we fell off of her once and now we are afraid to ride her. My little sister, Thelma, has written you a letter, too, and we are going to send them together. I have an uncle and a cousin who have to go to war and it makes me feel very sad. My twin sister and I dress alike, look just alike and everything I do my sister does. I don't think I need to hunt to find a twin, for I already have a real twin.—Edna Peterson, Pomeroy, Wash.

### This Cousin Came From Denmark.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but I have been reading the letters. I am 10 years old. My birthday is May 7. I have one brother and three sisters. My brother's name is Willie and my sisters' names are Asta, Esther and Agnete. We have nine horses, one cow, one cat and one dog. My cat's name is Pussy. My dog's name is Shep and our cow's name is Black Eye. Our horses' names are Diamond, Molly, Queen, Turkey, Brownie, Bell, Dud, Billie and Anna. We have some colt. Her name is Nellie. We have some chickens. I am in the third grade. My teacher's name is Miss McEwen. I came from Denmark four years ago. I live on a 360-acre farm.—Gerda Jensen, Kittitas, Wash.

### Gets Breakfast Every Morning.

Dear Aunt Nellie: I am hoping that the Corner will grow a lot. I have one sister, but no brothers. My sister's name is Lily. I was 12 February 27. The schoolhouse is just about across the road, but we can not see it on account of trees in the orchard. I do not take my lunch, but I go home for dinner. I am in the sixth grade and Lily is in the fourth grade. Lily is in a different room. We have started a Junior Red Cross at our school. We have made handkerchiefs and soon we will make washrags and quilts. A lot of the children have bought thrift stamps and war savings stamps. I have six thrift stamps and will have two more pretty soon. One day in February papa said that if I would get up in the morning he would give me 50 cents a month for getting up and making breakfast. We do not live on a very large farm, but we have a large orchard of apples, pears and many different kinds of prunes and plums and have one peach tree. We have seven cows, three calves, two horses, two cats and one dog.—Karen Pederson, R. F. D. 1, Box 73A, Enumclaw, Wash.

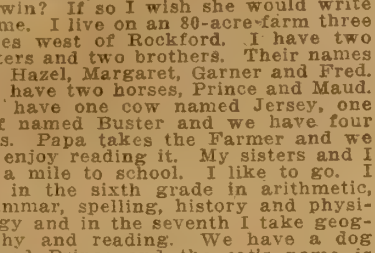
### Likes the Country Real Well.

Dear Aunt Nellie: This is my first letter to the Children's Corner. My name is Thelma. We lived in the city until three years ago, when we moved on a 210-acre farm. I have four pets, a rabbit, dog, chicken and cat. My dog's name is Queen. I am 9 years old and am in the fourth grade at school. There are 21 children in our school. My teacher's name is Miss Avis Fisher. We have a mile and a half to go to school. It is most all up hill. We have lots of fun sleigh riding in the winter and fun in the summer time, too. I like the country real well. I have two brothers, Lawrence, 18, and Raymond, 13. We have six horses and 20 head of cattle. Lawrence killed a coyote and made a rug of it. I like to help my mother do the work. I dry the dishes, sweep, set the table, and gather the eggs in the summer.—Thelma Mae Searle, R. F. D., Bossburg, Wash.

### The Cat Is a Bluffer.

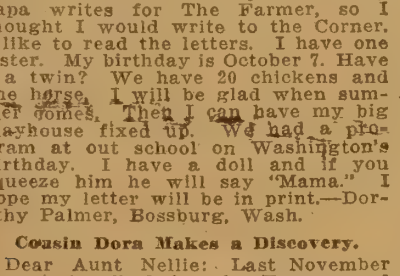
Dear Aunt Nellie: I have written to the Corner before and as I saw my letter in print will write again. I think the Children's Corner the best ever, and wish it was larger. I was 11 years old the 11th of February. I wonder if I have a twin? I am in the sixth grade at school. I hope I will be in the seventh grade next year. We live on a farm of 80 acres, although not much of it is in cultivation. We have a cow which gives plenty of milk for us. Her name is Daisy. We have a dog named Pete, a cat named Patrick Henry. My sister named the cat. Hasn't he a funny name? He is coal black and likes to have us play with him. He pretends he will bite us, but he is a bluffer. My smallest sister has the dog and cat. My large brother plays with the cat more than any of us others do. There are eight children in our family and one of my brothers is dead. I never got to see him. Counting father and mother we have 10. My hair and eyes are brown. My cheeks are pink and I am very fond of poetry.—Esther Dorn, Box 46, Naches, Wash.

### Lives on a Large Farm.



Dear Aunt Nellie: May I join the Children's Corner? I have been reading the letters and enjoy them very much. I am 12 years old and my birthday is October 23. Have I a twin? I so I wish she would write to me. I live on a large farm. I have two sisters and a brother. We have 37 horses and mules and 12 head of cattle. Now I will give some riddles and see if any of the cousins can guess them. What goes when the wagon goes, stops when the wagon stops, is of no use to the wagon, but the wagon can't go without it? There is an old red horse upon the hill that eats and eats and never gets full. What is it? I hope that some of the cousins will write to me.—Ethel Broyles, Penawawa, Wash.

---



Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

## An Elephant Stunt

Here is a diversion in which two persons imitate an elephant. One stands behind the other, as in figure 1, both bending their bodies so that their backs are horizontal, and the rear one rests his head and his hands on the one in front of him, as shown in the illustration. The first one holds a black cane with a curved handle to represent the

elephant's trunk, and the second has in each hand a roll of white paper for tusks. The tusks must be long enough to project in front of the trunk. A gray shawl is now thrown over both boys, two pieces of gray cloth are pinned in the proper places for ears, and round bits of white paper, with black spots in the middle, are fastened on for eyes (see figure 2). As the

animal walks, the trunk should be swayed slowly to and fro. A showman, gaudily dressed in colored shawls, with a white turban, should accompany the elephant, and exhibit him to the company. It adds to the amusement if the showman pretends to speak in the Hindu language, and what he says is explained to the audience by an interpreter. He can also lie down and let the elephant walk over him and perform other tricks usually shown in menageries.

ENCLOSED please find 5 cents in stamps to cover postage of farm service war flag. I would like to have one in my home.

GEORGE SCHOESSLER.
Wheeler, Wash.

# "Lafayette, Here We Are"

Through remote French villages resounds the unaccustomed tramp of American soldiers. But a little while ago and these men were in the quiet of their homes in a peaceful country. Today, in a strange land, they are facing the world's bloodiest struggle.

Pershing at the tomb of America's old time friend months ago reported, with true soldier eloquence, "Lafayette, here we are." And it is for us of the great American democracy to rally all our might to the support of our army and our allies.

From our shores to the battlefields of France are thousands of miles which must be bridged with ceaseless supplies to our troops. Every day calls for action here, no less than there. Cooperate! Sacrifice! These are the watchwords sent over the land by the Government.

In this national effort the Bell System has served with every other essential industry in order that communication, manufacture and transportation may be kept at the peak of efficiency to provide the munitions, ordnance and supplies so urgently needed.

# FIELD NOTES

"Now why," said H. L. Fletcher, the O. I. C. hog breeder of McMinnville, "should anybody ship a breeding crate set up, when it could be knocked down and sent for half the sum?" He had just received a breeding crate from Indiana and the cost of shipping was as much as the cost of the crate, because they had not shipped it knocked down. Mr. Fletcher said he had sold most of the animals he had for sale at good prices. The purchaser which appeared to be most interested was a boy who had bought an animal, won on it and wanted more. "The O. I. C.'s are going big, especially in the south," he added. The national show is to be held in Atlanta this year.

Rollie Watson of Tillamook, Ore., whose activities include real estate, fire insurance, and an interest in pretty much everything of a public nature calculated to benefit the city or county, in 1915 purchased the best Holstein heifer, Canary Fobes May DeKol 330077. Canary was calved February 11, 1915, on the farm of Benjamin F. Berg, Lake Mills, Wis. She dropped her first calf on Easter Sunday, April 8, 1917. Up to the end of her lactation period she produced over 8000 pounds of milk. Considerably over 1000 pounds of the milk was used at home, but Mr. Watson sold sufficient in the city, at 10 cents a quart, to give her just $364.

At the fall fair, although Canary had been in milk four months, she was put in the milking contest and won third place, producing 4.99 pounds of butter in 48 hours. She was grand champion of all ages and the value of prizes won was $60. At the Holstein sale at Tillamook March 18, Mr. Watson sold her bull calf for $200, giving her a total income for her first year's work of $624, on an investment of $525.

At the sale referred to Mr. Watson purchased the cow, Ruby Pietertje Hengerveld, for $550 and expects her to be as profitable an investment as the heifer.

Professor A. B. Nystrom, county agriculturist of Lewis county, Wash., recently purchased a richly bred Holstein bull calf from Bouchard Bros. of Tono, Wash., from the Maplecrest Farm of Ohio. The bull's dam, Maplecrest Pontiac Hartog, has a 20-pound A. R. O. record as a 2-year-old, and is a full sister to Maplecrest Pontiac Flora Hartog that has a year's record of over 1200 pounds of butter. His sire is Friend Hengerveld De Kol Butter Boy, sire of Banostine Belle DeKol, 1322 pounds of butter in a year, a world's record when made; two others above 1200 pounds and a total of four above 1000 pounds; also of 37 A. R. O. daughters, 26 proven sons and 18 proven daughters. The calf's dam is sired by Pontiac Aaggie Korndyke, sire of six above 1000 pounds of butter in a year, four of them above 1200 pounds, 54 A. R. O. daughters, 15 proven sons and 15 proven daughters.

The Bouchard farm is up the Hanaford valley, about 12 miles from Centralia, Wash. One other richly bred little herd of Holsteins is owned in the valley, that of W. L. Rector, and that valley is getting in line for some great producing Holsteins. H. A.

There was just a touch of pathos in the sale of Ed Long's island bred Jerseys at Buhl recently. While a thoughtless crowd made foolish remarks about various animals brought into the sale ring Mrs. Long sat near, with moist eyes and aching heart. She saw passing into other hands the beautiful creatures of the pasture and barn lot which she had learned to love with a devotion only live stock fanciers understand. Both she and Mr. Long have worked far into the night at times over the fawnlike beauties which comprised the herd. It was their devotion and perseverance that made them the successful breeders they are.

S. S. Carvosso was told nine years ago he wouldn't live long unless he stayed outdoors. He then lived at Yakima. He took his doctor's advice and moved to Buhl, and he has never regretted the change. He has his health, a fine 80-acre farm and a half interest in a paying grocery store. Mrs. Carvosso has been a great help in keeping things moving, both in the store and on the farm. She enjoys one activity about as well as the other, and is a success in both capacities.

J. Silvers of John Day valley, Ore., runs 300 head of cattle and remembers the day when cattle corrals were never thought of. The range riders merely lined their cow ponies up in a circle when they had branding or roping to do, and it had to be a wild "critter" that could break through.

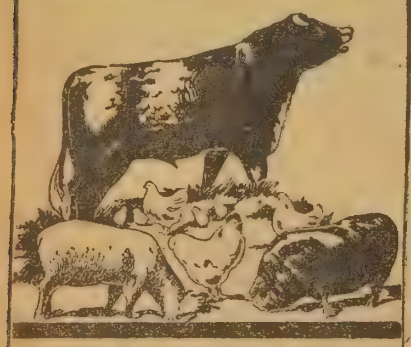
Frank Rothrock, Duncan Dunn and Frank Brown all agreed with W. J. Townley that they would attend the Union Live Stock show June 5, 6 and 7 and bring their wives. Union is going to have its usual good exhibit, and we are glad to observe general interest in the undertaking.

Oliver Hardman of Unity, Ore., bought nine head of Shropshire ewes last fall. He crossed them with a Lincoln buck and harvested a lamb crop this spring of 18. One ewe dropped only one lamb but another had triplets.

Alfred Campbell of New Meadows, Idaho, recently purchased eight head purebred Hereford heifers from George Chandler & Son of Baker. The shipment consisted of six yearlings and two 2-year-olds.

"I suppose that cow has paid you well," some one remarked to Herbert Chandler the other day when he pointed out a 15-year-old Hereford in the barn lot. "Well," replied Mr. Chandler, "father bought her in the east last year for $875, when she had a suckling calf. We sold the calf for $800, and she is about due to calve again."

R. C. Boyce has a first rate herd of Shorthorns on his farm not far from Baker, Ore. There are 60 head of registered stuff. R. W. F.



## Response to Far Cry

(Continued from page one.)

you will agree with the United States department of agriculture that this FARM SERVICE WAR FLAG, with its red border, with its blue field and with its white star, representing the patriotic farm family, is both "appropriate" and "attractive."

Already there have been received from many farm families in all parts of the Pacific northwest requests for this flag, and the Farmer sincerely hopes that this recognition of loyal farm service shall be seen on every farm in Oregon, Washington, Idaho and Montana, and that the movement shall spread and the farm service war flag shall find a companioned place with the Red cross, the Hoover shield and the Liberty loan emblem throughout the length and breadth of our nation.

## JERSEY CATTLE

# JERSEY CATTLE SALE

## JUNE 12, 1918

**WITH BROKEN HEALTH** have leased my farm and must sell 18 head of my choicest Jerseys, including cows with records up to 783 lbs. b. Young bulls out of cows with records up to 828 lbs. b.

Included in this sale is the entire working herd of J. A. Wood of 14 cows and 7 choice heifers and one cow a 40-lb. milker, from the well-known herd of McArthur & Stauff.

Included in this sale will be my herd sire, Oxford You'll Do Jr., who has 4-year-old daughters that will make 600 lbs. fat this year. Every animal in this sale is guaranteed to be sound, a breeder and a first-class animal. There will not be a cull animal in the sale. We want every buyer to be a satisfied customer.

If you should want a show animal you can get it here, with production, which is the money-making end. Catalogues sent only upon request.

Sale will be held at my farm, 8 miles west of Salem, 6 miles north of Independence, Oregon.

## Complete Dispersal Sale
# JERSEY CATTLE
## Tuesday, June 11, 1918

On account of ill health, and a big farm to manage, I am forced to sell my entire herd of Jerseys. This herd has been bred from the best American families and are rich in the blood of Golden Glow's Chief, Oregon Exile, and other noted bulls. The offering includes the entire herd of milch cows, herd bull, and young stock—all registered Jerseys; 30 head besides young calves that will be born before sale day.

The sale will be held on my farm four miles south of Salem. Catalog will be issued; send request to E. A. Rhoten, Salem, Ore., Sales Manager, and one will be mailed when published.

**IRA N. DELINE. Olympia, Wash.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, May 6.—Ideal weather and the bearish influence of peace gossip made the value of corn today average lower. Prices closed unsettled, at 7-8 net decline to 1-8 advance, with May 1.27 3-8 and July 1.47 3-4 to 1.47 7-8. Oats finished 1 1-8 to 2 1-8 down and provisions off 15 to 75 cents.

Until the last hour, pronounced weakness formed the rule in corn. Toward the end of the session, however, authoritative denials of peace reports were current and the market rallied.

Oats showed less rallying power than corn. One of the reasons was the outlook that the government crop report on Wednesday would prove to be in favor of the bears.

In the provision market the weakness of grains more than offset the influence of higher quotations on hogs.

## Seattle Market.

SEATTLE, May 4.—Some record high prices have been paid this week for local asparagus for early May. Receipts have been very light and jobbers are now convinced that eastern Washington will not produce enough of the stock to permit of accumulations or demoralized prices.

Quotations up to 18 cents were made this morning for Kennewick and Prosser locals. Frosts have been severe and the development of the asparagus plant retarded to such an extent that the demand has cleaned it up as fast as it came to market.

Reports today indicate that a few express shipments of Kennewick strawberries will arrive between May 15 and 20. The Olalla crop is being delayed by untimely cold weather and first arrivals are not expected before May 30.

The spud market is firm on selected Yakima grades. Growers are quoting $25 f. o. b. Spurred by a report in a Japanese newspaper that the market was to be firm and offerings scarce, Japanese growers of western Washington are holding tight to good stock and few transactions have been made during the week.

The poultry market, according to forecasts by leading jobbers today, will be weaker next week, running possibly to a decline. It is certain that receipts have been heavier than this market could absorb.

The fresh ranch egg market is up to 75 to 80 per cent of a lay and will be no heavier from now on, it is believed. The current market is steady.

Butter is holding firm, and this at a time when the tendency should be downward. There is a widespread conviction that butter will be little, if any, lower this year, and jobbers are preparing to pay 41 cents for their storage pack. Butter is offering today at 40 cents.

New cheese is coming slowly on the market, but none from western Washington has yet appeared.

**BUYING PRICES.**

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 30@37c per dozen; eastern Washington, Oregon and Idaho, 34@35c.

Poultry—Broilers, 35@40c lb.; live, old roosters, 17@20c lb.; squabs, large, $3.50 dozen; geese, fat, live, 18@25c; ducks, live, fat, 27@30c.

Butterfat—46c lb.; dairy butter, 30@35c.

Beef—Buying prices: Prime beef, steers, 16@17c; cows, fat, 15@16c lb.; heifers, 16@17c.

Hogs—Light, 18@21c lb.; heavy, 18@20c lb.

Veal—Fancy light, 17@19c lb.; heavy, 16@17c lb.

Hides — Salted, 14c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 11c lb.; green calf, 23c lb.; dry calf (under 6 pounds), 29c lb.; bulls and dry salts, 4c lb. less; green bulls, 9c lb. Clean, long wool, western Washington flint dry pelts, 39c per lb.; heavy to clean eastern Washington flint dry pelts, 30@35c lb.

Asparagus—Kennewick, 18c lb.; Oregon, 15@17c; Granger, 18c.

Apples—Winesaps, $1.25@2.50; jumble Winesaps, $1 box.

Potatoes—Puget sound, $17@22 per ton; eastern Washington, $28@30 per ton; seed, 1 1-4@1 1-2c per lb.

Feed—Bran, $34 per ton; shorts, $35.50; scratch feed, $80; all-grain chop, $75; oats, $72; sprouting oats, $78; whole corn, $75; cracked corn, $77; rolled barley, $77; clipped barley, $80; alfalfa meal, $36; oil meal, $72; egg mash, $65.

Hay—Eastern Washington timothy, $36@37 per ton; do double compressed, $39@40; alfalfa, $29; Puget sound, $27@28; straw, $15.

## Seattle Wheat.

SEATTLE, May 4.—Workings of the flour conservation program were shown this week when an agreement mill, or one that has stipulated with the government that in exchange for a supply of wheat it will ship no flour east of the Idaho state line, received an order for 1000 barrels of soft wheat flour from Memphis, a section that has been cultivated at great expense. The big mills of Washington, however, that have fallen in line with the agreement program have expressed no regrets. They point out that they have assurances of a wheat supply from the grain corporation as long as there is any in the state, and that when this fails they will be supplied from Australia, cargoes of which are now on the way, while plants that felt that they could get wheat without the good offices of the corporation are running out of both grain and flour and will be compelled to close down.

The car situation continues easy and the movement of Washington wheat to Minneapolis under government order has been heavy. In view of a possible shortage within the next 60 days some of the Puget Sound mills have been accumulating wheat. M. H. Houser, representative of the grain corporation in this zone, has protested vigorously against the practice, holding that the 10 per cent allowance for April and the prospective one for May should be ample to meet the situation.

If the eastbound movement of wheat were to be checked at this stage there would be enough wheat in the country to keep the mills in operation to August 1. The other alternative is the importation of Australian wheat. This grain will be ground for the government exclusively, but the millfeed will be marketed here, greatly relieving a tense situation.

All crop reports to millers from field representatives are similar in regard to the retarding of the spring-sown wheat through lack of moisture. It is too early, however, to warrant pessimistic forecasts of loss or damage, as conditions were very much the same in 1916 when the bumper crop of Washington was produced.

## Spokane Market.

**WHOLESALE.**

**Vegetables**—Cabbage, $4@5 cwt; carrots, $2@2.50 cwt; bunch carrots, 75@90c doz; bunch beets, 75@90c doz; beets, $3 cwt; rutabagas, $1.50 cwt; parsnips, $1.50 cwt; hothouse lettuce, 50c 5-lb box; head lettuce, 80@85c doz, $2.75@3 crate; turnips, $2.50 cwt; bunch turnips, 75@90c; California new turnips, $2 cwt; red bell peppers, $1.25 box; chilli peppers, 25c lb; green peppers, 11c lb; Florida tomatoes, $5.50 6-basket crate; Mexican tomatoes, $3.50 lug; celery, $1@1.10 doz; hothouse cucumbers, $2.25 doz; cauliflower, $2.25@2.50 crate; new garlic, 10@12½c lb; parsley, 40c doz bunches; horseradish root, 12½c lb; brussels sprouts, 12½c lb; radishes, 35@40c doz bunches; rhubarb, $1.25 box; spinach, 5c lb; Kennewick asparagus, $1.40@1.50 box; Walla Walla, $2@2.25 box; new peas, 10c lb; artichokes, $1.80 doz.

"Double the Use of Vegetables."

Help your country by raising vegetables for your own home and for market. But—to make your garden patch yield its utmost you can't afford to gamble with poor seeds. Play safe—

Plant Morse's Seeds

soil-tested and pedigreed, large yielding and sure. Morse's Seeds for fields and gardens have been producing profitable crops for farmers for forty years.

Our 1918 Garden Guide is just off the press. It tells you all about our new varieties of vegetables and flowers—as well as the old standbys. Send for your copy today—it's free.

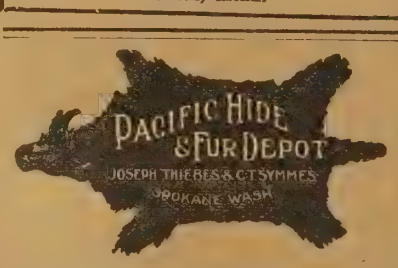
FORD OWNERS

The Aske Automatic Voltage Regulator, $5.00

With Dimmer .....$6.00



If you have a Ford car, write today for information telling just how you can have bright lights at all speeds. The Aske is the only patented device guaranteed to continue the operation of one light without increased voltage should one light burn out.

The Aske Instrument Board

complete with clock, dimmer and push and pull switches, which are standard with higher priced cars, decreases steering wheel vibration, eliminates all starting and lighting troubles, adds beauty and distinction to your car and gives a wonderfully efficient system. The Instrument Board complete with Regulator and Dimmer $18.00, without regulator $13.00, without regulator and clock $10.00. The Instrument Board without equipment $1.25. The Aske Dual Lighting Units are sold at most dealers, or will be sent direct to you upon receipt of price and dealer's name.

Aske Regulator Co.
Duluth, Minn.

WANTED--1000 tons of mixed country scrap iron

in carload lots of not less than 25 tons each. Write for prices if interested.

PACIFIC HIDE & FUR DEPOT.
Joseph Thiebes and C. T. Symmes.
1101-09 Railroad Ave., Spokane, Wash.

This is the season of preparation on the farm. There's many a timely and practical suggestion on equipment, etc., to be gleaned from our advertisements these days. Read them.

## Corn Meal Output Doubled.

A canvass of the whole country by the food administration shows that the actual milling output of cornmeal increased from 3,000,000 barrels in October to nearly 6,000,000 barrels for March. During the last 18 months the output of corn flour has increased 500 per cent.

### Tomato or Garden Apple.

The tomato for a long time was considered poisonous, and no one would think of eating it. Tomatoes were allowed to grow, however, and some gardeners cultivated them for their beauty alone. They were originaly called garden apples.

# Want Ads

**Want Ad Rates 30c Per Line**

Want ads are run at this rate in The Washington Farmer and i t s associate papers, The Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

# Want Ads

Send for card giving lower rates for ads running one month or longer.

**How to Figure Cost of Ads**

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

# Model 90—Farmer's Choice

## Complete Satisfaction Cannot Be Bought For Less

There are thousands of ways every day and every season in which Overlands are saving time for the farmers, multiplying their efficiency and adding to their families' comfort and happiness.

Hundreds of thousands of farmers drive Overlands and recommend them to their friends.

The result is that more than half of our vast production is now taken by farmers.

Improved methods of building cars, that build them better and *save millions* of dollars to the public is one of the substantial advantages you get in this Model 90.

Select this Model 90 and you save money in the first cost and in the maintenance cost. You can not get complete satisfaction from less advantages than it gives—

And you cannot get as much *value* in any other car for the low price of this Model 90

It has a powerful, fuel-saving motor; narrow turning radius; rear cantilever springs; 106″ wheelbase; 31x4 tires, non-skid rear. Auto-Lite starting and lighting and vacuum fuel system.

Because this Overland Model 90 gives every essential for complete satisfaction, the farmer's family can *enjoy* it as much as the farmer can *employ* it.

Order *your* Model 90 now.

# Red Cross Week Brings Opportunity

## *People of Washington Share in Organization's Great Work of Battlefield Rescue*

WASHINGTON is asked to raise $1,000,000 next week as her share in the $100,000,000 that the people of this country are asked to contribute for the conduct of the relief work of the American Red Cross. This is not Washington's task; it is her privilege and opportunity. The people of the state responded liberally and loyally to the Liberty loan appeal; they will respond with equal liberality and loyalty to the appeal for funds with which to relieve the suffering and save the lives of American and allied soldiers and the homeless widows and orphans of war-stricken Europe.

The purpose of the Red Cross is so well known that it need scarcely be mentioned. The organization is purely an American institution, inspired, developed, financed and conducted by the great humanitarian heart of liberty-loving America. It has no other aim than to do good. Back of the lines in France and Belgium today there are scores of hospitals conducted by it. In them and on the battle fields, braving the dangers of gas and shell, are thousands of nurses and surgeons, serving for no compensation save that of the consciousness of duty well done. Many of them are bearing their own expenses.

This work has no source of support save that of the voluntary offerings of the people at home, of those blest with the blessings of a land of peace. Washington is so blest, and she will show her appreciation of those blessings in the contributions that she will make during the coming week.

President Wilson has officially set aside the week beginning May 20 as Red Cross week, calling upon all the people everywhere to respond loyally to its humanitarian call. His proclamation follows:

"Inasmuch as the war fund of 1917, so generously contributed by the American people to the American Red Cross for the administration of relief at home and abroad, has been practically exhausted by appropriations for the welfare of the men in our military and naval forces, and for those dependent upon them, and for the yet more urgent necessities of our allies, military and civilian, who have long borne the brunt of war;

"And inasmuch as the year of our own participation in the war has brought unprecedented demands upon the patriotism and liberality of our people, and made evident the necessity of concentrating the work of relief in one main organization which can respond effectively and universally to the needs of humanity under stress of war;

"And inasmuch as the duration of the war and the closer and closer cooperation of the American Red Cross with our own army and navy, with the governments of our allies, and with foreign relief organizations, have resulted in the discovery of new opportunities of helpfulness under conditions which translate opportunity into duty;

"And inasmuch as the American Red Cross war council and its commissioners in Europe have faithfully and economically administered the people's trust;

"Now, therefore, by virtue of my authority as president of the United States and president of the American Red Cross, I, Woodrow Wilson, do

Continued on page eighteen.

# What Our Red Cross Is

The American National Red Cross is, by Act of Congress, the official medium of communication between the people of the United States and their Army and Navy.

The President of the United States is the President of the Red Cross.

The War Department audits its accounts.

The work of the Red Cross for the war period is directed by a War Council created by President Wilson on May 10, 1917.

## The Red Cross organization is world-wide

The American Red Cross today is world-wide. It reaches into every American village, and overreaches all national boundaries.

A year ago there were 562 chapters in the United States and 486,194 members. Today there are 3551 chapters, 11,000 branches, 50,000 auxiliaries, 22,000,000 adult members, and a Junion Membership comprising a large proportion of the school children of the land.

## Red Cross ideals

The strength of the Red Cross is in its ideals.

The War Council expresses these ideals in three great aims:

**1 To be ready to care for our soldiers and sailors** on duty wherever and whenever that care may be needed.

**2 To shorten the war**—by strengthening the morale of the allied peoples and their armies by alleviating their sufferings in the period which must elapse until the American army can become fully effective abroad.

**3 To lay foundations for an enduring peace**—by extending a message of practical relief and sympathy to the civilian population among our allies, carrying to them an expression of the finest side of the American character.

The American people are translating these ideals into facts—into money and personal service. Last June the War Council asked for $100,000,000, and the people pledged $110,000,000, of which $108,000,000 has thus far been collected—collected at probably the lowest cost of collection in the history of such undertakings.

The Red Cross active workers are estimated at millions, and they are doing almost everything known to commerce and science, from bookkeeping to surgery, from knitting socks to feeding American prisoners in Germany.

## How Red Cross is organized

The great secret of Red Cross effectiveness is organization. Millions of people are working together through the medium of an organized machinery which coordinates the work of each with the work of all, and transmits the vast quantity of finished products to the people who need them.

The country is partitioned into thirteen divisions, and there is a fourteenth division for the territorial, insular and foreign chapters, with national headquarters as the coordinating force. In each division there is a manager and his staff, to whom the chapter officials are responsible, and the chapter workers deal directly with the chapter officers. The organization is military in its well-ordered effort, but quite nonmilitary in its democratic equalities, for the chapter worker is quite as important as the national headquarters official. The Red Cross is organized for efficiency, not for display of authority.

## Volunteer service

All of the division managers, and many of those on their staffs, are volunteers. Unpaid service is the general rule in chapters, divisions, and at national headquarters. Most of the department heads in Washington are volunteers.

## Every dollar of the war fund goes to war relief

Red Cross affairs are economically administered. Every penny has been spent under an appropriation by the war council after careful study. Membership dues pay the entire cost of operation, with a large balance for the handling of disaster relief and other work.

## The work of women

In all the volunteer service of Red Cross none is more notable for devotion, none so notable for extent as that which the loyal women of America are giving in their chapter work. It is estimated that there are two million of these women, many giving most of their time to this work, all giving unstintingly.

## Co-operation with the Army and Navy

The Red Cross is in close cooperation with the military authorities of the country.

Officers of the army, the navy and the United States public health service are assigned to national headquarters of the Red Cross to insure a thorough understanding at all times of the ways in which Red Cross service can be most helpful.

Red Cross commissions operate in France, Belgium, Italy, Greece, Serbia, Russia, Rumania, Palestine and Great Britain. The commissions and their staffs are in the theaters of war, cooperating with the army and navy forces and with the military and civil authorities of the allied countries; cooperating also with other relief agencies, avoiding duplication of effort and confusion of purpose, assisting other agencies and assisted by them.

## What the Red Cross does

The story of Red Cross accomplishment and its plans for the future will be told in more detail in other statements. Here are some of its principal activities, which suggest the importance and scope of its work:

Organization of base hospitals and ambulance companies.

Recruiting and training of nursing personnel for service in the army and navy medical corps.

Production of surgical dressings, hospital garments, refugee clothing, knitted goods, emergency supply service for our army and navy at home and abroad, sanitary service around cantonments.

Care of dependent families of soldiers and sailors.

Study of the problem of crippled soldiers and sailors.

Canteen service for troops en route.

Feeding of American prisoners in enemy countries.

Casualty information.

...e to convalescents.

Disaster relief.

And relief for our allies, including canteen work, tubercular work, hospital supply service, ambulance and hospital service, dispensaries, recreation centers, reconstruction of homes and villages, maternity work, repatriation of refugees, rehabilitation of mutilated men, and many other forms of service.

The Red Cross supplements the work of the army and navy. The Red Cross war council is endeavoring in every way to increase the effectiveness of the whole program of relief by the utmost cooperation with the commission on training camp activities, the Y. M. C. A., Knights of Columbus, Y. W. C. A., Y. M. H. A., and other great patriotic agencies.

Red Cross chapters have statements showing in detail how the war fund is being expended. Ask your chapter for these statements.

This is the first of a series of five announcements covering the work of the Red Cross.

Succeeding statements will deal with activities of the Red Cross in detail.

## To Sell 60 Cars of Strawberries

### *Kennewick District Is Increasing Fame This Season*

By HORACE ADDIS.

The fame of Kennewick (Wash.) strawberries has been increased this spring by the first shipment of two crates selling for $507. They were picked May 5 and shipped to Seattle, reaching that market May 7. The first crate brought the grower $30, but was resold at auction for the benefit of the Red Cross, and brought $365. The second crate brought $12, and was sold for the Red Cross by the cupful, bringing $142.

The berries were shipped by the Kennewick-Richland Fruit Marketing union, which this year includes over 98 per cent of the growers included in the Kennewick, Richland and (this year for the first time) Pasco district. There are 225 acres in the Kennewick district, 60 in the Richland district, and 40 in the Pasco district.

Right here it is appropriate to say that Pasco has just five growers in the union, but all have rather large acreage and each has offered to donate his first crate of berries to the Red Cross. Before this reaches the readers, the berries will probably be sold on the Spokane market.

The crop this year promises well and is estimated to go 50,000 crates, or over 60 carloads. Kennewick each year has the first ripe berries north of California, and is nearly done shipping before Hood River, Ore., begins. The Fruit Marketers' union is stronger than ever before and for the third year the Spokane Fruit Growers' company is doing the selling. This season this company is affiliated with the Northwestern Fruit exchange and H. G. Fletcher is sales manager. The berries go to Montana, Dakota, Utah and Coast points. Last year's strawberries netted the growers almost $1.75 a crate, above the cost of shipping, packing and picking. The average yield was close to 150 crates per acre. Though this season in Kennewick is early, rain delayed ripening a few days, but will mean larger berries and a larger crop. The success of union marketing is due to intelligent distribution, which scatters the fruit where it is wanted, instead of overloading some markets, while others are bare.

All the strawberries of the Kennewick union are Clark Seedling. The plants are set in the spring, after the ground is thoroughly worked and well irrigated. The rows are made from 30 to 36 inches apart and the plants are set 18 inches apart in the rows. The planter, with a shall, short-handled hoe, makes the holes with one motion, drops in the plant and covers it with another. A good hand sometimes sets 6000 plants a day. The bed is then irrigated regularly and the next year bears its first full crop. Once set it will last for years, if properly cared for. All growers go over it with a harrow, which tears out the old plants more than the young ones. But many growers run a plow just in the old row, which throws the row over about a foot and makes a row of mainly new plants. This plan moves the row each year and will keep a bed renewed longer than any other system.

In addition to the strawberrries the union controls about 100 acres of asparagus, not quite enough to ship in carlots, and yet a rather heavy crop for individual shipments. The crop is about 200 boxes of a net value to the growers of about $9600. The early potato crop is also controlled by the union. Last year it amounted to about 35 carloads and is expected to be as large this year.

F. H. Krug is local manager for the union. M. N. Hudnell, Kennewick, is president, and J. R. Gardner, Richland, secretary. The board of directors consists of L. E. Johnson, J. J. Rudkin and Ole Brue, Kennewick; John Erickson, J. E. Mowery and F. J. O'Brien, Richland.

I AM enclosing $1.00, for which please send me The Twice-a-Week Spokesman-Review, one year; The Washington Farmer for three years, and also send me one of your Farm Service War Flags.

### MILLS ARE GRINDING.
### Ship Flour and Keep Mill Feed.

According to J. W. Ganong, representing the milling division of the federal grain-buying corporation for the northwest, the mills of this section are doing their utmost to convert wheat into flour and mill feed before it is shipped out of this territory.

"We are informed by the federal shipping board that 50,000 to 80,000 tons of steel shipping will be ready for loading in June and July at northwestern ports," says Mr. Ganong, "and unless they are to go without cargo it is necessary that the mills continue in operation."

He states that the food administration prefers to ship the commercial product of the northwest in the form of flour rather than as unground wheat, as it not only reduces the amount of shipping facilities necessary, but has the effect of keeping the mill feeds in the territory in which they are produced, thereby eliminating much of the cost and delay of shipping back and forth. He says that there has been and is now an unusual demand for mill feed, notwithstanding the unprecedented prices to which it has gone.

## Hard Hit by Russian Losses

### *But The I. H. C. Has $20,000,000 in Home Profits*

The 1917 report of the International Harvester company was submitted to a meeting of stockholders last week by President Cyrus H. McCormack.

This great organization has two corporations. The International Harvester company of New Jersey sells machinery to American farmers. The International Harvester corporation handles foreign trade exclusively. The foreign branch was hard hit by Russian losses, but the domestic company made clear profits of 20 per cent on its actual capital of $70,000,000, or more than 11 per cent on its total working capital of $125,000,000. The difference between these two sums, $55,000,000, represents surplus profits earned in previous years and not paid out in dividends, but added to the nominal capital of $70,000,000.

An interesting feature of the report is that $9,750,421, or more than half of the $19,311,983 income, came from the operation of the company's steel properties, 60 per cent of their output having been sold in the general market.

The gross profits of the company in 1917 were nearly $20,000,000.

That vast sum remained after the company had paid all taxes, including excess profits war taxes. After various deductions had been made, such as interest, ore and timber extinguishments, depreciation reserve and other reserves, and appropriations of $1,300,000 for fire insurance fund, pension fund and profit-sharing fund, there remained a clear profit of $14,009,593, or 20 per cent on the capital stock of $70,000,000.

This was $3,500,000 more than the company earned in 1916, $5,500,000 more than was earned in 1915, and $6,500,000 mroe than it earned in 1914. The showing is all the more remarkable from the fact that the company paid no war taxes in the previous years.

"The agricultural implement industry," says Mr. McCormack, "has been recognized by the United States government as essential to the national welfare, and this company appreciates to the fullest extent the responsibility imposed upon it to supply labor-saving machinery promptly to the American farmer. The implement industry, through a representative committee, in which this company has membership, has been in constant cooperation with Washington in the effort to insure the uninterrupted manufacture of farm operation equipment and the seasonable delivery of the finished product to the country."

As noted above, the foreign end of the company, the International Harvester corporation, was hard hit by war conditions. America's entrance into the war and the Russian collapse have compelled the company, the announcement says, to charge off $13,941,168, of which $10,120,000 "represents unquestionable losses in Russian funds and $316,825 in the value of equipment commandeered by Germany at the Croix works near Lille, France. These losses absorbed the whole of the corporation's 1917 earnings and caused a deficit of $1,350,721 for the year." Of the remaining loss, it is explained, $2,556,175 represents an estimate of 50 per cent of receivables in Russia, Rumania, Belgium, Serbia and enemy countries, $948,167 represents inventory goods, materials and other property commandeered by Germany at the French works.

## Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

**CORPORAL ROBERT SCOTT, Mabton, Wash.**—Entered military service in 1916, and was at the Mexican border with the national guardsmen. At present he is serving with the 161st infantry, in France. He is 22 years old and the youngest son of J. A. M. Scott, a farmer, near Mabton, Wash.

**H. C. PURTEE, Almira, Wash.**—Who is now serving his country, is stationed with the 428th squadron, aviation signal corps. He is the son of Mr. and Mrs. John W. Purtee, who have a farm in Lincoln county on state route from Almira, Wash.

**GEORGE EARL MATTHEWS, Aeneas, Wash.**—Enlisted in November, 1917, in the 142d aviation squadron. He is now serving with the American expeditionary forces in France. He is the son of Mr. and Mrs. Fred C. Matthews, who reside at Aeneas, Wash.

## Bayard T. Byrns

Bayard T. Byrns of Moscow, Idaho, died suddenly at his home last Saturday, May 11, aged 65. Death was probably due indirectly to a minor automobile accident that occurred a few days previously.

Mr. Byrns was one of the widely known live stock farmers of the northwest, having done much through the introduction of purebred stock to build up the industry in the Inland Empire, especially around Moscow, and in the general Palouse country. He operated extensive farms, the most highly developed of which was one of several hundred acres about three miles out of Moscow, just south of the University of Idaho farm. He has been a leader and a strong supporter in the movement for the building up of live stock associations, having done much toward the development of the Northwest Live Stock association. He has been not only an advocate of diversified farming, but one who practiced what he preached.

### Rural Life Conferences.

Mrs. Josephine Corliss Preston, state superintendent of public instruction, writes that it has seemed advisable to change the plan of holding the state rural life conference at Yakima in June on account of war conditions.

The local rural life conferences are reported to have been well attended, aggregating an attendance of nearly 5000 representative people.

The annual convention of county superintendents has been called at Ellensburg state normal school Wednesday, Thursday and Friday, June 12, 13 and 14. The first day of the meeting will be taken up with administrative duties of county superintendents: The last two days of the meeting will be devoted to a rural life conference. In cooperation with this meeting there will be a rural life conference held at Cheney state normal on Monday and Tuesday, June 10-11.

### Will Hold War Conference.

There will be a great war workers' conference in Spokane on May 27 and 28, at which time vital problems confronting the people of this state will be worked out. Speakers of national and international reputation will be present, including a representative of the French army.

### Works For Food Administration.

Frank M. Warren has been appointed as an assistant state food administrator in Oregon to assist V. B. Ayer, state administrator.

# Urges Potatoes

## Acreage Should Not Be Decreased

Robert L. Ringer, potato market specialist for the government, located at Portland, Ore., has gone on record strongly as favoring an increase rather than a decrease of the potato acreage for the present season. He has observed a tendency on the part of many growers to reduce their acreage this season on account of the unsatisfactory condition that prevailed in the potato business last fall and winter. He says that the producers are not generally recognizing the fact that "they spoiled their own market last fall." In speaking of the potato situation Mr. Ringer said:

"The various civic bodies of the country now are promoting campaigns for a large acreage of potato planting this season. Because of the prevailing prices the last winter, many growers are turning from potato raising in the hopes of securing greater returns in money. They are not generally recognizing the fact that they spoiled their own market last fall. The people were out of the way of eating potatoes to a certain degree, because of the high prices of a year ago. Instead of selling at a reasonable profit, the growers last fall generally asked big prices, which confirmed the people in doing without potatoes. Potatoes that cost $1.50 a barrel to raise in Maine, were put in storage even when $4 per barrel was offered for them. Hundreds of cars were stored in the Yakima section, for which $30 per ton was offered. To pay for the shrinkage, investment and cost of handling, the growers needed $50 a ton this spring to make such storing profitable, but instead they are letting go from $20 up.

"During the war it is evident that there will be a continual necessity to conserve the supply of wheat, so that potatoes will have to replace it largely in the American diet. Thousands of growers of experience know that a year of low price and large supply is followed by the opposite condition largely, so many such are planting extensively this year endeavoring to benefit themselves and do their share to help win the war."

# How to Get Sugar

## Allowed 100 Pounds for Canning

In order to insure the preserevation of large quantities of fruit this season the federal food administration has taken action allowing each family to secure sugar up to 100 pounds for the purpose of canning and preserving. Under this regeulation it is required that every person securing sugar for this purpose shall sign a certificate with his local dealer showing the quantity secured and the purpose for which it is to be used.

At the present time the general regulations throughout the country permits the purchase of sugar in lots of $1 or less for present uses without the signing of the certificate, but the certificate plan is designed to prevent the use of unnecessary amounts during the canning season. Farmers at the present time are generally allowed to secure sugar in 25-pound lots owing to their distance from markets. The certificate to be signed when securing sugar for canning purposes will be somewhat in the form shown herewith:

> I hereby declare to the United States food administration that I have purchased from . . . (grocer) . . . . . of . . . (address of grocer) . . . . an amount of . . . pounds of sugar for my use in preserving and canning purposes only
>
> I hereby promise, in consideration of the above, to endeavor to limit the use of sugar for all other purposes in my household to three pounds or less per person per month for the duration of the war.
>
> .....Name of purchaser.
>
> .....Address of purchaser.

Speaking of the conservation of fruit this season, W. B. Ayer, chairman of a federal committee and food administrator for Oregon, says that the people have responded loyally to the appeal that has been made for regulation of the amount or sugar used for ordinary purposes and that as a result there is an adequate supply in the states of Oregon, Washington and Idaho to insure the amount needed for canning and preserving this season.

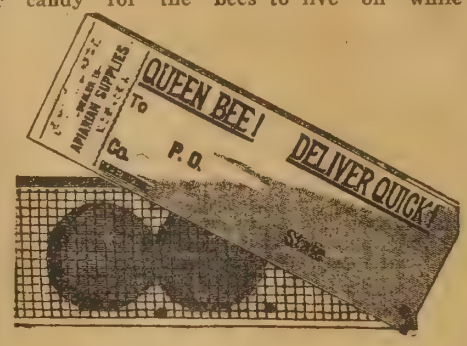
### A Kansas Record.

A Chase county (Kansas) steer, which had just come in off pasture, gained 45 pounds in 24 hours the first day it was put on feed on the farm of Henry Starkey.

### Demand for Registered Stock.

Doerfler Brothers, the Duroc Jersey breeders of Silverton, Ore., say that "never have we known of such a demand for good registered stock as right now." They report sales in various parts of Oregon, Washington and California.

### Fruit Storage Houses.



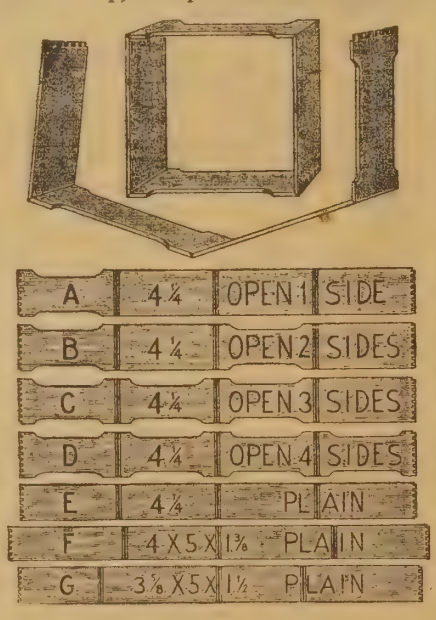
Storage houses are being built on many of the ranches and at shipping points in the Wenatchee district. The United States department of agriculture is cooperating actively with the horticultural inspectors and the county agents in promoting storage holding.

# Queen Bee Is Easily Introduced

## *She Readily Assumes Leadership of a Queenless Hive*

**Article 5, By GEORGE W. YORK.**

At the close of my last article I said I would tell this week how to introdudce a queen bee. But first I want to call your attention to the picture herewith showing a cage in which a queen bee is sent through the mails. It is made of a block of wood, about three inches long, about one inch wide, and perhaps half an inch thick. Three holes are bored in one side, and almost through the block. One of the end holes is filled with a soft sugar candy for the bees to live on while en route. The other two holes are for the queen and perhaps a half dozen escort worker-bees to occupy. A piece of fine-mesh wire cloth is tacked over the top of the cage; the bees are run in through a very small hole in the end of the cage, which is then covered with a little piece of tin.



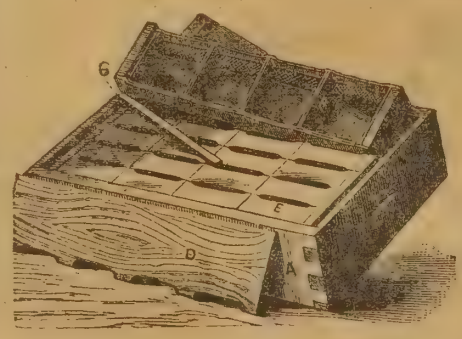
**Cage for mailing a queen bee.**

The candy end of the cage also has a small hole in it, across which is usually tacked a strip of cardboard, to prevent the bees escaping should they consume all the soft candy before arriving at their destination.

The cage with bees and candy usually goes through the mail for a one-cent stamp, which is stuck on the back of the cage.

This mailing cage is also used by many as a queen-introducing cage, as follows:

When the new queen arrives by mail, take her with the cage of bees to the queenless colony. Remove the address card, and lay the cage containing the bees, wire cloth side up, on top of the brood-frames. It is well first to put an empty super on the hive so that there will be nothing coming directly on top of the queen-cage. This will allow the bees of the hive to become acquainted with their new queen through the wire cloth. After, say, 12 hours, remove the strip of cardboard from the candy end of the cage, when the bees in the cage will, in another 12 or 24 hours, have eaten through the candy, and thus allow the queen to leave the cage and run down among the brood-combs, where she will very soon be laying eggs, and all will be well. The escort bees will look out for themselves.



**Sections, or boxes, for holding honey.**

There are other methods of introducing queens, such as almost drowning them in thin honey and then while so besmeared with sweetness drop them in between the brood-combs, when the bees will promptly lick them off and accept them. The standard bee-books give the various methods, but I have almost invariably succeeded with the simple method I have described, using the cage in which the queen came through the mails.

### Holding Surplus Honey.

There are two forms in which honey is produced on the hive. One is in the small frames or boxes for comb-honey, such as are found in many grocery stores; and the other is in frames the same length as the brood-frames, but sometimes a little shallower, say about six inches deep. These latter are extracted when filled and returned to the hive for refilling, but I will tell of this in the next article.

Both the large frames and small boxes or sections are placed on the hive directly above the brood-chamber. Some bee-keepers put a perforated zinc queen-excluder between the super and brood-chamber so that the queen shall not go above and lay eggs, to hatch into brood, where the surplus honey is to be stored.

**Super of one-pound honey boxes.**

The illustration herewith represents a comb-honey super containing the one-pound sections or small boxes, in which the bees store the honey for market. A is the dovetailed super; D, the solid wood separator to go between the rows of sections; E, section-boxes; F, follower board to go in at one side of the section; G, wedge for between follower board and super side, to make all solid.

There are topless wide frames for holding the sections, four in a row. The super shown holds six of these wide frames, making 24 sections in the one super. It will be noticed that the sections have small starters of comb-foundation in them, which will help the bees to build the comb straight. Some good beekeepers put, say a one-half or three-fourths-inch starter in the bottom of the section also, which aids in making a much stronger comb in the section. This helps to hold the comb more firmly in the section for shipping on the cars.

The time to put a super on the hive is when the brood-chamber is well filled with bees, which in white clover regions is about the time the clover begins to bloom. If there is a good honey-flow, when the first super is about half filled with honey, raise it up and put another super between it and the brood-chamber. Sometimes one hive may have on it four or five such supers, though many do not use more than two or three supers, as the honey can be removed when the small combs are all sealed over.

Referring again to the section-boxes, it will be seen by the illustration that there are several styles, but the style most commonly used is perhaps the one 4 1-4x4 1-4 inches square, and 1 7-8 inches wide, slotted at top and bottom so the bees can readily go up and down through the supers should they be tiered one above another.

These section-boxes are dovetailed at each end, and also grooved at the three joints, so that they can be folded easily. They are usually put up in the flat in packages of 500 at the factories. But should they become very dry and brittle at the joints, simply dampen the backs of the grooves with a wet cloth or sponge, when the wood will become tougher and stronger again.

# Grange to Meet

## State Convention On Next Month

During this year's session of the Washington state grange, which will be held in Walla Walla from June 4 to 7, the important matter of choosing a master to succeed the late C. B. Kegley will come before the delegates. William Bouck, who, as overseer, became acting master on the death of Mr. Kegley, will undoubtedly be a strong candidate, as his record of loyal service to the grange is a long one. The office of overseer will also become vacant during this year's session, and it is probable that the necessity of filling these important offices will secure a record attendance at the Walla Walla meeting.

In the line of special business various phases of the farmers part in the conduct of the war, including his ability and willingness to feed the world, and also the matter of profiteering during war time are apt to come up for discussion. That the work of the nonpartizan league will be considered seems probable from the expected attendance of Ray McKaig, master of the North Dakota state grange and also a prominent nonpartizan leaguer.

# Powdery Mildew

## Spraying Controls in Northwest

Powdery mildew, the most serious fungous disease occurring on apples in the irrigated orchards of the northwest and sometimes causing considerable damage in semi-arid regions farther east and south, can be controlled by thorough spraying. Lime-sulphur, diluted 1 to 50, is the spray to use. This is the recommendation of D. F. Fisher, a specialist in the office of fruit disease investigations, United States department of agriculture, after a three-year field investigation of this disease. A serious attack of this mildew often results in a crop reduction the following year of more than 50 per cent, and it also causes a dwarfing and a russeting of the fruit, which greatly reduces its market value.

The first application of the spray should be made when the cluster buds have separated, but before blossoms have opened; the second when most of the blossoms have fallen and before the calyx has closed. In the second application the lime-sulphur should be combined with the arsenate of lead used for codling moth. It has been thoroughly demonstrated that there are no harmful effects from such a combination of sprays, and it is a great saving of time to make the two treatments in one application.

The treatment just described usually is sufficient to hold the disease in check, but in case of severe infection another spray may be necessary three or four weeks after the calyx spray and possibly still others at intervals of four weeks. In these later applications lime-sulphur can not be used in these regions of intense sunlight without severe spray injury. Bordeaux is unsatisfactory as a substitute, for in the almost entire absence of summer rainfall it remains as a heavy coating on the fruit and prevents it from coloring properly. Experiments have shown that ammoniacal copper carbonate is a satisfactory substitute for lime-sulphur in these later applications, completing the control of the disease without harmful effects.

Powdery mildew attacks the buds, twigs, foliage, fruit and sometimes the blossoms of the apple. The affected leaves become somewhat curled and narrowed and have whitish, feltlike appearance. The twig growth is checked, and in some cases the twigs are killed. Fruit bud formation is partially prevented and such buds as form are of low vitality.

A detailed report of the specialist's studies is soon to be published in a bulletin of the department of agriculture.

### An Early Season.

Rain which fell early in the week of May 5 was quite general over western Washington, according to G. N. Salisbury of the U. S. department of agriculture. Mr. Salisbury states that the present season is nearly two weeks earlier than the average, as compared with the four weeks' tardiness of last year.

### Does Itself Proud.

C. R. Campbell of Bellevue, reports splendid results from the organization work conducted by the Bellevue Council for Patriotic Service. During the recent Liberty bond campaign Bellevue was allotted $6500 worth of bonds, but practically within the first week $20,000 worth were subscribed for.

# Millers Increase Profits

## *Speculated Prices on Feed Are Added to the Liberality of Government*

It is made plain by the report of the federal trade commission that the government is dealing liberally with the millers of the United States. Many people will think too liberally.

Under the regulations of the food administration the mills are allowed a net profit of 25 cents per barrel on flour sales, and also 50 cents a ton on feed sales, equivalent to about one and three-fourths cents additional on a barrel of flour. That is two and a half times the average profits made by the flour mills of the United States in the fiscal year of 1912-13, a fairly normal year, when, as shown by the commission's report, they made a profit of 11 cents per barrel.

Grinding flour at 11 cents profit, the mills that year made a profit of 10 per cent on their investment. During the fiscal year 1913-14 the average net profit was 16 cents a barrel, yielding 13 per cent on the investment.

But in the fiscal year 1916-17 their profits shot up to 52 cents per barrel, due in part to the increased value of unsold stocks carried over from the preceding year and disposed of on a rising market, and also to speculative profits on feed, the prices of which increased greatly during the year.

If it had been necessary to increase the country's milling capacity (as it is necessary to increase its wheat production), the government would have been justified in authorizing exceptional profits to the mills. It would have been economically wise to induce the millers to enlarge their plants, and to reward them for that enlargement, which would have been made with considerable risk of investment.

But the federal trade commission's report shows there was no such necessity. It finds that the 7000 merchant wheat flour mills in the United States have been producing for the last three years an average of 116,000,000 barrels of flour annually, and have capacity sufficient to about double that output. They have present capacity to grind 1,100,000,000 bushels of wheat, which is far and beyond the wheat growing capacity of the country.

This excess of milling capacity explains, at least in part, the government's plan of bringing Australian wheat to the Pacific coast, to be milled here and shipped as flour to our European allies.

## Get the Information

How to can fruit, how to can vegetables, how to prepare Hoover foods, how to swat the fly, how to swat the mouse and the rat, how to plant and care for the garden, how to fertilize the garden and lawn—in fact, how to do almost anything that the housewife or farmer should know can be learned through this paper's information bureau at Washington, D. C. Of course, everything about all subjects can not be expected, but pointed questions will be answered pointedly and valuable information given on any subject of inquiry. The bureau has access to all the records in Washington, the national capital, and is enabled to send out booklets and bulletins issued by the various departments of the government, including the department of agriculture. If you want a booklet or pamphlet on the subject in which you are interested enclose a 2-cent stamp. If you want a personal reply to a question, enclose a 3-cent stamp. Address all your inquiries to The Washington Farmer Information Bureau, Washington, D. C.

### Best for State.

I am reading the Washington Farmer myself and know it is the best farm paper published for the state of Washington.

FRED SCHNETZ
Odessa, Wash.

### Liberty Day at Okanogan.

The Okanogan county council of defense will celebrate Saturday, May 25, as Liberty Day at Okanogan. Leading people in the county will discuss patriotic matters. The invitation includes the editors of every paper, every member of the county bar, every member of the county council of defense, every minister of the gospel, every four-minute man, every minute woman, every Liberty loan committee man and woman and every war savings stamp chairman in Okanogan county.

# Should Use Milk

## Food Administration Appeals

If a recommendation of the national food administration were accepted by the people of the entire country it would mean a great relief, not only to the food situation, but to the dairy situation as well. The administration urges that consumers substitute milk as much as possible for the meats which are so greatly needed for exportation to Europe. Milk can be used in many ways as a food and is recommended by food specialists everywhere as one of the cheapest articles of diet obtainable even at the present comparatively high prices.

For a long time the dairy situation in the country, especially in the northwest, has been suffering from a number of conditions, not only have feed prices been unprecedentendly high, but the cost of labor and the quality of labor obtainable have proved a great handicap to the conduct of the business. In addition it has been difficult to secure shipping facilities to transport the milk products, especially condensed milk, from the northwest to eastern markets or to ports for transportation to Europe. As a result many dairymen have either reduced their herds or have gone out of the business altogether and many of the smaller condenseries have quit business or greatly curtailed their operation. Therefore, to whatever extent milk can be consumed locally the dairy industry will be profited.

### BANKER MUST KNOW.

### Must Understand Farm Problems.

R. A. Blanchard, agriculturist for the Live Stock State bank of North Portland, was a visitor at the office of The Farmer recently. Mr. Blanchard, after a number of years in county agricultural agent work, is devoting his energy to developing the spirit of cooperation between the bankers and the farmers in the matter of financing agricultural production throughout the northwest.

He reports a growing realization on the part of bankers of their real relationship to the farmers, but says that there is yet too great a lack of understanding of farm problems on their part.

"How many bankers know what crop is best adapted to their communities?" asks Mr. Blanchard. "How many know what it should cost to feed a cow, to put on a pound of pork or to produce a pound of butter fat? How many bankers have called in their farmer customers when feed was soaring in price and consulted with them on methods to save the live stock rather than sacrifice them?"

These questions indicate, in the mind of Mr. Blanchard, the mutual understanding and cooperation that should exist between the bankers and the farmers of the agricultural communities of the northwest.

### FAVORS SUGAR BEETS.

### Valuable Both for Feed and Food.

A small tract of sugar beets will produce more hog feed than any other crop, according to a statement just made by E. F. Benson of the state department of agriculture. A patch of sugar beets, he says, will also help solve the sugar shortage problem. Part of the stateemnt by Commissioner Benson on this subject reads as follows:

"Many people will save sugar next year by growing a few sugar beets and making their own syrup. A bushel of beets will make three to five quarts of syrup. Write to the superintendent of publications, department of agriculture, Washington, D. C., for farmers' bulletin No. 823, 'Sugar Beet Syrup,' and learn how to grow the beets and make the syrup. It is most unfortuntae that people generally do not make use of the information available in the splendid bulletins of the United States department of agriculture and of the state college. The best information on every agricultural subject is found in these bulletins and they are free to every one for the asking."

### Invented Garden Seeder.

S. L. Allen, one of the prominent men of the country from the standpoint of improved methods of garden production, died recently at Miami, Fla., in his 77th year. Mr. Allen developed the garden seeder idea, his work along this line resulting in the origin, improvement and manufacture of the Planet Junior garden seeder.

### Movement of Sheep.

There is in progress a heavy movement now of sheep from the Yakima valley to points in Chelan, Okanogan, Colville and other parts of the state.

# Wheat Is a Luxury Which May Easily Be Dispensed With

At a recent meeting in Washington, D. C., Dr. L. E. Taylor of the U. S. food administration declared that the first necessity for us is to get a clear conception of the relation of wheat in the human diet, and to divest ourselves of all preconceptions that a life of generations of ease, indolence and luxury has bred in us. We are accustomed to regard wheat as a more or less indispensable article of diet. It isn't. It is an article of luxury and absolutely nothing else. Wheat possesses over oats, corn and rice absolutely no nutritional quality for man or beast. It has no more protein and no better protein. It has no more fat and no different fat. It has no mineral salt better or in larger amounts. It has no more fuel or better fuel. It is just one of the cereals, and there isn't the slightest evidence that it is the best one, because so far as comparative tests are concerned in animals, it isn't the best one, it is very far from the best one.

"Our predilection for wheat is solely a question of taste, comfort and convenience; it is absolutely nothing else. Wheat makes the nicest bread, the lightest bread, the bread that is transported best, the bread that keeps moist and sweet longest. It lends itself to the habits of ease and convenience of a people, and because it lends itself to the convenience of a people, we want it sent to Europe and not kept here, and we ask and expect the American man and woman in judging of every situation as contrasted with that of our allies, men and women, to ask who has the larger burden to bear, who has borne it the longest, who has wasted in resources the most, who has lost the most by sacrifice, who has suffered the most in death and destruction, we or our allies.

"And when we have a choice to decide as to whether we or they should increase or decrease our burden, it ought to be not the duty, but the joyful privilege of every American to lessen the burden of every man, woman and child in the allied countries of Europe, by accepting the heavier burden on this side. And because wheat is easier to prepare than oats and rice and barley—that is the very best reason in the world why we ought to accept the oats and the rice and barley, and to give them the wheat that is necessary to maintain a normal ration."

# Make Farm Service Flag a National Movement

COOPERATIVE EXTENSION WORK
IN
AGRICULTURE AND HOME ECONOMICS
STATE OF TENNESSEE

CARRIED ON BY COOPERATION BETWEEN THE UNITED STATES DEPARTMENT OF AGRICULTURE, THE COLLEGE OF AGRICULTURE, UNIVERSITY OF TENNESSEE, THE STATE BOARD OF EDUCATION, AND OTHER COOPERATING ORGANIZATIONS.

CEA:LT

HEADQUARTERS
DIVISION OF EXTENSION
KNOXVILLE, TENN.

May 1, 1918

Editor, Washington Farmer,

Spokane, Washington,

Dear Sir:

I have noticed with interest your campaign to secure and establish a Farm Service Flag.

This seems to me a splendid thing to do, and I wish you the best of success in making this a National movement. The Flag which you have suggested is a very attractive one.

Very truly yours,

C. E. Allred
Specialist in Farm Management.

P. S. Buy Liberty Bonds.

# "Wife and I Worked"

P. Schwantes of Ridgefield writes: "When wife and I started in on a rented farm 40 years ago we put in a large patch of cabbage, kohlrabi, sweet corn, cucumbers and melons. Everything grew fine. Wife and I worked hard nearly all day and night and kept that garden clean. We were proud of it and I felt good when I took a dozen nice large watermelons to town (Horicon, Wis.), but was thoroughly disgusted when I found I couldt hardly give them away. A few cabbage heads I sold for 5 cents apiece, but the most of them we fed to the cows. That was the first and last time I tried to raise and sell truck. We always have enough and to spare for our own use. This year especially the farmer can not afford to raise truck for sale. Help is too scarce and he had better do something that does not take so much hand work." Mr. Schwantes adds that "wife" is the gardener and all the vegetables needed for the entire year are raised. Mr. Schwantes helps out, however, in the garden. He hauls the manure and plows the garden or spades it, once in a while helps to hoe it if the weeds get too much for the wife, otherwise she claims it as her part of the farm.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on acconut of disease in stock sold through these columns.

## Near Bottom of Flour Bin

Not since the civil war, and probably not within 100 years, has the United States been so near the bottom of the national flour bin. Its visible supply of wheat (grain in mills, elevators and in transit) was down to 2,776,000 bushels on April 27, and supplies in farmers' hands are also known to be near the bottom.

A year ago the visible supply was 33,207,000 bushels, and that was considered a close margin, although it was 13 times the present holdings.

We realize now more fully than ever before the tremendous value of the service that Mr. Hoover has rendered the nation and our allies. If the American people had eaten wheat flour in normal quantity the last year, one of two calamities would have resulted: either we should have sent no wheat to our allies, or wheat flour would have disappeared entirely in this country several months ago. Mr. Hoover's persistent appeals to the people to use substitutes, and his steadily tightening regulations on the mills, the bakeries and the hotels and restaurants, have enabled us to send generous supplies to our allies and tide over the shortage in this country.

And we are not to forget that for that service he receives only $1 a year from the government.

## Stay With the Apple Industry

In recent years a good many persons engaged in the orchard business have become more or less discouraged because the results have not been what they expected. My advice has always been to stay with the apple business. It will come into its own under the law of the survival of the fittest. The apple industry in the northwest is bound to succeed, and those who give it the most care and attention, and who stay with it until the reaction comes, will have it greatly to their advantage.

The question is often asked: "Why is the Pacific northwest becoming so famous for the production of apples?" There are three general answers to that question. The first is that the latitude is in the great apple belt of the world. Even where the latitude would seem not to be far enough north the altitude of the hills and mountain ranges often compensates for the distance south and gives cool nights and a temperature favorable for the growing of the best fruits.

Second, in a large part of this country there is during the day a bright sunshine and at night a cool air, both of which tend to give color and flavor to the apple.

Third, the character of the volcanic ash soil, of which a large portion of this region is built, is favorable for the growth of the apple tree and its fruits. G. L.

## From Cow to Retail Store

Negotiations of deep interest to dairymen are announced by J. D. Miller, attorney for the Dairymen's league of New York and other adjacent states. Mr. Miller has informed the newspapers that the league has arranged for an option to purchase all of the country receiving stations of the Bordens' Farm Products company, the largest distributors of fluid milk. If the deal goes through this would mean that the producing dairymen will handle the milk from cow to retail store. The details are not revealed, but the New York Commercial says it is understood the league will have a long term of years in which to pay for the Borden stations, and that the price at which the company is said to be willing to part with these properties is approximately $5,000,000.

R. D. Cooper, president of the league, has long contended that farmers should own all the country producing facilities. He contends that thereby the producer would get the largest return for his milk and the consumer would get milk at the lowest possible price.

Under this plan all opportunity for tricky and dishonest testing of milk would be abolished and the members of the league would know that they were receiving at all times full pay for the butterfat contents of their product.

While details are yet lacking, it is probably the purpose of the league to deliver its milk in New York city to two classes of retail distributors—the retail stores and the present companies that distribute milk from door to door. This would be a distinct improvement over the present plan under which producers sell their product to the country receiving stations of the big distributors.

## Consult Food Administrator

After protests on the part of some farmers, the food administration has decided that conditions in the city and on the farm vary to such an extent that it would not be right to make the same rulings for both. For example, the farmer who has grown wheat substitutes should not be compelled to buy the substitutes when he buys wheat flour. If he is compelled to sell his substitutes and then rebuy them there is a loss for him, and the railroads have an unnecessary haul. The state food administrator should be consulted in person or by letter in such cases, and he has power to modify the rules in effect now.

We would like for the farmers to give us their idea as to the size of the horse most profitable for his use on the farm. Now is the time for you to express your ideas through the columns of this paper. If you believe in the extreme heavy weight horse or the extreme light weight horse give us your idea, or if you think favorable of a new breed of horses let us have your idea.

In these days of conflict and conflicting opinions there is a danger which we must carefully guard against of charging those who do not agree with us with lack of patriotism. It is natural enough to believe our own opinions are correct, but we must remember always that others feel the same way.

The labor shortage has not been so serious as was feared early in the season, so far as ordinary field work was concerned. When it comes to real experts, it is making itself felt more and more. This is a subject which calls for serious study and wise action.

We are very much like the man girt with a belt of gold and precious stones, who is cast away on a desert island. No nation is rich unless it is rich in possessions of value to its people. Without foodstuffs, of what value is gold, silver or even perfect credit?

## Washington Gleanings

Clarke county has every indication for a bumper prune crop this season.

R. C. Hamilton of Pullman has purchased the George F. Johnson 40-acre tract, east of Pullman, for $3800, or $95 an acre.

Pacific county is assembling the material to build five miles of pavement eight feet in width in the Holcomb neighborhood.

Enough perfect spruce material to make 300 airplanes each 24 hours is going forward from the war department cut-up plant at Vancouver.

Leon H. Cays, a practical dairyman of Jefferson county, has purchased the Andrew Smith ranch just east of Montesano, at a price said to be $42,000.

The Centralia police have started a crusade against loafers. All poolroom hangers-on will be rounded up and forced to go to work or serve jail sentences.

Fifty-five acres, covering a south sloping side hill in Lyle, has been sown to war gardens jointly by the Union Meat company of Portland and Dorr E. Keasey of Lyle.

Joseph Passenneau of Rosalia has been appointed to the staff of farm markets at Pullman, and will have charge of assembling market information for the farm markets news service.

The Sumner school board recently decided to refund to the state the bonds voted a year ago for the erection of a new high school building, thus saving further interest to the district.

Italians of the Yakima valley have decided to organize to lend financial aid to Italian soldiers wounded in the war. It is estimated 500 Italians are scattered throughout the valley.

More than 40,000 sheep will be shipped from Yakima ranges in the immediate future to points in the northern part of this state and Montana and Idaho, where they will go on the forest reserves.

Sheep will soon be seen grazing on the Capitol park and state house lawns, Olympia, to replace the lawn mowers. Commissioner Benson has donated the sheep, the wool to be sold at the end of the season for the Red Cross.

A thoroughbred stallion belonging to J. A. Willis of Ritzville, which contracted rabies, was examined by Dr. Donaghue of Ritzville and a veterinary surgeon of Harrington, and after the examination the animal, valued at about $2000, was killed.

The Anti-Tuberculosis league of Okanogan county was recently organized with Mrs. George W. Lee of Okanogan, president; Frank M. Dallam of Oroville, vice president; Mrs. W. C. Gresham of Okanogan, secretary, and C. M. Davidson of Okanogan, treasurer.

Robert Lenocker is the gardener in the family of D. A. Lenocker of Ruff, Wash. The garden consists of about one-fourth of an acre and produces onions, beets, peas, parsnips, carrots, radishes, lettuce and cucumbers. About one-tenth of the supply of the family's food is raised in the garden.

H. E. Robinson of White Bluffs reports a garden 100x150 feet, the same size as last year. He raises all the principal vegetables, plants in succession crops such as corn, carrots, radishes, peas, lettuce, etc. About 30 per cent of the year's supply of food is furnished by the garden. As to the best gardener in the family Mr. Robinson says he is the "goat."

M. W. Hodgson of Orient has one-half an acre in garden besides one acre in potatoes and one acre in carrots. One-half of the living is raised in the garden, while their eggs and milk furnish another fourth, or better, of the year's supply of food. The products consist of peas, turnips, lettuce, radishes, beans, corn, beets carrots, cabbage, tomatoes, and potatoes. He makes about three plantings during the season.

The county commissioners of Thurston county have sent a certified copy of the resolution appropriating $35,000, to match the $35,000 from the federal government for the Olympia-Camp Lewis paving project, to the state highway commissioner. This formality places the commissioners on record as accepting the terms of the federal aid road act, which provides that the county will match, dollar for dollar, the federal funds for the road.

You do not have to convince the visitor to Camp Lewis that horses are still demanded for war purposes. One of these declares that "everywhere one can see corrals, wagon houses and hay sheds and quantities of equipment. There are warehouses and silos at the stock yards where horses are loaded on trains and unloaded. There are great quantities of grain and hay stored in the warehouses and sheds and more is constantly coming in, for it takes 125 tons a day to feed the horses in use here. At present about 1800 are out in a field back of the remount station feeding on green forage."

# Castor Bean

## Long Growing Serson Is Needed

By E. G. SCHAFER.

It is expected that the federal government will require large quantities of the castor bean for war purposes. Since their requirement along this line has become known, numerous inquiries have been received at the State College of Washington concerning their probable success in Washington and methods employed in their cultivation. The following explanation received from the United States department of agriculture will show how the government demand for castor beans is being cared for. "The chief signal officer of the army, Washington, D. C., has contracted for a large acreage of castor beans throughout the southern states. The entire acreage allotted has been contracted for. No contract was written for less than 100 acres, since small contracts would involve too much government supervision."

In order to produce castor beans successfully it is necessary to have a long growing season and a warm climate. Where the crop is grown the following cultural methods are suggested for its production. The land should be prepared by plowing, followed by disking and harrowing. A seedbed which is suitable for corn, spring wheat or oats would be satisfactory for the castor bean. Seeding should be delayed until the soil is well warmed up and danger of frost is past. Where only a small area is to be planted, they may be put in by hand. The rows should be spaced about four to five feet apart and the seed planted in hills about four feet apart in the row. About three seeds should be planted per hill at a depth of one to two inches. When the plants are five to six inches tall they should be thinned to one plant to each hill. The cultivation of the castor bean should be very similar to that of other intertilled crops.

It would not seem that the climatic conditions of Washington would be suitable for castor bean production, except possibly in the valleys of lower altitudes where there is a comparatively long growing season. Their value, however, has not been proved even in the districts where they would most likely be successful.

# Farm Garden Reports

"All of us" are the gardeners in the family of Otis Robinson of Lantz. Only a small amount of the family's food supply is furnished by the garden. The garden consists of radishes, lettuce, onions, peas, beans, some parsnips and carrots. Mr. Robinson writes. "This dry part of Washington is not very favorable for gardening unless you can do some irrigating. Expect to plant a good patch of spuds, as they are our best garden fruit."

James Bowerman of Rosalia has a larger garden than last year, having this season about seven acres in small garden stuff and about seven acres in potatoes. He raises onions, peas, beans, carrots, beets, cabbage, potatoes, corn and turnips. Plants peas, turnips, potatoes and corn two or three times. About two-thirds of the year's supply of food is furnished by the garden.

All but groceries and flour are produced by T. Merriott on his one-sixteenth acre of garden at Kennewick. The garden is smaller than last year, having had to drop out of growing for market on account of age and too many strawberries and other work. "Wife" is the gardener.

H. B. Dennis of Addy has a larger garden than last year, about one-half an acre. All kinds of vegetables for the family use are planted and a good share of the living for the family comes from the garden. Mr. Dennis himself is the gardener of the family.

Cantaloups, asparagus and strawberries constitute the bulk of garden truck and fruits raised on ten acres by J. H. Hampden of Hover. About one-half of the supply of food for the family for the season is furnished by the garden and "Dad" is the gardener.

Potatoes, onions and melons are planted on eight acres by M. Schuster of Kennewick. Clarence Schuster is the gardener of the family.

Other garden reports will follow.

### Buys Fine Ranch.

A Younggren of Seattle has purchased the Dober ranch in the Valley Heights district near Prosser. This is one of the most valuable ranches in the district. The consideration was $31,000.

# Farm Test Plots Are Simple.

By HOMER A. COLLINS.

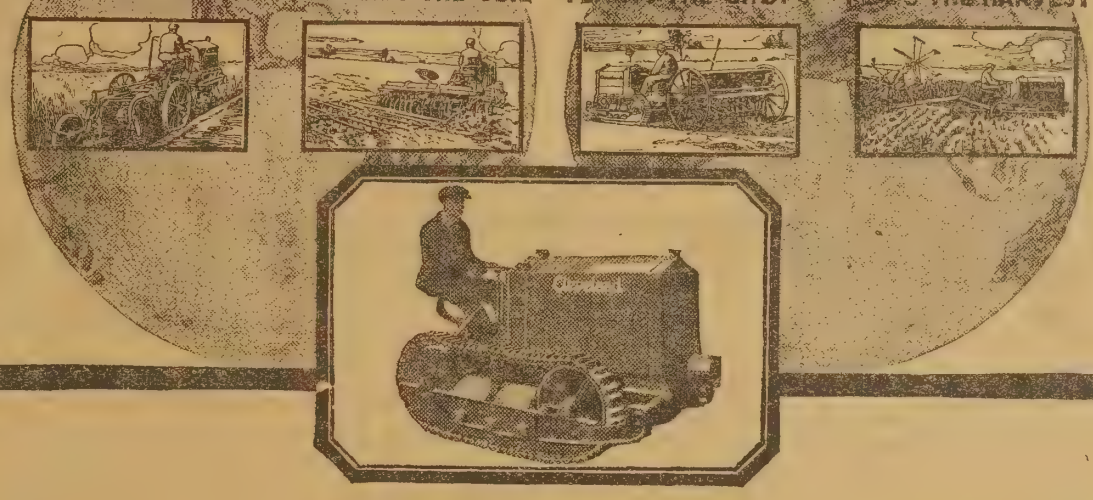
A soil analysis is still supposed by many people to be an exact statement of plant food, having much the same place as the balance sheet of a factory. The experiment stations are discouraging this implicit faith in soil analysis, and are pointing the way to a more dependable test of available soil fertility—namely, the use of test plots by the farmer. This test work in the fields is the only conclusive demonstration, in any case, and why should not the farmer do the work himself?

The requisites for a series of test plots are really very simple, being merely several plots of equal area, where soil, moisture, and previous yields have been as uniform as possible. With limited plots of this kind one can safely experiment by methods that are too risky and expensive to use on a whole field. Each plot can be anywhere from 1 to 16 square rods in area, eight being very convenient as it is one-twentieth of an acre.

There should be at least five experimental plots, so that the effect of lime, nitrates, potash and phosphates, singly, can be determined when compared with the untreated or check plot. With more plots than five, various combinations, such as nitrates and phosphate, lime and potash, or even three of these soil foods or amendments, can be worked out. The effect of green manure and barnyard manure can be tested in the same way.

Needless to say, the time of seeding, rate of seeding, cultivation and all such cultural details should be exactly the same for all plotes, unless cultural methods themselves are the subject of the test. This is extremely important.

At the end of the season, some results will show unmistakably, as lime might do on acid soils, while others will be harder to detect. In each case, however, the farmer will have something definite on which to base his calculations as to the profit in using fertilizers. False conclusions may sometimes be arrived at, but if the field has previously yielded uniformly and all the plots have been treated similarly, with the exception of the fertilizer, the results should be accurate.



# Pulling Together

## Forget Local Disagreements

Never in the history of Spokane county were so many of the usual neighborhood disagreements—envyings, jealousies and bickerings of all kinds—never were these put into the background and forgotten as they have been during the last 30 days. This is the word I get from Frank W. Guilbert, who has been in charge of the war campaigns throughout the country, especially the liberty loan drive.

"Inside of 30 days we have driven 1600 miles, held 56 meetings, at which 1600 people were present. It made no difference where these meetings were held, in churches or schoolhouses, or grange halls, or any other place, the people have gathered together, forgetting the past, and pressing on toward the mark of their high calling in these momentous days of the world war. The Red Cross work has been especially influential in getting everybody into the harness."

# The Tractor for all the World

ALL year 'round utility characterizes the Cleveland Tractor. It performs its varied duties regularly, season by season. It is a "man-of-all-work."

It plows. It harrows. It plants. It reaps.

And it does all of these things *faster* and *better* than was possible before.

But that isn't all. It does the thousand and one other things that require mechanical power. It pulls your manure spreader. It runs your saw. It operates your pump. It cuts your ensilage. It drags logs and lumber. It pulls road machinery. It does practically everything that horsepower and stationary engines can do. It develops 12 horsepower at the drawbar for hauling and gives 20 horsepower at the pulley for stationary work.

The Cleveland Tractor plows 3½ miles an hour—eight to ten acres a day—which is equal to the work of *three* good men with *three* 3-horse teams.

*It travels on its own endless tracks which it lays down and picks up as it goes along.*

It operates easily over gullies, ruts, and uneven ground of all kinds. Because of its 600 square inches of traction surface it goes over sand, gumbo, mud and slippery clay without packing the soil, without sinking, miring or floundering.

The Cleveland weighs less than 3200 pounds and is so small that it can be readily driven under and among small fruit trees.

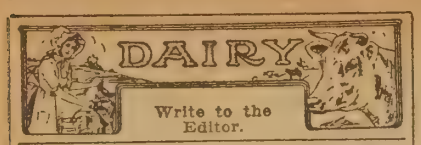
It steers by the power of its own engine and will turn in a twelve foot circle.

It requires less space to house than a single horse.

The Cleveland Tractor was designed by Rollin H. White, the well known motor truck engineer—and is manufactured under his supervision.

He has designed the track for long service. The sections are constructed to prevent filling or packing with mud and protection is provided to prevent dirt and mud from falling into the track. The sections are joined with hardened steel pins which have their bearings in hardened steel bushings.

**Cleveland Tractor**



Gears are protected by dust-proof, dirt-proof cases and are of the same high quality as those used in the finest trucks. Materials used throughout are of the best.

Every step must be taken this year that will speed up farm work—that will enable machinery to replace muscle—that will help produce—and increase harvests.

The Cleveland Tractor is already bearing a big share of the war burden. Farmers are producing larger crops because of the Cleveland—*and are making greater profits.*

You too can help the nation meet the food emergency—and incidentally make more money for yourself. Write to us *now* for complete information and the name of the nearest Cleveland dealer.

**THE CLEVELAND TRACTOR CO., Dept. BK, Cleveland, Ohio, U. S. A.**

# Shortage of Ships

## Bad for American Dairy Industry

As the Farmer has noted in previous issues, the shortage of ships has resulted in considerable demoralization to the dairy industry of the United States. For lack of ships, stocks of condensed milk and cheese have been accumulating, and that exerts a depressing influence on prices paid to producers.

A similar problem has arisen in Canada and is being solved by governmental action. Advices from Ottawa say that the dairy produce commission, which is composed of members representing the British food ministry, the Canadian department of agriculture, the Canada food board, the producers and the trade, has been authorized by the British government to act for it in handling the exportable surplus of Canadian cheese, condensed milk and butter, and the make of the entire season of 1918. The price authorized for cheese is from 22 to 23 cents per pound. The price of butter will be determined as soon as there is a surplus available for export. It will be on a basis of parity with the prices of cheese and condensed milk.

It is pointed out that the chief advantages to the cheese and dairy industry of Canada under this arrangement are the assurance of a regular market at a fair and reasonable price for the whole output, regular shipments even under the present shortage of tonnage and the financing of a trade of about $40,000,000.

The only alternative method of disposing of the cheese of Canada would leave it open for the British ministry of food to purchase such quantities as they would require from time to time, and that without any assurance that they would purchase the whole quantity available for export. We have seen from experience in the United States that this latter plan is unsatisfactory.

Meanwhile our government should either enter into a similar working arrangement with our allies for the disposal of the American surplus or cease urging the American people to consume less milk, cream, butter and cheese. If we can not be provided with sufficient ships and allied markets for the present surplus, increased consumption in this country is the only means of stimulating and sustaining the industry.

# Premature Calves

## Straw Is Found Disturbing Factor

It is a pretty good idea to stick to approved methods of feeding stock. There doubtless is much more to be learned about feeds and feeding, about physiologically balanced rations, and yet as stated by a good authority: "Energy and proteins are the nucleus of good ration construction and calculating their proper proportion as prescribed in the standards should be continued. It will in the majority of cases bring success." As the same authority declares, the complete ration of the future will include more than protein and energy, it will mean "a proper mineral content, an absence of poisonous materials, an adequate quantity of vitamines and possibly things yet to be discovered."

It has already been demonstrated that the wheat plant can not be relied upon to furnish adequately the nutrients needed for a growing and reproducing heifer. In addition the grain carries a toxic material tending to pull the animal down. Wheat grain and wheat straw can be coupled by alfalfa hay or corn stover and probably other good roughages such as clover hay, thereby supplying the mineral deficiency and at the same time aiding greatly in overcoming the toxic effect of the wheat grain.

Rations made wholly from the oat plant will be incomplete and the offspring produced by the continued use of such a ration will be dead or weak. The straw is the disturbing factor. Due to its low mineral content the overabundance of a material like wheat straw in the ration is an important factor in premature births. While it is well known that considerable trouble from contagious abortion is often met in dairy districts, it should also be recognized by breeders that it is possible to produce dead or weak premature calves from the improper selection of feeds. The use of good roughage solves the problem.

### Salvation of Dairy Business.

Some communities are looking to the cow-testing association as the salvation of the dairy business. I believe that cow-testing association records, properly applied and studied, will solve nine-tenths of the questions that come to the dairyman. Those records should mean more than just being able to get $50 more for old Brindle because of the 300 pounds of butterfat which she produced in one year, says F. M. Colcord of the Washington State college. How about that heifer calf from Brindle and the new bull which you just purchased last fall? There is a sire with a record as long as our present "Liberty days," and you say you sold that calf for $10? Again, studying the cow-testing association records would show you that a heifer calf from a good cow and a poor bull is no better than a heifer from the poorest cow and a bull of strong breeding. These things must be studied and there is no better way to study them than to sit down with the county agent after the year's records are in and interpret the figures as they are, keeping in mind the breeding as represented from a certain bull that was used as well as the cows that stand at the top of the class.

### Italy Saves Paper.

Every household in Italy saves all the odd bits of paper. These are soaked in water and kneaded into balls then put in the sun to dry. They will serve to give a little heat later on. Walk down a fashionable street in Milan and you will see pyramids of these paper balls in the balconies of the houses of the rich.

FARMERS NOT A POISON
POWERFUL DISINFECTANT

FOR CONTAGIOUS ABORTION
Most valuable in controlling abortion, bringing after-birth and treating barren cows. B-K kills the infecting germs, heals the uterus, removes the slime and acid—no odor—no straining. More effective than lysol, Lugol's solution, carbolic and cresols—much safer. Send for our Bulletin 32, "Contagious Abortion," and testimony from leading breeders. For sale at your druggists.

# Veterinary

Dr. S. B. Nelson

**Mare Has Pole-Evil.**—I have a mare that has pole-evil on her head and I have tried many remedies, but can not cure it. Please let me know what to do for it. J. A. M., Red Bluff, Cal.

The best treatment at the present time is what is known as Williams' operation, which consists in making an incision lengthwse at the top of the head through the pole-evil area and taking out a portion of the top of the skull, so as to give free drainage. Any competent veterinarian can perform this operation for you.

**Wind Puffs.**—I have a mare that has wind puffs on her ankles, which make her quite lame at times. How can I take them off? Also, how are potatoes for hog feed? Better cooked than raw?—E. G., Driggs, Idaho.

Try raising the mare on her heels, by lowering the toes and putting on a little thicker heeled than toed shoe. At the same time you might, if you have the time, spray her legs with cold water for 10 or 15 minutes daily, and then rub them dry. The wind puffs are due to straining in hard pulling or hard traveling. There is not much difference between cooked and raw potatoes, when the cost of cooking is considered.

**Bottle Lambs Bloat**—Will you please tell me what causes my bottle lambs to bloat? The bottles are always thoroughly scalded and aired. The milk, too, is absolutely fresh, being given to them right from the cow. The lambs are about one month old. After they die the skin seems to be rotten and they sometimes burst.

F R. M., Elliston, Mont.

I regret that I am not able to tell you what causes your bottle lambs to bloat. Supposing that you try cuting the amount of milk feeding in two, and add to it a tablespoonful of lime water at each meal. Maybe that will help.

**Cow Is Dumpy**—Can you tell me what to do for my cow? She freshened April 13 and was on good alfalfa hay, but she was poor and gave two and one-half gallons of milk twice daily. Now on grass she keeps running down and will eat shorts only once in a while. She seems dumpy and has lost in milk. She has a whitish discharge from her eyes like milk in the corners.

J. T.

Grangeville, Idaho.

Give your cow one ounce of compound tincture of gentian in a pint of water once daily for a week or so. If her trouble is only an indigestion this will aid her and tone her up. If it is something more serious you will need the service of one of your local veterinarians to diagnose the trouble and give you definite advice for the specific trouble.

**Growth On Neck**—I have a heifer that has a growth on its neck just below the jaw. It has only been a week since I noticed it. It was about the size of a tea cup and hard and seemed to be very sensitive. At first I thought it was an absess, but it remains as hard as when I first noticed it. Will you kindly inform me what it is and if it can be cured? O. J. H.

Ilwaco, Wash.

It is possible that your heifer is affected with lumpy jaw. If it is at all possible you ought to obtain the services of a veterinarian to make a personal diagnosis of the trouble. As there is a possibility of this being the trouble you should not take any chance to have the tumor break and scatter the disease on the place. Place the heifer somewhere in local quarantine, so that she will not expose other cattle if you have them or the cattle of your neighbors. The disease is sometimes amendable to treatment, especially in the early stage that its now, if it is lumpy jaw. That is, by removing the tumor carefully and then packing the cavity with cotton, soaked in a tincture of iodine and leaving it there for 24 hours. Then daily inject the wound with tincture of iodine, giving the heifer daily internally one and one-half grams of potassium iodide in a pint of water night and morning for a week. Stop treatment for a week, continue for a week and then give her the last week's treatment. This has sometimes given beneficial results.

**Loco Weed**—Will you please advise me what to do for horses that are locoed? My horses are young mares six years old and are not troubled with loco very badly. A SUBSCRIBER,

Belfry, Mont.

The first thing that is to be done is to remove your horses from the pasture where it is impossible for them to obtain the weed, which many authorities believe causes loco. The weed, which is generally called the loco weed is the wooly loco or astragalus mollissimus. The general treatment consists of giving the animals a purge, preferably of raw linseed oil, about one quart. Feed hay and grain and then administer to them about one ounce of Fowler's Solution of Arsenic once daily on the grain. But remember that the principal treatment is to remove them fro mthe cause, which very likely is the wooly loco.

**Pigs Should Exercise.**—I have six small pigs, about two months old, and I keep them in the box stall. One died and the rest look sick and stagger. They eat very little. I also feed boiled potatoes and a little skim milk.—J. A. S., Friday Harbor, Wash.

Turn your pigs out for exercise and see that they get it. Feed some rolled or cracked oats with the skim milk. Lessen the amount of boiled potatoes. Your pigs are on entirely too wide a ration to grow and do well.

I have a colt about 8 months old that rubs and bites itself. It bites its sides, tail and hind quarters. It has a very heavy coat of hair and is not in as good flesh as should be, but has a good appetite. It is well fed on a variety of oat, timothy, alfalfa and clover hay, also chopped oats.

C. H.

Colville, Wash.

I would suggest that you give your colt two tobacco solution baths when the weather gets warmer. Make just a light brown solution by heating tobacco, or better tobacco stems if you can get them, and use a solution warm, washing the colt all over. Then blanket it carefully so that it does not catch cold. Repeat in about a week if possible. I would be glad to hear about it later.

**Bone Spavin**—I have a horse that has a bony growth on one hind leg that causes him to be quite lame. Our veterinary here said it was a bone spavin. He gave me some kind of red blister salve. It blistered but didn't kill the spavin. Since then I have used iodine and it has done no good. Would appreciate any cure you would recommend.

J. F. M., Anacortes, Wash.

Depending on the age of the spavin depends the probability of your horse getting well. I believe the best thing that you can do is to have your veterinarian thoroughly fire the animal and blister it and give it three-months' rest. I do not believe that simple blistering or the application of iodine or any light liniment will be of any value, but I do believe in a thorough firing and blistering with rest.

**THICK, SWOLLEN GLANDS**

that make a horse Wheeze, Roar, have Thick Wind or Choke-down, can be reduced with

**ABSORBINE**

also other Bunches or Swellings. No blister, no hair gone, and horse kept at work. Economical—only a few drops required at an application. $2.50 per bottle delivered. Book 3 R free. ABSORBINE, JR., the antiseptic liniment for mankind, reduces Cysts, Wens, Painful, Swollen Veins and Ulcers. $1.25 a bottle at dealers or delivered. Book "Evidence" free.

W.F. YOUNG, P. D. F., 371 Temple St., Springfield, Mass.

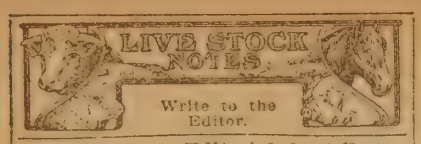
The Comfort Car

H

THE really striking thing about this new Hupmobile is that an almost unprecedented degree of driving and riding comfort is secured at a mileage cost low almost beyond belief.

All of the old Hupmobile qualities—amazing quickness and an almost savage power of driving and pulling—are more fully developed than ever.

In addition, Hupmobile engineers have accomplished a reduction of 600 pounds in weight, with the resulting economy of a 24 per cent gain in gasoline mileage and 15 to 18 per cent in tire mileage.



Yet they have provided a car whose comfort of riding and driving, superb steadiness and absence of side-swing is a positive delight.

*The remarkably easy starting of this new Hupmobile is by no means the least of its comforts.*

## Ration for Sow

### Rich in Protein Before Farrowing

To the Editor: I have a sow that will farrow soon and, as far as I can tell, is in good health, but she will root until she finds a small stone, about the size of a peach pit, and chew on it until the froth runs out of her mouth. I think there is something she wants, but I do not know what it is. I have given her charcoal. I feed her cooked apples and potatoes, just a small amount of dishwater and a handful of bran and shorts twice a day. F. J. H., Chewelah, Wash.

The above letter was referred to C. E. Howell, assistant professor in animal husbandry at the Washington State college, whose reply follows:

**Professor Howell's Answer.**

The condition of the sow referred to above is due to the fact that she is not supplied with a sufficient amount of mineral matter. It is not uncommon for pigs that are kept in confinement or are not fed the proper kind of a ration to show a craving for charcoal, rotten wood, soft brick, and will often greedily devour many other seemingly unnatural substances. This lack of mineral matter is usually a lack of lime or phosphorus. This craving on the part of the animal should be satisfied by supplying the materials which contain these mineral elements. A good method of supplying this demand on the part of the hog is to keep before the animal a mixture of the following ingredients. Epsom salts, 3 parts; copperas, 3 parts; sal soda, 3 parts; common salt, 3 parts; sulphur, 1 part; wood charcoal, 2 parts; and bone meal or ground rock phosphate, 1 part. These ingredients can be bought at any drug store. They should be mixed well and kept before the hogs at all times.

This mixture is valuable not only in correcting the lack of mineral elements, but it also aids in keeping the animals healthy. It will aid in preventing the heaves in many cases, and is especially valuable as a preventive for worms.

The ration which you are feeding the sow is lacking not only in mineral matter, but also is deficient in protein. The brood sow, before farrowing time, should receive a rich protein ration.

One of the most satisfactory rations for a brood sow just before farrowing time is corn, 50 parts; shorts, 25 parts; bran, 15 parts, and tankage, 10 parts, by weight. This mixture should be fed in a 20 per cent ration. That is, if your sow weighs 200 pounds, she should be given four pounds of the mixture per day. If she weighs 300 pounds, then she should get six pounds of the mixture per day. In communities where the above named feeds are not readily available and are very high in prices there are quite a number of other feeds that can be fed with a fair degree of success. A ration composed of six parts of barley, three parts of bran, and one part of tankage will prove quite satisfactory.

In this sow's ration you are feeding both apples and potatoes. Both of these feeds are very bulky in nature, and you would have to feed quite a large quantity in order that the sow might receive very much nourishment from them. The handful of bran and shorts which you are giving twice a day was not sufficient for a pregnant sow. Apples and potatoes can be used to good advantage if they are given with judgment. Raw potatoes should not be given to pregnant sows. The potatoes should always be boiled and thoroughly cooked before being fed. The bitter tasting water in which the potatoes are cooked should be thrown away. This is especially true if the potatoes are decayed. All the sprouts from stored potatoes should be removed before they are given to hogs. They contain a poisonous compound and so cause serious trouble if they are given to swine.

One of the most economical ways of producing pork and of maintaining brood sows is to run them on a forage crop. Alfalfa is considered one of the very best forages for swine. The pregnant sow should be allowed all the alfalfa hay that she will consume, or else she should be allowed to run in an alfalfa pasture. If alfalfa pasture is not to be had then clover, vetch, or a combination of peas and oats, or rape and oats, make a very satisfactory forage.

The sow should not be fed very heavy the day before farrowing. The sow should not be given anything at all on the day she farrows. All that she will require is plenty of water to drink. The water should not be too cold, or it may produce chills in the sow. The sow should be gives a bran mash about 24 hours after she farrows, and then her ration should be carefully increased until she is getting the same kind of feed which she was receiving before farrowing. The sow should be back on full feed by 10 days or two weeks from the time she farrows.

If the brood sow is one that shows any inclination to eat her pigs then she should be watched very carefully at farrowing time. As a precautionary measure the afterbirth should be removed immediately from the pens so that the sow will not eat it. This has often been the cause of starting sows to eating their pigs. They would get the taste of the afterbirth and this would start their desire for eating the flesh and they would start in on the little pigs. If, after these precautionary measures have been followed out, the sow shows an inclination to eat her pigs it has been recommended that such an animal should be fed about 3 pounds of salt pork cut in strips. I have never had any experience in handling sows that ate their young pigs, but the above treatment has been recommended upon good authority.

Some of these suggestions which I have made to you may sound rather expensive, but if by these methods you are able to raise a larger and a stronger litter of pigs it will be very much more economical in the long run than if you feed a poor ration and run the chance of raising only a small litter, or perhaps of losing your sow.

## Purebred Cattle in Brazil.

The director of the bureau of animal industry of the Brazilian department of agriculture announces that the government is about to expend 600 contos in gold (about $300,000 United States currency) to assist in the importation of purebred cattle for breeding purposes, in orders placed by the several state and municipal governments, by the agricultural societies and experiment stations. In no case will the contribution of the government exceed 50 per cent of the cost of the animals plus the freight paid.

**German Peace Is Uglier.**

War is an ugly thing, but a German peace is uglier—Russian farmers are producing German food.

# Cutter's
*Refined*
# Germ-Free
# Anti-Hog Cholera Serum

***Produced in the Most Up-to-date and Best Equipped Anti-Hog Cholera Serum Plant in the World.***

**Does away with the risks** that necessarily attend the use of a serum that is not germ-free.

**It is 20% more efficient,** measure for measure, than the old type, "bloody" serum, is much more quickly absorbed, does not discolor the flesh at point of injection, and carries no liability of producing abscesses.

**80 c.c. of Cutter's Refined Germ Free Serum is just as efficient as 100 c.c.** of the best old type "bloody" serum.

**But we make the old type serum,** and do the job so well that though **we have sold several million c.c.** since we started production in 1917, there has been **not even one complaint of failure** to protect, or of bad effects following its use.

**So, whether you use the old or the new kind,** insist on "Cutter's," for in either case you will be getting the best that can possibly be produced.

**Remember, a serum may be "clarified," or "clear," and still not be germ free.** Such a serum is almost as dangerous as a "bloody" serum. **Cutter's Refined Serum is not only clear but it is Germ Free.**

**Write for our two new booklets,** "Hog Cholera Prevention," and "Special and Detailed Information Concerning Hog Cholera Immunization." **From the latter you will learn** what constitutes good work and why a competent veterinarian should be employed.

**Prices.**

**Cutter's Refined, Germ-Free, Anti-Hog Cholera Serum is** 2½ cents per c.c.

**Cutter's Regular, or "old type"** Serum, is 1½ cents per c.c.

**Cutter's Hog Cholera Virus,** for use with either type of serum, is supplied at 1½ cents per c.c. **It is dependable.**

**We prepay shipping charges.**

**Let your veterinarian order** for you and **encourage him to be liberal in estimating the amount of serum to use;** safety lies in giving more than may be needed rather than trying to figure too fine.

**Should he be prejudiced in favor** of some other serum, there is a reason that concerns him but not you, except insofar as it should make you more insistent that Cutter's Serum be used. **In such case do your own ordering direct from us.** You will get "Cutter's" promptly, prepaid.

## Scaley Leg.

To the Editor: Can you tell me how I can cure my chickens of scaley leg; also tell me the cause? I have a perfectly clean henhouse with no mites in it, also have a large place for them to be during the day. I applied turpentine twice, but it does no good.

MRS. A. L.

Northport, Wash.

Scaley leg is caused by a small parasite or mite under the scales of the fowl's leg. To cure it the mite must be killed. Take a tomato can, fill it with kerosene, then hold the chicken's legs in it about half a minute. The oil works up under the scales and kills the mite. Two or three treatments will be necessary if the case is bad. The legs should also be rubbed with grease or vaseline to soften the scales so that they can be removed without causing bleeding. J. D.

## Receives 500 Baby Chicks.

Marvin S. Howell, who two years ago started a poultry plant north of the college campus, at Pullman, Wash., has recently completed a good sized addition to his poultry house and has received a shipment of 500 day-old chicks from a Seattle hatchery. Mr. Howell now has a building 64 feet long and 14 feet wide, divided into five compartments, four for chickens and one for the storage of feed. He expects later to build concrete foundations under the building to provide a basement.

## Should Raise More Geese.

There is a notable lack of the production of geese in the northwest in the opinion of many who are interested directly or indirectly in poultry production. This is due probably to the fact that few persons are familiar with the habits of geese.

On considering the growing of this bird it must be remembered that he requires pasturage rather than the concentrated feeds required by chickens and ducks. He is an herbivorous animal. He does well in an alfalfa pasture or in a pasture of mixed grasses. In winter time he may be fed on such foods as caggage, kale, turnips, mangels and the like, but he does not require flesh foods.

The care of goslings for a few weeks after hatching is an important matter. For a week or 10 days they should have limited feeding. Stale bread soaked in milk is a good feed to begin with or they may be fed a mash of bran and shorts mixed with milk two or three times a day. At the same time they should have before them fresh, tender clover or alfalfa cut up so that they can readily take it. At the end of a week or 10 days they may be allowed to go on the pasture and very shortly no grain feed will be needed.

As to the breed of geese that should be selected by those desiring to produce some of this kind of poultry, the Toulouse or the Embden are the two best varieties.

## Encourage the Children

Recently a 10-year-old girl showed me her flock of chickens on her father's farm and said that she would like to make some changes in the way she hatched the chicks. I asked her what the trouble was, and she said she wanted to make "some improvements." I had to draw a plan on paper for her for hatching coops for hens, and she was going to get "Dad" to have them made. This Dad fortunately was one of those who did not grudge spending a dollar or two to encourage the children in such things. Too many farmers would either laugh at the idea or grudge the dollar as money thrown away, forgetting that it is not merely a question of dollars and cents but of character building; yes, character building. Poultry raising may be made a means of developing character and citizenship, and the love of poultry may help keep the boys and girls on the farm. J. D.

## Motors in War Times

The manufacturers of motor cars have unanimously voted to reduce the output of new cars 30 per cent this year. This will result in a shortage of passenger cars and although it will not make it impossible for those wishing new cars to secure them, it very likely will necessitate placing orders considerably in advance of time when delivery is wished.

In curtailing the output of new cars as a war measure auto manufacturers are unquestionably making a most commendable and patriotic move, since it is to conserve labor, war materials and coal. It does not follow, however, that those who contemplate buying a new car this season should hesitate—and particularly is this true of farmers because of the utility value of the motor car and the motor truck in present day farm life and farm operation.

To the family on the farm the motor car is not merely a "pleasure car." It is in a great majority of cases an economic necessity. It is the best means of conserving time, and the time element is vital to maximum production.

The motor truck, too, is coming more and more to be considered as a piece of modern farm equipment. A light truck solves the question of rapid transportation from farm to market, and sometimes permits doing in one day what team and wagon would require several days for. Most trucks are sturdily built and if given as careful attention as a team can be made to give many years of good service.

Those who can make either a passenger car or a truck enable them to accomplish more, now, when the maximum of accomplishment is called for, their own judgment should be used independently of what may be said by those who are inclined to be pessimistic.

Body Built for Country Loads

Truck Built for Country Roads

**PATRIOT FARM TRUCK**

*Built for Country Roads—Built for Country Loads*

There is real need for motor trucks on the farm—to speed up transportation—

To bring better markets nearer—

To master bad roads—

To save high-priced horses—

But—the farmers have not bought them to any great extent. Why? The reason is, there has never before been a real Farm Motor Truck on the market.

Those that have been sold were built for the paved streets of the cities—not the soft roads and fields of the country.

**The Patriot Is the First Motor Truck Built for Farm Work**

Or—they have been mere cheap units to combine with worn-out, low-priced, low-powered cars—forming makeshift trucks that never were expected to deliver real farm service.

But now—the farmer has a real truck—built in the center of Agricultural America—by experienced truck and body makers, in a new, complete and modern factory—and built for farm service.

Every farmer with 160 acres or more should find out what a Patriot Farm Truck will save. Write for information.

(9)

**For Cultivating Beets or Beans**

**Use a Moline Beet Cultivator No. 6**

WITH a Moline Beet Cultivator No. 6 you cultivate beets or beans two, three or four rows at a time, doing thorough work and covering a great amount of ground with little effort. The cultivator is easily handled, instantly responsive to the driver's control, and provided with a variety of adjustments that make it perfectly adapted for work under any conditions and in any kind of soil.

It is controlled entirely by pushing forward upon foot levers that pivot the wheels and guide the tool bar simultaneously. The tool bar is swung from the main frame so that it is free instantly to move in either direction. The combination of wheel and tool bar control gives the most responsive and flexible control system yet devised, making it possible to cultivate four rows at a time in a thorough manner without injury to the plants.

The ease with which the machine is handled is due in a large measure to its construction, which is almost entirely of steel, giving maximum strength with minimum weight. Draft is light, the connecting bars between the tool bar and the main frame being directly in the line of draft, subjecting the tool bar to maximum pull.

Two levers are used for raising or lowering the tool bar, operating either together or independently. Two levers are provided as at times it is necessary to force one end of tool bar deeper than the other.

Your Moline Dealer will be glad to show you this cultivator. See him or write us for full information.

## SPRAY ORCHARDS

### Fruit Inspector Has Authority.

Recently I wrote an article on the damage to orchards being done by rodents, mostly by gophers. At that time I did not have in mind that the work of destroying them, or at least diminishing the damage they are doing, might be better done under the direction of the regular fruit inspector than under the present system, where each individual assumes the responsibility for himself and has no care whatever as to the results in his neighbor's orchard. I have been thinking the matter over and upon more careful reflection I have concluded that the damage by these pests is of sufficient importance to warrant a general effort for their extermination. If that effort is carried on it can not be done successfully by individuals. The reason why individuals can not successfully do the work is that there are a great many orchards owned by nonresidents. These owners, many of them, live long distances away. From my own personal knowledge there are orchards owned by men in Seattle, Tacoma, Spokane and other places from 100 to 200 miles away from the orchard. These orchards are cared for either by hired men or renters, and in a majority of cases are sadly neglected. There are a few exceptions, but generally they are not well irrigated, not well cultivated, pruned or sprayed. There is no effort in most cases to destroy gophers, field mice, ground squirrels or other rodents that injure the roots of the trees. Then, too, there are owners of orchards who have not properly estimated the damage that is being done to their trees by these pests. The result is that they not only damage the orchards of these careless owners and nonresidents, but they migrate to adjacent orchards and make extra work for those who are determined to control them. It is the same philosophy exactly that has caused the passage of a law in the states of Washington, Oregon, Idaho and several other states, requiring every orchardist to spray his trees as a safeguard against codling moth, scale, aphis and other pests. If these trees are not sprayed the pests infect the orchards adjacent and damage the man who is careful and industrious to eradicate them.

Under the law as it now stands the fruit inspector, in case the owner of an orchard does not spray, may do the work at the proper time and charge it up to the owner as a tax against the land. My belief is that if his duties extended so as to include gophers and other pests not now included, that it might be beneficial. Up to the present time this question has not been considered of enough importance to include gophers with such pests as scale and codling moth, but I have a growing conviction that it would be beneficial to do so. G. L.

Your 1918 Crops

will be worth more to you in your dairy output if you have a silo. On the contrary if you are without silage, every time you milk you may know that you lose! With

WEYERHAEUSER SILOS

you will not lose, but your crops will give up every cent's worth of their value. Exclusive features are embodied in the "Weyerhaeuser" which make it without question the silo "best for the West!".

## TO DESTROY GOPHERS.

### No Pest So Damaging in Orchard.

Among the rodents there is no pest so damaging to orchards as gophers. Rabbits will peel the trees, but it is not difficult to build a fence of closely woven wire, that will keep them out. Field mice injure the trees but are not so large or vigorous as gophers. The gopher burrows in the ground. It eats the tiny roots of the trees and cuts off their food supply in just the proportion that the roots are destroyed. Rossetted top is a symptom that gophers have been at work on the roots. There are other cases of rossette, but this is one. If alfalfa is grown in the orchard, the gopher will feed on its roots and the tree roots will not be so greatly damaged.

I have tried several methods for their destruction; in fact I have tried almost every method that I could find recommended, and that, which to my mind is the easiest and most effective, is to put poisoned wheat in their holes and cover them over first with a bunch of grass or leaves and then with dirt.

The full formula is given by Professor H. E. Wilson.

The ridges and mounds of earth thrown up by moles are often incorrectly supposed to be the work of gophers. A few careful observations will show the difference.

The gopher piles up the dirt on the surface of the ground, building a mound by the addition of load after load on top of that already deposited. A mole simply heaves up the dirt from beneath, forming piles which show radiating cracks. Associated with these piles are the surface ridges, made by the animal when ranging in search of food. The feeding runways of the gopher never show in surface ridges.

The natural food of the gophers consists of the fleshy roots and underground stems of various plants. They are busy at almost every season of the year, unless the ground be frozen hard, but are more so in the spring and fall.

#### Raisin Formula for Gophers.

To prepare raisins to poison gophers, says A. G. Craig, take a raisin, punch a hole in it with a toothpick, then place a large grain of strychnine into the hole, and roll the raisin in the fingers until the strychinine is broken up and mixed with the pulp of the raisin. Prepare as many raisins as necessary for the day.

The gopher's mound is almost always located on a short run from the main run or hole. Dig down at the mound until the branch is located, and follow the branch until the main run is reached. Place two treated raisins in the run on each side of the branch run and cover the hole with a shingle or chip and soil. If any new mounds are thrown up, repeat the treatment. We have found it a sure remedy. G. L.

#### Mule and Wife Both Sick.

"You may put in the paper that my fine mule is sick," said a farmer to a reporter. "By the way, I almost forgot this: My wife is under the weather. I tell you, I'm worried about that mule. That critter cost me real money."—Atchison Globe.

CHANDLER SIX
$1595

Unusual Economy Without Sacrifice

THE Chandler Six has always been famous for its economy of operation—economy without the sacrifice of reserve power, without the sacrifice of roadability, without the sacrifice of beauty of design.

Thousands of Chandler owners all over America tell of gasoline mileage of fifteen to seventeen miles per gallon.

Tire mileage of seven thousand to nine thousand miles per set of tires is commonplace among Chandler owners.

Chandler owners and Chandler dealers say that the service upkeep of the Chandler car is much less than that of other good cars which they have owned or sold.

In the ownership of a Chandler Six you will possess a really great automobile—great not merely from the standpoint of economy of operation and maintenance, but, even more important, from the standpoint of mechanical excellence and daily performance.

The Chandler motor, designed and built in our own factory, distinguishes the Chandler chassis, marked throughout by its simplicity and its sturdiness. The life, pick-up, get-away and endurance of this motor will astonish you quite as much as it pleases you.

Bodies of most attractive design and of unusual comfort are mounted on the Chandler chassis.

*Seven-Passenger Touring Car, $1595*
*Four-Passenger Roadster, $1595*
*Four-Passenger Dispatch Car, $1675*

Choose Your Chandler Now

There are Chandler dealers in all principal cities and in hundreds of towns. Some one of them is in position to show you the newest Chandler models. Write us today for catalog and folder "How the Chandler Checks with High Priced Cars."

# Seeding Is a Month Early

## Spring Work Not Hindered by Labor Conditions in Spokane County. Food Production Is an Accepted Duty

GARFIELD, Spokane County, Wash., May 5.—Judging from the efforts of the farmers to put into crop every available acre this spring, I would say all are patriotic. With a light crop last year and a very early spring this year, a heavy crop is expected and hoped for. Last year seeding started generally on May 9. This year by April 9th everybody was seeding and through by the first few days of May, over a month ahead of a year ago. Labor conditions have not hindered the spring work. There was plenty of help and plenty of machinery, although both were high. The outlook right now is very favorable for a bumper crop and we are going to get it.

ROY G. ADAMS.

### Cattle and Crops Look Well.

SOUTH BEND, Pacific County, Wash., May 1.—Generally speaking there is no lack of patriotism among the farmers. Raising food seemed to be the accepted duty and there are more gardens this year than last. The month of April was very favorable; four inches of rain and several really warm days with only very light frosts. Spring oats are up and winter rye is ready to cut. Price of milk and butter has dropped a little. This month the state veterinarian will return to test over four hundred head of stock for tuberculosis. This was instigated by the county agriculturist who held a public demonstration with the lungs of a tubercular animal. A couple of our younger farmers have added a tractor and a milking machine to their farm equipment. Pastures are in splendid condition and the cattle are sleek and well fed. Boys and girls are organizing for club work. Women are doing lots of farm work because there is such a great demand for labor in the spruce camps and ship yards.

MRS. WINNIFRED BUCKINGHAM.

### Plant Light Potato Acreage.

SHELTON, Mason County, Wash., April 27.—The ready response to the call of one year ago to speed up and employ every available acre in crop production is not quite as apparent now as then. Not that there will be less acreage devoted to gardening and general cultivation, but that less attention will be given to the production of potatoes. The result of the ardor of one year ago was an over production and a consequent lower price than was generally anticipated. Many counted on selling at $30 per ton, but were obliged to not sell or accept $22 to $25 at which contracts had been secured to supply a demand at Camp Lewis. Some fed potatoes to stock, cows especially, with fairly good results. Some estimate a return of $30 or more have in this way been realized. The second farm tractor has lately quietly entered Mason county and with a two-plow attachment been set to turning the soil. The first farm tractor to enter the county came some years ago. It was found to be too big and unwieldy for the service required so was driven to the shed and since has been inactive.

SCOTT HAYES.

### Country Needs Rain.

LA CROSSE, Whitman County, Wash., May 1.—Seeding has been finished for some time and most fields are up and have a good stand. Some of the last seeding, however, is badly in need of rain to make a profitable stand. Fall wheat wintered well and as a rule is a good stand. The dry cold weather has retarded the growth and weeds will be bad in some instances. Possibly this has been and still is the longest drouth on record for this season of the year. Scarcely any rain has fallen since March 13th, except a few snow flurries. The soil has been in fine condition for seeding. Plowing summer-fallow is well under way, but soil is drying so badly that it leaves the ground in poor condition. Pasture, and in fact everything, would be greatly benefited by a good rain. A number of frosty mornings cut fruit crops short.

M. E. SCHRECK.

### Show Patriotism by Planting.

PORT ORCHARD, Kitsap County, Wash., May 1.—Farmers are well awake to the situation that a tremendous task is ahead of them in supplying food for the coming season and are proving themselves patriotic by laying aside all disgruntled ideas and getting in and digging. Dissatisfaction with the U. S. department of agriculture can very safely be rated as minimum in this county. The weather this spring has been ideal for the planting of crops and the soil has worked up nicely. A little handicap has been felt in the scarcity of farm labor and shortage of teams. The outlook for crops is exceptionally good as reported by the farmers. Live stock are doing nicely. Poultrymen still continue to drop out of the business on account of prices, both received for their product and paid for feeds.

C. B. SPRAGUE.

### Crop Prospects Good.

COLFAX, Whitman County, Wash., April 15.—Farmers as a whole in this county are alive to the necessity of maximum production. I know of none who are intentionally failing to increase the production. The spring has been exceptionally favorable to the seeding of greater acreages than heretofore and farmers generally have taken advantage of it. While it is early to state with any degree of certainty I can say that prospects are very favorable for a heavy crop. Live stock generally are in poor flesh. This county is essentially a wheat producing one. I should say roughly that it will cost $20 per acre to produce and market a 30-bushel yield of wheat. I will cost almost as much to produce and market a 15-bushel yield.

F. L. KENNARD.

### In Need of Rain.

METHOW, Okanogan County, Wash., April 22.—Everyone is overlooking everything in the hardship line, and doing all they can to help win the war. I can not say the spring is favorable to seeding; it is too dry. Labor and the high price of machinery are more or less of a handicap. Work is more slighted than it would be if labor was more abundant. The outlook for crops is fairly good. The fall wheat needs rain badly as it was put in in the dust last fall. The fields are now too solid for the wheat to do well. This community raises a good many thousand bushels of wheat, but is no wheat country like the Bend or Palouse. As to what it will cost to raise it, all depends on the rainfall, two inches of rain in May and two inches in June is good for 20 bushels per acre; half an inch in May and June is good for five bushels. The outlook for stock is good as to price.

CHARLES GRANT.

### Planting Over; Need Rain.

CHIMACUM, Jefferson County, Wash., April 30.—Most of the farmers are working over time and Sundays to grow and produce food enough to meet the government's needs. At present we need rain as it is very dry, and most of the planting is well under headway. A large acreage of peas has been planted, and also other grains such as oats, barley, etc. Wheat has not been planted to a great extent here. The farmers are planting enough feed for their cows next winter so as to cut the buyers of high priced grain.

JOHN VAN TROJEN JR.

### Plant Larger Acreage.

COLVILLE, Stevens County, Wash., April 24.—There is a positive determination to grow the maximum crop of grain this season and this is already well under way. This county can not be rated as a heavy grain producing section, but conditions have been favorable for seeding and more than the usual acreage is undoubtedly going in.

E. E. ELLIOTT.

## SHEEP INDUSTRY

### Principal Changes Suggested.

The sheep industry in the United States must either adjust itself to the changed economic conditions or continue the decline which has been its portion in years past. Such is the conclusion reached in a report issued on the sheep and wool industry by the committee on statistics and standards by the Chamber of Commerce of the United States. The principal remedies suggested are, first, the use of sheep grazing of the agriculturally worthless and cheap cut-over timber lands of the north, northwest and south; second, the more general and systematic raising of sheep on farms, where sheep raising has been hitherto neglected largely because of frontier competition; and, third, continued use of the great ranges of the west to their full capacity. The cause of the decline in the number of sheep on the western ranges is ascribed to the growth of dry farming, and the consequent reduction in the grazing range. The industry has come to depend on that range, and it has not yet adjusted itself to the idea that it will now have to seek part of its range elsewhere, on cut-over land and on farms.

PROFIT comes from fruit, not foliage. On Citrus fruits use immediately available

# What Does It Mean?

## *Germany Wonders About Foch's Plans*

What are the plans of General Foch, the supreme allied commander?

This question is being asked not only by the folks at home in this country and her allies, but by the German war lords. For nearly three weeks there have been no heavy attacks by the Germans, who were stopped by the powerful defense of the British and French and Americans. With the vital ports on the English channel only 25 miles away, and with the capture of these ports the admitted object of the great drive of the Teutons, this delay means that the war leaders of Germany realize that they are not strong enough to force their way through without further preparation of some kind.

On the other hand, what does the silence of the allied leaders mean? Why is no counter blow struck? These questions are the subject of much speculation everywhere, but it seems evident that the same condition in the allied armies that existed when the German drive began is sufficient to explain it in part. The allies can not afford to make the sacrifice of men that would be required to carry on a great offensive. This does not mean necessarily that the allies are weaker than the enemy. It may as well mean, and does seem to mean, that it is better strategy to give up some territory for the time being to the invaders than to allow the allied strength to be reduced by heavy losses of men. This policy leaves it for the enemy to make the attacks, and to sustain the heavier losses that always are felt by the attacking army.

In the meantime, General Foch is apparently reorganizing his armies into one great army, something that has not heretofore been done. Up to the opening of this great campaign the English army has been a separate unit, the French a separate unit and the American a separate unit. Now they are being coordinated into one great, centrally directed force, with General Foch, the great French strategist, in supreme command.

During the lull in the fighting that has been noted for the past two or three weeks the allies have been strengthening their positions as much as possible, and preparing in all ways possible for the renewal of the drive that is expected. The Germans have been preparing to make that renewal or to defend themselves against an attack from the allies—just which is not certain, but the evidence seems to be that it is for the renewal of the drive. Germany can not wait. It is now or never. With successful warfare being waged against the submarines and with the American army daily growing stronger and more numerous on the battlefront, the allies will gain strength from this day until the war is won. That is why Germany launched the stupendous attack when she did, and that is why she must succeed with it now or not at all. Hence, it does not seem reasonable that her armies are now waiting for the allies to attack unless she is convinced that a great allied attack is being planned and must prepare for defense rather than for offense, as has been the case up to this time.

### Block Submarine Bases.

A second attempt, partially successful, has been made by the British navy to block the German submarine bases on the Belgian coast, Ostend and Zeebrugge. It appears probable that the Germans will be compelled to use home ports from which their sea piracy will be practiced in the future. It is also reported with seeming authenticity that the British have carried out a colossal scheme of mining the entire North sea against the submarines, so that their operation from the German ports will be extremely hazardous. The method of blocking the Belgian bases was the daring entrance of the harbors by British war ships, which were then sunk across the channel by their own crews. The ships used were out of date, only partially serviceable vessels, and they were loaded with concrete to make their sinking easy and their resting firm and secure after sinking.

### Many American Soldiers.

Secretary of War Baker, in a statement last week, made it clear that more than 500,000 American soldiers had been transported across the ocean to France since January 1 this year. He asked the newspaper men not to speculate as to how much the number exceeded 500,000, making the following simple and guarded statement:

"In January I told the senate committee that there was strong likelihood that early in the present year 500,000 American troops would be dispatched to France. I can not either now or perhaps later discuss the number of American troops in France, but I am glad to be able to say that the forecast I made in January has been surpassed."

### Raise Railroad Pay.

The federal railroad wage commission has recommended to Director General McAdoo, who controls the railroads for the government, that the pay of railway employes be materially increased. The increase would go only to those employes who were receiving during the last month of last year less than $250. If the recommendations were adopted it would be on the basis of January 1, 1918, and would give employes approximately $100,000,000 back pay since that date and would increase the pay roll for 1918 about $288,000,000 over that of 1917.

### May Raise Draft Age.

The possibility of raising the draft age from 31 years to 40 years is being discussed in military and congressional circles. Provost Marshal General Crowder in charge of the operation of the draft law and the military committee of the house of representatives have the matter under discussion. It is not probable that any action will be taken on the matter for some time to come, however.

### Probe Aircraft Work.

An official investigation of the activities of the aircraft board under the war department has been authorized at Washington, D. C. Serious charges of graft on the part of some of those in authority in connection with the construction of airships for war service have been made. Considerably more than a year ago congress appropriated $640,000,000 as a fund for the construction of war planes. Among the charges made against the board, in addition to those of graft, are those of inefficiency and needless delay in supplying the American army and its allies with sufficient airplanes on the battle front in Europe.

## BIG DEMAND FOR H-L-F SILO THIS YEAR

***Prices Going Up June 1st***

Demand for the H-L-F Silo, a widely popular, double-wall silo, has broken all records this year. More silos have been sold so far this year than during the whole of 1917.

"The silo surely gives satisfaction," said Willis Brindley, inventor of the H-L-F Silo, who has charge of silo business for Hewitt-Lea-Funck Co., the manufacturers. "Our biggest sales this year are in the neighborhoods where the H-L-F Silo has been in use for several years, and many owners of 1914 and 1915 models are buying the improved 1918 model to take care of increasing herds."

Hewitt-Lea-Funck Co. figured on an increase in business this year, and contracts for steel hoops and other hardware were made last fall; now, however, it is necessary to make new contracts to cover business received after June 1st, at big increase in cost of raw materials. Also, in line with government war orders, the company has increased wages and shortened the working day, thus greatly increasing factory expense.

The only possible result is an advance in the price of the silo, which was announced as effective June 1st. Customers who order in May will save $25.00 to $40.00.

"We regret very much the necessity of raising the price of the H-L-F Silo," said Mr. Brindley. "One thing that has made the H-L-F Silo so popular has been its low price. In spite of the advance effective June 1st, our price will still be very low, and remember that we are selling a double-wall silo. Of course, we are advising our friends to buy during May and save $25.00 to $40.00."

H-L-F Silos are sold direct to the farmer, at one profit over cost. The H-L-F Silo Book entitled, "All About Silos," will be sent upon request. It shows prices and terms in plain figures. Anyone needing a silo this year should send for the book at once, and order before June 1st. Farmers who already have H-L-F Silo prices are advised to order immediately.

**Hewitt-Lea-Funck Co.** 658 Funck St. Sumner, Wash.

P.S. Early orders are already delivered, or on the way. We hope to handle all business, but wise customers will place silo orders now, so as to be sure of getting a silo. H-L-F Co.

## All-Pacific Northwest Power Farming Demonstration

**Pullman, Wash., May 29, 30, 31.**

Under auspices State College of Washington, demonstrating all lines of labor-saving machinery.

**TRACTORS, ENGINE PLOWS HARVESTING AND TILLAGE MACHINERY, FARM TRUCKS, FARM POWER EQUIPMENT**

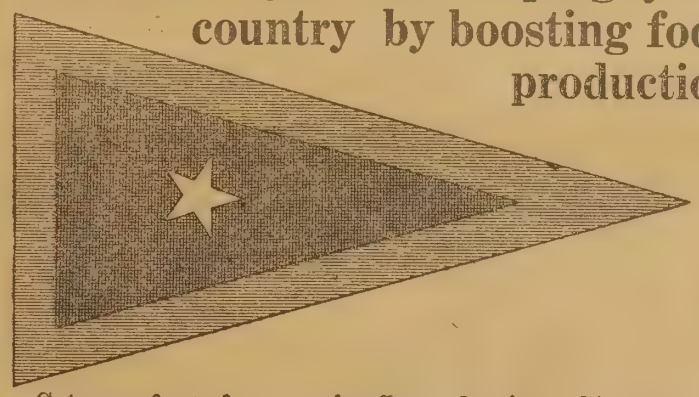
Arrange to attend—fare and a third round trip on all railroads—certificate plan—take a receipt from your ticket agent. Splendid camping facilities. For further information write Dept. Agricultural Engineering, State College of Washington, Pullman, Wash.

**KNOW POWER FARMING**

## HIDES

**WOOL, PELTS, MOHAIR, CASCARA BARK**

We do the largest consignment business in the northwest. Equally fair treatment on all shipments, large or small. Returns at full market value mailed same day as goods are received. Trial shipments wanted and appreciated, but are handled as regular shipments and not at inflated values.



**THE H. F. NORTON CO.**

53-55 No. Front St., PORTLAND, ORE. 206 3d Ave. So., SEATTLE, WASH.

## FARM SERVICE FLAG

**Display one of these pennants to show you are helping your country by boosting food production**

Get one of our farm service flags, showing a big star to represent your farm and smaller stars for each member of your family who is helping produce food. This is the big, new idea in service flags. It is distinct from the war service flag; as it applies exclusively to the farm. Described as "appropriate" and "attractive" by the department of agriculture. In securing your order state the number in your family who are aiding in food production and we will supply the correct number of stars without extra charge.

**AWARDED FOR SUBSCRIPTIONS**

Offer No. 1.

***Paper Pennant***

A pennant, 9x22 inches, printed on heavy enamel paper in full colors, will be postpaid to any one securing and sending in ONE NEW subscription to this paper. (One year 25c, three years 50c; 5 years $1.)

Offer No. 2.

***Felt Cloth Pennant***

A pennant, 9x22 inches, made of cotton bunting (just the thing for the auto, front porch or the flag pole), will be mailed postpaid to any one sending us THREE SUBSCRIPTIONS TO THIS PAPER. Secure three of your neighbors under our special bargain rates and receive a bunting "Farm Service War Flag."

# Red Cross Week

(Continued from page one.)

hereby proclaim the week beginning May 20, 1918, as "Red Cross week," during which the people of the United States will be called upon again to give generously to the continuation of the important work of relieving distress, restoring the waste of war, and assisting in maintaining the morale of our own troops and the troops and peoples of our allies by this manifestation of effort and sacrifice on the part of those who, though not privileged to bear arms, are of one spirit, purpose and determination with our warriors."

**THE SELF-OILING WINDMILL**

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

Write AERMOTOR CO., 2500 Twelfth St., Chicago

# 90 Bushels Per Acre

Mr. A. J. Woolen writes: "I arrived in Canada with practically nothing. Nevertheless I made good, and my first crop of oats went on an average 90 bushels to the acre."

Mr. Woolen is only one of thousands of farmers who have made good in Western Canada. Government statistics show the average yield of oats per acre is 53⅓ bushels; of wheat 30 bushels.

| | |
|---|---|
| Wheat | 30 bu. |
| Oats | 53⅓ bu. |
| Potatoes | 148 bu. |
| Barley | 37 bu. |
| Rye | 27¾ bu. |
| Flax | 13⅓ bu. |

This is the 1915 average per acre from Government statistics.

## 128,000 FREE FARMS!

Whether you have capital to buy land or not, there is a farm for you in Canada. You can get one of the recently surveyed 160-acre fertile homesteads along the Canadian Northern Railway. Here you have the same opportunity to succeed as did Mr. Woolen. First comers get choicest locations.

## Best Farm Lands $15 to $25 Per Acre

Thousands of acres of specially selected centrally located land, *close to the railway*, can be purchased on easy cash payments, or part cash and part crop payments. Here are modern free schools, good transportation, telephones and automobile roads. Crops produced can only be equaled on farms costing $150 to $200 per acre in more densely settled communities.

**Special Low Fares**—The Canadian Northern Railway, which takes you to all parts of this territory, provides special low fares to home-seekers and settlers.

## Send for FREE Book

Write today for your free copies of the "Home-Seekers' and Settlers' Guide" and government literature. The Guide is full of interesting and valuable information based on government returns and it tells you exactly how to make a home in Western Canada. Here is a home and wealth for you.

A. R. Brostedt, D. F. & P. A., 605 Hastings St., Vancouver, B. C.

## THERE'S A DIFFERENCE. Ayer Tells What Farmer Is.

W. B. Ayer, state food administrator for Oregon, on his way to the national capital, attended a conference of state food administrators for Washington, Oregon, Idaho and Alaska, in Spokane. He is a profound admirer of Mr. Hoover, regarding him as "up to now the great man the war has brought forth."

Mr. Ayer gave his definition of the words "farmer" and "agriculturist." "The farmer," he says, "is the man who makes his money in the country and spends it in town, and the agriculturist is the man who makes it in town and spend it in the country." He added that he himself is an agriculturist.

B. F. Bicknell, state food administrator for Idaho, told of the potato flour mill recently built at Meridian, Idaho, the only plant of the kind in the Pacific northwest, and, according to the New York Journal of Commerce, the largest and possibly the only exclusive potato flour mill in the United States.

The mill, which was equipped at a cost of only $10,000, will have an output of 150,000 pounds of potato flour a day, or five carloads. It will run until all the surplus potatoes in the state have been used for flour production. Sound potatoes of all sizes will be used, small being as good for the purpose as large ones. By the evaporation process the bulk will be reduced about five times, or five pounds of potatoes will make one pound.

Potato butter is another product recommended by the British ministry of food as a cheap substitute for butter, being made in England at a cost of less than 10 cents per pound, as follows: "Peel the potatoes and boil until they fall to pieces and become floury. Then rub through a fine sieve into a warmed basin 14 ounces of potatoes and add two ounces of butter or margarine and smooth and then mold into rolls and keep in a cool place. To make the appearance approvable use butter coloring, and if intended to keep beyond a few days, a butter preservative should be added."

STANDARD OIL COMPANY (California)

# The Fighting Soul---A Tale From the Bunch Grass

By JOE L. ASHLOCK

You fellows won't believe me when I say I was sickly when young? All right; don't, then. But it's so, anyway. I was sickly till I met up with my first and greatest physical trainer—who was a horse, Nigger, they called him; and because he was an outlaw on the range, and a whale of a horse, they also called him Nigger the Great.

When I was the sickly boy I spoke of I wanted to be a cowboy—and that ambition of mine was a family joke. My legs were like clothespins, and I had arms like straws. My hands were a good deal like the claws of a chicken—yes, I looked a lot like a cowboy.

Dad used to let me ride Old Chub, a tame squaw pony, down to Tony Richard's stock ranch five miles south of our home, where I could see the boys rope wild horses and ride them. Sometimes I stayed at Tony's several days at a time so that I could get up at 4 in the morning and ride out in the hills after the saddle bunch that had been turned out to grass the night before.

One morning I met up with Nigger the Great. The black rascal headed a band of cayuses fully as wild as himself. During the night he and his bunch had mixed up with our saddle band, and the whole bunch stampeded when I waddled up on Old Chub. I could catch them about like a mouse.

Back at the ranch the lid blew off when I told my story. Tony swore that this thing had to stop, and so on. Jap Garland wanted to know how to stop it. Tony told Jap he might walk out in the hills and sprinkle salt on Nigger's tail and then lead him in and give him a good feed of hay. Everybody got mad, especially the boys when Tony remarked that this Nigger outlaw was a real horse and it took real punchers to run him in. The fellows were rather outspoken, and to cool matters down a bit Tony offered $10 to the first man to put a rope around Nigger's windpipe.

Well, our fellows borrowed some horses of the Triangle Dot ranch—and you should have heard the other punchers guy them. They offered Richards' boys tame cows, pigs, fat old squaw ponies, and so on, and wondered if they dared trust one of us with a live horse. The boys were so sore that by the time they had their own band corraled they were ready to shoot Nigger the Great on sight. They didn't do it for two reasons: first, it was hard to get within gunshot of him; second, each fellow wanted the $10 and had to take him alive to get it.

They got him, all right, and I and Old Chub were in on the finish. Six fellows riding in a half circle rose out of the bunchgrass one morning and went after the big black with their ropes. Nigger was a good field general. He saw right away that he could not break through the half circle of riders without getting tangled up in a lasso. So he straightened out his bunch and headed for the Grand Coulee wall where it was 800 feet straight down. That was the very thing the boys wanted him to do—they thought they could corner him on the wall land he wouldn't jump over.

That part of the plan I guess Nigger didn't see. He raced like the wind up to the very edge of the big gulf. Then he saw it and tried to stop. His hind feet slipped forward and he sat down on his haunches like a dog and slid right to the edge of the jumpoff. His head was hanging over it when he stopped. The fellows meant to get him or kill him, you see.

There he stood, swaying on the edge of the 800-foot drop—Valhalla on one side and six cowpunchers with ropes on the other. He could take his choice. Once I though he was going to make the Valhalla jump, for he bunched for a leap. Then he stepped back, and like a flash headed for the boys and their ropes.

If it hadn't been for Indian DeWitt the horse would have gotten away, for the other fellows threw wild. But the Indian closed in on him and centered the loop right over his head. The $10 was his.

I won't go into details. They are grewsome, and my sympathies were all with Nigger. It was not till many minutes later, when Indian DeWitt's horse had been dragged from its feet and the Indian unseated and the other fellows had gotten their ropes on the black fighter's legs and throat that he was brought to his knees.

The fight continued all the way to Tony's corrall. They got him there, though; but when they did I was crying my eyes out I was so sorry for him. Blood streamed from his nostrils, his windpipe had been strangled 20 times, and he was nearer dead than alive when they finally laid him in the dust with the rawhide sawing holes in his hide in a dozen places. Those fellows had no mercy, and they didn't see the great fighting soul of the horse at all—they saw nothing but an ornery black cayuse that had been stampeding their saddle band.

The whole thing was so bloodthirsty and cruel that it made me sick. I loved the big black for the fight that was in his heart; and I couldn't bear to see him tortured. So I went home the next day.

Having captured the outlaw, the boys began to plot against Tony. I have heard that they kept the fighter doped with chloroform when Tony was around. Others say they kept him partly paralyzed with whisky. Whatever they did, they finally got him fairly well broken, it seems, and right before Tony rode him single and double and drove him. All the while they kept talking about how gentle Nigger was getting. Tony was fooled.

He wanted to go to town one day, so Jap and Cal hitched Nigger to the buckboard, drove up and handed Tony the lines.

No one will ever know just what happened, for Tony won't tell. Nigger the Great was found 20 miles away on another range with 20 inches of one line still hanging to him. The buckboard was picked up a wheel here, a wheel there and a pile of splinters somewhere else. Tony, finding himself five miles from the ranch and 10 from town, walked back home, the maddest man you ever saw. The boys reckoned that Nigger was a real horse; and that it did take a real driver to handle him.

Tony got mad and swore he would fire every cowboy on the place. Cal Paddy got mad and told him to fire and be damned. Nothing more was said about the matter, and in a week or so after Nigger was recaptured. Tony sold him to a railroad contractor for $10.

The contractor got enough right away. He turned the big black out to grass, and by way of farewell threw a neckyoke at him. Once more Nigger was free on his native heath.

Gradually the black horse rounded up his outlaw bunch, and with other renegades was at large, an outlaw, a Robin Hood of the bunchgrass, so wild, so suspicious of all human beings that if you got within five miles of him on the level you had to start before sunup.

I suppose I might as well skip a few years while I was growing up and Nigger, loose and unclaimed on the range, was acquiring more cunning. He kept out of every one's way, and no one bothered him. To me he was a source of never-ending fascination and worship. Always I could see him, a heroic black figure swaying on the 800 feet height, weighing his chances. I imagined that he was the kind of a horse that the old Roman gods hitched to the chariots that they drove through the clouds. He appealed to every nerve that was in my body for all that was grand, heroic and desirable. I wanted to capture him. I had no more use for him than a pup for two tails or a fifth leg. But I simply wanted to make a conquest of this grand, heroic horse. My sickly body tingled from toes to hair when I thought of the day when I would be big enough, strong enough, sure enough in the saddle and quick enough with a rope to go after Nigger the Great and get him.

I laid my plans. Right away, I saw that I would have to do a lot of growing. I was shy a lot of muscle and bone and half the time had either the stomach-ache, the headache, or some other ailment.

I found somewhere, an old book that gave a lot of rules about eating and sleeping and exercise. I learned the rules by heart and lived by them day and night. I cut out pastry of all kinds, drank water between meals, scorned coffee and tea, drank lots of milk, ate eggs, went to bed on time and crawled out early, and took all manner of exercise. I lived by rule, day and night. Out in the hay-loft I fixed me up a little gymnasium, most of the things being home-made. I had ropes with rings in them to swing on so as to develop my wrists and arms and back. I started in to chinning myself on a pole. For a long time I could hardly lift myself off my feet with both hands. Finally I got so that I could raise myself to my chin. Now I can chin myself with one hand, which is going some.

I did these things because I knew it took a good wrist and arm to throw a rope. I did everything else I know of to develop muscle. I got up early in the morning and ran a mile or so, first at a dog trot, and later, at a swift gait. All the while I was growing, and will you believe it? I could fairly feel those aches and pains slip off of me and I began to take on muscle. Heavens, how I grew! Mother said I had a bigger appetite than our big, black hound, and that pleased me more than anything she could have said.

Of course I studied riding. I began riding well grown calves with a surcingle around their bodies for me to hang to while they pitched or ran. From calves I moved up to wild two-year-old steers, and from steers to young colts—that is, wild 2-year-olds. I practiced with a rope all the time. I swung the loop over my head by the hour, and threw it at posts in order to get distance in throwing. I threw it into the wind, with the wind, and sidewise on the wind. I threw it from the back of a horse standing, walking, trotting, galloping and running.

Every month or so I would ride down into the hills and take a look at Nigger the Great. Days and nights I stalked him, learning cunning from his cunning. In the night I often stole up to him, but never did I get closer than a hundred yards to him and his truant band, and two or three miles was the closest I could get on the level, in daylight. The wild horses seemed to have outposts and sentries all around. One horse would snort, and away they would go.

One morning I lay in wait by a trail that took Nigger and his wild band to water. My hiding place was back a little way in a small hollow screened by a clump of willows. I had noticed that on many mornings when it was hot and dry in the summer, Nigger and his band went that way for water. This habit of the wild herd fitted in with my plan.

By this time I was 18, and my years of diet and training with a single object in view had wrought a miracle. It had turned me from a sickly, pale-faced muscled fellow on the range; and I could ride with any and throw a rope with any, though no one realized it, for I had kept my training as a secret. The folks at home thought I had just outgrown my ill-health. They did not know that dream of mine about getting big and strong enough some day to go out and capture Nigger the Great.

While I watched by the trail that morning, I heard the pounding of hoofs; and just a little before the sun blazed out of the east the wild band galloped by in the cool morning light. This was the closest I had ever gotten to the outlaw bunch, and I was surprised. The wild black had no less than a hundred horses in his band, and I could see that many of them were in the 1400 class.

There was something grand about the way they rolled by with their hoofs pounding on the hard trail. I shook a little when I thought of the job I had cut out for myself. But I had been testing my strength and skill in various ways, and knew that I was ready to go at it.

I went down to Tony's and told him that I wanted to ride Boxcar out in the hills for a day or two. Tony was a bit puzzled, but said I could take the horse—the best trained saddle animal on the Richards ranch. He had about forgotten that Nigger existed, I suppose, considering that he owned him no more. I made no explanation.

The next morning I waited by the trail in the same place; and at about the same time, the wild band came by for water. I slid out a big loop in my rope, swung it a couple of times to make sure it wasn't kinked, and went after the band, right onto their heels.

All eyes ahead, the wild band did not see me at once. The rear horses saw me first, and they plunged forward, piling up on the front part of the band. This sudden jamming together from behind slowed up all the the horses, and in that brief second Boxcar moved like an express train. He shot right into the herd and wild horses surged away from him and climbed over each other to get out of the way.

Just for a second it was more of a pile-up than I had figured on getting into. I saw all about me the massed band with horses up to 1400 weight uprearing and climbing over the smaller ones. Some of them went down and were trampled. Boxcar went into the mixup like a snowplow, using his teeth and feet at the same time. Once the hard, bony sides of the range horses were squeezing my legs so tight that I though they would lbe pinched flat. In another instant I was in the clear, and right at the black outlaw's heels. In the general confusion, he had not seen at once what was happening.

I had been drilling myself for this fight for years. There was no reason why I should fail—I could rope and ride well enough, and Boxcar was no bungler. Just the same, when I saw the big black ahead of me with his mane beating the wind like a pirate's banner, there was a

(Continued on page twenty-three.)

## *"Only Don't Begin by Telling Us You Were a Sickly Kid"*

Quarterback Hardy extricated six feet of catlike brawn from the human pyramid which had engulfed him and stood waiting for the others to untangle. Twenty thousand Crimson rooters went limp. No gain! The Wolves had downed the ball in its tracks.

Again the tense battle lines were drawn up. "Signal!" muttered Halfback Jones, looking wonderingly at Hardy, whose gray eyes were fixed in a curious, fascinated way on the distant, sunlit clouds. And then again, "Signal, damit, signal!" hissed Jones.

Hardy's eyes came back to earth and in two short words he had snapped out the signal for a terrific off-tackle play. Chaos followed. Jones with the ball held tight slipped forward like a greyhound; a Wolf tackle came for him and was blocked off by Hardy; and then Jones was down at the bottom of the pile, digging his elbows into the ribs of a Wolf who was trying to pry the spheroid away from him. Twenty thousand people went still and tense while the official waded into the tangle and dug for the ball—which he found 10 inches over the chalk line, Jones, smiling happily, still curled around it.

The yell that went up from the tense thousands swept the field like a gale at sea, then died into utter silence as Hardy prepared for the goal kick. There was the thud of a cleated foot and the ball, rising like a bird, sailed between the uprights.

From grandstand, bleachers and sidelines came peal after peal of thunderous applause. Bands played. A sea of crimson pennants fluttered. Simultaneously a human tide poured down into the gridiron and the tired football players were caught up and borne away.

"Great luck you gave us!" yelled Jones to Hardy, as they rocked and swayed on the shoulders that bore them, "but what did you hold that signal for?"

Doc Bowles, head coach for the Crimson, repeated this question a few minutes later. "Fine playing, Hardy," beamed the coach, "but say—why the devil did you hold that last signal so long?"

Hardy evaded the crowd and was gone without answering, and the question thereby became magnified to the proportions of an enigma. Why had Hardy brought his team within 10 seconds of being beaten by delaying that signal?

Doc Rowles finally cut the Gordion knot. "Hardy," he said, "we've a right to be let into this weighty secret of yours—we had some interest in this game, you know. Why did you delay that signal?"

"You're right, I suppose," admitted Hardy. "It's a hard story to tell so that you'll understand, though—I'd have to start way back with the time when I was a sickly kid—and what's the use?"

"Lots of use," Doc assured him. "Only don't begin by telling us you were a sickly kid. You sickly—I smile!"

## For a Herbarium.

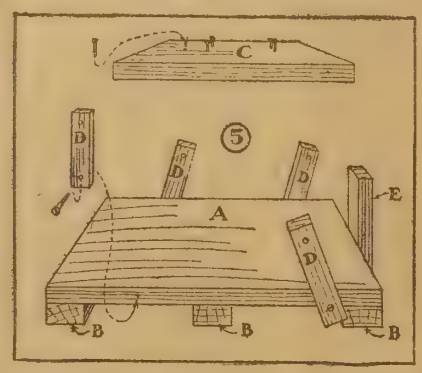
You have all gathered wild flowers, but I wonder how many of you have a herbarium, or collection of varieties, with a record of both the common and botanical names, location where found, kind of soil, and other data. It is a splendid way to acquaint one's self with the flowers, plants and ferns discovered while tramping through the woods and across fields, and if you haven't yet started a collection, I hope

you will do so when the first opportunity affords. The work is fascinating, and your herbarium is something of which you will never tire and will always be proud to show to friends.

A 25-cent letter-file is better than a book to keep specimens in (Fig. 1), and the heavy, light yellow wrapping-paper used in butcher shops, cut up into sheets to fit the letter file is good material to mount specimens on. It is cheap and you can buy as much as you want, as you need it. By placing the sheets loose in the file, the specimens may be arranged according to their genus, and rearranged as new varieties are added.

In addition to the herbarium file, you must have a press. Don't use a pile of books. Make yourself a regular press, or ask brother or father to make one for you. Figs 3 and 4 show a practical press easy to construct, and Fig. 5 a working diagram. Make base board A 12 inches wide and 18 inches long, and nail the three cross strips B to the under side, one at each end and one in the center; and make the upper board C 12 inches square. Cut the hinge blocks D 6 inches long, three-fourths inch thick, and one and one-fourth inches wide, and bore a screw hole through each one-half inch from each end. By means of these blocks, hinge board C to A, being careful to locate all four blocks in exactly the same relative positions so they will work together.

Mount a flatiron upon board C. This can be done so it may be removed on ironing day, by driving nails into board B at the sides of the flatiron so the heads come down upon the base, as shown in Fig. 3, and providing a nail to drop into a hole at the flat end, as shown in Fig. 5. The flatiron can then be slipped between the nails, endwise, and locked in place by dropping the loose nail into the hole made for it. Double pieces of cardboard or tin beneath the nail heads, will hold the flatiron better than the heads alone (Fig. 3). The flatiron not only provides weight for pressing, but serves also as a handle for operating the



press. Nail block E (Fig. 5) to one end of board A as a stop for board C to strike against when the press is opened.

Newspapers are good for placing specimens between for pressing, as they are sufficiently porous, to absorb sap. A half-dozen or so sheets are none too many to place beneath and above each specimen. These should be replaced with fresh papers about once a day until the specimens have thoroughly dried and are ready for removal. Several sheets of specimens may be pressed at a time, one placed over another.

When ready to transfer from the drying papers to the herbarium sheets, daub glue here and there along the under side of each specimen; then lay the specimens upon the sheets in as natural positions as possible. Narrow strips of court-plaster lapped over the thick portions of stems will help hold them securely.

The name, place of finding, and other data, may be written or printed in the corner of each sheet, as indicated

in Fig. 2. Glue index tabs to the edges of your sheets, in the same way that letter-file indexes are put on, on which to letter the name of each genus, to simplify the finding of specimens.

# Raise Own Potatoes

## Farmers Should Never Have to Buy

"It is a ridiculous proposition for a farmer to figure on buying potatoes, and for that matter he ought to raise a few to sell. But to raise potatoes on a commercial scale and expect to get more than $20 a ton is not good business."

This is a declaration of E. F. Benson, commissioner of agriculture for the state of Washington, in a letter written to a resident of Washington criticizing certain recommendations made by Commissioner Benson.

Mr. Benson warned the growers last spring against overproduction of potatoes, basing the warning upon the fact that as potato prices last spring were very high everybody would be inclined to plant as heavy an acreage as possible. Later he recommended that farmers sell their potatoes when they could get a reasonable price and not hold them for speculative purposes.

Relative to the government fixing a price on potatoes, Commissioner Benson told his critic: "It is not supposable that the government would fix a price on potatoes any more than it would on peaches, green corn, string beans or any other perishable crop. Such a system of state socialism would soon bankrupt the country and we might as well have kaiserism as a bankrupt country."

As to the price of $20 a ton, which Commissioner Benson considers a reasonable price, he says: "If a person can raise 10 to 15 tons to the acre, the price of $20 is amply sufficient. A person who can not raise potatoes and sell them at $20 had better raise something else which he knows more about or which his land is better adapted to produce. Be sure to understand me as talking about commercial crops. Everybody ought to raise the potatoes he needs for his own use, whether he can grow 10 tons or only five to the acre."

# Sidelights

### Wooden Leg.

"Well, after all," remarked Tommy, who had lost a leg at the war, "there's one advantage in 'aving a wooden leg."

"What's that?" asked his friend.

"You can hold up yer bloomin' sock with a tin-tack!" chuckled the hero.—Tit-Bits.

### Seeing Is Hearing.

Sergeant Major — Now, Private Smith, you know very well none but officers and noncommissioned officers are allowed to walk across the grass.

Private Smith—But, major, I've Captain Graham's oral order to——

Sergeant Major—None o' that, sir. Show me the captain's oral orders. Show 'em to me, sir.—Liverpool Post.

### Willie Was Up to Date.

"One beautiful autumn day," said the teacher, telling a story, "Little Red Riding Hood was walking along a path in the woods when she came to a sharp turn; and whom do you think she saw standing there, with a row of shining white teeth gleaming at her?"

Up went a little hand.

"Who was it, Willie?"

"Mister Roosevelt."

### Included All.

"An expert delivered an address yesterday on food conservation to several hundred fashionable women and a few men. He began by saying: 'Ladies and gentlemen, and—er—others.'"

"He must have intended a covert insult to somebody who was present."

"No. Several of the dames brought along their poodles."—Birmingham Age-Herald.

### Doing His Bit.

"I never hear you criticizing your neighbors."

"I haven't the heart to do it," answered Mr. Dubwaite.

"Most extraordinary."

"Not at all. The only neighbors I know well enough to criticize have two sons in France, and I feel it my patriotic duty to gloss over any little imperfections they may have."—Birmingham Age-Herald.

### What Mother Said.

"Nellie was entertaining Mr. Noble, and little Tommy was hanging about. At length Nellie told him it was time for him to retire.

"Oh, can't I stay up a little longer?" pleaded Tommy.

"What do you want to sit up for?" asked Nellie.

"Why, I want to see you and Mr. Noble play cards," answered Tommy.

"But we are not going to play cards," said Nellie.

"Why," said Tommy, "mother said you were. I heard her tell you that everything depended on the way you played your cards tonight.

**ECLIPSE**

**Your water tank always full— for $1.65 a year**

"It's a mighty still day when the Eclipse Wood Windmill will not pump some water into your tank." That's what one farmer said who has had an *Eclipse for 38 years.* Itis still pumping *to day with no repair expense.* Figure the Eclipse water supply cost on the basis of service for at least 38 years—not the first cost—and you will have water the year 'round for about $1.65. The Eclipse is powerfully built—few parts—automatically controlled—all wood oil treated—practically storm-proof. Now go to your dealer and get all Eclipse Windmill and Tower facts.

The above cut is of Bishop Patrick Hayes, who was recently appointed Catholic general of the United States army. The photograph was made from F. W. Wright's recent portrait of the bishop.

## Germans Destroy French Sugar Mills

Sugar production in France has fallen to less than 25 per cent of the pre-war output. This picture of a wrecked sugar mill shows one of the principal reasons for the decline. When German troops retreated from occupied portions of France they took pains to destroy virtually all of the sugar mills that would otherwise have assisted the French in maintaining their sugar stocks. That first wave of Teuton invasion was stopped in France after the Germans had established a battle line that cut off 203 of the 213 French sugar mills, as well as much land that had produced sugar beets. The official sugar production figures emphasize the French sugar needs which must be filled by American aid.

## Is 82 Years Old.

Former Speaker Cannon of Illinois was 82 years old May 7, and the occasion was made the subject for a demonstration by his colleagues. Representative Madden of Illinois, republican, called the attention of the house to the birthday anniversary.

## Will Eat No Wheat.

President S. B. L. Penrose of Whitman college, Walla Walla, has announced that he and his family have decided to have no more wheat flour in the house until after the next harvest. He has suggested the forming of an "informal but resolute" league for victory through saving wheat. The picture, taken some years ago, shows President Penrose and his twin sons.

# Trappers of the Ozarks

**The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana. Now the State of Missouri.**

By LOUIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

**Summary of Preceding Chapters.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time an unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination—a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their salt making and hunting. After an exciting experience with a bear in a cave they find their first fresh sign of Indians—moccasin-tracks in the snow about their camp and the morning after they find moccasin-tracks in the snow about their camp. The Indians attempt to enter their barricaded cabin at night but are frightened away by a great earthquake. The boys are captured and taken to the Osage village. One day they are given one bullet and one charge of powder each and allowed to go hunting. They dare not attempt to escape for fear of starvation, but lose their way and are found the following day by the Indians who think they tried to escape and are taken to the camp under guard. Ben is tied to a stake and a fire built under him but it is only a ruse to induce him to take as his squaw Watermelon, for the time being an Indian widow, who cuts his bonds and proclaims herself his squaw. Ben declines. The boys make plans to escape by canoe. They accumulate some parched corn and dried meat, steal a canoe at night and paddling far up the river turn into a branch stream and hide in a cave. After two days and a night there they go back down the river, safely past the Indian village and turning into a branch find a cave high up in the rocky face of a cliff. Here they place all their belongings except the canoe, which they conceal. They are discovered by the Indians, and, retreating deep into the cave with their belongings, they find, over a mile from the opening through which they entered the cave, an exit, and start southwest, the Indians undoubtedly in pursuit. The second day a blizzard sets in and hungry wolves follow the boys. Toward dusk they reach a deserted settler's camp, the cabin burned but chimney standing. Here they build a fire and plan to stand off the wolves.

## CHAPTER XVI.

### In a Ring of Fire.

Soon big wolves could be seen on top of the piled-up logs, their shining eyes glaring down hungrily, fiercely at their intended victims. Back in the part of the enclosure shadowed by the chimney one would leap down inside every now and then, and only by the hurling of fire could he be driven out. And scarcely was one chased back when another would venture in. Indeed, the two hard-beset fugitives were kept so busy driving wolves out that they had no time to finish their supper ;and in spite of their roaring fire they were soon half-frozen.

"Jodo, most of our trouble is behind the chimney. "Let's start a fire to light up back there."

"Let's start three or four of 'em. Theres' plenty of wood. Maybe they'll warm things up a little. If the night keeps getting colder, it'll be nip and tuck with us whether we shall freeze first or be eaten alive."

"I'm wondering—I'm wondering—" The young trapper ran his eyes around the whole enclosure.

"Wandering what, Benoni?"

"If it wouldn't be wise to fire that brush-and-log fence and let it burn. If we set fire to it in several places, all of it would soon be ablaze. Then no wolf would be hungry enough or fierce enough to come over it."

"And this frightful cold, that's threatening to freeze us in spite of our fire here, couldn't come over it so well. The sooner we fire it the better, I say."

While Ben was still debating whether so big a fire would be prudent, yelping, snapping brutes bounded over the fence and down into the enclosure at the same time; and only by a furious pelting with firebrands could they be driven out.

"Ben, it's either fight those savage varmints hand to hand, or climb up and sit on top of our chimney, or—"

"Or fence ourselves in with fire."

"That's right. And I say fence ourselves in with fire. The quicker the better, too."

"It seems we've got to do that, Osages or no Osages. So let's get at it. We'll have ourselves in the center of a fiery ring."

"But do we dare fire it all around? S'pose we want to get out."

"But we shall not want to get out. We wouldn't dare venture outside. Those hungry varmints would be picking our bones before we could go 20 yards. This is the only place for us tonight, and until the weather changes and that hungry pack scatter away."

"That's a fact. This is the only place we can live tonight. So let's start our big fire before those noisy brutes take it into their heads to come over all together. Then we'd have a time of it."

But before the two could do anything several wolves rushed over the log-pile. Each man snatched up a blazing stick and started toward them. One wolf stood snarling and snapping defiantly, and Ben hurled his fire-brand. The brute dodged, and the blazing stick plunged into the snow and sizzled out. And scarcely was the fire gone when the fierce beast bounded forward and leaped at Ben's throat.

His rifle was in his hand, but he would shoot only as a last resort. Like a flash his tomahawk was out, and he struck with all his might! So intent was the wolf on reaching his victim's throat that he made no attempt to dodge, and the keen-edged blade split his head open. As the wolf fell, snapping fiercely, Ben sprang back.

"Hold to your fire, Jodo! If you don't they'll be on top of you! Wait till I get another chunk!"

Ben ran back to the fire-place. Putting down his rifle, he hurried out with a flaming stick of wood in each hand. They approached the fence.

"Now, Jodo, you start your fire and I'll keep them off of us! But be quick!"

With his hand Jodo dug away the snow till he found a mass of dry leaves that the wind had blown under the logs and brush. Those caught fire at once, and the flames quickly began to shoot up through a leafy, thick-brushed tree,top. In a few moments that dark and dangerous spot back of the chimney was well lighted up.

"Now move on a few yards and fire another place!" said Ben.

Jodo did so. And as soon as the leaves were blazing he advanced to still a third place. Soon all the enclosed ground was so brightly lighted that the howling pack outside, creatures of darkness, had not the boldness to venture over into it.

Now the two defenders kept moving around the fence, firing it in places 10 or 15 feet apart. In a few minutes flames were leaping up all around the big ring. And the higher the different fires leaped the closer they came together.

Ben drew a long breath, and kept running his eye around the big circle. "At last we've got the hungry pack safely shut out! They could climb over in a few places yet a while, but they won't dare. And pretty soon they'll have to wade fire to cross. Now we can go back and finish our supper in peace."

The two returned to their big fire-place, and were soon sitting on the buffalo-robe, devouring broiled venison and parched corn.

"Feels warmer in here already—don't you think so, Ben?"

"Yes, it does, though it's none too warm yet. It'll be warmer, though. All that ring of fire around us can't help raising the temperature inside of it, even this frightful weather. We shall be safe tonight, and warm enough to sleep, I've no doubt."

"But we shall not both dare sleep at once, shall we?"

The boys fight for their lives.

"No. One must remain awake. So the sooner the other gets to sleep the better. Which do you prefer? First watch or second watch?"

"I'll take the second, if it's just the same to you, Benoni."

"It's just the same to me. And you'd better get to bed as soon as you can and sleep as fast as you can."

"Do you s'pose we're in danger from the Osages?"

"Not tonight. We must have shaken them off 50 or 60 miles back. And even if we didn't, this weather will drive them down into some deep ravine to keep from freezing."

"I'm glad we hung onto both of our buffalo-robes." Jodo had made down their bed and was slipping into it.

Jodo was soon asleep. Ben sat down on the edge of the bed, before the fire. But he was warm now, and no further fear of the wolves, he soon began to nod. And he kept nodding for a good while. Finally he sprang up and stood with his back to the fire-place.

By this time the fires in the brush-and-log fence had all burned together, till they made a complete flaming ring. And the big ring kept crackling and popping and roaring till its noise filled all the air. Outside the ring the weather was doubtless growing colder as the night advanced; but inside it was certainly growing milder.

When he began his watch, Ben had expected to remain up till some time after midnight, and then stir out his partner. But after a long, hard, cold day of tramping he was too tired to stand or walk about; and every time he sat down he seemed about to fall asleep in spite of himself. For a good while he kept sitting down and getting up. But that, too, was tiresome. Finally he stood gazing around for a few minutes, and said:

"What's the use? Nothing can get to us—neither wolves nor redskins. And the fire can't spread for the snow. I'm off to bed!"

He stood for a few minutes longer, listening to the roaring and crackling of the flames, and to the howling of the wolves in the darkness beyond the fiery ring. They seemed well aware that there was good eating inside that ring, and even the great glare of firelight could not drive them far away. Their clamor, mingled with the noise of the encircling fire, made a ceaseless uproar.

While still standing in front of the big fire-place. Ben speculated a little as to who had lived in the house that had once stood here, and how anybody had come to build a house away out here in the wilds.

No answer came to these questions. And after running his eye around the flaming circle, to make sure that there was no place where a hungry wolf could break over, he put some more wood on the fire in the fire-place. Then he took off his boots and outer clothes and crept between the blankets and buffalo-robes. He drew a blanket up over his eyes, to shut out the great glare of light, and a minute or two later was sleeping as soundly as Jodo.

Several times during the night he was half aroused by the unaccustomed noises. And every time he rose to his elbow and gazed around. But after recalling where he was, and assuring himself that there was no new cause for alarm, he dropped down and was quickly asleep again.

It was the shining of the sun that finally awoke him. He sat up at once and blinked about. But everything was as it had been when he fell asleep. The hungry, blood-freezing clamor of the wolves had ceased; but the big ring of fire, almost as high as a man's head, was crackling and popping and roaring as loudly as ever. Inside of it the air was comparatively mild.

Soon Jodo also awoke and sat up. He gazed around drowsily, almost stupidly, trying to recall where he was and how he had come here. He had not waked before since falling asleep.

"Well, the wolves and the Osages haven't got us yet," he finally remarked, with a yawn.

"No. We're safe enough so far. Frightfully cold outside of this fire-circle, I'm guessing. It's a satisfaction to know we're not out there, and don't have to get out there."

"Isn't there danger that the Osages will see this big smoke and come to find out what it means?"

"Not for the present, I think. They won't be moving about such weather as this. If they didn't make back toward their village when the cold spell struck them, they're down in some deep hollow, huddled up over a little fire to keep from freezing."

"Then let's hope they'll stay huddled up there. I would hate to have to jump out of our comfortable pen and go to running away from 'em such weather as this."

"Not much danger of our having to run from Indians, I think. But there's something almost as bad that will stir us out of here before long."

"What, Benoni?"

"Why, starvation. Our deer-skin bag is getting light. We've been eating a lot since we escaped from that cave—that last cave."

"We've had to eat a lot, traveling the man-killing, horse-killing gait we've been traveling. We'd have dropped down on the way if we hadn't stuffed ourselves three times a day till we were fit to pop. How long do you think our supply of corn and venison will last us?"

"About three good meals more. And we can't afford to wait till we've come to the last mouthful before we rustle up a new supply. Hunting is too uncertain for that, especially when you've got only about two bullets."

"That's so. We mustn't run close to the ragged edge of starvation such weather as this. We can't afford—What was that thing?"

"Where? I don't see anything."

"It hopped behind that burn't stump yonder. Looked to me like a rabbit."

"It might be a rabbit. Let's see about that. There must have been several rabbits hiding under those logs and brush. And naturally they'd run inside from the fire instead of out among that howling wolf-pack. If it's a rabbit, we'll have him broiled for breakfast, and be thankful for small favors. It'll help us to economize on venison and Osage corn."

The thing behind the burn't stump was indeed a rabbit. And while they were running after that one with sticks to kill it, they scared up three more rabbits. And under a pile of poles they discovered two big, white, fat 'possums. All this game had been driven inside the fiery circle by the fire. But one rabbit did the young trappers kill for breakfast.

"These rabbits and 'possums are certainly a windfall to us," Ben remarked, while he and Jodo were sitting before the big fire-place, each broiling a half rabbit.

"That's what they are. They'll feed us while we're penned up here by the cold and the wolves and the fire. After that we ought to be well rested, and able to hunt down bigger game."

"Yes. And it must be bigger game when we go hunting with our rifles. Powder and lead are too everlastingly scarce for us to waste a shot on some animal only big enough to make a mess or two."

When their breakfast of rabbit was ended both were thirsty. There was no water here, though there must have been a spring not far away. But handfuls of snow, warmed to mush before the fire, served to quench their thirst.

The sun was still shining, but through a haze now, and its warmth could not be felt. So far as could be told from the inside, the weather beyond the fire-protected circle was little if any warmer than it had been the night before. Thankful for their comfortable shelter, the two trappers sat or lay before their big fireplace, luxuriating in this chance to rest after days of hard tramping through cold and snow. Sometimes they took a nap, to make up for sleep they had recently lost.

"Ben," the other remarked once, "s'pose we want to get out of this fire-pen. How could we go about it?"

"It wouldn't be as easy as sliding down hill. Maybe, though, we could work the thing somehow. But as we don't have to break out for a few days, and don't want to break out till the air warms up, let's not worry. I'm glad we stumbled onto such safe, comfortable quarters to weather this cold snap in."

For dinner another rabbit was killed and broiled. In the afternoon, knowing that the remaining animals must soon begin to suffer from hunger, Jodo and Ben killed them all, dressed them carefully and buried them in a mound of snow.

In spite of the fact that the big ring had been burning so long, the fire was not even beginning to die down. In fact, the air inside the ring was growing the least bit warmer all the time. This was due to

the increasing heat. For the weather outside was about the same.

Not long after nightfall the hungry, howling of wolves started up again in the surrounding forest. There were not so many as on the night before; but those that did assemble around the fire-girdled enclosure made the frozen night hideous with their clamor.

Before their fireplace sat the two shut-ins, watching a fat 'possum roast on a flat stone, close up to the fire. Feeling safe now, they did not shudder any longer at those fierce voices off in the forest.

"It does seem to break their savage hearts that they can't get to us to make a meal of us," Ben took occasion to remark.

Jodo answered: "And it delights my heart that they can't get to us to make a meal of us."

After resting all day, and sleeping not a little during the day, Ben and his companion sat before their houseless fireplace till a late hour, feasting on baked 'possum and listening to the roaring of the great log fire around them and to the outcry of the wolfpack in the darkness beyond. They themselves were well fed and comfortable enough.

For a time they speculated as to the people who had once lived here, and as to whether they had gone away or been murdered when their house was burnt. Later they talked of their friends at home, and wondered what each of them was doing. Naturally, much of Ben's talk was of Rachel Henderson, his partner's sister. Still later they discussed their plans—what they would do after making good their escape from the Osages.

"Our crying need just now is a supply of ammunition," Ben remarked. "An unarmed man is at a hopeless disadvantage out here. We're both taking our lives in our hands when we dare to travel through this savage wilderness with only two bullets apiece and two charges of powder. Hunting is always more or less uncertain; and besides the redskins there are too many hungry beasts of prey roaming around. Think what might have happened to us if we hadn't been lucky enough to stumble into this particular shelter. It would have been a hard choice between being devoured alive by wolves and climbing trees to be frozen as stiff as a poker."

"No chance for us to make any ammunition, is there?"

"Not here. If we were back on the Big Niangua and were left in peace for a few days we could turn out an ample supply. Here we have no sulphur and no saltpeter, and I doubt if we could pick up any lead ore. In fact I know we couldn't while the snow covers the ground. Our one hope in this part of the country is to find some hunter's cabin".

"But it's not at all sure that we could obtain any ammunition if we found a hunter. Those fellows don't usually have more than they need for their own use. And this late in the season they're apt to be running short. We didn't have overly much before the Indians robbed us."

"Yes, I know. But the hunters will have some powder and ball, and pretty nearly any of them will divide with us. The main thing is to find our hunter. The fact that there has been a house here would seem pretty good evidence that we're where the white hunters stay. By pushing on south for two or three days more, at the outside, we ought to see the smoke from some cabin. Even if we shouldn't find a hunter, the farther we travel in that direction the better will be our chance to elude the Osages."

"Then we ought to be up and off the very first minute the weather will let us. But those wolves howl so ferociously it makes my blood run cold to think of being caught out among 'em."

"The wolves won't be so troublesome, I'm pretty sure, after this cold spell passes. They're always fiercest during the bitterest weather. It was that way back in Kentucky—so all the old settlers declared."

(To be continued.)

# The Fighting Soul, a Bunch Grass Tale

(Continued from page nineteen.)

lump in my throat. I'm getting to the part of this story you're waiting for—it was the same lump that choked me in the game with the wolves, and I had to swallow the lump before I could give the signal.

I had to put that lump of yellow down before I could drop a loop over Nigger's outlaw head—and Boxcar made me swallow the lump. Nigger wheeled like a flash, and Boxcar wheeled with him. When his four feet hit the trail for the turn there was a whack and a yank that showed me some stars and every string in the saddle cracked like a whip. When I got those stars brushed away, Boxcar had straighted Nigger to the trail again, all by himself, and that lump of yellow had been jolted down my throat and on out at my shoes.

Nigger held back a little, not wanting to leave his band; and Boxcar crowded right up to his heels, going like a locomotive. When the instant seemed right I swung a wide loop at the outlaw's head and it went straight to his windpipe. I had him. I could have stirred the big horse to a fight with no trouble whatever; but I was careful not to do this. He reared a couple of times and I let out just enough of the rawhide to save his windpipe. The pinch of the loop brought back some bad memories of his former captivity, I suppose, and then I didn't nag him. He gave up without much of a scrap.

His surrender with pitiful. His fleeing band was widely scattered, many having passed over the prairie out of sight. All of a sudden the big black seemed to forget I was there. He raised his head, proud as any king, and whinneyed to his band. I guess it was his good-bye to the range. The morning sun was in his eyes when he said it—and the thoughts that were in his wild horse-mind I would like to know. Don't tell me that a horse hasn't a soul.

I wish now I had let Nigger loose to race to the sun with his band. Instead of doing so, I led him home where for days he had all the manner of a captured thief. By inches I got his confidence and friendship—maybe a little of the love in his wild, fighting soul. But for anybody but me he was all hoofs and teeth.

I tied him in a strange stall one night, and expected to put the saddle on him the next day. I never did. He or some of the other horses started a row in the night. When I went out in the morning Nigger had wrecked his stall and broken loose, and another horse had kicked him in the ribs. He was about all in when I found him. I coaxed and led him out into the pig pasture behind the barn. The irony of it all struck me—he, a king of the bunchgrass, put into a pen with the pigs! I felt like apologizing to him.

One of the tricks I had used to win the horse's friendship was to feed him little square lumps of sugar. I fed him about all the lumps of sugar mother had during his last days out in the pig pasture. But he got weaker right along, and one morning when I went out to see him with some sugar, he was dead.

Quarterback Hardy stopped speaking. When he resumed, his voice was low with emotion:

"I've never forgiven myself for taking the big black off the range as I did—though I guess my training for the job made a man of me. I've wished many times that the outlaw had taken the Valhalla jump from the Coulee Wall instead of turning back to captivity. Many a time when the game was going against us, or some fellow had slugged me down in the pile, I've thought of the black's fighting soul in that Valhalla place, and the thought of it brought me to my feet for the next play.

"In our last 10 seconds with the Wolves, when the score was 6-0 against us, I pulled myself out of the pile and figured out the next play with 20,000 people looked our way; and I seemed to feel each eye in the crowd, 40,000 you know, boring a hole in my back. I went yellow—the lump came up in my throat and I couldn't say the signal.

"In a flash I thought of the time when Boxcar jolted the yellow lump down through my shoes, and I wished that Doc or Jones or somebody would knock me down with a club so that I could swallow the lump again. In anothr flash I seemed to see the big black standing on the Coulee brink 800 feet high, weighing his chances; and, the flash raised my eyes up to that Valhalla place I've always imagined in the clouds. Sticking out from the edge of a black cloud was a queer looking shape of black formed almost like a horse's head and neck. Maybe I was a bit dopy; some one had slugged me when the official wasn't looking; but it came to me that up there was the fighting soul of Nigger the Great signalling to me. I seemed to leave the game for an instant; and then I heard Jones calling for the signal and gave it. The lump was gone."

---

Doc Bowles broke the long, thoughtful silence that followed Hardy's last words. He spoke slowly, musingly, partly to himself.

"I'm just wondering," he said—yes, I'm wondering how much we can skin the Wolves next year, on their home grounds, if each of you fellows look up in the game and see what Hardy saw."

YOUR

# LOCAL HOME PAPER

AND

# THE WASHINGTON FARMER

## For the Price of Your Home Paper Alone

Through a special clubbing arrangement with a large number of newspapers in Washington, we can now send you **The Washington Farmer** and your Local Home Paper at the regular subscription price of your home paper.

## THE HOME PAPER

You alone know the great value of your local town paper. The part it plays in local affairs, the news of the happenings of your community, the gossip, social and commercial life that you wish to keep posted on. It brings the story of the home boys at the front who are fighting for you and our country.

## THE STATE FARM PAPER

The Washington Farmer is your family paper. It keeps you posted on the agricultural developments of your state. It is a complete family farm paper—all the farm news, latest and best serial stories, department for every member of the family—feature sections of every branch of farming, dairying, stock raising, fruit growing, etc. Also colored comic pages and a children's and family page. It is the biggest and best farm paper published in The Pacific Northwest.

**The Washington Farmer Is Issued Every Week**

We are pleased to state that by subscribing now to any of the following papers and paying the regular annual subscription price of that paper your payment will also include a subscription to The Washington Farmer.

## FRESH VEGETABLES

### We Are Learning the Food Values.

Since the war began much has been written on the question of food values and many comparative tables have been published. The result has been that a vast amount of education has been received by American housewives and the homes today are being provided with a mort healthful food ration than ever before. Some of these articles have not been of much value, but on the whole the education has been exceedingly helpful.

The following is to my mind one of the best I have seen:

Vegetables are eaten in various plant parts. Potatoes are tubers, turnips are roots, onions and garlic are bulbs, asparagus and kale are stems, Brussells sprouts are leaf buds, lettuce and cabbage are leaves, cauliflower is a flower bud, artichokes are the flowers themselves, cucumbers are the green, unripe fruits of the plant, tomatoes and melons are the ripe fruits, corn and peas are the unripe seed, while beans and lentils are the ripened seeds. Ripened vegetables usually contain more starch than the unripened.

Vegetables are not wholly edible. Skins and seeds are not good pabulum, though they may have a mechanical value as a laxative.

In being prepared for the table much of some vegetables is lost. The pods of fresh beans and peas constitute on an average about 50 per cent of these two vegetables. The cob of corn is also more than 50 per cent of the weight. Peeling potatoes, carrots, sweet potatoes and parsnips removes some 20 per cent of the original weight of the vegetables.

According to Dr. E. W. Allen, sugar and starches are present in fresh vegetables in the following proportions:

| | Per Cent. |
|---|---|
| Fresh sweet potato | 26.1 |
| Fresh white potato | 18.0 |
| Fresh green corn | 19.2 |
| Fresh artichoke | 15.9 |
| Fresh green peas | 15.2 |
| Fresh sugar peas | 12.1 |
| Fresh parsnips | 11.0 |
| Fresh onions | 9.1 |
| Fresh beets | 8.8 |
| Fresh carrots | 8.2 |
| Fresh muskmelons | 7.2 |
| Fresh mushrooms | 6.0 |
| Fresh string beans | 3.5 |

For invalids or others who may eat vegetables with the least sugar and starch, asparagus, shelled beans, celery, cabbage, collards, cucumbers, egg plant, dandelions, leeks, lettuce, okra, pumpkin, rhubarb, spinach, tomato and watermelon are allowable. These are all under 4 per cent starch.

In proportion to bulk these are all "filling foods." Fats are for the most part coloring matters, and scarcely reach one-half per cent in any fresh or canned vegetables.

The "meaty" protein or albumins in vegetables seldom seem high. Cowpeas, peas and beans alone run to 9 per cent, most other vegetables are under 3 per cent of this flesh repair material.

It is the mineral matter in vegetables and vitamines or the life-giving principles which actually animate. These seem to ward off many human maladies such as pellagra, beri beri, rickets, scurvy, joint aches and pains, spontaenous bruises and like ailments of the human form.

Cooked vegetables have an altered content of water. Baked or fried they lose water; stewed or boiled they usually take up water. Of course, heat clots the albumins and breaks up the starches and sugars. When a cabbage is boiled the water extracts almost 50 per cent of the starch, which ordinarily is thrown away.

Potatoes peeled and soaked before boiling lose a huge part of their nutriment. With their skins on, much nourishment exudes. The substances lost are sugars, albumins and minerals. Nearly one pound of sugar in a bushel of carrots is lost in boiling.

After all, it is really the quantity of, more than the percentage of, starch present in vegetables eaten, which counts. Any one with intestinal, bile, liver or gall-bladder disturbances or with such tropical distemper as sprue, needs eat sapringly of sugar-starch foods." G. L.

### When the Family Is Late.

To keep baked potatoes flaky, when they have to stand, pierce them full of holes with a fork or crush them a little in a towel and pierce a small hole in the end of each. Put them where they will keep warm.

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Free Remedies the "Sure Cure" for "Spring Fever"

Dr. Hirshberg.

"Who becomes easily fatigued achieves not much," says an Italian proverb, which in the idiom of the street means, if you have "that tired feeling" or allow yourself to be beguiled easily by "spring fever," you will be about three-quarters of a real man or less.

To be tired is to be unwell—in a certain sense. Your vital fabric is diminished in its capacity to do even a fair share of its best work. Unless you feel the vim and tonic, the joy and pleasure of your efforts, your productiveness, industry, your creativeness, are below par.

The call of "the season which pricketh every gentle heart, and waketh him out of his sleep to start," makes each little indoor unpleasantness seem all the more noticeable. The "fever" to be outdoors, the call of the open, "when well appareled heel of limping winter treads," exaggerates the restlessness, the longing and little discomforts of desk, shop and bench.

**Rest, Sleep, Sunlight, Oxygen.**

When you are tired of several housed-up months there is a mental fatigue which yearns for a change. Intellectual fatigue is as real a thing as physical exhaustion. Examined by the standards of medical precision and the myriad of indirect senses called instruments it will be found that the victim's eyes and senses are less accurate, the muscles not precise, agility reduced, energy much fallen off, strength and force diminished and the capacity to work, to act, to create, to pay attention, to become interested, to enjoy, to do and to invent have all disappeared or become faulty.

Here you observe a combination of mental and physical signs which indicate that fatigue is sickness, though it lasts but a brief period. Just as the accumulated waste of worn or torn tissues age or sicken your anatomy, so the waste fluids after long hours of exertion or of days spent in carbonized, unoxidized air store up poisons.

Call these fatigue substances how you will, they are present and must be repeatedly and automatically removed by rest, sleep, sunlight and oxygen. It is these four manifestations which help to clear away the dishes, eliminate the crumbs, remove the soiled tablecloth of exhaustion and burn up the debris. Simultaneously, the tissues begin to replenish the lost and consumed substances.

Reparation and restoration then set in. You say, "I feel refreshed." You are invigorated and snort like a war horse. The quality and quantity of your work picks up; the oxygen of fresh air, the sunlight, sleep and rest put you on your mettle, and your discrimination and productiveness reach where tired nature fears to tread.

Let all this be as it may, you need not be necessarily tired because you feel that way. The sensation of fatigue is no reliable indication that there is true exhaustion of your flesh and bone. To determine whether there is real fatigue or only "spring fever," measurements are made by laboratory psychologists as to physical efficiency or reduction of mental efficiency.

**Ways to Test Yourself.**

Target practice, threading needles, bow and arrow tests, steadiness of the muscles, inserting a rod in a socket or tapping evenly a number of times upon a sounding board are only a few of the tests available.

The various senses, too, such as the powers of observation of the eye, the range through which it sweeps soon prove to the practical psychologist whether you are actually tired or have only convinced yourself that you are.

# Crochet and Tatting Designs

By Winnifred Worth.

**Child's Dress.**

The children are always thought of when any crocheting is to be done. Try this beautiful dress design.

Use No. 50 Cordoney.

**First Row**—2t., 2 ch., 2t., (shell) in 4 ch., from needle.

**Second Row**—5 ch., 1 t. in 1st t. of 2 ch., 1 shell 2 ch., 1 t. in last st. of 1st row.

**Third Row**—5 ch. 1 shell 3 m.

**Fourth Row**—5 ch. 4 m., 1 shell 1 m.

**Fifth to Ninth Row**—1 m. each row.

**Tenth Row**—Same as 1st row.

Finish neck, 4 dc. 1 t.

**Belt Strap**—2 m. each, finish with dc. and t., in colored thread, to match thread used for embroidery design.

**Belt**—Ch. 17, 15 dc.

**Buckle Strap** is made of rib st. 5dc. wide, sew on st. only, rp. until belt is desired length. Drop 1st. on each side until only 1 st. is left.

Buckle strap is made of rib st. 5 dc. wide, sew on with needle; make belt of colored thread.

Follow illustration for embroidery design or stamp dress any desirable pattern and embroider in color to match belt.

Use paper pattern for size of dress and crochet yoke to fit garment.

Crochet edge on bottom of dress to match that on sleeves and yoke.

A beautiful child's filet yoke is shown in instalment 50. It's the next one.

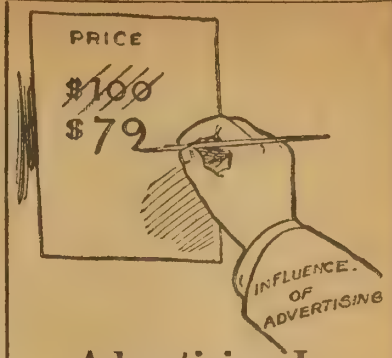
## How Sweet Is Syrup?



A cup of syrup is not as sweet as a cup of sugar but will frequently be found sweet enough. There is a tendency to over-sweeten foods. The table below gives the sweetening value of different amounts of corn syrup in terms of sugar and will be found useful in making sugar-saving substitutions in your recipes.

| Sugar. | Corn Syrup. |
|---|---|
| 1 cup equals | 1 3-4 cup |
| 3-4 cup equals | 1 1-5 cup |
| 1-2 cup equals | 4-5 cup |

Half syrup and half sugar give better results in cooking than all syrup. With one cup of syrup use one-fourth cup less liquid.

### Sterilize Bread Scraps.

While saving every ounce of bread, remember that the heat of the oven will sterilize scraps left on plates, and the shape of the bite makes no difference after the bread is rolled into crumbs.

## Advertising Is Beneficial

"Any manufacturer has two methods of procedure in marketing his product," says Collier's, the big national weekly. "He can attempt to reach thousands of dealers exclusively through a huge force of salesmen, or he can supplement his salesmen's efforts by intelligent advertising. By the first method he creates for the dealer a problem of getting the product into the consumer's hands; by advertising he acquaints the consumer with the product and influences him to buy from the dealer.

"Thus, creating a big market, he increases his production, lowers manufacturing costs, buys in quantities at lower prices, and can make a lower price to the consumer. Quantity buying, manufacturing and selling are not so easily achieved by the nonadvertiser.

"The nonadvertiser is generally the first to take advantage of any tendency to higher prices, says the advertisement. He has no good will with the consumer to maintain—his responsibility to the buying public is less. 'Higher prices are velvet for him.'"

**Kill All Flies!** They Spread Disease

Placed anywhere, Daisy Fly Killer attracts and kills all flies. Neat, clean, ornamental, convenient, and cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Ask for

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer today.

STANDARD OIL COMPANY
(California)

NEW PERFECTION OIL COOK STOVE

**Likes the Corner Letters.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I like to read the letters very, very much. This evening I saw the Farmer. I had a letter from my cousin in the navy. I wanted to read the letter first, but I hurried through it. I was afraid it would be supper time before I could get through reading the Children's corner. I am 9 years old the 2d day of November. If I have a twin I wish she would write to me. I will answer her letter. Aunt Nellie may I join the Children's Corner? If so will you please write to me and tell me? I am in the fifth grade. My brother went to work today at Bert Malone's. I will have to go to supper now.—Nettie Rurak, Pomeroy, Wash. (All the children who write to the Corner are cousins, Nettie. We are glad that you belong and are glad to recieve your letters.—Aunt Nellie.)

**Have a School Bands.**

Dear Aunt Nellie: I read the letters of the Corner and enjoy them very much. I have two brothers and one sister. Their names are Edward and Amos. My sister's name is Lillian. She is 6 days old. I have been wanting her for a long time. I am 11 years old and my birthday is September 17. I am in the seventh grade. Amos is 8 years old and in the fourth grade. Edward is 15 years old and in the ninth grade. We have a school band. It is the Liberty band. There are 15 pieces. My brother Edward plays a baritone, Amos plays an alto and I play a cornet. My teacher's name is J. Elmer Bovey. I have gone to him four years. I like school fine. I have been sick about all winter and have missed school a great deal. Have I a twin? If so I would like to hear from them.—Lucy Hule, Wheeler, Wash.

**Gets Along Fine at School.**

Dear Aunt Nellie: This is my first time to write to the Children's Corner. I am 11 years old and in the fourth grade. My teacher's name is Miss Wright. I like her. I have a pet pig and a pet pony. The pony is a month and a half old. My sister's name is May and my brother's name is Penn. I live in the country and we have not very much land. I am going to get a little automobile. Its name is the American Junior. I like the girls. I get along in school fine. There are 21 pupils in my room. My sister is in the sixth grade and my brother is in the third grade. I will tell some riddles: It is as round as an apple and deep as a cup and all the king's oxen can not pull it up? What is a thing with four eyes and can not see? It's black within and red without and has four corners round about. A man rode and yet he walked.—B. B. Port, Stanley, Wash.

**Have Formed a Home Reserve.**

Dear Aunt Nellie: I enjoy reading the letters very much. We have formed a Home Reserve down in our school to help the orphan children of France. We just have to give one penny a day and that will give the children a good living. We form a company of 10 and have a captain. Mildred Long is our captain. I think it would be nice if all the children would adopt one. We are going to give up our candy, nuts and gum to help the children of France, but what is that compared to what they have to stand. —Pearl Thomason, Wauconda, Wash.

**Clara Joins the Corner.**

Dear Aunt Nellie: My papa takes the Farmer. I have read the letters. I like them very much. May I join the Corner? This is the first time I have written. I was 10 years old February 5. Have I a twin? If so will they please write to me. I am in the last half of the fifth grade in school. I have gone three terms without being tardy or absent. We live two miles from school. I live in the country. I have four pets, two dogs and two cats. My dogs' names are Bob and Vic. The cats' names are Spot and Snowball. I am taking music lessons from my teacher. Her name is Miss Blanch Brown. With love to Aunt Nellie and the cousins I will close.—Clara Staley, R. R. 1, Colbert, Wash.

**Eleven Pupils in Her Room.**

Dear Aunt Nellie: I was 11 years old last December 5. My father takes the Farmer. I like to go to school and I am in the fifth grade. My teacher's name is Miss Willcutt. There are 11 pupils in our room. I have seven brothers and two sisters. Their names are Dennis, Henry, Clifford, Chester, Alfred, Ralph, Glen, Blanche and Anna. We have four cows, four calves, two horses, one colt, 13 sheep and six lambs, three rabbits, five little ones and lots of chickens. We all go to school but four.—Ellen Secrest, Neppel, Wash.

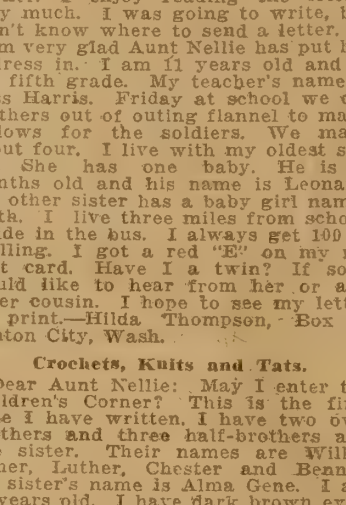
**A Vegetable and Flower Garden.**

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I am in the sixth grade at school. I am 12 years old and will be 13 September 29. My teacher's name is Mrs. Jacks. We have about five inches of snow here, but we have good weather. I am going to work out when school is out. I have knitted three wash cloths and am almost through with another one. I have been getting letters from two of the cousins in the Farmer. Us girls got up a little Red Cross meeting from house to house. We first have it at the schoolhouse. I am going to raise a little garden this year. Then I am going to get some pansies and many other flower seeds to plant.—Gertrude Ruchest, Box 3, Peola, Wash.

**A Red "E" on Her Report Card.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters very much. I was going to write, but didn't know where to send a letter. So I am very glad Aunt Nellie has put her address in. I am 11 years old and in the fifth grade. My teacher's name is Miss Harris. Friday at school we cut feathers out of outing flannel to make pillows for the soldiers. We made about four. I live with my oldest sister. She has one baby. He is 18 months old and his name is Leonard. My other sister has a baby girl named Ruth. I live three miles from school. I ride in the bus. I always get 100 in spelling. I got a red "E" on my report card. Have I a twin? If so I would like to hear from her or any other cousin. I hope to see my letter in print.—Hilda Thompson, Box 65, Benton City, Wash.

**Crochets, Knits and Tats.**



Dear Aunt Nellie: May I enter the Children's Corner? This is the first time I have written. I have two own brothers and three half-brothers and one sister. Their names are Willie, Elmer, Luther, Chester and Bennie. My sister's name is Alma Gene. I am 12 years old. I have dark brown eyes, brown hair and quite a light complexion. I am 5 feet 1 1-4 inches tall. Have I a twin? I can crochet, knit and tat. I enjoy doing such work. I hope the war will end soon. It is certainly serious. We have one dog and three cats. The dog's name is Shep. He is a good dog. The cats' names are Boots, Bibbs and Jet. I am in the sixth and seventh grades at school. There are 14 children going to school now—two girls and 12 boys. We didn't have school last Friday on account of our teacher having the Liberty measles. Her name is Miss Nillen.—Thelma Reynolds, Ellensburg, Wash.

**Our Duty Is to Hooverize.**

Dear Aunt Nellie: I select for my subject, Hooverizing, as we certainly are Hooverizing these days. I think that we all should Hooverize and economize in every way we can. The main drawback is that the substitutes that go with wheat flour are much higher in price. But, as I have two brothers now in the army, I feel it my duty to Hooverize. I also have other relations in the army. I will also help raise as much food as I can. My folks raised quite a lot of potatoes last season and now can hardly sell them at any price. But we are going to try it over again, in order to help win the war, as we can not help do the fighting. I think it is our duty to help in the way of raising food for our soldiers. The meatless days and wheatless days don't bother me much. I wrote to Sally, but she did not write to me. I am in the fifth grade at school. I am 12 years old. My birthday is December 19. My teacher's name is Miss MacDonald. I like her fine. We are making washrags, gun wipers and joke books at school. I have made two washrags and six gun wipers. My mother is knitting a washrag for my brothers in the army. I have a service pin with two stars on. The two stars stand for my two brothers in the army, Almon and Frank. Ruby Warren, Route No. 1, Box 2B, Elma, Wash.

## Shadow Pictures

Shadows may be thrown on a wall or screen so as to form pictures in various ways. The most common shadow

pictures are made by holding the two hands so that their shadows will resemble some animal or bird. To make

such pictures well requires considerable skill. The position of the hands in making two of them is here shown.

**A Chewing Gum Day.**

Dear Aunt Nellie: I am in the fourth grade. The school is going to give a patriotic program. I am 9 years old. I will be 10 July 6. Have I a twin? We have a team. Their names are Nellie and Colonel. We have a cow named Whitey. My sister's name is Florence and brother's name is Bertie. I belong to the Red Cross. Mamma is sewing for the Red Cross. I have a cousin in France and an uncle in the training camp in Mississippi. My uncle sent me a silk handkerchief for Christmas with pictures of soldiers on it. At school we have a chewing gum day. It is Wednesday. I am in a flag drill at the program. May I be a cousin? I like our teacher fine. Her name is Miss C. Spalding. We have a mile to go to school. I like school fine. We are going to sing "Oh, Columbia the Gem of the Ocean" at the program. I wish you could come to see us go through the flag drill. Please tell Gladys Mable McCully to write to me. I saw her letter in the Corner and thought it was very interesting. Thelma Smith, Tiger, Wash.

**Lucretia Knits Washcloths.**

Dear Aunt Nellie: I enjoy reading the Corner. I have one sister. Her name is Gertrude. She is 4 years old. I was 10 years old April 4. My name is Lucretia. We have a Junior Red Cross in our school. I have joined it. We have made one quilt. I have knit one washcloth and I have 7½ inches on another one. I am in the fourth grade. I go just a little ways to school. I go to school in town. The snow has all gone here. It is muddy and some water around. Here are some riddles: A riddle, a riddle, as I suppose, a hundred eyes and never a nose. Answer, cinder sifter. Patch upon patch, and a hole in the middle; if you guess this riddle I will give you a fiddle.—Lucretia Reynolds, Box 12, Fairfield, Idaho.

**From a Nova Scotia Girl.**

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I enjoy reading the letters very much. I am a Nova Scotia girl. I am 13 years old. I go to school. I am in the sixth grade at school. I have two brothers and three sisters. My papa is in the west and my mama is dead. My oldest brother is in the war. We take the Farmer. I like to read the stories in it, too. For pets I have two cats and a pretty horse. I call my horse Nellie. I have two miles and a half to walk to school. I live on a farm of 200 acres. I would be very glad to hear from each of the cousins or Aunt Nellie.—Georgena Baillie, River John, Nova Scotia.

**Bernice Lives in Utah.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters. I would like very much to be a cousin. I am 11 years old. My birthday is the eighth of July. If I have a twin I should like them to write. I have one brother and one sister. Their names are Meda and James. I have no pets. I go to school. I have one mile to walk to school. My brother goes, too. He is in the fourth grade and I'm in the fifth grade. I shall write again.—Bernice Weddop, Tremonton, Utah. R. F. D. Route A.

**Dorothy Wants a Twin.**

Dear Aunt Nellie: I enjoy reading the Children's Corner. I earned my first money picking up potatoes. My papa gave me $2.50 and my little sister got $1.50. I have three brothers and three sisters and their names are Guy, Ulric and Harold. My sisters' names are Eva, Ila and Delphene. I live on a farm of 850 acres. We have seven cows and 18 horses. I am going to school. I am in the fourth grade. I was 11 years old November 16. Have I a twin?—Dorothy Shelhamer, R. F. D. No. 1. Box 50, Wilsall, Montana.

**Nine Boys and Five Girls at School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 12 years old and will be 13 July 10. My father takes the Farmer. I live on a 40-acre farm. We have two horses, two cows and some chickens. I am going to school and am in the fifth grade. There are 14 pupils in my school, nine boys and five girls. May I join the Corner? Have I a twin? If I have I wish she would write to me.—Mabel Barr, Eatonville, Wash.

**Nellie Has a Turkey Hen.**

Dear Aunt Nellie: I am 11 years old. My birthday is June 8. I will be 12 years old then. I have two brothers and two sisters. My sisters' names are Hazel and Mabel and my brothers' names are Alva and Earl. Earl is my half-brother. His name is Earl Barton. Alva is working up at Osborn's. Alva is 14, Hazel is 10, Mabel is 8 and Earl is 4 years old. Earl is the baby. I have 20 little Rhode Island chickens. I have one turkey hen and she is sitting now. Mama has some little chickens and nine turkey hens. Papa has four horses and two colts. Their names are Pet, Nellie, Flossie and Dick. The colts' names are Jet and Beauty. We have one cow, one pig, two cats and one puppy. The cow's name is Spot and the puppy's name is Laddie. We walk one mile to school. I am in the sixth grade. Hazel and Mabel are in the fourth grade. We had two teachers this year. Our first teacher's name was Miss Gilmer. She was sick and had to stop teaching school and go to Seattle. Our other one is Miss Dills. I like her fine. I go to Lake View school, district No. 105. Papa takes the farmer.—Nellie Maley, Wheeler, Wash.

**Cutting Scraps for Pillows.**

Dear Aunt Nellie: We have been taking the Farmer for three months. I have been reading the letters so I thought I would write. This is my first letter to the Corner. I am 9 years old and in the fifth grade. I have brown eyes and natural curly hair. I also have three sisters and two brothers. I live on a 60-acre farm. We have three horses, two cows, one cat and one dog. We also have one pig. I walk a half a mile to school nearly every morning. My teacher's name is Miss Davidson. She is a nice teacher. I am very patriotic. I joined the Red Cross and am cutting scraps for pillows. Have I a twin? My birthday is February 7.—Maveria Green, age 9, Route 10, Hillyard, Wash.

**Fifteen Little Pigs Are All Red.**

Dear Aunt Nellie: I am the little girl who did not sign her name. My brother started to read the children's letters a few weeks ago and thought they were good. I have three sisters and one brother. My sisters' names are Bernice, Elvira and Mae. Bernice is 13 and in the seventh grade. Elvira is 11 years old and in the sixth grade. Mae is 8 and in the second grade. I am in the fourth grade. My birthday is August 20. We have two little kittens; their names are Toots and Snowball. They are about 6 months old. We have 15 little pigs, all of them are red. I guess I won't forget to sign my name this time. I would like to see Aunt Nellie.—Harriet Blyton, age 10, Bishop, Wash.

**Have a Good Time at Home.**

Dear Aunt Nellie: I was 12 years old March 2. I live in the country on a 160-acre farm. We are building a new house. We have one cow, two calves and seven horses. I have a pony named Stell, which I ride to school. I have one mile and a half to go to school. I am in the sixth grade. There are six children in our school. Our school joined the Junior Red Cross. We are very proud of our charter. I have six brothers and one sister. They are all home this winter. We certainly have a good time together. I am going to raise a garden this summer. I have two Black Minorca hens and one rooster. I hope my letter will be welcome to the Corner.—Bessie Cheyney, Route 2, Republic, Wash.

**Buttercups and Birds Are Here.**

Dear Aunt Nellie: I wish I could find a twin. I love to read the nice letters. Some of the cousins write big letters. My brother's name is Mervil. He got his arm broken yesterday. He was in a tree and he fell out and broke his arm. He was taken to the doctor. He just got back tonight. It is spring here now; the buttercups are in bloom and all the birds are here. When school is out I am going to have a garden. We have sent for the seed. We all ought to have a big garden. Food will win this war. I wish all the cousins would have a bik garden. We have a dog and a cat. The dog's name is Tip. She is a shepherd dog.—Wilma Little, Fruitland, Wash.

**Would Like to Have a Twin.**

Dear Aunt Nellie: This is the first time that I have written in the Children's Corner. I live in the country about two miles from town. I am 10 years old. My birthday is August 18. I would like to have a twin. If I have I would like for them to write me soon. I am in the fifth A grade. There are 44 in my room. I have no sister, but have one brother 13 years old. I have one dog and one cat. Their names are Tricks and Pussy. We have one cow and two calves. —Matie Burchett, Bellingham, Wash. R. F. D. No. 2, Box 303.

**Wants the Corner to Grow.**

Dear Aunt Nellie: I am 12 years old and am in the sixth grade. My birthday is October 12. Have I a twin? If so, I wish she would write. I go to school on the stage. My teacher's name is Miss Sefrit. I like her fine. I am doing fine in school. I have two sisters. Their names are Jennie and Nellie. I want the Corner to grow. Jennie is going to write a letter.—Leta Lane, Box 294, R. F. D. 2, Bellingham, Wash.

**Pick Flowers in the Woods.**

Dear Aunt Nellie: I am 7 years old and am in the first grade. I like to go to school very much. My teacher's name is Miss DeValois. I have light brown hair and blue eyes. I have three sisters. Their names are Mathilda, Henrietta and Jacoba. I have one brother. His name is John Henry. We have a large woods back of the house. We go there to pick flowers in the summer. We also pick blackberries there.—Cornelia Muyskens, R. R. 1, Lynden, Wash.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

# FOR THE ENTIRE FAMILY

# ALL ENJOY THE STATE FARM PAPER

One of the reasons for the rapidly growing popularity of this paper is the fact that it appeals to every member of the family circle.

We will appreciate your telling neighboring families about its stories, articles and features.

When we introduced the "direct-to-the-consumer" idea in our subscription business we hoped to have hearty cooperation from our readers and we are not disappointed. The new system is working splendidly. Already thousands have taken advantage of the big saving which our offer makes possible.

Much of this success is due to the efforts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those who they feel will be interested in a high-grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. We will appreciate your assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices.

## A Real Saving

Following Rates Now in Effect for Subscriptions to The Washington Farmer:

25c for One Year
50c for Three Years
$1.00 for Five Yrs.

# NEWS FOR BREEDERS

## Mears Sells His Herd.

S. M. Mears Jr., who for some 20 years has been breding Poland China swine at Woodland, Wash., has sold his herd to Merrill & Ring of Seattle, and has accepted the position of supedintendent of the stock ranch of these gentlemen at Pysht, Wash. The Mears herd included the 1000-pound big type boar, Superba Jr., that Mr. Mears purchased from the Royston estate of Payette, Idaho, last fall. It is the intention to build up a herd that will be second to none in the west and with Mr. Mears in charge. The purchase of another greatly bred boar, this time from an eastern breeder, will probably soon be announced. It it also planned to run a herd of high grade Shorthorns, and in time breed purebred cattle.

Pyhst is away up toward the point of the Olympic peninsula, where lumbering is now the principal industry. It is a wonderful pasture country, when developed, and Mr. Mears is enthusiastic over its possibilities. H. A.

## Purebred Stock Shipments.

Carlton Sentinel: Foothills farm has shipped purebred stock as follows: A Guernsey bull to W. A. Taylor, Kalama, Wash.; a Shorthorn bull to W. A. Northcraft, Dillard, Ore.; Shorthorn bull to Jacob Jones, Roseburg, Ore. Recently the farm shipped a Yorkshire boar to Sacramento, Cal. Jacob Jones also bought one of Frank Brown's fine Hampshire sheep.

## Guernsey Breeders Organize.

Recently through the efforts of R. M. Turner, county agent of Island county, Washington, the Island County Breeders' association was formed, with a membership of 15 live Guernsey breeders. The officers elected at this first meeting were J. P. Frosted, president; P. A. Frosted, vice president, and W. P. Parker of Oak Harbor, secretary.

The object of this association, as stated by President J. P. Frosted, is to get in several carloads of good Guernsey heifers and a number of sires and in this way not only improve the herds of the members, but to make Island county, Washington, a Guernsey center, both for breding stock and for Guernsey milk as well.

## Live Stock Notes.

Colorado lambs in fleece have reached $22 on the Chicago market.

In 1880 the first herd of Longherds was trailed into eastern Montana from Texas.

During 1917 about $5,000,000,000 pounds of milk were produced in the United States.

At the Calgary, Alberta, sale of 778 bulls, the top price was made by a Hereford at $3200.

Three years ago there were 18,000 breeders of Shorthorns in the United States. Now there are 30,000.

A sale of 65,000 pounds of wool has been made by the Berg Sheep company of Idaho to a Philadelphia house at 55 cents.

During six important auctions of Herefords held in the south recently 115 bulls averaged $287 and 196 females $322.

E. Z. Russell, Omaha, Neb., has been appointed by the United States department of agriculture as a specialist in swine husbandry.

R. P. Heren of Miles City has been elected president and W. K. Floweree of Great Falls, secretary-treasurer of the Montana Stock Growers' association.

## Grand Champion Shorthorn Sells for $4500

# Breeders' Department

GUERNSEY AUCTION
53—Famous Gile Herd—53
Astoria, Ore., May 23, 1918

About 25 registered Guernseys, the balance high grades, consisting of cows in milk, bred heifers, young calves and a number of excellent young bulls. They represent some of the best blood lines of the breed, for both production and show type. The herd of Guernseys from this farm have done much to make the breed famous, both as producers and show winners.

For convenience of those coming by train the cattle will be taken from the farm at Chinook, Wash., to Astoria, Ore. They will be sold on the W. O. Reith farm near Young's bridge. Free transportation to and from trains on day of sale. Catalog gives full information. COME. Lunch at 12 o'clock, sale immediately following.

Herd headed by Knoll Slope Colonel, assisted by Jolly Lad IV. Correspondence solicited.

**Bliss, Idaho.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, May 13.—Corn bulged in value today owing more or less to a good-sized decrease of the visible supply total. Prices closed strong at a shade to 2½c net higher, with May $1.27 5-8@1.27¾ and July $1.45⅛@$1.45 1-4. Oats advanced 1 5-8c to 2 1-4c. Provisions finished unchanged to 45 cents lower.

It became apparent almost from the outset that the corn market was in an oversold condition. Evidence that big commission houses were buying made shorts cover freely, and brought about a decided upturn in quotations soon after the opening

Demand, however, failed to last, and the market had undergone a material setback when toward the end of the session a falling off in the visible supply figures attracted notice. Fresh advances then followed and the close was at virtually the top figures of the day.

Oats were bullishly affected by abnormally cold weather northwest and by excessive rains elsewhere.

Weakness of the hog market carried down provisions and so, too, did disappointing exports. Grain strength, though, led afterward to rallies.

### Cash Quotations.

CHICAGO, May 13.—Corn—No. 2 yellow, $1.68@1.70; No. 3 yellow, $1.57@1.63; No. 4 yellow, $1.35@1.48. Oats, No. 3 white, 75@76 1-2c; standard, 75¾@76¾c. Rye—No. 2, $2.05@2.10. Barley—$1.30@1.50. Timothy—$5@8. Clover—$18@28. Pork, nominal; lard, $24.77@24.87; ribs, $22.75@23.37.

## Seattle Market.

SEATTLE, May 11.—The apple season in Washington, regarded here as one of the most successful from the standpoint of profits and quality from grower to retailer, is now conceded to be a closed incident. Last quotations at Yakima, where practically all the unsold apples in the state are now held, are $2.50 f. o. b. for Winesaps of 225's and larger, eastern buyers being the source of the bids. There is little of this fruit to be had, cider and jumbles grades being all that is available. There are no unsold apples at Wenatchee.

### BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 36@37c per dozen; eastern Washington, Oregon and Idaho, 34@35c.

Poultry—Broilers, 35@40c lb; live, old roosters, 17@20c lb; squabs, large, $3.50 dozen; geese, fat, live, 18@25c; ducks, live, fat, 27@30c.

Butterfat—16c lb; dairy butter, 30@35c.

Beef—Buying prices: Prime beef, steers, 16@17c; cows, fat, 15@16c lb; heifers, 16@17c.

Hogs—Light, 18@21c lb; heavy, 18@20c lb.

Veal—Fancy light, 17@19c lb; heavy, 16@17c lb.

Hides—Salted, 14c lb; flint-dry hides, 29c lb; salt kip, 16c lb; green hides, 11c lb; green calf, 23c lb; dry calf (under 6 pounds), 29c lb; bulls and dry salts, 4c lb. less; green bulls, 9c lb. Clean, long wool, western Washington flint dry pelts, 39c per lb; heavy to clean eastern Washington flint dry pelts, 30@35c lb.

Asparagus—Kennewick, 10@12½c lb; Oregon, 10@12½c; Granger, 10@15c.

Potatoes—Puget sound, $17@22 per ton; eastern Washington, $28@30 per ton; seed, 1¼@1½c per lb.

Feed—Bran, $34 per ton; shorts, $35.50; scratch feed, $79; all grain chop, $75; oats, $71; sprouting oats, $78; rolled oats, $73 ton; whole corn, $75; cracked corn, $77; rolled barley, $77; clipped barley, $78; alfalfa meal, $36; oil meal, $72; egg mash, 65.

Hay—Eastern Washington timothy, $36@37 per ton; do double compressed, $38@39; alfalfa, $26; Puget sound, $26@27; straw, $15.

## Spokane Market.

# Washington Winter Wheat Acreage

The abandonment of winter wheat for the state of Washington this year is not in excess of that of the average and is materially below that of last year. This is the summary of the report made by E. T. Marchetti, field agent of the government bureau of crop estimate, under date of May 8. Mr. Marchetti finds that the abandonment of local fields here and there in the Palouse and Big Bend countries, while slightly greater than the average abandonment in those localities is substantially offset by the extremely small amount of resowing throughout Walla Walla and adjacent counties. There was practically no winter killing of north hill slopes. Indications point to a production of a little over 10,000,000 bushels of winter wheat in the state of Washington. Of the total of 422,000 acres in winter wheat this season seven counties—Asotin, Columbia, Garfield, Klickitat, Spokane, Walla Walla and Whitman—have 382,290 acres, as follows:

| County | Acreage Sown | Acreage Abandoned | Ac. Remaining to be Harvested | Condition |
|---|---|---|---|---|
| Asotin | 21,000 | 420 | 20,580 | 100 |
| Columbia | 40,040 | 400 | 39,640 | 95 |
| Garfield | 34,450 | 345 | 34,105 | 95 |
| Klickitat | 30,400 | 1,725 | 28,675 | 90 |
| Spokane | 28,050 | 2,144 | 25,906 | 80 |
| Walla Walla | 102,310 | 1,023 | 101,287 | 95 |
| Whitman | 126,040 | 12,080 | 113,960 | 80 |
| Totals | 382,290 | 18,137 | 364,153 | 90 |
| State Totals | 422,000 | 21,100 | 400,900 | 90 |

Every Weyerhaeuser Grain Tank

is a blow at the kaiser, because it

Conserves American Man Power

Think of the labor saved by bulking grain.

Think of the satisfaction and permanence of farm storage.

Think of the price of sacks and the uncertainty of their supply.

No skilled labor is needed to erect the Weyerhaeuser Grain Tank, yet there is nothing cheap or temporary in its construction. Its special features permit of general use when empty of grain.

Our capacity for manufacture and shipment is already heavily taxed and late buyers will be disappointed. ORDER EARLY.

Weyerhaeuser Timber Co.

EVERETT, WASHINGTON.

THE VELIE TRUCK

*You Can Depend Upon a Velie Truck for Hauling Milk*

Because—

Velie Trucks are making trips in spite of all weather conditions. You can depend upon a Velie to get your milk to condensery and cheese factory at a low cost. The fact that dairymen are depending on the Velie accounts for their steady increase in use in the State of Washington.

Roesch Motor Car Co.

Pine Street and Boren Ave., Seattle, Wash.

WANTED--1000 tons of mixed country scrap iron

In carload lots of not less than 25 tons each. Write for prices if interested.

PACIFIC HIDE & FUR DEPOT.
Joseph Thiebes and C. T. Symmes.
1101-09 Railroad Ave., Spokane, Wash.

## CORN AND PUMPKINS.

### Farmers Do Not Plant Enough.

John Klingele of Yakima writes: "Nobody should experiment too heavy this time and not depend on hired help more than absolutely necessary. Be sure that, other things being equal, you have enough feed of your own to market your stock; don't raise young stuff that somebody else may not want to feed, for soon there will be more pigs than feed at the right price. People get weaned away from high-priced things and are hard to bring back again. We see that with potatoes this year, and it will take several years before people will eat as many potatoes as they have done, but that will not be the case with wheat flour, as it is cheaper now than most of the substitutes. If we had a general public market day twice or oftener a year, like in old Missouri, then we could get rid of most anything, but here everybody is for himself, and that often is hard skidding. I think people don't plant enough sweet corn and pumpkins. The wireworm does not bother pumpkin seed, and in a cornfield pumpkins will fill out the vacant places and perhaps make up for corn lost. My best money crop last year was a small patch of popcorn, although my field corn made over 100 bushels of corn to the acre. I have my seed corn yet, and it tests 100 per cent." Mr. Klingele adds that they always have a surplus of most things, but that gardens are not made in the same way they are on eastern farms. He says: "We have three kinds of berries and raise a lot of sweet corn, cabbage, tomatoes, carrots, etc."

## Put Forth Best Efforts.

**By C. C. Brown, Castle Rock.**

There is no lack of patriotism in Cowlitz county, that has been reported. Of course stories will get started and go the rounds, gathering a little as they go, and by the time the last person gets hold of it the story is out of all reason, and the farmers, as a rule, are doing all they can to make good in the crop supply. Of course there is criticism of the mistakes of the government departments, but it has not disgruntled to a apoint where they are failing to put forth their best efforts, willing to overlook hardship and do their utmost.

## Drying Potatoes for Stock.

W. A. Linklater, superintendent of the Western Washington experiment station, does not believe drying potatoes for stock feed will be a paying venture unless plenty of cull potatoes can be obtained at about $10.00 per ton. With beet pulp normally selling at $25 per ton and with the possibility of $40 or $50 corn next year, the building of drying plants at a time when machinery is abnormally high is a risk.

PLEASE send me The Twice-a-Week Spokesman-Review and The Washington Farmer under your combination offer, for which I am enclosing $1.00. I have also included five cents for one of your Farm Service War Flags.

JIM SANFORD.
Oroville, Wash.

# Want Ads

### HELP WANTED—FEMALE 1

SUMMER COURSE IN TELEGRAPHY opens June 10. Jenkins Institute of the Spokane Y. M. C. A.

PLUMBING SUPPLIES AT WHOLESALE. Stark-Davis Co., 212 3d st., Portland, Ore.

### SEEDS 620

IF YOU HAVE ACCLIMATED SEED TO sell, it will pay you to advertise it in this classification. If you want to buy seed adapted to western soil and climate watch what is offered in this department.

FOR SALE — SEED BEANS; LITTLE White Navy and Lady Washington (large White Navy). J. E. Clemens, Mohler, Idaho.

### SEEDS 620
Continued.

SEEDS—THE KIND THAT GROW. You can't keep them in the ground. Send for catalogue.
BUTZER'S SEED STORE.
188-190 Front St.,
Portland, Oregon.

UNION SEED & FUEL CO., BOISE, IDA. Send for catalog. Compare prices on tested Idaho acclimated field and garden seeds. Complete line of poultry supplies and stock foods.

WE SPECIALIZE IN TIMOTHY, ALFALfa, clovers, seed for forage crops. Write for prices. Mark Means Co., Lewiston, Ida.

SUDAN GRASS SEED FOR SALE—MAKES excellent late green feed, 30c per lb. Wm. Neuenschwander, grower, Gaston, Ore.

IDAHO ACCLIMATED SEED CORN; WELL tested, desirable Yellow Dent. Write H. C. Baldridge, Parma, Idaho.

### FARM LANDS—FOR SALE 651

NO PAYMENT DOWN.

WE SUPPLY THE LAND AND ASK NO PAYMENT UNTIL YOU CAN MAKE SAME FROM CROPS. IT STANDS TO REASON WE MUST HAVE GOOD LAND TO OFFER YOU THESE TERMS. OUR LAND IS LEVEL, THE SOIL A SILT LOAM, NO BETTER LAND FOR ALFALFA, MILO MAIZE, FRUITS, NUTS, ETC. WATER FOR IRRIGATION IN ABUNDANCE WHENEVER NEEDED; GOOD DRAINAGE, CLIMATE AND TRANSPORTATION, SCHOOL ON TRACT; ON STATE HIGHWAY, WITHIN 3 MILES OF RED BLUFF, TEHAMA COUNTY (BANNER COUNTY OF CALIFORNIA). PRICE $150 PER ACRE. SEND FOR BOOKLET AND MAP.
F. D. BURR CO.
219 Montgomery street, San Francisco, Cal.

HELP.

We still need a few more settlers to finish our 6000 acres, which is being sold in 40-acre farms at $25 per acre. Ten yearly payments at 6 per cent interest.

By selecting your future home in this splendid tract at Bryant, Snohomish county, you are not alone buying a fertile and productive piece of land, but you are buying the best investment in the state today. Railways, paved roads, schools, churches, canneries, creameries and mills.

The best proposition on the market for the man who wants a farm. For further information address the owners, BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

ALDER BOTTOM AND CLAY loam land, formerly owned by Isaac Stevens, Washington's first governor; selected by him when he had the pick of the whole country; 10 to 40 acre tracts, many crossed by running stream; rural mail delivery, bus service for school children; railroad station almost on the land; good roads; good neighbors; ideal climate. Price $75 an acre. Terms. Write us now.
A. H. REID & CO.
314 NEW YORK BLK.
SEATTLE, WASH.

MONTANA STOCK RANCH, 2300 ACRES; 1600 acres fine bottom land, with thousand inches water rights for irrigation; partly in crop; improvements good; adjoins live town in Great Falls territory. Excellent subdivision proposition. Price $27.50 per acre. Terms given. Many other snaps in farm lands. Equity Realty Co., 104 First ave. S., Great Falls, Montana.

NO. 1004—75 ACRES, ON RIVER; NEAR steamboat wharf; 1500 fruit trees, mostly young peach and apple; 8-room dwelling, front porch, 2 halls, attic, shade, well fenced; 15 acres of woodland, chestnut and oak; 7 acres in meadow; 6½ miles from county seat; barn and stable, new pig pens, 12x60; buildings worth $3500. Price only $3250. Russell Realty Co., Baltimore, Md.

682-A. IMPROVED WHEAT FARM; SEVEN miles south of Hartline, Wash.; on Sunset highway; good land; all in cultivation except 15 acres; 300 a. in summer fallow; all fenced; large house, fine barn, good outbuildings; plenty water. Only $45 per acre. $6000 cash will handle. A. L. Tucker, Coulee City, Wash.

FOR QUICK SALE—ONE-HALF SECTION farm, 4 miles from Moscow. Price right to sell, and liberal terms. The place is all in crop, one-third of which goes to the purchaser. Possession given Oct. 1, 1918. If interested, write P. O. Box 393, Moscow, Ida.

240-ACRE FARM NEAR LYLE; ¾ UNDER cultivation; ¼ now in grain; 10-acre orchard; other crops; good buildings; fences; water and soil. Price $40 per acre, including ½ crop. D. D. Bathrick, Lyle, Wash.

CALIFORNIA STOCK RANCH, SISKIYOU Co.; 320 a. (can be divided); 150 a. in cultivation; 290 a. tillable; open range; 6-room house, large barn, furniture, stock, tools included. No trade. S. E. Hummel, Tecnor, Cal.

BARGAIN — WILLAMETTE VALLEY stock or grain farm; bottom land, half clear; on main highway; good bldgs.; 525 a. $50 per a. F. L. Wood, Salem, Ore.

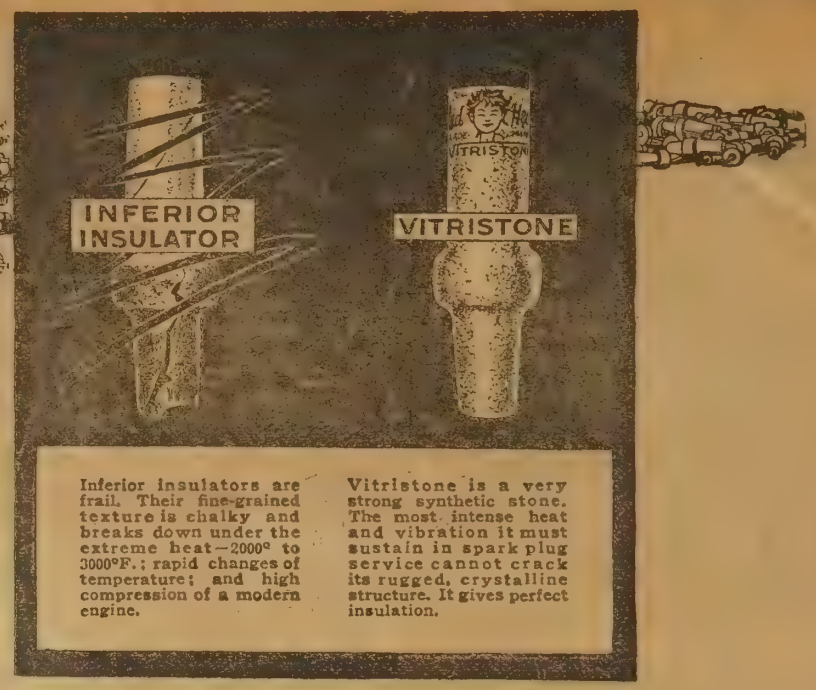
2600 ACRES LOGGED-OFF LAND, CLOSE to Astoria; finest of small fruit, vegetable and dairy land. Only $25 an acre. L. A. Larsen, Astoria, Ore.

WE ARE AGENTS FOR THE BEST LAND in South San Joaquin Irrigation district on the easiest terms. Address Ripon Nursery Co., Ripon, Cal.

GOVT. LAND, ORE., CALIF. BOOKLET. Joseph Clark, Sacramento, Calif.

### FARM LANDS—WANTED 654

WANTED — TO HEAR FROM OWNER OF farm or unimproved land for sale. O. K. Hawley, Baldwin, Wisconsin.



I WANT TO HEAR FROM OWNER OF farm or unimproved land for sale. Mrs. W. Booth, Pulaski, Iowa.

### CITY PROPERTY—FOR SALE 690

LOT, 50X100, AND BEAUTIFUL 8-ROOM house, with bath; E. Portland; 4 bedrooms, closet in each; built-in bookcases, buffet; gas heating; up-to-date electric fixtures; fireplace, full basement, stationary tubs; house screened; 2 porches; interior fine; painted outside last year; 5-yr. fruit trees, berries, grapes, roses, arbor; back yard fenced; fine view; restricted residence dist. $1400 cash; $25 mo. will handle. No agts. Write if in earnest. Owner, B-9, 411 Stock Ex. bldg., Portland, Ore.

More than 42,000,000 spark plugs were thrown away last year, largely due to the breakage of inferior insulators.

# 42,000,000 spark plugs junked in 1917

***This enormous waste, largely due to the breakage of inferior insulators, rendered needless by a new artificial stone***

EVERY motorist knows the constant trouble he has with faulty spark plugs.

This trouble is largely due to the use of inferior material in the insulators. They are frail and simply can not stand up under modern engine conditions. No one should expect them to.

Inferior insulators crack and break down quickly. They cannot withstand the intense heat of the present-day engine — 2000° to 3000°F.; the sudden temperature changes; high speeds; and rapidly recurring hammer-like blows of compression. They short-circuit, miss fire and are thrown away.

## The development of Vitristone

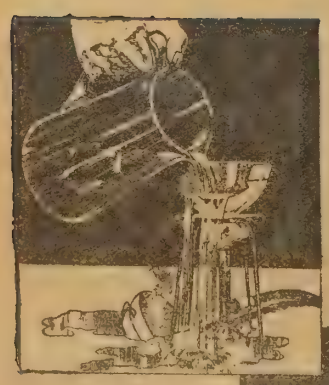
After eight years of experimentation in the Red Head potteries, spark plug experts perfected an insulating material that would not crack under the most severe engine conditions.

Practical tests prove this discovery to be the greatest advance made in spark plug construction in the past ten years.

Vitristone—the new insulator—is an artificial stone. Its rugged, crystalline structure is unaffected by rapid changes from extreme heat to extreme cold. It withstands the most intense vibration.

The difference between inferior insulators and Vitristone under the heat of the engine is the difference between a porcelain-ware dish and a stone-ware dish. If you suddenly pour cold liquid into a hot porcelain-ware dish, the chances are it will crack, but you can subject a stone-ware dish to the same test without damaging it.

## Built for years of service



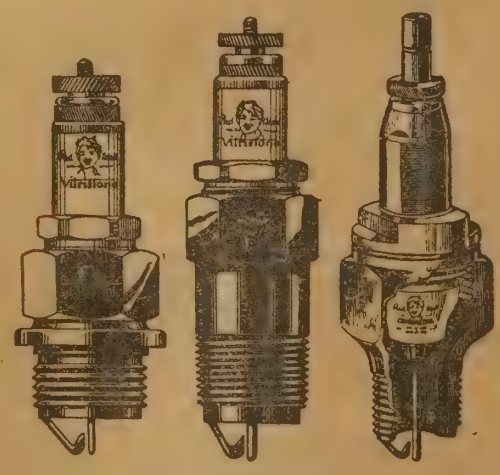
Red Head spark plugs are built for years of service. Rigid tests insure gas-tightness and insulator efficiency. If a Red Head misses, clean it and nine times out of ten it will fire 100% right. It is easy to clean.

Don't wait till your spark plugs crack and miss fire. *Put a full set of Red Head plugs in your engine today.* You will find that they stand up perfectly under the most severe working conditions.

There is a Red Head plug for every requirement.

Your dealer has Red Head plugs in stock or can get them for you. If he does not, write to us for the name of the nearest dealer who can supply you.

**Emil Grossman M'f'g Corp'n**
**Bush Terminal, Bldg. 20 Brooklyn, N. Y.**



**Porcelain-ware.**
Many inferior insulators are made of the same material as a cheap porcelain-ware cup, which quickly cracks and breaks under sudden and extreme changes of temperature.

Stone-ware
*Stone-ware withstands extremes of heat and cold. That is why Vitristone insulators do not break*

Red Head Spark Plug
Vitristone Insulator

*Red Head Vitristone Standard ⅞"—18—an all-purpose trouble-proof plug. $1.00*

*Red Head Vitristone Special for Fords. Long body assures accessibility. $.75*

*Truck and Tractor ½" Vitristone cap protects mica core. $1.50*

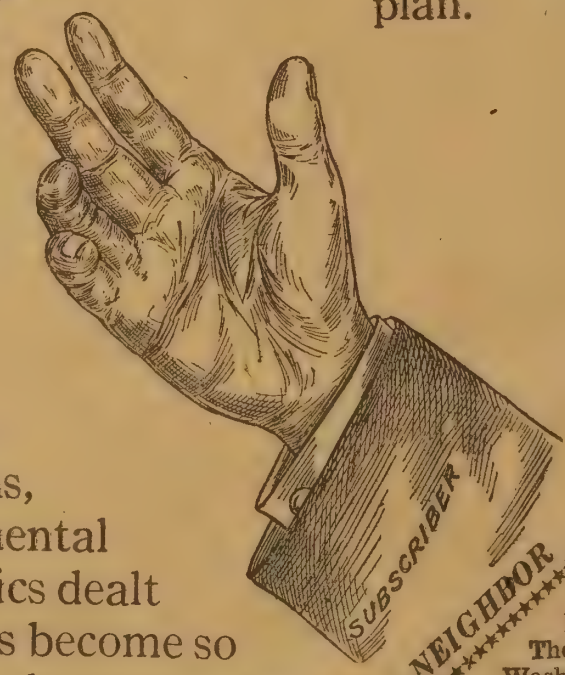
POWER FARMING BRINGS IN A NEW EPOCH

# DIRECT TO READERS

**That is the central idea in preparing this year's subscription plan of The Washington Farmer. It is the reason for our request that readers pass along copies of this paper to neighbors where the various issues have been read.**



We are glad to say that our new plan is being supported wholeheartedly by hundreds who believe in the cooperative principle. We said to our friends—"Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, if you believe in eliminating the middleman, help us make our experiment a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

## ENTERTAINING SUMMER READING

The summer visits of this paper are sure to be welcome. Its exciting stories, its interesting articles, and its helpful departments will all be appreciated when you have a little spare time for the enjoyment of reading. Then you will want to know of crop conditions, of price tendencies for farm crops, of governmental action affecting the farmer, and many other topics dealt with by your state farm paper. The "Farmer" has become so much worth while that letters are being received constantly from readers who say they do not wish to miss a single copy.

## A Real Saving

*Following Rates Now in Effect for Subscriptions to The Washington Farmer*

*25c FOR ONE YEAR*

*50c FOR THREE YEARS*

*$1 FOR FIVE YEARS*

IF YOU'VE ANSWERED, PLEASE PASS TO A NEIGHBOR

May 23.

## Mobilize Threshermen

### Much Wheat Lost by Carelessness

A project to mobilize America's threshermen to save millions of pounds of wheat now lost by inefficient threshing practices is announced by the U. S. food administration.

To do this, a special grain threshing division has been created as a part of the food administration grain corporation, with Captain Kenneth D. Hequembourg, U. S. R., at its head. Captain Hequembourg is actively engaged in wheat production in Oklahoma, and for some years has had first-hand experience in threshing operations. He was recently connected with the equipment department of the cantonment construction division of the army, and organized the equipment record branches at construction camps. The grain threshing division will have national headquarters at the office of the United States Food Administration Grain corporation at 42 Broadway, New York city.

It is estimated that from 1 to 10 per cent of the wheat crop is lost to the country by hurried and careless operation and inefficiency of threshing machines. In some sections, however, losses are materially greater than in others. Waste in threshing depends largely upon the condition of the machine as it enters the harvest field and the care with which it is operated. While it is believed that the majority of machines operate satisfactorily conservative estimates indicate that on an average:

One and one-half bushels in every hundred threshed can be saved by having all machines go into harvest (1) in excellent repair; (2) with ample power: (3) by providing that during harvest they are efficiently adjusted to meet varying conditions.

One bushel in every hundred threshed can be saved by having all machines in such repair that little or no grain leaks under and around them on the ground, and providing that what does leak out in this manner and otherwise scattered by the machine, is cleared up and threshed before the machine leaves the field.

Three-quarters of a bushel in every hundred threshed can be saved by careful handling of bundles from the shock to the machine or stack and by arranging the bundle wagons so that all grain which shatters in them is caught and saved.

Thus it is estimated that a total or three and one-quarter bushels in every hundred threshed may be saved. In Kansas alone this would amount to nearly 3,000,000 bushels.

With such facts in view, the threshing division will begin work immediately in the 11 southern wheat states—Texas, Oklahoma, Kansas, northwest Arkansas, Kentucky, Tennessee, northern George, South Carolina, North Carolina, Virginia and Maryland.

The division has secured a threshing machine demonstration plant centrally located in Indianapolis, Ind., where a corps of men to be known as "thresher-men's assistants," will be assembled, inspected, their qualifications determined and their work directed. The men engaged in this capacity are expected to be patriotic and earnestly interested in grain conservation as well as being experts in repairing threshing machines

These threshermen's assistants will be located in each state to cooperate with threshermen requiring expert help. The threshermen's assistants will be called upon by county threshing committees whenever needed. Their duty will be to advise in overhauling the machines, to assist in acquiring expert labor, to supervise repair jobs when the owner so desires and time permits. The county threshing committees will be composed of the county food administrator, the county agricultural agent, and a retired thresherman, representing the state or local council of national defense.

Each of these committees will open county headquarters accessible at all times to farmers and threshermen. One of the first duties of each committee will be to locate owners of threshers and find out what assistance can be given them.

The county threshing committees will

(Continued on page twenty-eight.)

## "What I Have Learned in Raising Rabbits"

Are you interested? Then you will be glad to know that next week's issue of the Farmer will contain the first of two articles on the above subject. This will be written by Joe L. Ashlock from personal experience during the past year.

So valuable has been this experience, especially along the line of what should not be done, that Mrs. Elizabeth Jones, boys' and girls' club leader for the state of Washington, recommends that her rabbit club children throughout the state carefully study these articles in the Farmer on rabbit raising.

Comparatively little has been written from first hand experience on the subject; in fact there is a general dearth of rabbit information. This is not a dry-as-dust scientific bulletin, although there is plenty of workable science in it to any one who wishes to raise rabbits.

We all know there is no such rapid method of supplying meat foods for families as the raising of rabbits, and of all lines of the production of war foods the rabbit is by no means to be ignored as a factor. There is no need of assuring you that you will be interested in this story written by the "Bunch Grass Boy" whether you raise rabbits or not.

"How I Raise Rabbits" will begin in next week's issue of the Farmer.

## May 30 a Day of Fasting and Prayer

BY THE PRESIDENT OF THE UNITED STATES.
A PROCLAMATION.

Whereas, the congress of the United States, on the second day of April last, passed the following resolution:

> Resolved by the senate (the house of representatives concurring). That, it being a duty peculiarly incumbent in a time of war humbly and devoutly to acknowledge our dependence on Almighty God and to implore his aid and protection, the president of the United States be, and he is hereby, respectfully requested to recommend a day of public humiliation, prayer and fasting, to be observed by the people of the United States with religious solemnity and the offering of fervent supplications to Almighty God for the safety and welfare of our cause, his blessings on our arms, and a speedy restoration of an honorable and lasting peace to the nations of the earth;

And whereas, it has always been the reverent habit of the people of the United States to turn in humble appeal to Almighty God for his guidance in the affairs of their common life;

Now, therefore, I, Woodrow Wilson, president of the United States of America, do hereby proclaim Thursday, the thirtieth day of May, a day already freighted with sacred and stimulating memories, a day of public humiliation, prayer and fasting, and do exhort my fellow citizens of all faiths and creeds to assemble on that day in their several places of worship, and there, as well as in their homes, to pray Almighty God that he may forgive our sins and shortcomings as a people and purify our hearts to see and love the truth, to accept and defend all things that are just and right, and to purpose only those righteous acts and judgments which are in conformity with his will; beseeching him that he will give victory to our armies as they fight for freedom, wisdom to those who take counsel on our behalf in these days of dark struggle and perplexity, and steadfastness to our people to make sacrifice to the utmost in support of what is just and true, bringing us at last the peace in which men's hearts can be at rest because it is founded upon mercy, justice and good will.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done in the District of Columbia this eleventh day of May, in the year of our Lord Nineteen hundred and eighteen and of the independence of the United States the One hundred and forty-second.

WOODROW WILSON.

By the President:
ROBERT LANSING,
Secretary of State.

## Don't Hold Seed

### Wheat Desperately Needed as Food

So desperate is the need for wheat with which to provision the allied armies in Europe from now until the new crop begins to come in that the federal food administration is urging upon the farmers of the country to put all their wheat on the market, even to the supply of grain that is being held for fall seeding.

While it has been the practice in many communities for farmers to hold over wheat for seed the food administration regards it as unnecessary.

Never before has there been such urgent need for wheat. Every carload, every bushel and every grain that can possibly leave the farm may within the next few months play an important part in our war program. Throughout the country millions of people are cutting their consumption to the barest minimum, many of them going entirely without wheat. The release of thousands of bushels ordinarily held for seed would do much to relieve the present situation

At the present rate of consumption each bushel would provide bread for at least one soldier in Europe until the next harvest relieves the necessity

## There Is No Other Organization Like It

The American Red Cross stands the unchallenged queen of all humanitarian organizations. There is no other like it. In a world tortured by the inhumanities of war it marshals its forces of mercy to undo as best it can the awful wrongs that follow in the wake of the conflict.

Last Saturday afternoon I watched the Red Cross parade in Spokane. I saw 10,000 women and girls in white, with the little red emblem of their wonderful organization as their only decoration, save the United States flags and the service flags that they carried. Ten thousand women! It required almost two hours for them to pass a given point on the line of march.

I saw hundreds of them with their red and white flags bearing from one to five blue stars—mute testimony that sons or brothers or husbands had answered the call to army or navy service. I saw an automobile of special honor, a large, white automobile, in which rode six women whose service flags bore at least one golden star, silently telling of a son or brother or husband who had given his life for his country and his country's ideals of right.

I stood in reverence and wonder. Ten thousand women, their best efforts dedicated to Christlike service in the cause of humanity!

And then I remembered something that increased my reverence and wonder. In hundreds of cities and towns throughout the United States demonstrations like this one, some larger, were being given. It was not 10,000 women. It was 100 times 10,000. It was 500 times 10,000. Five million women in America were marching that afternoon.

And I remembered again that in this great land of ours, this land dedicated to liberty and human righteousness, this same Red Cross had a membership of 22,000,000. Twenty-two million women and men and children!

And again I remembered, this time that there are in this land, so blest with the blessings of freedom and peace, 100,000,000 people. As I turned to my work from the white line before me I said within myself: "This country will subscribe the $100,000,000 that these women are asking for the Red Cross work before Red Cross week is half over. This state will pass its quota; this city will go over the top."

I turned for one more look at that great line of workers who are giving a touch of heaven to the world's war-created hell, and I saw a banner that read: "We give our sons; they give their lives. What do you give?"

This is Red Cross week. America is giving its answer to the appeal of human kindness. You and I are giving our answer. How? F. W. C.

# The War Garden

## Better to Have a Little Sense

By GEORGE SEVERANCE.

One of the most patriotic things that the home folks can do in the great war is to live as largely as possible from our gardens, thus permitting the shipment of the greatest possible amount of staples, wheat, pork, beef, etc., to the allies. For those who do not realize what a large percentage of our food requirements may be supplied from the garden, yet provide a thoroughly wholesome diet, the extension service of the State College of Washington has prepared bulletins on the food requirements of the body, the value of various foods and various food combinations that will meet the needs of the body.

Much has been said about war gardens, and probably the majority are filled with the patriotic desire to grow a war garden and have already started them. Viewed from the standpoint of rendering the greatest public service certain points should be considered:

1. The majority of garden stuff is perishable, and nothing is gained by producing more than is needed by the home family, unless it is produced by the idle time of children and can be sold on the local market. Plant all that is needed, but do not overplant. It is a waste of seed, land and labor.

2. The production of small gardens with hand labor is uneconomical carried beyond the point of utilizing idle time of children or furnishing much needed exercise for men in sedentary occupations. Commercial requirements for garden products can be more economically supplied by regular market gardeners who are equipped with labor-saving implements and produce on a field scale. The man whose time is worth $1 to $3 per hour and who is not in need of the exercise had better buy his vegetables. If growing a war garden reduces his time and efficiency in a more valuable occupation his aggregate service to the country will be reduced by growing a war garden. Consider, then, whether this is the most profitable way to spend your time.

3. For wealthy people to hire regular labor to work a small garden is unpatriotic, since all such labor can accomplish very much more if employed on farms, market gardens or orchards, where production is a business, and where crops are produced on a fairly large scale and with labor-saving machinery. It is unpatriotic to divert labor from its most effective service. Don't play golf or tennis or burn valuable gasoline on pleasure jaunts while hired labor is caring for your war garden.

4. Much surplus may be saved for later consumption by simple methods of preservation described in bulletins issued by the extension service of the state college.

# Just Go Ahead

## Everybody Must Do His Level Best

In a letter relative to the labor situation, State Commissioner E. F. Benson of the department of agriculture, says, "We will get along fine in this country if every one will take an optimistic view of things and go ahead with a determination to get the very best results possible. We will get by in fine shape if everybody just sets his mind to it and determines to get along with his work in some way and uses his ingenuity and determination to accomplish that result. We must do things now that we have not been accustomed to doing."

Commissioner Benson is actively engaged in farming himself. As commissioner of agriculture he is still conducting his farms "at long range," as he puts it.

"I am running these farms with hired labor," he says. "On one of them they milk 20 cows and farm 180 acres of irrigated land, seven acres of orchard and the rest of it alfalfa, corn, etc. The managing farmer on one of these ranches was drafted last year and I had to rustle another one. Of course it is hard to get labor, but on both of these farms there are young ladies, one about 15 years of age and the other 16. The 16-year-old girl on the dairy ranch milks six cows every day. Both of the girls drive teams in the fields and we pay them the same rate of wages we do the men for the same kind of work. They enjoy their work, and are making good at it. At Prosser last year between 70 and 80 women, wives of merchants, lawyers, county officials, etc., put on overalls and went into the orchards and helped solve the orchard problem in that district. They earned from $3 to $6 a day, and many of them invested every dollar of it in Liberty bonds."

## DRYER THAN DRY.

### J. H. T. Smith Visits New Mexico.

There is evidently very good reason why the Washington Farmer has not seen or heard much from J. H. T. Smith of Pullman for some little time. Meeting him on the street in Spokane recently, it was learned that he has been spending the last seven months in New Mexico where his son, A. Z. Smith, has been teaching in the Agricultural college of that state. Young Mr. Smith, who graduated from the State college at Pullman four years ago, is about to accept a position as county agent in one of the leading counties of that state.

Speaking of the drouth conditions in New Mexico and panhandle of Texas, J. H. T. Smith gives as a sample of weather that at Carlsbad, N. M., there had been only three inches of rain since a year ago last October. It goes without saying that live stock, as well as crops show deplorable consequences of this prolonged drouth.

### Codling Moth Spray.

Spraying for the codling moth is in progress in the Walla Walla valley. "The time for applying this spray should be, under normal conditions, when 75 to 80 per cent of the blossom petals have fallen from the tree," says District Horticulturist H. L. Miller. "An accurate method to denote the proper date is to daily examine the calyx cups and apply the spray when they present the widest opening. Generally speaking, these cups will remain open for good spraying for a period of 10 days, after which they will grow together.

"The calyx is by far the most important of all codling moth sprays, for the reason that at least 75 per cent of all worms attempt to enter through this part of the fruit. The second and possible third brood are progeny from the worms which escape the first spray. Thus it is very apparent that the proper application of the calyx spray governs to a very large extent the amount of wormy fruit at the harvest."

### Better and Better.

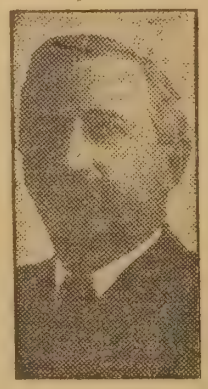
I think the Washington Farmer grows better and better all the time. It sure is the best paper we have in the state.

E. G. GRINDROD.
Ellensburg, Wash.

### Will Make Experiments.

H. B. Carroll, county agent at Bellingham, has announced a plan for experimenting in the cultivation of various varieties of wheat, oats, kale and peas in Whatcom county this year. The farms of E. S. McCaw of Rome, Frank C. Johnson of Ferndale, O. Lagen of Lawrence, C. E. Flint of Blaine and Ed McAlpine of Wiser Lake, will be among those to try out various varieties of crops under the direction of the county agent.

### Dairy Organization.



West Side dairymen, representing owners of 50,000 cows, met in Seattle May 7. After listening to various discussions on the cost of producing milk, the delegates decided to proceed vigorously with the work of organization, and to meet again in Seattle, June 1.

#### Hogs Worth More Than Wheat.

Walter G. McLellan of Sprague is soon to dispose of his third carload of hogs for the last season. He recently sold a car of 83 head that brought him approximately $3800, an average of more than $40 a head. He says that his hog crop was worth more to him than his wheat crop last year.

# Framed at Old Cambridge

By J. L. ASHLOCK.

E. A. Bryan.

W. J. Spillman.

A few years ago there hung on the wall of a room in the agricultural building of Cambridge University, England, a picture of some wheat heads. On the picture was a notice informing the public that the wheat heads were grown on the farm of the Washington State College, in Pullman, Washington, U. S. A.

While the wheat heads were there, Dr. E. A. Bryan, not yet succeeded by E. O. Holland as president of this American agricultural college, chanced to be a visitor at Cambridge university, and saw the framed picture.

"Why, that looks like Spillman's work," he exclaimed.

His guide promptly said: "That is Spillman's work."

The photographs had been taken in Pullman away back in the 90's, when the wheat-hybrid studies were beginning; and in Cambridge, hoary with age, representing the culture and statesmanship of a great world-empire, they were exhibited in evidence of a practical experiment begun years before on the Palouse hills back of Pullman, Wash., U. S. A.

It was Spillman, finally, who conceived the plan of crossing, or "hybridizing" different varieties of wheat, and creating a new variety of wheat in which would be combined the desirable characteristics of the parents and eliminated the undesirable.

Spillman accepted from Secretary of Agriculture, James Wilson, the appointment as chief of the national division of farm crops at Washington, D. C., before his plans in wheat-breeding had developed practical results so far as increasing the wheat-production of Washington wheat-fields was concerned. After him, the wheat-breeding work has been carried on with very definite results by C. W. Lawrence, Alex Carlisle and E. F. Gaines.

With all this inventive genius Professor Spillman could not satisfy himself with the purely practical question of producing a winter wheat that was beardless, stiff strawed, non-shattering, a good yielder, and of good milling qualities, but he wanted to know about the fundamental laws of heredity back of the results he was getting.

At about this point in his work, Professor Spillman went to Washington, D. C., as chief of the office of farm management, where he is today. In Washington, brother scientists, after the manner of their order, energetically attacked all his conclusions and results, and he as energetically defended his conclusions and results.

One day, a member of the scientific brotherhood dropped into Spillman's office and said in the course of conversation:

"By the way, Spillman, you were not the first to discover those principles of heredity about which you have been talking. I came across a pamphlet by a Hollander, who sets forth the same thing even more fully than you."

Not long afterward, it was discovered that an Englishman had published results similar to those of Spillman. Then the big truth came out. An Austrian monk 30 years before had conducted an elaborate experiment with garden peas and published a pamphlet pointing out these same principles of heredity.

This monk was named Mendel. The Hollander was named Tsermak, and the Englishman was named Bateson.

What happened was this: A Hollander, an Englishman, and an American, all working on a similar problem at about the same time, each on a separate continent, and unknown to the other, had stumbled upon and rediscovered the law, famous now throughout the scientific world as "Mendel's law."

It was the wheat-head signalizing Spillman's American rediscovery that Dr. Bryan found in a photograph on the walls of Cambridge university, in which world-famous university Bateson, the English rediscoverer of Mendel's law, was then a botanist and horticulturist.

# Small Fruits

## Juice to Take Place of Booze

It would take quite a chunk out of the history of Idaho if you should leave out the part played by Alex. McPherson in its agricultural development. It was with exceeding pleasure as well as considerable surprise that I again met him as he came into the Spokane office of The Washington Farmer. I had not seen him for eight or ten years and had heard of him as being largely engaged in developing irrigating enterprises in New Mexico and Arizona. He tells me he has also been in the same line of work in southern California.

Mr. McPherson was a pioneer in the line of obtaining first-hand and accurate information of the climate and soil conditions of the state upon which it bases better farming in Idaho. As the state agricultural inspector, as I remember it, he traveled over a good deal of Idaho on foot, swimming the rivers when no better means of crossing was offered. He was an early worker in Twin Falls district. He tells me there is a most enjoyable reunion every Christmas at Los Angeles at which are gathered over 100 of the Twin Falls people. Over half of these are farmers, and from lands at Twin Falls they have gained a competency sufficient to enable them to pass their winters in a summer climate. "Why, more wealth already has been taken out of the Twin Falls country than has come out of the Klondike," says Mr. McPherson. Speaking of the future of irrigating in the Pacific northwest, Mr. McPherson says that water storage and pumping will be the two great future systems of supply. Almost all gravity water is not used now. While pumping is costly, yet that cost has been reduced by cheap power, and the water is converted by underground piping. "You can save half the water by this method of underground piping and when you have saved half the water, you cut its cost down one-half."

Mr. McPherson is looking forward to a tremendous development of the small fruit industry, to furnish fruit juice to take the place of booze. The people generally will turn to fruit juices, in his opinion, as the national drink. He adds: "Cattle and sheep and poultry and wheat are in greater demand than there is supply today, and the same with dairy products, and there is every prospect of demand for years to come. Here are great opportunities for the American farmer."

#### World's Wool Supply.

Australia is reported to be the chief source of the world's wool supply, though it is said that South America and Australia have about the same number of sheep, approximately one hundred million.

### Farm Service War Flags.

The farm service war flag idea is one that appeals to the sense of fairness and justice of the city man. He is beginning to realize more and more the importance of the farmer both as a loyal citizen and as a producer of food supplies. Bankers have been in closer touch with the agricultural interests probably and have had a wider knowledge of agricultural progress of the country than almost any other class of business men, saving perhaps the farm implement business men. The Washington Farmer appreciates the following letter from W. D. Vincent, vice president of the Old National bank of Spokane.

To the Editor of The Washington Farmer: We thank you for sending us a copy of the Washington Farmer with the farm service flag. The idea is one that I hope will appeal to farmers throughout the country. It is certainly a splendid idea and one that will not be confused with a flag for any other purpose.

Congratulating you upon your originality and hoping that the flag will be found in every farm house in the country, I am

Yours truly,
W. D. VINCENT,
Vice President.

# Power Farming Will Be Demonstrated

## *Typical Palouse Farm Will Be Used to Show Work of Different Tractors*

By J. P. FAIRBANKS, W. S. C.

Tractor demonstrations are not new in the middle western states, where tractors have been used considerably longer than in the Pacific northwest. The demonstrations in the east and in the middle west have from the start been held in fields which are approximately level, and afford nearly ideal conditions for tractor operation.

The power farming demonstration to be held at Pullman May 29 to 31 under the auspices of the State College of Washington, which is one of the first large public demonstrations to be made in the Pacific northwest, differs in several respects from those held in various other parts of the United States.

In the Palouse country the farmers can rarely lay their fields off in rectangles, but must plow around the hills on "the contour line" instead of climbing directly over the hills. This necessitates dividing a large tillage field up into a number of irregular plats composed of hilly and flat areas. The flats are usually used as one land, and the hills or knobs used as another land or field. In level countries where the fields can be divided up into a number of rectangular lands they are plowed out by various systems of furrowing and plowing around, leaving head land at the end on which the tractor turns. These head lands are plowed out the last thing. But these fields in the Palouse country are not adapted to such a scheme of plowing. The tractor must go around the irregular fields as is done with the horse outfit. At the sharper triangular corners which may result the plows "cut the corner," but when the field is completed these corners are plowed up. Such conditions make tractor operations more difficult than do large, level fields; but since these conditions are typical of the Inland Empire and other parts of the Pacific northwest, the demonstration at Pullman will be of much real value to the agricultural and machinery interests of the west. Demonstrations which have been held under ideal conditions have received considerable criticism because they did not show average or adverse conditions. Those who attend this demonstration will see land plowed, harrowed and disked which varies from level to a grade of over 32 degrees. No spectacular performances will be approved by the tractor men, as their purpose is to show the public only the practical use of power farming machinery. They do not recommend hill-climbing contests, as in field work it is often impracticable to go directly over the hills. In fact, in many instances it may pay to leave the very hilly ground to be farmed by horses.

The general plowing demonstration will be held each afternoon when all the machines will be at work in one large field. After this demonstration in the afternoon the tractor companies are free to harrow the plowed ground or pull other tillage implements. During the forenoons private demonstrations will be made by tractor companies to those who are interested in their particular machine. At times other than during the general plowing demonstration belt-driving machinery will be operated by the tractors.

Tests will be conducted by the State College of Washington on various tractors to measure the power developed in the belt and on the draw-bar. Efficiency tests will also be made to determine the amount of fuel and oil consumed per acre on the different slopes and by the different types of tractors.

Another feature of importance is the motor-truck exhibit. Many makes of motor trucks adapted for farm use will be shown. The motor truck is now rapidly taking its place in the hauling job on the farms, and is properly classed as power-farming equipment.

The plow companies will have their complete line of engine plows on the ground, and will furnish these for use during the demonstration.

At the present time (May 15) there is assurance of a demonstration of 20 tractors, the exhibition of 10 and possibly 12 motor trucks, and the plow and implement line of three or four plow companies. Quite a number of firms handling farm gas engines, farm water supply systems, and farm lighting systems will exhibit in the accessories tent. There will also be an exhibit of accessories used by tractors and trucks, such as lubricating oils and greases, spark plugs, piston rings, and tools.

The greatest advance in agriculture is largely due to improved farm machinery. Increased food production with a minimum amount of hand labor is made possible by it. Power farming machinery is the latest development in farm equipment, so new that the broadness of its field can hardly be imagined. The public as a whole is unfamiliar with the present stage of development and uses of mechanical power for farm work. It is our duty to learn all we can of improved farming methods and the demonstration at Pullman May 29, 30 and 31 will give the public a chance to see many different farm power machines and to compare their work on a variety of conditions.

Many good automobile roads lead to Pullman, and the railroads are making a round-trip rate of one and one-third fare. In order to secure this reduction it is necessary to get a receipt at the time the ticket is purchased.

## GOOD POTATO CROP.

### Plows Deep Furrows in Planting.

By V. VAN-HOUTEN, South Bellingham, Wash.

"Potatoes are easy enough to raise and keep clean and I always have good crops," says A. M. Meigs, S. R. D., South Bellingham. "I plow good and deep in the latter part of May, then plow out my furrows, going twice in each furrow so as to throw the dirt both ways. Next I go to work and fill in the furrows about three inches deep with manure and drop the potatoes about 16 acres apart on top of the manure and cover them with a hoe.

"I want not less than two eyes to a piece, and sometimes plant the potatoes whole. I cover the potatoes three to four inches deep, according to when I plant, put early planting deeper than late planting.

"Then when the plants are six to eight inches tall, I turn to in the evening when the leaves raise up toward the vines, and plow the dirt toward them with an eight-inch stirring plow I keep just for that purpose, than sometimes I go through the patch with a hoe a few days later and kind of smooth the dirt down in the row. That is all the cultivation they ever get. At digging time the potatoes are all right on top of the manure, near the surface and come out nice and clean, never scabby, but that way won't work east of the mountains, they would just burn up over there, they grow there till about 8 or 10 inches high, then just dry up.

"I plant carrots and mangles the same way with the manure right under the seed, where they can get at it and get the good of it."

## Pullman Wants State Grange.

Pullman grangers have announced their intention of sending a strong delegation to Walla Walla next month to the state convention of the grange with an invitation from the state college town for the 1919 gathering.

## RED CROSS.

### Even Dead Horse Brings $25

Some time ago Ed Barben loaned a horse of uncertain value to E. F. Dunbar, says a Mt. Vernon, Wash., paper. While in the service of Mr. Dunbar the animal met a tractor in the road one day and fell dead, it is presumed of fright. After a while there was talk of litigation; but before the matter came into court Mr. Dunbar brought $25 to A. R. Hilen, who was attorney for Mr. Barben, as settlement for the horse. Mr. Hilen notified Mr. Barben of the payment and received in return instructions to present the money to the local Red Cross chapter. He said he wanted the animal to die in a good cause.

**Advocates Conscription of Women.**

Lady Bathurst, who is proprietress of the London Morning Post, is an advocate of conscription being applied to women for war service.

# Burbank Develops Community Life

## *Cooperative Spirit Will Play Big Part in the Future*

By STEPHEN B. L. PENROSE.

The Burbank grange took a forward step two months ago when it decided to organize a store for the benefit of the community. The first month of operation was financially successful, and the members were able to buy their household supplies and feed at reduced rates. Much enthusiasm prevails concerning the outlook. The grange is the most striking feature of the life at Burbank. Few places of the size in the United States have so large a grange membership, more than 125 now being enrolled and this including almost every one in the neighborhood. Grange meetings are well attended and constitute a center for the social and business life of the place. The neighborliness of Burbank also shows itself in the maintenance of an active literary society and a vigorous Red Cross society. Moreover the Community church provides Sunday school for the children and a church service for adults every Sunday. You will not often find a neighborhood where people are more alive to the need of organization and more keen in providing an efficient form of organization to meet their business, social and religious needs. Of course the educational activities are looked after by the state, but the schoolhouse has been doubled in capacity this winter and the affairs of the school district are skillfully managed by the board. All meetings of the grange and other organizations are held in the schoolhouse, except on Sunday, when Sunday school and church meet in the attractive church building which belongs to the community.

The community spirit and general friendliness which prevail at Burbank are in no small degree due to the personality of the genial manager of the Burbank company, F. J. Pingry. Two years ago he took charge of the project when a spirit of criticism was rife and factions were in danger of forming. By his fairness, strict justice, and kindliness, he has smoothed out the difficulties and has oiled the machinery so that now it is working without friction. An ero of good feeling has come about, and although now and then some one may have a kick, he knows that he will be treated fairly and also that his neighbors will befriend him in any time of need.

Personally my confidence in the Burbank project rests not so much upon its remarkable geographic conditions, its railroad advantages, its low altitude and its mild, early climate, as on the confidence I have in its water supply. An irrigated project which can not depend upon water is a dangerous place for investment or living. No matter how rich the soil, or how advantageous the climate, if the water fails at the critical moment the effort of years may be wasted. I could cite illustrations, but believe it is not necessary. More important than the fact that three transcontinental railroads are within a mile of Burbank, more important than the fact that the opening of the Columbia river for navigation has given it the assurance of low freight rates to the Coast, and more important even than its mild, equable winter climate, is the character of the firm who guarantee its water supply. For 12 years I have been interested in the project, have had many discouragements, and my hopes have been postponed of fulfillment, but I feel that an engineering firm of first-class professional standing and first-rate financial backing has become responsible for the success of the Burbank project and will see it through. In the next few years I expect to see a wonderful development at the junction of the Snake and Columbia rivers. Water on the so-called desert turns it into a garden. One of the largest centers of farming population in the northwest will develop. It will not surprise me if a great city springs up, combining, perhaps, Pasco and Kennewick and Burbank, but whether or not such a city arises, undoubtedly the region will support a dense farming population and in this future development the community spirit which Burbank has already shown will have a potent influence. Neighborliness and genuine friendliness are the primary needs of any civilization.

# Washington Boys in War Service

—From The Twice-a-Week Spokesman-Review.

**JOSEPH HICKMAN, Prosser, Wash.**—Enlisted in the United States navy in December, 1917, and is now at the naval training school at San Diego, Cal. His parents, Mr. and Mrs. T. M. Hickman, and four brothers, John, Charles, Russell and Albert, live at Prosser, Wash.

**CHRIS BIHLMAIER, Irvin, Wash.** — Entered the United States navy November 23, 1917, and is now serving his country at the United States submarine base, Coco Solo, canal zone. He is the son of the late Mr. and Mrs. Jacob Bihlmaier of Irvin, Wash. He has three brothers, John, Fred and William.

**ED E. EDGINGTON, Ritzville, Wash.** — Answered the call of duty and entered the service of the United States April 15, 1917. He is now serving with the 14th infantry, Company F, at Butte, Mont. His step-father, R. N. Thompson, resides near Ritzville, Wash.

# This Machine Does Many Things at One Time

**The photograph herewith shows a tractor doing a number of things at one time. It is converting the unplowed land into a seed bed at one operation, a thing that is being done successfully on land that lies well.**

## For Fair Play.

Editor Washington Farmer: We truly enjoy your paper as it stands by fair play. Editorials free from bias—advice in all departments, good and to the point.

AL S. BIGGS.

Port Stanley, Wash.

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on acconut of disease in stock sold through these columns.

## Share Profits With Farm Help?

A dispatch from Pierre, South Dakota, says a movement is under way in that state to pay farm help on the profit-sharing basis. The average scale for farm hands now runs around $55 a month, with board, room and laundry. In wheat-growing sections a sliding scale of $50 minimum, $55 for wheat of 10 bushels to the acre, $60 if it goes over 15 bushels to the acre, and $65 if it goes over 20 bushels is being considered.

The plan is worthy of serious consideration. Many of the great business and industrial concerns of the United States have found that the profit-sharing plan is beneficial all around, as it stimulates the workers to more intelligent and energetic effort and makes it possible for the employer to pay his help more generously and profit himself from the improvement that results.

We do not know that the plan would be applicable to the farm, but should like to see it tried out.

## Sweet Are the Uses of Adversity

War is unquestionably an adversity, but in its wake undoubtedly follow some valuable results. War has become an industry these days —the most strenuous industry known to mankind. Anything and everything that works against its successful operation must be eliminated. We must do things that we have never done before and we must cease to do things that we have habitually done. Regulations that our oftentimes mistaken sense of personal liberty has revolted against in normal times are drawn up and we must follow them implicitly.

Acknowledging these things to be true, we are quite naturally faced by the question: If all this is good for us in time of war, may it not likewise be good for us in time of peace?

If thrift and economy are essential to the conduct of a successful war, why are they not equally essential to the conduct of successful industries of peace? If the prohibition of intoxicants is necessary that the best service may be rendered by men engaged in the industry of war, why is their prohibition not equally necessary for best service in the industries of peace? If it is economically wise to do away with duplication and overlapping of effort in war, why is it not equally wise in peace? If it is sound business to convert our raw materials into finished products in the districts where they are grown, thereby preventing needless handling and transportation during the war period, why is it not sound business during periods of peace?

These are but suggestions of the war way of doing things. The world is slowly waking up to the fact that system and efficiency must take the place of haphazard and inefficient methods if any great success in any line is to be accomplished. Surely when this war is over the world will not relapse into its old foolish dream.

## Man Is Not a Power Machine

It has always been man's desire to speed up, and he has speeded up whatever he has undertaken by the method of employing machinery of some kind. He is himself a puny being when it comes to exerting purely physical power. In a test of muscular strength he takes a back seat to most of the dumb animals with which he deals. But in spite of that he is their master. His intellect controls them. He puts the mto work for him.

In like manner he goes further and puts powers of nature to work for him. He harnesses rivers; he reaches out into the invisible and seizes electrical energy; he invents and puts to work engines that convert the energy of coal or oil or gasoline into effective power. And with them all he speeds up industry.

There is probably no fairer example of this speeding up than in the agricultural world as affected by power machinery. Just as there were many who scoffed at the automobile till it compelled them to acknowledge its prominent place in the vehicle world, so there are those who yet look with misgiving upon the tractor as a source of power for the farm. But there is no gainsaying that the power-driven machine has become a permanent and a mightily effective part of modern farming, and there is little doubt that as time goes on it will become more and more effective. Though tractors are common throughout the farming sections today, the whole power farming movement is but in its infancy. Stimulated by great needs for increased production of foodstuffs, it is going forward with almost unbelievable rapidity. The place that engine power may yet create for itself in the agricultural life of the world is one of great possibility.

## "The Problem of the Farm"

This title, with some variations in form, but not in thought, is the subject for a great many long articles, most of them with some measure of truth in them, but nearly all of them futile.

And this is the case because each farm is a problem in itself. So is every business, we suppose.

That all the problems have not been solved is clear enough to one who travels about a little.

It does not need figures, either, to see that the soils in the New England states, with some exceptions, have been wasted and robbed. They do not bear very much nowadays. They have been exhausted. In other words, the original owners of those farms and some of the successors did not solve the problems of those farms very well.

Well, we can learn by the mistakes of others, if we are willing to do so.

## The Fruit of Hate

Those who sow hate will reap more than hate. Hate is a destructive thing, which has only lasting evil effects. Today, it is said, crime among the children of Germany has increased more than 40 per cent. Why? Are the children of Germany worse than any other children? Not at all.

Lack of police, less discipline at home, relaxation of school restraint, trashy literature, are some of the things which are said to have brought on a wave of youthful criminals; teaching hatred has done more than all these other things combined.

There is enough hatred in the world already without deliberately fostering it. And those who sow it shall surely reap it.

## Coming Events

May 26—Picnic, Horse Heaven grange, Horse Heaven, Wash.
May 27-28—Convention, war workers, Spokane, Wash.
May 29-31—Tractor demonstration, Pullman, Wash.
May 30—Smut lecture, H. H. Brown, Spokane, Wash.
June 4-7—Convention, Washington state grange, Walla Walla, Wash.
June 12-14—Convention, county school superintendents, Ellensburg, Wash.

**Fairs, Shows, Exhibits.**

September 2-7—Spokane Interstate fair, Spokane, Wash.
September 16-21—Washington state fair, Yakima, Wash.
October 1-6—Western Washington fair, Puyallup, Wash.

**Live Stock Sales.**

May 28, Holsteins, Moorhead & Hobson, Outlook, Wash.
June 5-6—Jerseys and Holsteins, T. S. Griffith, Spokane, Wash.
June 11, Jerseys, C. H. Cannon, Turner, Ore.
June 12, Jerseys, W. O. Morrow, Independence, Ore.
June 26, Guernseys, E. R. Brady, Satsop, Wash.

## Caveat Emptor

This phrase of law Latin means "let the buyer beware." It was a principle of law at one time that, in the case of property which was not stationary and to which title was hard to prove, anybody who bought it took a chance along with the stuff.

However, even in the days when this principle was in full force and effect, there were people who never took advantage of it, and who realized that a good name for honesty and squareness was more valuable than the gains which came from crooked dealing.

## Washington Gleanings

The Horse Heaven grange, at Kennewick, has announced May 26 as the date for their annual picnic.

Work has been started on the one-story brick building at Vancouver for the Washington School for Deaf, costing $40,000.

Twenty carloads of potatoes were recently shipped from Mt. Vernon to Vancouver, B. C., to be evaporated and sent to England.

The Cashmere Fruit Growers' union is to increase its warehouse facilities and equipment this summer at a cost of about $23,500.

The shearing of Columbia county sheep is in progress. It is estimated that the clip of the county will aggregate 250,000 pounds.

The first two crates of Kennewick's 1918 strawberry crop were sold at a Red Cross auction in Seattle, bringing $507, or $10.56 per pint cup.

The Island County Guernsey Breeders' association has been formed with John Frostad as president, W. R. Parker, secretary. The association is considering buying a carload of purebred Guernseys in the east.

Yakima has its first girl bootblacks. Two young women have taken charge of the public "shine" stand in the Yakima Trust company building and are proving experts.

The carpentry class of the Bellingham high school is building a portable schoolhouse, which is to be used this fall where congestion is the greatest. The building is built in sections, has one room and will seat about 40 pupils.

Grays Harbor county is equipping its road district with motor trucks, and the commissioners expect to effect a big saving in the cost of road repairs and construction. Six large trucks have been purchased by the county, and in addition, a tractor trailer.

Eighteen thousand acres of sugar beets have been planted in the Yakima valley this season, to supply the three factories at Yakima, Toppenish, and Sunnyside. Judging by past crops they are expected to yield a little over 10 tons to the acre, which, at $10 a ton, will make a $2,000,000 crop.

Mt. Muncaster is to be the name of a hitherto unnamed 6000-foot peak near Lake Quiniault, in the northern part of Grays Harbor county. The mountain is to be named after Roy Muncaster, an American soldier, who lost his life when the Tuscania was torpedoed and sunk. Muncaster was forest ranger for the Quiniault district before he enlisted.

High school credits towards graduation will be given for this summer's work to girls spending four hours, six days a week for six weeks at the canning center. Girls may be credited by specializing in canning and going to various homes demonstrating how to can properly, while others may earn credits in the commercial branch of the high school by taking care of the canning center books, doing managing and recording work.

H. C. Davis, president of the Central Bank and Trust company of Yakima, has been invited to judge Holsteins at the Minnesota State fair, the first week in September, and has accepted the invitation. Mr. Davis was for some years a successful breeder of Holsteins at Granger. He judged Holsteins at the Interstate fair at Spokane last fall, in a very satisfactory manner. His selection is a merited recognition of Holstein judging ability.

# Regulate Wool

## Government Controls 1918 Output

The following is an official statement by the war industries board at Washington, D. C., relative to the government's control of the wool industry covering the 1918 output:

"The government nas definitely fixed the price of wool, taking as a basis the accrued value in Boston on July 30, 1917. The arrangement was arrived at by conferences between the representatives of the growers, the dealers and the government. It is desired that the wool shall, as nearly as possible, follow its usual channels, and to this end the growers have agreed to deliver to the dealers the new clip, and the dealers have agreed to distribute it upon a definite basis of compensation, conforming to the government's direction as to its distribution.

"The government has not obligated itself to buy the clip, but does have first call upon any portion it requires, and it will allot the balance of the wool to the mills throughout the country, such balance to be made use of for civilian purposes. The Boston prices as of July 30, 1917, are net to the grower, except that he has to pay transportation charges to the Atlantic seaboard and interest on such advances as may be made to him at the time of shipment.

"The dealers are to be permitted to make a charge of 3 per cent of the selling price, if the wool is not graded, and 3 1-4 per cent if it is graded. This commission is to cover all storage, cartage and insurance. The commission charge is to be added to the price of the wool as it leaves the dealers' hands. The dealers are arranging to make a blanket advance to the grower at the time the wool is shipped, the balance of the price of the wool to be paid to the grower when the wool is sold and delivered by the dealer.

"Speculating or any form of buying, directly or indirectly, is to be prohibited. The dealers in wool will be licensed by the government, and no licensed dealer will be allowed to buy wool, nor will he be allowed to take on consignments more than can be stored and expeditiously graded and transferred to the mills. The dealers desiring to be licensed by the government to handle wool shall first make application stating their capacity for storing and grading. Application for license shall be made to the wool division of the war industries board.

"All shipments will be made in such manner as to effect the greatest economy in transportation. After the wool is in the hands of the dealers and graded, it will be valued by a government valuation committee. The woolgrowers, the wool dealers and woolen manufacturers will each be represented in a government committee which will take charge of the details of operation.

"A method of handling wool in the fleece in wool sections, and other sections where the clips are small, is now being worked out, which will probably allow selling in small lots. This plan will be made public as soon as it is definitely decided upon. The full schedule of prices will be distributed without delay by the wool trade associations, or can be obtained from the wool division of the war industries board.

"Naturally there are many details to be worked out, but the foregoing is the substance of what has been definitely thus far agreed upon. The war industries board has erected a new commodity division, entitled 'wool division.'

"Lewis Penwell of Helena, Mont., has been appointed chief of this division. All communications relative to the subject of wool should be addressed to 'Lewis Penwell, chief of wool division, war industries board, Council of National Defense building, Washington."

# Red Cross Dollar

## Market Value Has Been Increased

The American Red Cross issues the following:

The American Red Cross and the government dollar will stand side by side in the marts of trade hereafter.

One will be on the same footing as the other. Red Cross purchases are to be accorded the same prices and the same priority privileges as those of the government, according to a recent decision of the war industries board.

"From this time forward the Red Cross dollar will go as far as the government dollar, and will thus be more efficient than it has been in the past," says the New York Journal of Commerce, in discussing the ruling.

"The new rule will be a source of gratitfication to the many voluntary contributors to the Red Cross all over the country," it continues. "It assures them that every advantage will now be taken to secure the supplies that must be obtained through the charity of the country on a basis that will not add a seriously disturbing influence to general trade.

"It will also make contributors feel that their money is being well spent. To many men in the trade who have been larrge contributors to the Red Cross, both direct and indirect, it will give assurance that all manufacturers will be treated alike and fairly as to the proportion of merchandise they are required to furnish for war purposes."

The importance of the action taken by the war industries board may be best understood through the statement of an official of the American Red Cross bureau of purchases, who estimated that it saved $18,000 on a single order placed a few days ago.

# Raise the Calf

## Two Advantages Are Possible

The question of what to do with the calf of dairy breeding has always been a question. It has always been known that the dairy animal is inferior from the standpoint of meat not only as to quantity, but as to quality, and there are many advocates of ruthless slaughter of the dairy calf.

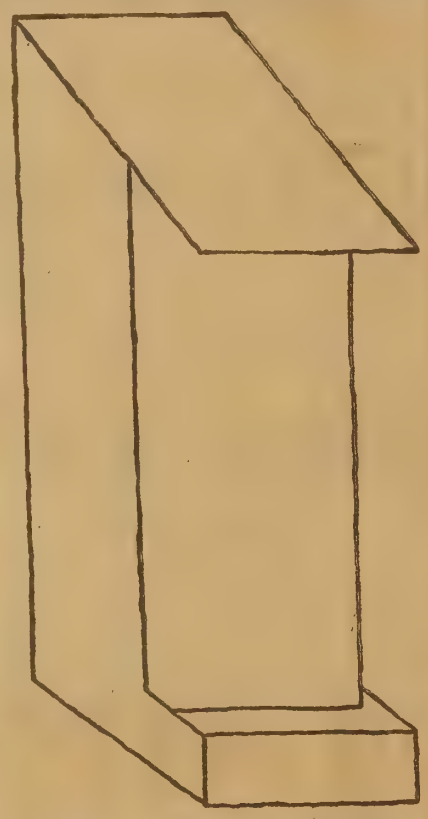
With the present unprecedentedly high price of meat, this animal now finds himself fairly well protected for the early days of his life. With veal and baby beef at its present price it seems best to keep almost anything in the shape of beef for some little time at least, if there is any possible way of feeding him at a reasonable cost.

From the point of view of the dairy business alone the dairy calf should be studied with a view of improving the herd by raising or eliminating him. The male calves of good breeding and of a good line of producing ancestors may well, in many cases, be kept for breeding purposes later on and one excellent way of improving the dairy herd is to raise the heifer calves from the cows that have proved their worth as milk and butter fat producers.

Every dairyman should keep a careful and accurate record of all his cows, should use a purebred sire only and should constantly watch to eliminate from his herd every animal of inferior breeding or that has proved a poor producer.

When the price of butter-fat is taken into consideration it is readily seen that the cost of feeding a calf whole milk is high if not actually excessive. Many dairymen are using cream separators and raising their calves on the skim milk, believing that they can raise a calf that way much more cheaply than on whole milk and at the same time produce just as good a dairy cow.

One thing should not be forgotten by the dairyman, and that is that the calf must have plenty of fresh water regardless of the amount of milk that it consumes. Salt should be provided for it also, especially as soon as it begins to take other feeds than milk.



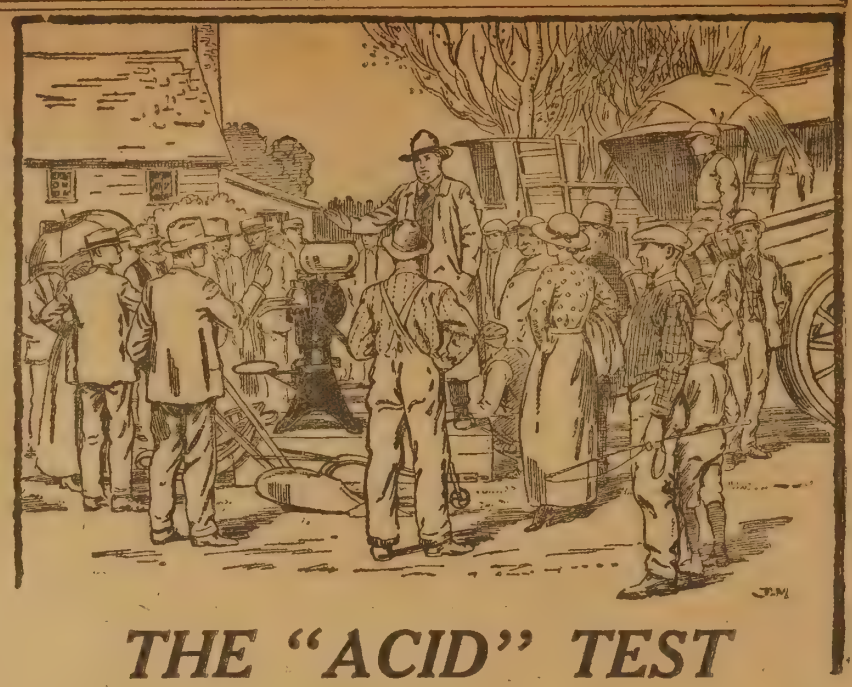
# Give Salt Uniformly

By E. D. ROSEMAN.

A uniform system of dairy salting, which approximates natural conditions by making it possible for cows to supply their needs in amounts and at times to suit their taste, has been put into operation on the Clarence Bowne farm in Marion county, Oregon.

The system consists of a series of salt hoppers, home-made, and nailed up conveniently around the barn and corral. Use of this arrangement in Mr. Bowne's herd has eliminated the digestive troubles which frequently result from the practice of irregular salting, and causes a tendency toward the maximum of production from the cows.

Using 1x12 lumber, Mr. Bowne has built the hoppers to hold 50 pounds of salt. They are about two and one-half feet long and 12 inches wide by eight deep. On one side at the lower end the bottom and adjacent sides of the hopper extend out slightly, making an opening through which stock can satisfy their wants. The top is cut on a slant and a hinged cover reaches out over the feed slot at the bottom, thus preventing undue dissolution of the salt in rainy weather.



Hopper for Salting of Dairy Cattle.

Several of these containers are on the barn and posts in Mr. Bowne's corrals. His animals quickly learn to use the device and the only attention required of him is an occasional refilling. By this means he has eliminated a large proportion of time and trouble usually experienced with that work and at the same time provided a condition for his cows that is very necessary to the best results—a system of salting that makes the animal judge of its individual needs.

## Oregon Butter Scoring Contest.

The second scoring of the Oregon Agricultural college for the last month's contest was held on April 13, the butter being scored by L. B. Ziemer, Portland; P. S. Lucas, Corvallis, and V. D. Chappell, Corvallis. The April contest contained 18 entries. The butter was of fair quality, the highest scoring butter being entered by S. T. Coats, buttermaker for the Monmouth Cooperative creamery, with a score of 93.5; the lowest score being 88.5. The average for all entries being 91.23.

The following are the names of exhibitors scoring above 90: George Lee, Nashville, 91.5; H. A. Colt, St. Helens, 93; E. O. Post, Salem, 91.5; W. P. Coie, Albany, 92.5; N. Pederson, McMinnville, 91; S. T. Coates, Monmouth, 93.5; George Gauire, Ashland, 90; G. M. Barklow, Norway, 91.5; J. Thelkerson, Umapine, 92; M. J. Anderson, Pendleton, 92.5; H. C. Berg, Roseberg, 91.5; H. P. Belloni, Coquille, 90.5; L. S. Leach, Carlton, 93; C. W. Sly, Eugene, 90.5.

# THE "ACID" TEST OF VALUE

At an auction sale the buyer makes the price.

Auction prices are apt to be lower than the real value warrants, rather than higher.

In any case, auction prices represent the estimate of value placed on the article by the buyer and not the seller.

During the past few months, the cow owner's appreciation of the unusual values offered in De Laval Cream Separators has been demonstrated in a most remarkable way.

From one state after another have come reports of the sale of De Laval machines at farm auctions—machines which had been in steady use for several years—at prices, in most cases, only two or three dollars less than the sale price when new; sometimes at practically the same price at which the machine was sold when new, and, in several instances, at even more than the original list price.

In February, at a Missouri auction sale, a De Laval in use two years was sold for $1.25 above the original purchase price. In Kentucky a farmer paid for a De Laval $2.00 more than the original price, at an auction sale. Last January, in West Virginia, a second-hand De Laval sold at auction for $2.50 less than the original catalog price. On January 15th in Ohio, a De Laval machine in use a year was sold at auction for exactly the same price it brought when new, and at another point in Ohio a De Laval in use several months brought several dollars more at auction than the original list price. In the province of Ontario, early in April, a De Laval in use since 1916 brought at auction a price $5.00 higher than the owner paid for it when new.

In contrast with these prices paid for De Lavals at farm auctions, it is interesting to note that when other makes of cream separators are offered they are usually listed simply as a "cream separator," and not by name. Often there is no bid for such machines and their usual auction prices run from $10 to $15. We have never heard of one that sold at auction for half its original cost.

Perhaps you may not have had an opportunity to learn of the cleaner skimming, easier turning, the great durability and the splendid service given by the De Laval machines, but here is the strongest and best sort of evidence that those who do know cream separators appreciate that the man who buys a De Laval gets good and generous value for the purchase price. And further, that even after a De Laval has been several years in use, it is practically as good as new.

**If you are without a cream separator or in need of a new or better one, why not see the local De Laval agent immediately? If you don't know him, address the nearest De Laval office as below, for any desired particulars.**

# Veterinary

Dr. S. B. Nelson

**Paralysis In Sow.**—I have a sow about 7 months old that has been out on pasture up to about three weeks ago, when she was taken with a sort of paralysis. She could not get up and had no control of her four legs at first, but in a few days she got all right in her front legs but could not get up behind and only the last few days she seems to be some better. She stands and walks a few steps, but her hind legs are crooked at the hock joint. Her appetite is good and has been and her eyes look bright. Would appreciate any information you can give me. R. C., Hamilton, Mont.

Give the sow two doses of sodium salicylate, a teaspoonful at a dose, 24 hours apart. Follow this with four to six doses of potassium iodine, 15 grains to a dose, one daily. Apply a little vaseline, carbolated is good, at the cracked places in the joints.

**White Warts on Neck:** I have three yearling calves that have something that looks like white warts growing on their neck and head and when they get about the size of a quarter they grow very fast, and then turn a kind of brownish color. Would be pleased to know what to do for it. G. G.
Danville, Wash.

The trouble affecting your calves is a malnutrition due either to a nervous condition or to the inability for them to use their food. I would recommend lessening the food to some extent, also give them each morning and evening one tablespoonful of Fowler's solution of arsenic on their feed. Do this for several days. Also apply castor oil or a saturated solution of magnesium sulfate to the warts daily.

**Cow Has Brain Trouble.**—I have a cow four years old which freshened last May and has been ailing now for months. At times she seems to suffer with pain in the head, just like a person with neuralgia. Sometimes she will go from four days to a week at a time seemingly perfectly well, eating good, and all the time gives a fairly good mess of milk. When the spells attack her they last two or three days and at that time she will not eat, holds her head down or to one side, or up against a post or wall. When she lies down she lays her head against her hind leg and slobbers drool from her mouth and water from her eyes, at times. The trouble seems to be just on one side of her head. She is in terrible agony, her nose and lips jerk and quiver. It is a fine cow and I dislike very much to part with her. She has kept up fairly well in flesh, but a little thin just now, as there are two or three days at a time that she does not eat. Her coat is in good condition. We keep her up in a box stall most of the time. A short time ago she went for over a week without having an attack. We thought she was well again, and turned her out with the rest of the herd. She came in that evening with the worst attack she had had. Have fed her corn silage and hay and shorts all winter. At present am feeding alfalfa hay and shorts. I had a veterinarian look at her when she was first taken sick and he thought it was some brain trouble.
MRS. L. P., Castle Rock, Wash.

I think the diagnosis your veterinarian made of brain trouble is correct. From the description you give I would judge it to be in the posterior part of the brain. I do not know if treatment will benefit her. You might try giving her one dram of potassium iodide in one pint of water night and morning for a few days.

**Let Horse Rest.**—I have an old horse about 18 years old. He has had a few queer spells lately which I can not diagnose. Here are his symptoms: When I turned him out to pasture one morning he grazed around a while, then stopped still and seemed to stiffen and tremble, then he started staggering around in a circle. I walked up to him, but he didn't seem to know I was there, nor did he pay any attention when I spoke to him. Can you kindly tell me what is the matter and is there anything I can do for him?
C. F. B.
Port Angeles, Wash.

It is very likely that the trouble affecting your horse is a nervous trouble. I would suggest that you give your horse one dram of potassium iodine night and morning for three or four days. Let him rest and repeat the treatment the following week.

**Trouble With Heifers**—I would like to know the cause of the trouble I had with two of my heifers this spring. All winter they had good care and feed, but this spring when time to calf one of the heifer calves came with little help, but its neck was quite stiff and turned to the left side some, while I lost the other heifer and calf, too, because its head was turned so far to the side I could not reach it to straighten it around. Could a manger a little too high cause such a thing? They were both tied at night to the same manger all winter. MRS. W. O. H.,
Benge, Wash.

I do not believe the tying of the cows to the manger had any effect upon the unfortunate condition occurring to the unborn calves. I do not know why the irregularity in the presentation of the young occur, especially when they are fully formed and well developed in every resepct.

**Mare Has Cough**—I have a nine-year-old mare that has had a cough for the last two or three months and she sometimes throws out phlegm and rattles around the head. This seems to be getting worse. I feed a good quality of timothy hay. B. M.
Mukilteo, Wash.

Try applying a light blister as large as your two hands to the mare's throat. Use one part of pampharides, one part of red iodide of mercury to 20 parts of lard, or to 16 parts of lard and four parts of beeswax. Just blister lightly. Two or three days afterwards begin giving the mare one ounce of Fowler's solution of arsenic once daily, either in her drinking water or mix it with her feed.

**Cut Does Not Heal**—I had a cow that bloated and in order to save her she was stuck in the left side high up by the hip joint. She gives her natural flow of milk and seems all right, but the cut is running puss. M. N. K.
Colville, Wash.

There is probably a little pocket containing offending foreign material at the wound. Consult your local veterinarian and let him open up the wound, and then with the treatment of a simple antiseptic it will without question heal for you. I do not believe you ought to let it go very long, because the puss may burrow and pass clear down around the abdomen and form a serious pocket just at the middle line of the abdomen in front of the udder. Therefore, you should have it attended to as early as possible.

**American Cream at Quebec.**

There were 399,816 gallons of cream, valued at $364,186, invoiced at the American consular agency at Beebe Junction, Quebec, Canada, for the United States during 1917, as compared with 471,896 gallons, valued at $414,283, for 1916.

## RAISING CALVES.

### With a Gruel Made of Calf Meal.

By V. VAN HOUTEN, South Bellingham, Wash.

The Pacific Stock farm, Alger, Wash., is meeting with splendid success raising calves with very little milk. Captain H. A. Reasoner, the general manager, says:

"We have a valuable bull, at the head of our herd, with an excellent milk record behind him, and are going to keep all our heifer calves and some of the others.

"I feed a calf five pounds of whole milk twice a day for about seven to 10 days after the mother's milk is good (we have no skim milk), then gradually change to gruel made from calf meal until the calf is about six weeks old, when it gets a pound of calf meal at a feed and no milk, then I gradually change the calf meal in the gruel to shorts.

"We feed the calves dry shorts as soon as they will eat it.

"No, we have no trouble with scours. Scours is caused by overfeeding. If there is any sign of scours, just let the calf miss a feed, and if that does not stop it, give four drops of formaline."

Those calves are a pretty bunch, all nice red fellows with white markings, full of vigor and excitement as they stand in their little stanchions at feeding time, then they come out with almost as much enthusiasm and trot off to the trough for the dry shorts.

## Bloat in Cows.

To the Editor: I saw in your paper of a few issues back an inquiry for the care of "bloat" in a cow. I will give an experience of mine:

A neighbor had a valuable cow which he was trotting around the lot with a stick in her mouth. Having read of the value of cold water poured upon the loin for such cases I told him of it. He brought the cow to our gate and we attached the hose to the hydrant, turning it upon the cow as stated. Within a few minutes the bloat was reduced. What relation to the bloat and cold water sustained I do not know, but I do know it was effective.

W. A. M'GHEE.

Leland, Idaho.

Dr. Nelson makes the following comments regarding the above:

Whenever bloat is caused by the loss of tone of the muscle wall of the stomach, then the treatment recommended of dashing or turning water from the hydrant over the loin on the side of the cow stimulates through the nerve endings of the smooth muscles of the walls of the stomach, and causes them to contract and cause the expansion of the gas and increases, in some cases, the digestive power. It does not prevent the reoccurrence of the bloat from the same cause. This has to be done by drugs which will prevent fermentation of food which the stomach may contain.

## British Wool Prices.

Notification comes that the British war office has agreed that the price for the British and Irish wool clip of 1918 has been fixed at 60 per cent above the average price of 1914. This decision is one that will be received by woolgrowers with considerable surprise, the advance being considered totally inadequate to recompense growers for the increased costs incurred by them in the production of the 1918 clip, says the London Live Stock Journal of April 5.

"We are authorized to state that, in view of this unsatisfactory response to the resolution passed by the National Sheep Breeders' association at its meeting held in February, 1918, the president of that association has called a special meeting of the association and other agricultural bodies for the afternoon of Monday next at the offices of the Royal Agricultural society, 16 Bedford square, for the purpose of considering the reply received from the government, and to take such steps as may be deemed advisable to endeavor to induce the government to reconsider the matter, with a view to giving to woolgrowers of the united kingdom an adequate price for their product and labors."

### Pennsylvania Coal Production.

Nearly half of all the coal produced in the United States is mined in Pennsylvania.

## Long Distance Test.

One way of eliminating poor cows from any locality is through the purchasing of bulls, not from show ring reputation, not from seven-day records, but for the kind of records that were made day in and day out, 365 days in the year. Some of the poorest cows of the different breeds make a high test and a large total amount of fat for a brief period after calving, but on the long-distance test are not there, says F. M. Colcord. Keep in mind that bulls purchased on long-distance records are worth many fold more to the average dairyman than all the "20" and "30" pound cows that were ever produced. Has your community looked into the bull club proposition? Do you know that it is possible to get the use of a bull for a very small figure, one that is bred right through cooperating with your neighbor and in time through this cooperation or bull club, as it is called, a bull association could be formed. With the shortage of labor there never was a better time to get together on the bull proposition than now.

If you want help in organizing a bull club or in getting a better bull, write to you dairy field agent at your state college of agriculture.

## Sheep for Summer Range.

By A. B. KEITH...

Thirty-five carloads of sheep which left Dillon April 29, from the Woods Live Stock company's ranches in the valley, made a total of 76 carloads shipped from Dillon the previous week to Spencer, Idaho, their summer range. The sheep have wintered on the ranges surrounding Dillon without hay the last winter, having been fed on cottonseed cake and what they could pick up on the hills. They are all in splendid condition, and the loss was under 2 per cent during the time they were ranged. This is a remarkably low figure, even for a mild winter.

For the most part they are 2-year-olds and will shear well, and are in prime condition for mutton.

Five hundred fat steers were shipped recently by Rife & Duff to the St. Joe market, and the Centennial Land and Cattle company shipped 400 prime steers to Portland.

## Kept Seven-Day Test.

To the Editor: I have been running some cows on a seven-days' test and am sending you the following report: One junior, 4 years old, Ann Lunde 4th, No. 220954, produced 557 pounds of milk and 22.07 pounds butter in 7 days. One junior 2-year-old, 14.97 pounds of butter; another, 14.44 pounds butter. The 4-year-old and one of the 2-year-olds, I expect to run on semi-official for a year. I have one cow that has over 800 pounds of butter to her credit for 348 days, and the 4-year-old is starting off better than she did.

NATHAN HAMILTON.

Chehalis, Wash.

### Pennsylvania Women in Business.

More than 100 firms, parnerships, and individuals doing business in Pennsylvania under assumed names have registered the real names of their owners, and in many cases it has been found that women were not only managers but owners of stores, factories and other industries.

**Stop the Gamble in Haying!**

YOUR mower lays the hay in even swaths down meadow and hayfield, exposed to whatever weather may come. Take no chances with that unprotected hay. **International Harvester** hay tools will put it under cover in prime condition, properly cured, four or five hours after cutting.

Every hay grower should become familiar with the new **International, Keystone** and **Osborne Combined Side Delivery Rake and Tedder.** This popular, economical machine has two duties in one—it can be instantly adjusted for rake or for tedder. It rakes clean, teds thoroughly, and handles hay gently. It is a left-hand-delivery rake, which means it can follow the mower closely and strike the heads first (not the stems). It does clean work, piling two swaths at once on the clean stubble (not on an unraked swath), which means proper curing. Quickly adjustable to any condition.

**International, Keystone** and **Osborne Windrow Loaders** are built to last. Pulled easily by two horses, they load uniformly, leave the field clean, lift hay over 10 feet, and do not thresh off blossoms and leaves.

These tools return their price, and more, to your pocket. The dealer can furnish you with proper size and types and special equipment. Act early this year and be certain. See the dealer—write the address below for folders.

# Gasoline Engines---Their Care

By Joseph C. Herzner, Valley, Wash.

The gasoline engine which will work properly year after year without care and adjustment, has not yet been invented. Every gasoline engine, regardless of its make, size or design, requires attention. The expert engineer—whose engine always runs well—thoroughly understands the engine which is in his charge and gives it daily attention (as does the horseman give his horse) whereby his repairs are very few.

Each day before he starts the engine he oils each part where friction occurs with good gas engine oil, especially filling the oiler which oils the cylinder, and turns down all grease cups, which likewise he supplies with the best hard oil obtainable—he positively makes sure that every part gets as much oil as it needs. Then he wipes away the superfluous oil and dirt with a piece of cloth for cleanliness, meanwhile making an examination of the engine to be sure that nothing, such as bolts, flywheels and pullies, has worked loose, and whether there is any play in the crank shaft boxes or connecting rod; if any he tightens them so they will not knock and so they will still work freely. He always keeps the hopper or cooling tank filled with clear water; if there is a pump, he makes it do its work. Nor does he forget to drain the water in cold weather after stopping.

Likewise he examines the electrical apparatus ascertaining that there are no loose wires, broken wires, or short circuits, that the battery produces a good hot spark; or if there is a magneto, sees that it runs and works well. Frequently he investigates whether the spark is on time; if not he adjusts the ignitor trip so that its tripping will correspond with the mark on the flywheel. About every two weeks, oftener if necessary, he removes the ignitor and cleans the points with sandpaper.

If his engine does hard work continually he makes it a point to remove the cylinder head about every month so he can scrape the carbon from the cylinder walls, grind the valves—especially the exhaust—if they do not seat perfectly, and takes out the piston to examine the rings. Finally, after thoroughly cleansing cylinder, piston and valves with kerosene, he replaces the head, being careful that the gasket is not broken, which would, of course, cause leakage, and tightens all the nuts equally.

About every six months he takes the engine all apart, carefully examining each part as he does so. With a piece of cloth or waste and kerosene he thoroughly cleans the dirt and gummed oil from each part. Any part which is badly worn he replaces. In again putting it together he endeavors by all means to do the thing perfectly. Crank boxes, connecting rod, camrod, governor, gasoline supply, mixer, electrical aparatus, valves, piston and rings; in fact everything belonging to the engine gets careful, diligent attention. He makes it as near like new as he can.

### Suggestions by Mr. Fairbank.

Commenting on the above article, J. P. Fairbank of the agricultural engineering department of the state college at Pullman, says:

In the care of these machines the points made should be of value to the average farmer, who has gasoline engines. In the second paragraph, "where friction occurs with good oil," I would insert "with good gas engine oil." To my mind it is essential that we impress upon the gas engine owner that he should not put anything but gas engine cylinder oil into the device which lubricates the cylinder. For that reason we recommend that one kind of oil only be kept around the engine so that no mistake can be made. Down further in the paragraph he suggests that superfluous oil and dirt be wiped away with a cloth after the engine is lubricated. It might be well to suggest that this dirt should be wiped away from around the oil holes before the engine is lubricated, thus preventing dirt being washed down into the bearing by the oil.

I would suggest that the last sentence of the fourth paragraph read "about every two weeks, oftener if necessary, he removes the ignitor and carefully cleans the points with fine sandpaper," simply adding the two words, "carefully" and "fine."

## TRACTOR MEN.

### Pacific Northwest Association.

Organization of the Pacific Northwest Tractor and Power Farming Association has been completed in Spokane at the office of the Holt Manufacturing company by more than a score of machinery and implement dealers. Officers elected were:

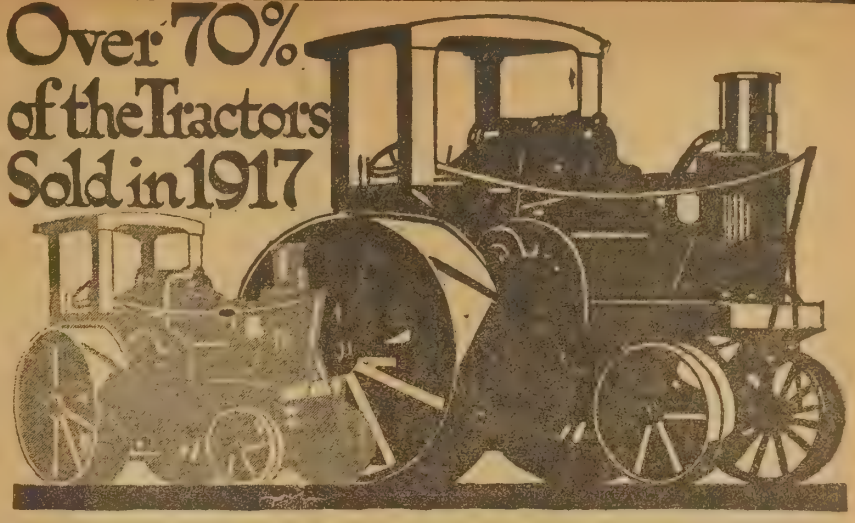
President—M. W. Weeks, International Harvester company.

Vice president—H. A. Caldwell, Holt Manufacturing company.

Secretary—Otto Spannagel, Yuba Manufacturing company.

Treasurer—A. D. Taylor, John Deere Plow company.

Trustees—A. S. Fetterman, A. H. Averill Machinery company; Robert H. Sampson, Harlin & Orendorff company; M. W. Weeks, H. A. Caldwell, Otto Spannagel, A. D. Taylor, with P. E. Lattner of the Twin City Manufacturing company.



Vice presidents—For Washington, H. H. Harwood, Eldridge Buick company; for Oregon, Edward Newbegin, manager of R. M. Wade company. Portland; for Idaho, R. P. Fairbanks, manager Pocatello Engineering and Machinery company, Pocatello; for Utah, Henry Landes of H. Landes & Co., Salt Lake.

Plans were discussed for the tractor plow and test to be held May 29, 30 and 31 near Pullman, and it was decided that all should go there May 26 to pick out their allotments of land to be plowed in the demonstration work.

Demonstration will take place on six different fields. Three fields of practically level ground, grades not to exceed 20 per cent, and three fields of ridges or hilly ground, where the grade runs all the way from 15 to 40 per cent. This demonstration will be of especial benefit to the farmers from the fact that we are demonstrating on average farm land and using the methods necessary to farm the average ground.

## Buy Canada Tract.

F. W. Anderson of the F. W. Anderson Mortgage and Investment company has purchased 19,000 acres at Killian, Alberta, for $250,000. The property is an old estate in a portion of Alberta, popularly referred to as the "Palouse of Alberta."

This is the number that used K-W Magnetos as standard equipment—the list including 39 of the leading manufacturers.

This year already 40 of America's leading tractor manufacturers have specified K-W Magnetos as standard equipment on 83 models.

And why? Not because they are cheaper, because K-W Magnetos do cost tractor manufacturers *more* than any other make, but because these 40 manufacturers realize that the severe operating conditions common to tractor service *demand* K-W Magnetos. Their experience has proven that K-W Magnetos have the stamina to stand up under the most gruelling service.

TRADE K-W MARK **High Tension MAGNETOS**

give the hottest known spark—timed accurately. They fire leaner and poorer mixtures and develop maximum power out of every drop of fuel used. Their construction protects them against **water, dirt and oil.** Their use eliminates troublesome starters and batteries.

In buying your new tractor insist upon a K-W Magneto. Look for the K-W trade mark.

Write for list of K-W equipped tractors and literature describing K-W Magnetos.

THE TRADE K-W MARK IGNITION Co.
2891 Chester Ave. CLEVELAND, OHIO, U.S.A.

**Look!** Before You Buy a Tractor

## –See what Bean *TrackPULL* Tractor Does

Down Between the Rows and Around the Trees!

Note the practical turning feature of this remarkable tractor. Watch it *pull the tools* around turns just as easily as on the straight-away. See it go all around a tree, with the tools *sunk down deep* doing *valuable work*, plowing or cultivating right up to the trunk. Look at the circular diagram above. Do you know another tractor that will do that? Many tractors will *turn themselves* around all right but the tractor you need whether in *orchard, vineyard* or FIELD WORK must take *the tools* around too and keep them *at work* all the way around. This requires *full power* on the turns. A pivot-turn with *half* power isn't sufficient; and a pivot-turn with one wheel or track stationary and *full power thrown on one side* of the tractor is a *straining overload.*

That's where the great PATENTED SINGLE-TRACK FRONT-DRIVE principle of the *Bean TrackPULL Tractor* gets its immense value. It permits full power even when *turning inside a 10-foot circle* (5-foot radius). No pivoting, and no overload on *any part.* No other tractor *can be built* like the Bean, because basic patents protect it from imitation.

Don't buy a tractor that doesn't turn with full power. Your work calls for many turns and a tractor that will make them right will save you time and money.

Send right now for the Bean catalog with full details, learn the price of this remarkable tractor, and the name of the nearest agent who will give you a true demonstration of the TrackPULL doing the kind of work you have waiting for it *on your place.* Mail us this coupon now, before you forget it.

**Watch the Bean at Pullman demonstration, May 29, 30, 31.**

**Bean *TrackPULL* Tractor** (Patented Front-Drive)

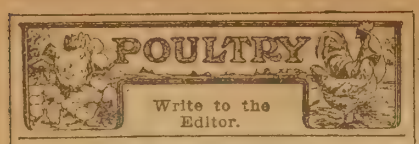
## Uncle Sam Is an Advertiser



Advertising is such a universal force today that it is used by nations as well as individuals.

Kitchener advertised to raise England's first army of 4,000,000 men. The British government advertised to induce her people to invest in the huge war loans; and again advertised to influence the public to save food.

Similarly, the United States has utilized the power of advertising in the conduct of the war, persuading men to enlist, winning investors for the Liberty bonds and thrift stamps, and pointing out the need for more food.

Millions of stamps in our post-offices are canceled with a machine which prints the words, "Food will win the war; don't waste it." That is just one of Uncle Sam's methods of advertising.

Advertising means simply the distribution of important information. To keep well posted and up-to-date you should be a reader of the advertisements in this paper.

## THOSE WAR CHICKS.

### Feed Properly and Save Them.

Some millions of war chicks are now being hatched, and it is safe to say that some millions of chicks are lost every year due to improper feeding. Some of the important points, or the essentials, are some ground grain and some cracked or hard grain; a variety, or a balanced ration, so that there is sufficient of the flesh-forming foods as well as fat or heat-producing foods; some animal food; green food, and grit; water or milk to drink.

The important points in feeding; that is in method of giving the feed, are frequent feeding when chicks are small; and second, fed in such a way as to induce exercise.

As to the ration of feed, it is not always a question of what is the best feed, but what is the best feed that is available. In these war times it is not possible always to feed what we would like to feed. Wheat, which before the war was the principal feed for young chicks as well as old stock, is not available. The government says we shall not feed it, or virtually says so. There is a shortage of wheat, and we must save it or a large part of it for the soldiers. There may not be a law to punish the farmer for feeding wheat, but the patriotic appeal to save the wheat is or should be as good or better than a statute.

Other feeds, because of their price, are almost out of the question. Bran and shorts, another staple feed, is cheap and because of that fact is hard to get, the demand being so great. We had hoped to get corn cheaper and enough of it to replace wheat, but on account of the condition of the crop when harvested, due to rains and frost, and also lack of transportation, corn has not been forthcoming as yet at a price that was expected. The price is a little lower, however, at this writing, and there is more in the market.

As a starting food for chicks there is nothing any better than stale bread soaked in milk and squeezed dry. If the stale bread or milk is not available, eggs that have beein tested out of the incubator or from under the siting hen as infertile, make a good feed mixed with bran or meal. Hard boiled eggs are frequently fed, but hard boiling them renders them more indigestible and they will cause bowel trouble if fed liberally. The best way is to use them raw or soft-boiled and mix them with bran. Feed this two or three times a day for a week or as long as the eggs last. A dozen eggs to a gallon of bran is about right. It should be crumbly, not soft. Feed just as much as the chicks will clean up readily. Twice a day, give a feed of cracked grain, cracked corn will do. Chicken groats and cracked corn are good. Good wheat screenings will answer the purpose. A good grade of commercial chick feed will answer for the grain feed. Which one of these grain mixtures is fed the feeder can decide for himself on the basis of price and availability.

It is important in feeding the grain to scatter it in a litter of cut straw or chaff so as to make the chicks exercise in getting their feed. The whole business in life of the chick is to eat, and it does not have work to do between meals to give it exercise. Unless it gets exercise in its search for feed it will go without exercise, and exercise is as important to the chick as to the athlete. Chickens can not be successfully raised without exercise. That is an absolute fact. The hen with a brood of chicks that is running at liberty around the farm is giving the chicks all the necessary exercise in searching for food. With the hen-reared chicks on the farm there is not much danger of the chicks pining and dying from lack of exercise. But even then it is just as well to provide a small scratching place where the grain can be fed in the straw. For brooder chicks, however, confined in brooder houses and in small yards the exercise must be provided; they must be made to scratch; scratching is their exercise. Begin with the straw litter after the chicks are two days old. Cut straw an inch deep for the first two or three days; then two or three inches and five inches by the time they are 10 days old. They will dig down to the bottom of it for the kernels. Then give them just as much grain as they will clean up. If too much is given they will find it too easily.

After the stale bread or the egg mash is discontinued a mash of bran and shorts and ground corn should be fed. The question here is, shall this be fed dry or moist. It saves time of course to feed it dry in a hopper, filling the hopper once a week. If one has the time, however, to mix up a mash once a day with either water or milk, the chicks will, I believe, grow a little faster. But the difference in growth is not very great, and sometimes it is an advantage not to hasten the growth of the pullets too fast. Early-hatched pullets if forced fast are likely to lay early and then molt in the fall and stop laying. If moist mash is fed mix it with milk or buttermilk to a crumbly consistency. The mash may be composed of about 2 parts bran and one each of shorts and corn meal by weight. If corn meal is not available it may be omitted or ground oats or barley substituted.

Next, animal food is necessary. If milk can be had, either skim milk or buttermilk, there is nothing better. Give them this to drink all the time, and no water. They will drink more milk if they have no water. If no milk can be had, use meat scraps, mixing it in the mash at the rate of about 10 to 15 per cent of the weight of the ground grain. Some feed it in a hopper separately with success, keeping it before the chickens all the time. Meat scrap hastens growth.

Then, finally, remember the green food. This is absolutely necessary. Of course grit and charcoal should be furnished.

Don't starve the chicks, but they should be hungry at feeding time and should retire for the night with crops well filled.

J. D.

#### Place Carbons Horizontally.

A group of European electricians decided, after experimenting, that better results were obtained by placing the carbons in arc lamps horizontally and one slightly above the other.

## Attention Poultrymen

War times demand as many eggs as possible at the least possible cost. It is not only profitable, but patriotic, too.

## Cocoanut Oil Meal

It is a splendid feed for chickens, mixed in the mash wet or dry.

Try it out and you'll not be without it.

Ask your dealer or write direct.

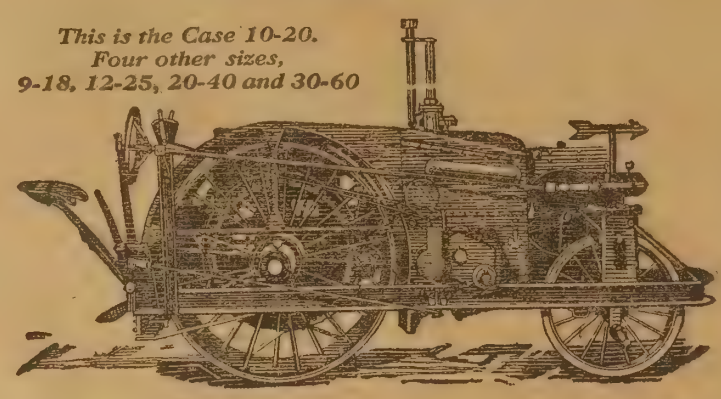
## DR. HESS Instant Louse Killer Kills Lice on Poultry *and* Stock

Use it on your lousy hens and chicks—your lousy colts, horses and cattle. You'll get better chicks—bigger, better fowls—more eggs—better contented stock.

Chicks are apt to be lousy now. Give them a chance. Sprinkle Louse Killer into the feathers, about the coops, on roosts, in nests of laying and setting hens. Always keep Louse Killer in the dust bath. For lousy horses and cattle, colts and calves, stroke the hair the wrong way and sift in Louse Killer.

We authorize dealers to return your money if it does not do as claimed.



1 lb. 25c, 2½ lbs. 50c (*except in Canada*)

Dr. HESS & CLARK
Ashland, Ohio

# CASE

KEROSENE TRACTORS

*This is the Case 10-20.*
*Four other sizes,*
*9-18, 12-25, 20-40 and 30-60*

## Popular in Every State and Country

THIS is a picture of the famous Case 10-20 Kerosene Tractor, the model that has been purchased by thousands of successful satisfied farmers.

It pulls three 14-inch plows anywhere a team can continuously pull one plow. It is the most powerful tractor in the 5000 pound class. It delivers 14 7-10 per cent more drawbar horsepower than rated.

It embodies the latest and best engineering principles, being built by the J. I. Case Threshing Machine Company, famous among farmers for 76 years. So it is not an experimental type made by a concern unacquainted with farm needs.

It has a 4-cylinder Case valve-in-head motor and burns kerosene successfully and economically. An efficient air strainer prevents dust and grit entering cylinders.

In plowing, all wheels travel on unplowed ground. The combined tire width of drivers is 32 inches. There is absolutely no side draft and no soil packing.

Under belt, this Case 10-20 drives a 20 x 36 Case Thresher with all equipment; a Case No. 16 Silo Filler, and other machines requiring similar power.

You cannot afford to buy any tractor before you learn the advantages of this Case 10-20. Inquire of a Case dealer or write to us for a catalog.

# Vegetables for Canneries

Canneries are being established in different parts of the country, mainly to care for the peaches, cherries, apricots, and a certain grade of apples that are not good commercial fruit. It often happens that this fruit for canning is as good as that shipped in extra fancy boxes, except that it is bruised, the skin is punctured, or that it has a little scale. This is not an injury for canning purposes, or at least the injury is very slight. Hundreds of tons of fruit can be saved by canning that otherwise would be wasted and the cannery should be a permanent adjunct to every fruitgrowing section. However, there are difficulties.

One of the difficulties in making a cannery profitable is to be able to employ the help for a large period of the year. The fruit season is comparatively short; the investment for machinery is as great if the plant is operated four months as if it were operated 12 months. This canning season can be greatly lengthened, if early vegetables are grown, so as to supplement for fruit. Suppose aspargus should be grown on a large scale for canning purposes; it would be ready for the cannery early in the season, and will bring a good profit per acre. Besides, it is a crop that requires only two years to bring the plants into profitable bearing, and then does not have to be renewed every year. It is estimated by some growers that asparagus will bear good returns for 15 or 20 years after planting. Rhubarb is an early crop and is canned by many companies who claim for it a good profit. Other vegetables could be grown to keep the cannery running until the early fruit is ripe. G. L.

## YOUNG TREES.

### Vary as to the Time of Bearing.

I have a letter from J. J. McElroy of Rupert, Idaho, who says: "I have a swell orchard of 50 trees that have never borne to amount to much. I prune regularly, and work the ground around them, but not deeply. They are thrifty, 8-year-old trees and have made good growth. I grow alfalfa between the trees, but not close to them. They have never bloomed but a little. What do you recommend to do? I irrigate, but not excessively.

It is difficult to diagnose a case correctly without having seen and studied all the conditions. Even then we sometimes make mistakes. It is a little like the old story of the doctor who found it necessary to amputate a patient's limb. The report read: "The operation was successful. The man died."

In a general way there are the following reasons why trees do not bear early:

1. The varieties vary greatly in the number of years required to bring them into bearing. The Spitzenburg, for instance, is a late bearer. I would not expect a Spitz to bear much before 8 years of age. The Delicious, Jonathan and Winesap are early bearers and will ordinarily bear as much at 6 as a Spitzenburg at 8.

2. If trees are planted on a rich soil, especially if it is rich in humus, they will make a heavy wood growth, but will not at an early age develop fruit spurs. However, this condition should result in a longer-lived tree and be to the ultimtae advantage of the grower.

3. If the orchard has been heavily manured it would tend to produce a heavy wood growth and light fruitbearing.

**The Remedy.**

I think you acted wisely in sowing alfalfa, and cultivating close to the trees. But now, that the trees have reached the bearing age, I would sow every square foot in alfalfa. That will hasten the bearing slightly by absorbing some of the plant food; but it will do more than that, it will nitrogenize the soil, cause the breeding of nitrogen gathering bacteria in the soil, break down the organic substances in the soil, as that when the water is turned on the food substances are dissolved and the rootlets can drink them in. This may at first tend to check wood growth a little, but in the future it insures a healthier and longer lived tree. The roots of the alfalfa will go to greater depth than the tree roots, will let the water down and the tree roots will tend to follow, thus developing a larger, healthier root system. After about four, five or six years, the alfalfa should be plowed up, the land cultivated for a couple of years, and then sowed to alfalfa again. But this means a large system of roots that have penetrated deeply into the soil, have been rotted, thus fertilizing, and aerating the soil to a greater depth than the tree roots will go. This advice is on the presumption that you have a volcanic ash soil, not a heavy humus soil, and that you have a substratum of some kind of volcanic ash formation, not a sandy or gravely subsoil. There is no difficulty in tree roots penertating sand and gravel; but the volcanic ash puddles under irrigation and clean cultivation, and prevents a proper aeration, besides it impedes and hinders root development.

I have known a number of cases, where the tree has been partly peeled to check wood growth and develop fruit spurs, thereby hastening the bearing period. They generally cut the bark in something of a diamond shape, but the slits are much longer up and down the tree than the width around the tree. In these cut spaces the tree is peeled, all the bark stripped off. The tree at once begins the work of repairing the damage and wood growth is checked. Generally about one-third of the bark at a given circumference is taken off. This lessens the power of the tree by one-third, to carry food to the top system, and many of the limbs develop fruit spurs. However, I do not believe that is a good plan. I have watched it with much interest, and in every case it worked injury in future years that I think is more than equal to the loss from late bearing. G. L.

**Woman Manages Big Chicago Store.**

One of Chicago's largest department stores is owned and managed by a woman.

## Sunshine Essential to Growth.

It is not an uncommon custom for gardens to be grown in the orchard or along fences or in other partially shaded places. It is, however, a serious mistake to think that any garden vegetable can be successfully produced where it is for any considerable part of the day in the shade. It sometimes appears at planting time to be an economy of space to plant close to the trees, using all the room possible, but those who have practiced this sort of economy have undoubtedly observed at harvest time that there was very little crop produced near the trees. This is due to two conditions, the fact that the trees robbed the vegetables of moisture and soil fertility and that they shut them off from the sunlight. The latter condition alone is sufficient in nearly all cases to account for the failure.

There are some vegetables that will stand more shade than others. Some of the plants grown for the use of the leaves only, such as greens and lettuce, can stand considerable shade, but to plant beans, peas, tomatoes, corn, turnips, carrots and the like where they will be shaded is in a majority of cases a vital blunder from the standpoint of garden success.

**Post Cards First Used in Austria.**

Post cards were first used in Austria. They became part of that country's postal service in 1869. They cost less than half a sent to send and the first were limited to 25 words. They were taken up by England a year later. The first picture postcard is said to have been sent in England in 1891. Some two or three years later, the first view cards made their appearance. Postcards came into use here in 1877.

# Pull Big Stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage—same principle as a jack. 100 pound pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Showing easy lever operation

# New Interest in Farming

## Many Retired Farmers Are Reported Back on Their Farms Doing Their Bit in the Fields—Cold Winds Hurt Apples

FAIRFIELD, Spokane County, Wash., May 10.—Spring work generally has been finished under very favorable conditions. A light rain fell the fore part of the week that freshened up the growing grain, but was not enough to be of much benefit to the late seeding, which will need a good rain before it comes up. In approaching a bunch of farmers who are standing around talking, you would be very apt to hear something about the several makes of tractors that have been used here on the hills this spring. Then, too, crop prospects are always a source of conversation. The war is most always mentioned, but it is avoided unless something momentous has just happened at the front or on the ocean. The war hasn't helped the community spirit, but rather has smothered it. Retired farmers are back on their farms this spring doing their bit in the fields. ROY G. ADAMS.

### Community Spirit Is Better.

MEAD, Spokane County, Wash., May 11.—It is too cold and dry for good growth of crops, a light rain the last week did a little good. Cold, high winds have interferred with pollenization of blossoms and will affect the apple crop. Red Cross work now engages the attention of the people to the exclusion of most all other subjects, now that the third Liberty loan drive is over. And this interest in the work of the Red Cross is doing a great deal to promote a more general community spirit. People will attend these meeting who have not been to a public meeting for years, and are giving evidence of a greater willingness to give their time and money every day. On the way to the town one meets retired farmers on their way out to their farms and the country much oftener than formerly, showing a new interest in the work on the farms. Some are able to help a part of the day. The farmer is only now beginning to grasp the full significance of the war and the country will find him up and coming when all others are tired and beginning to be discouraged. GEORGE HINGSTON.

### Have Big Acreage of Peas.

SPOKANE, Spokane County, Wash., May 11.—The crop and weather conditions in Spokane county are somewhat unfavorable this spring. All crops are in need of rain and this is especially true of winter wheat. The spring wheat is not beginning to show the need of rain as yet, but a good rain would be a benefit to this crop as well as to oats and barley. Where peas have been planted a sufficient length of time to be up, they are looking very fine indeed. The acreage of peas in the county this year is much larger than it has ever been before. The farm labor problem is beginning to be the topic of greatest consideration as the harvest season approaches. Different organizations are under way to handle the problem. Many of the boys who have gone to Camp Lewis are getting furloughs to assist in the harvesting and threshing of the crops we have this year. Retired farmers have not done much toward assisting in the handling of the problem up to the present time. We hope that from this source we may obtain additional help during the harvest season. J. R. SHINN.

### Crops Are Promising.

BICKLETON, Klickitat County, Wash., May 11.—We have just had one of the finest rains that has ever occurred here at this time of year. The 9th it rained all the afternoon and that night; the next morning the low hills north of Bickleton were covered with snow, which at the present writing is only half melted. It is an odd sight at this time of year, when fall grain is eight or ten inches high, and farmers are summer fallowing, to see part of the country covered with snow. I have never seen prospects better for a large crop and I believe there is a larger acreage than last year. The farmers here are trying to raise all they can, and are willing to abide by the government price and grading, but they do ask the government to step in and buy direct, and do away with the outrageous warehouse graft, which pockets one-foruth of this set price, which rightfully belongs to the man who raises the grain, and not to a lot of schemers who ought to have their fingers gripping a plow handle instead of having their hands in the farmers' pocket. The farmers in general are loyal here, and are freely buying Liberty bonds, and trying to rent all the land they can get hold of. There is a lot of land here in private hands that is yet unbroken and lying idle that would raise good crops. BERT F. FAULKNER.

### Fruit and Grain Look Fine.

STEVENSON, Skamania County, Wash., May 7.—Weather conditions in this section continue fine, but a little too cool nights. Crops of all kinds promise good at this time. Gardens are pretty well all planted and the disposition seems to be in the direction of increased acreage in garden stuff, but do not think there will be so many potatoes as last year. Apples, pears, cherries, plums, all bloomed heavily and are setting a good crop, and unless unfavorable weather sets in will yield heavily. Spring grain looks well, but nothing but oats is raised here, as this is not a grain-growing locality. Labor is very scarce and many will only do just what can be done by the family, as the call to the army and navy and the shipbuilding plants on the Coast has taken all the available help in our community and the prices for labor makes its employment prohibitive. Some are not able to spray their trees. Horsepower is very scarce and on account of the rugged condition of the country, situated in the heart of the Cascades, the employment of tractors is a dubious proposition at best. Horses are high and none on the market. There is plenty of machinery for all purposes that it can be used for here and none is being purchased this year. Meat animals are very scarce, with none on the market, and there will not be any until the grass fattened cattle come on. Stump land is the only pasture we have and is very good this season, as it has been an ideal season for grass and our native grass is highly nutritious and abundant. W. T. JACKSON.

### Labor Is Scarce.

GIG HARBOR, Pierce County, Wash., May 2.—Owing to the nearness of our farming district to the city of Tacoma and to the high wages there offered, we are, of course, losing much of our man-power on the land. The tremendous development of ship building makes a call for thousands of men to handle the rougher parts of the work. Many of them quickly acquire the necessary skill for classification among the expert workers. With wages ranging from $4 to $7 per day, is it any wonder that our ranches are more or less neglected? Other power on the farm is limited in this section. Horses are not plentiful on the ranches. This is not owing to the high prices of horses, but to the high cost of keeping them. The scarcity of man and horse power on the land of necessity curtails the amount of farm machinery operated. Most farmers are postponing the buying of implements with the hope of cessation of the war and a lowering of prices. The old implements are being patched up, with but little new being purchased. Nearly all meat animals are put onto the market from this section in the fall months. If the present dry spell—most extraordinary for April and May—keeps up, some stock will have to be disposed of in order to lighten up on the pastures. The farmers here are fully alive to the importance of the pasturage question, but find it difficult to extend the range and quality. Creek bottoms and springy side hills are of course the main and last dependence. Italian rye is proving very helpful to the pasture on some of the dry upper lands. W. D. BOYNTON.

### Alcohol as Source of Power.

Alexander Graham Bell recently remarked that the world will probably depend upon alcohol more and more as time goes on, and that a great field of usefulness is opening up for the engineer who will modify our machinery to enable alcohol to be used as the source of power.

Stewart's Little Giant
PORTABLE ELEVATOR

Made in lengths 12 to 24 feet. Capacity 300 to 400 bushels per hour. Weight, 300 to 400 pounds.

Can be run with any size engine.

Hundreds in successful use in the Pacific northwest.

Bulk It or Sack It?

It's time right now to decide "Yes" or "No." You should realize by this time if you are going to take a chance on sacks and on labor.

Weyerhaeuser Grain Tanks

eliminate all chance. They are the practical, sure thing for the grain harvest. Your bank account, your duty to your country are all wrapped up in the question of "Bulk it or sack it?" There is only one rational answer: "BULK IT!"

ORDER NOW—IT'S NEARING HARVEST

Weyerhaeuser Timber Company
Everett, Wash.

Best buy your SEED CORN NOW

The supply of all kinds of seed corn is decreasing every day. Some varieties are almost sold out. Others soon will be. Prices will not be any lower and for some varieties an increase seems certain. By all means buy your seed now.

¶ This year you are sure of high prices for Indian Corn and—you will get a good crop if you plant Morse's Stanford Yellow Dent or Morse's Hybrid Yellow Flint.

¶ Stanford Yellow Dent Corn was originally produced on the famous Vina Ranch. It is acclimated to California and under proper cultural conditions is a sure crop in the interior valleys of California. Last year it first was offered to the public. Scores of satisfied customers have written us their endorsements. Morse's Hybrid Yellow Flint yields heavy crops of fine, well filled ears. There is no corn better adapted for California.

*It will soon be time to plant forage and grain sorghums.* Morse's Dwarf White Milo and Fererita are two varieties that cannot be beat. Morse's Egyptian Corn is another good producer. All seed acclimated and recleaned. New Honey Sorghum is being planted extensively by farmers who want to make their own syrup.

# Water System for Farm Home

## *Spells Difference Between Happiness and Drudgery*

Here are more letters in the contest among women and girls of the farm home on the advantages of the automobile, farm lighting system or farm water system.

### Means Health and Happiness.

To the Editor: Why wouldn't I do without water in the house? How could I do without water in the house? What would I get done if I had to run out and pump every bucket of water I needed, or even carry it? Mercy! It's hard enough to get the children to wash their faces now. If they had to carry the water to wash them with—and of course, they would put it off till the last minute—the energy I would waste every time, getting them to do it beforehand!

I have lived where the water was at the bottom of a long hill, long ago, but never again for me, I'm emancipated.

Do you like to wash dishes? I do. I use two big pans of water; one I set on the gack of the range to wash in, and the other on the hotter part and as I wash them I rinse them and stack in the drainer. Then they are clean and the work is short and pleasant.

Do you dread wash day? I love it. It never comes on Monday at our house. 'Cause why? I always soak the duds in a tub full of warm soap suds, the finest on top, next morning I ring out, boil and wash in one water. Why, it's easy. The boilers I fill with a hose attached to the water faucet. Think of having to run out in the yard and carry the water in by bucketfuls!

Did you ever have to leave off your Saturday night bath because you had worked from 4 o'clock until 9 and were just too dead tired to carry the water? But if the water were there and already hot, the bath itself would rest one so.

Say, when in the habit of having a cold sponge every morning, did you ever for some reason omit it? Don't it make one feel slouchy for the whole day?

Don't you love to care for a baby? Did you ever get him all ready for his bath and find not a drop of cold water in the house? Don't you love to wash his little clothes? It might not be any particular pleasure if you had to plan beforehand and carry in the water and heat it, if you had time. But if there is plenty of water already hot any time, don't you just love to?

Don't a baby make so much washing? But if it can be done easily every day or two instead of putting it into the weekly wash, it's all the difference between work and pleasure in doing it.

My! Don't the children get dirty these days? They can't work or play without it and so long as they are out in the sunshine who cares? With plenty of water and an engine to run the washer we can keep them clean and every day clothes don't have to be ironed.

But the hired man—isn't he a sight sometimes, and don't you hate to have him crawl into your clean beds? There is certainy some excuse for the custom of letting the hired man carry his blankets. But it's a poor custom just the same, and it could be abolished by having a bathroom and water handy and giving a man a choice between his bed or yours.

We live in a dusty country and the only successful combatant of dust is water, and we can't afford to not have the water on tap at all times and use it.

Just this one thing spells the difference between health and happiness and drudgery in farm life. Why wouldn't I be without water in the house? Ask me something hard. What would I do without it? MARILLA KIDWELL.
Garfield, Wash (Cora farm).

### Dollars Saved by Auto.

To the Editor: "Oh, yes," said mother with a tone of real pride in her voice, "both of our boys have been in the ——(small town) band for several years."

This came in answer to Ann Bennett's question as she in looking over various pictures and snapshots paused to study more closely a view of a 24-piece, fine appearing uniformed band. Ann had been a close friend of mother's in the early days of Oregon, when they had lived on adjoining homesteads. Now for the first time in many years, Ann, as we all called her, was visiting us. She and mother were having an altogether "homey" visit.

"But," remarked Ann, "this must take time and practice. How can they, who stop for nothing until work and chores are done, have time to get to town to practice and to play on various occasions?"

Mother smiled. "Our machine solved that difficulty." Then reminiscently, "They couldn't always have done so. There have been many years of struggle since the old homestead days. But now things are better, the boys have staid by us and I think, they are not now sorry that they have done so."

"I am sure they are not, for you and Jed have made it worth while. I have seen plenty evidences of that just since I have been here."

"But then," continued mother, "we get as much joy out of it all as do the boys. Surely it is refreshing to get in the machine in the evening, after a day of hard work, whir smoothly away to town and sit comfortably in our own 'house' while the boys—our own town and country boys—pour forth the spirit that thrills us through. Aside from this, there have been excursions to various places where the band has been asked to play. These trips have been enjoyed for the most part by the band boys and their families as well. They have carried us to places where we hadn't been for years, where we met new folks and visited with the old timers. This, of course, was all made possible by the machine. Also—but I must go 'tend to the chickens and gather the eggs."

Ann as of old, accompanied her. As the two old cronies started out, the last I heard was, "But jaunts of this kind do not express the beginning of the value and good we have derived from our automobile. Why, during the last three years, we have gained more time and——" But the voice and the footsteps were lost to my ears. However, the thought stuck in my mind, "How much have we gained from the possession of a five-passenger car?"

Briefly I recalled most pleasurable family, band and neighborhood picnics, fishing trips and even little journeys to grandma's, as the old story goes—practically all of which would have been out of the question had we not had the machine.

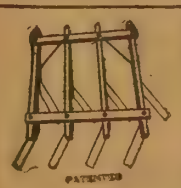
Even I, what had I individually gained by it? A knowledge of the surrounding country and towns and of the people who lived in them, a feeling that I was a part of the world outside our own big farm, where it is true I had previously passed the "almost all" of my time.

After this, more thoughtfully I recalled the necessary errands, endless in number, from the hasty trip to the blacksmith's shop to have a threshing machine or hay baler part repaired (while the whole crew waited) to the more usual, but none the less essential taking of products, such as cream and eggs to town. Think of the actual dollars and cents in time and labor alone, we had gained by it! Had we ever really paused to sum it up? After all the practical side, were there not many items that could not be reckoned in nickels and eagles?

So, I thought as I poked the kitchen fire, these were the reasons why we would not now be without an automobile.

(MRS.) ESTHER A. TRUNNELL.
Cottage Grove, Ore.

### More Than Pays for Its Keep.



To the Editor: On the farm the auto is an absolute necessity. It more than pays for its upkeep. When repairs are needed for the broken machinery, it is the auto that makes the hurried trip to town, driven by father or some of the women folks, and the machinery quickly put in running order again. What is gained? First, time, which is precious to the farmer if he is paying high prices for labor. Second, horse power is saved. If not for the auto the poor, tired horses might have to be taken from the fields to make the trip to town.

Then, on Sunday morn the farmer can take his family and drive to town to church services, come home refreshed in body and mind, more ready to resume the tasks the following week.

The auto is a great inducement to keep the young folks on the farm, giving them more pleasure. The auto is here to stay on the farm.

These are the reasons we could not be without the auto on our farm.

MRS. HOWARD CONOVER.
Twin Falls, Idaho, R. R. No. 1.

**Help Is Scarce**

The Jones Weeder will save 50 per cent of labor; cultivate 30 to 40 acres of summer-fallow per day and do it better, instead of 10 to 20 by the usual method. Couples up like a harrow; use as many sections as wanted. For booklet, prices, etc., write

**C. E. Jones, Heppner, Ore.**

**Build a Silo**

Stop wasting 40 per cent of the corn crop. Make green pastures last through the winter.

A silo is a crop savings bank—a bank that you will own, and pay the profits from to yourself. Many silos have paid for themselves in one season. After that they return 100 per cent profit yearly.

**Build a Concrete Silo**

—because concrete is rotproof, ratproof, windproof, fireproof, permanent.

# Homesteading in the Grand Coulee

By IDA C. YOUNG.

It was along past 9 o'clock of a mild evening in April and I was sitting in my homestead shack, waiting for the coming of Sister Frances and her husband. Frances and I were living on our adjoining homesteads, making up the term of residence necessary to commute them. During this period Will, Frances' husband, worked in the general merchandise store at Hartline, coming down to bring up supplies and reading matter twice each week.

I waited and listened for some time, then growing somewehat chilly I blew out the light and went over to Frances' shack, which stood just across the line from mine. The stove was still warm when I entered, so I lighted the lamp, took a peep at Baby Ivan asleep in his dry goods box upon the trunk, and made myself comfortable with an old magazine.

The evening was so still that only the ticking of the alarm clock and an occasional contented sigh from the sleeping baby broke the quiet of my waiting. Outside the night was tremulous with the chiming of frogs.

Ten o'clock came, and still no sound of buggy wheels. There were other noise like a flock of sheep stampeding, ing back and forth overhead with a noise a-plenty—a wood rat was gallop- and I recognized him for one of a pair which had been bothering us for some time. One of the pair had been drowned in our water barrel and I had a trap set for this one now. Sometime along toward 11 I heard the snap of the trap and a great rattling and thumping of the chain by which it was made fast. I lighted the lantern, took up the poker, and went out to despatch the creature. After that there was another reign of quiet, broken suddenly by a tremendous whang against the stove pipe which projected through the roof and into the night. A prodigious sound of scratching and scrambling followed, then a vociferous "Whoo! Whoo! Whoo!" startled my straining ears. After that silence returned, and I knew that the owl had departed.

I was just getting ready to go to the door for the umpty-nth time when a thundering, blast-like roar shattered the stillness, and all the waterfowl which dwelt in thousands on the lake below set up a great confusion of protest and clamor. A portion of the 1500-foot cliff had been loosened by the winter's frost and had come crashing down to the very edge of the lake.

As 12 o'clock approached, Frances drove up alone, looking tired and worried. Unfortunately we had failed to have a definite understanding as to just where she was to meet Will, and she had gone first to the cut-off Junction, where he sometimes left the train and then, not finding him, had struck across through bunch grass and sage brush to the Coulee City road. Here she waited for some time without finding a trace of her husband.

Ivan woke up and greeted his mother with a one-toothed smile, and after he had gone to sleep again Frances went rattling off into the black night while I sat down to wait. I waited and waited until it seemed to me I couldn't possibly wait another moment, then went on waiting and waiting and waiting some more. At 1 o'clock Frances returned alone for the second time, tired out and white as a ghost.

After that we sat discussing the situation and peering into the night. When we could think of nothing to say, one of us would open the door and look out some more. The suspense finally became unendurable, and with the exclamation, "I can't stay here any longer—I've got to start out again!" Frances threw open the door. There, just beyond the threshold, stood Will, as ghastly white as Frances herself.

It was past 2 o'clock when we were through with our belated supper and the whys and wherefores of the evening adventure had been made clear. It was a comedy, almost a tragedy, of errors. The train had been late and Will had gone on to Coulee City, striking off from there with his heavy grip and expecting to meet one of us with the buggy on the road. In her anxiety to be in two places at once, Frances had missed him altogether.

"And where is the grip?" I asked suddenly, remembering that I had not yet seen it.

"About two miles this side of town," answered Will with a weary smile. "I've got to go back after it."

And go back he did. Frances insisted on accompanying him.

"I'm taking no more chances," she commented grimly, as she climbed into the buggy beside her husband.

## Larger Garden This Year.

Taking out the sweet corn and potatoes there is only one-half an acre left out of the 10 for the home garden, is the report of W. J. McDonald of Cheney, Wash. But on this space there is grown lettuce, radishes, onions, cabbage, carrots, beets, turnips, parsnips, spinach, peas, beans, tomatoes, cucumbers, squash, pumpkin and melons. Radishes, lettuce and peas are planted in succession. Mr. McDonald thinks that perhaps one-fourth of the living of the family is furnished by the garden, while he himself does most of the work. His son, Elwood, comes in next. He adds: "This year we have planned on raising considerably more of all kinds of grains, also our garden, including sweet corn and potatoes, will be larger.

### Over 400,000 Women Teachers.

More than 400,000 women are employed as teachers in the elementary schools of the United States.

## Farmers Patriotic

By E. E. Elliott.

I have been at some pains to ascertain the attitude as it relates to the government and its war policies, and believe it can be summarized without placing them in any other than a patriotic position. There has been some grumbling over the food administration's ruling, especially in the matter of cereal substitutes, but each new requirement is being agreed to and the grumbling is not very audible. As to the patriotism of the farmers, it is not easy to define it clearly. It must be admitted that during the last few years there has developed among this class a critical attitude toward governmental affairs. The bulk of the independent voting as well as the main support of what might be called the moderate socialist movement was to be found among the farmers. The principle of government control is something that is readily accepted by them but the fact that it has been adopted only partially to the flagrant neglect of many commodities and conditions, has caused much dissatisfaction. At heart the farmer is fully as patriotc as any other citizen, but he is certainly less effusive and demonstrative about it. It might be added that he is less inclined to sacrifice and is disposed to consider increased crop production rather than Liberty bond subscriptions as the measure of his patriotism. It is my impression that this attitude is a general one and not limited to this particular community. The patriotic work of The Farmer in pushing the Liberty loan campaign and its support of the government conservation policies should have an educative effect upon its readers, all of whom are to be found outside the cities. Given a good crop this year and there will be no question as to where the next loan will come from.

# The Four Drive Tractor

has power on **all four wheels.** It **pulls** instead of burrowing and its turning radius is 4 feet 9 inches.

The **wise** farmer will decide **what** tractor will be the best investment for him only after he knows what the tractor will do under all working conditions existing on his farm.

**The Four Drive** has power to plow deeply, to disc sufficiently and to harrow without packing the seed bed.

Working days determine the value of a tractor to any farmer. The Four Drive is built to operate in weather that keeps horses in the barn. That's why it is delivering such paying results to its owners.

**The Four Drive stands up and works under the hardest conditions.** It is dust proof and has no exposed fragile parts. Will ford creeks 4 feet deep. Works on the average hill with ease, pulling three 14-inch bottoms.

## See the Four Drive at Pullman May 29-31

SPOKANE, WASH.

# The Fish Pond as a Source of Revenue

By CARL J. MENZE.

If you should chance to travel on the Blaine-Ferndale road north of Ferndale, Whatcom county, Washington, you would no doubt be attracted by George Roessell's miniature lake.

The location of this lake is in a hollow basin, which was formerly a natural watering place the entire year. It was excavated during the spare time from the ordinary farm work. To add to its beauty a row of Douglas fir trees were planted on its banks. The bank was then seeded down with a good turf-forming grass.

This lake has not only been a thing of beauty, but has been a source of revenue. The lake is stocked with a variety of Columbia catfish. Mr. Roessell has sold to Whatcom county, for stocking a number of lakes, a considerable amount of fry. And whenever the Roessells want a mess of fish, they have only to go and catch them.

This lake has another feature. When it freezes hard enough to form a supply of ice, the Roessells always harvest a good supply for the summer months.

## Poisons Gophers

### Whole Carrot Better Than Part

To the Editor of The Washington Farmer: I see by a recent copy of The Farmer, J. W. Moore is troubled with gophers working in his alfalfa fields. I have had a great deal of trouble and experience with this most troublesome pest and I have always found they will not eat small pieces of vegetables, as poisoned raisins, where there is much vegetation, such as in an alfalfa field, berry patch, or garden, yet they would take great rows of parsnips, carrots and potatoes right beside an alfalfa field. So I concluded they like whole vegetables. I take carrots whole and about as large around as their runways in the small end of these carrots make three or four slits and with a toothpick insert one or two crystals of strychnine in each one of the small slits. I then dig down in the burrow until I find the runway and put one of the carrots in. If the carrot is large enough to fit snugly, so much the better and sometimes I find two runways, and I always put one of these carrots in each, then cover the burrow over smoothly and have always watched a day or two to see if the carrots are thrown out, but have never found one. I poisoned them in our alfalfa this way last spring, and never saw where there was a gopher working since, and I think if Mr. Moore will try this method he will soon exterminate the gophers on his ranch.

MRS. FRED KINCAID.
Sunnyside, Wash.

**FORD OWNERS**

**The Aske Automatic Voltage Regulator, $5.00**

With Dimmer .....$6.00

If you have a Ford car, write today for information telling just how you can have bright lights at all speeds. The Aske is the only patented device guaranteed to continue the operation of one light without increased voltage should one light burn out.

**The Aske Instrument Board**

complete with clock, dimmer and push and pull switches, which are standard with higher priced cars, decreases steering wheel vibration, eliminates all starting and lighting troubles, adds beauty and distinction to your car and gives a wonderfully efficient system. The Instrument Board complete with Regulator and Dimmer $18.00, without regulator $13.00, without regulator and clock $10.00. The Instrument Board without equipment $1.25. The Aske Dual Lighting Units are sold at most dealers, or will be sent direct to you upon receipt of price and dealer's name.

**Aske Regulator Co.**
Duluth, Minn.

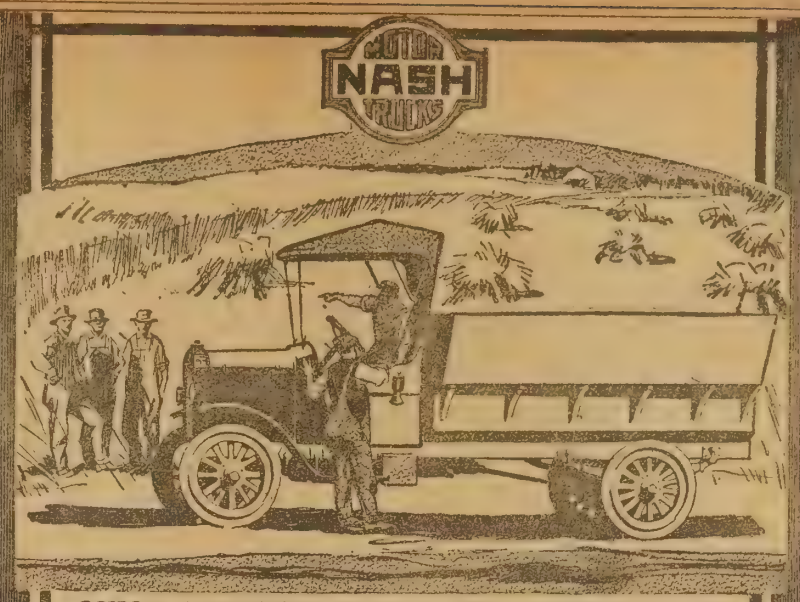
## Food Production Inspectors.

Over 40 food production inspectors of the United States bureau of markets already have been stationed in the larger receiving markets to enforce the United States standard container act. All interstate shipments of fruits and vegetables in containers must be in packages that conform to the provisions in this act. The baskets, crates, hampers and boxes must be in sizes containing half pints, pints, quarts, or multiples of quarts, slight variations either over or under size may be allowed, provided the average for any shipment conforms to the standards. Climax baskets for grapes can be made only in 2, 4 and 12-quart sizes and of the dimensions specified in the act.

Although the law applies only to interstate shipments it is probable, according to the bureau, that shipments within the states will be generally made in United States standard containers, because many manufacturers have arranged to make no containers except those that comply with the federal size requirements. Even shippers whose products are usually consumed in their own state are said to favor packages complying with the United States standard container act, because they have no assurance that their produce will not be sent across state boundries before it is consumed.

## Bee-Keeping in New Zealand.

At the late annual meeting of the Waikato Beekeepers' association at Hamilton, an assistant director of the horticultural division of the department of agriculture stated that there were 4391 apiaries registered in New Zealand, representing 50,523 colonies of bees.



One beekeeper last year returned 30 tons of honey, which he sold at $487 per ton, while some was sold as high as $730 per ton, thus making it a very prosperous industry.

## Voting by Soldiers.

The war department decided that so far as soldiers are stationed within the borders of the United States their votes at either a primary or general election may be taken by the several state governments without serious interference with military operations. As to soldiers in France or in other foreign soil in the theater of war the department decides that their vote can not be taken without serious interference with the military efficiency.

### Nothing Like It.

We have been taking your paper ever since it originated and we think there is nothing like it in regard to farm news. GEORGE CLARK.
Bow, Wash.

QUICK AND ECONOMICAL TRANSPORTATION

# Nash Trucks Speed Up Hauling

Wheat, the life food of the world, must go from field to town in the shortest possible time. Nash trucks speed up wheat hauling and reduce its cost.

They carry bigger loads than the horse drawn vehicle and do not need rest between loads. Equipped with electric lights, they work night and day, if need be, in busy harvest time.

Many superior mechanical features fit Nash trucks unusually well for this service. All Nash trucks are equipped with M. & S. automatic locking differentials. The driving wheels cannot spin. This saves tires and fuel. It lets Nash trucks get through where other trucks without this important feature cannot go.

The unusually strong internal gear drive axles of Nash trucks are simpler and lighter than others. This type of axle also delivers more power to the truck's driving wheels, especially at low engine speeds.

Our transportation expert will be glad to tell you which Nash truck can serve you best.

# Conveniently Arranged Dairy Barn

The photo herewith shows the big, well built and conveniently arranged dairy barn of William Lund, near Cathlamet, Wash. The building is on a side hill. It is 130x44, with the basement, or lower story, shown, 130x14. The basement is used mainly for calves and young stock. The foundations are of concrete and so are some of the floors. The loft is thoroughly, tightly floored, with vents for pitching the hay down, thus making the smallest possible amount of dust. Alternate vents go to the basement and to the upper floor.

The most notable feature of the barn is the roof. As the picture indicates, it is a rounding roof and has absolutely no cross beams or braces to take up space in the loft. This fine barn in the little Locomon valley is believed to have been the first barn of this type built in western Washington, if not in the entire northwest. The rafters are 2x8, and by breaking the joints half way and nailing two joists together, Mr. Lund gets the curve in the roof and yet gets great strength. He gets the effect of 4x8 rafters braced, in the roof.

Mr. Lund has a few purebred Holsteins and a herd of good grades. His herd sire, Hollywood Lilith Loma, is richly bred along producing lines and is a good individual.

Pearl Peterman is another breeder of a few purebred Holsteins near Cathlamet. And West Brothers have five head of excellent registered Ayrshires, from Stockwell foundation stock. Dairying and the improvement of dairy stock are making slow but steady progress. H. A.

# Must Fly Flag

## Patriotism Required in Schools

One of the laws of this state reads as follows:

"Every board of directorrs of the several school districts of this state shall procure a United States flag, and shall display said flag upon or near each public school building during school hours, except in unsuitable weather, and at such other times as to said board may seem proper, and shall cause appropriate flag exercises to be held in every school at least once in each week at which exercises the pupils shall recite the folloking salute to the flog: 'I pledge allegiance to my flag and to the republic for which it stands. One nation indivisible with liberty and justice to all.'"

I have recently had occasion to pass a few rural school buildings during school hours and fair weather, but saw no United States flag flying. Recently, on a national holiday, I was in one of the school towns of the state where there is located a state school, a high school and a grade school. Not one of the buildings had the Stars and Stripes displayed on that day, though school was being held in all of them at least part of the day.

While the school authorities in a community should be the last wilfully or carelessly to fail to live up to the law, both in letter and spirit, it is possible that the neglect of this simple flag requirement is more to be regretted, where it occurs; because of its patriotic significance than because of the legal question involved. The flag, always sacred in the hearts of the American people, but just now more so than at any time since the civil war, should be constantly before the eyes of the people, especially of the children. The schoolhouse, the rightful center from which radiates community life, is the logical place for it to be ever afloat. It should be the pride of school directors and teachers everywhere to keep it flying—clean, bright and glorious, a challenge and a warning to the patriotic slacker and an inspiration to the loyal patriot. F. W. C.

# Dairy Needs Stated

Under the date of March 18, 1918, the United States Dairy association of Washington addressed to the Washington delegation in congress and to the public in general a letter outlining the position and demands of the dairymen represented.

Throwing responsibility for the present unsatisfactory condition of the milk industry largely on the shoulders of the condensery interests, the association letter takes up the milk farmer's present difficulties. Shortage of labor, forcing the farmer, his wife and children to work from 4 in the morning till strength gives out at night; $10 shoes, with the hide market down to the normal for average years; high taxes; and a lack of federal aid, are among the trouble items specified by the committee.

The following paragraphs will give our readers an idea of the claims of the association:

"The threat has been made by the condenseries that they will spend a million dollars before they will submit to the demands of the dairymen; it appears that they are bound to destroy or force the dairymen to the lowest possible level.

"The writer has seen this morning women following a three-horse plow that are not capable of handling a sewing machine, to say nothing of a three-horse team hitched to a plow.

"The depression throughout the country is greater than the average American citizen has any idea of; and if we must win this war, which we should, it appears that if the government does not stipulate a price for our products very soon, and not hamper us on the financial end, that when the bottoms of ships are built, there will be no cargoes for them to load."

This letter is signed by W. K. Knutzen, Ed Brown, John B. Lee and Fred Nelson, acting for the association.

## Yakima Fruit Crop.

At a recent meeting of the state horticultural association at Yakima experts placed the maximum apple crop of Yakima valley at 12,000 cars and the maximum soft fruit crop at 6000 cars, and under the favorable conditions now prevailing it is thought the crop for the coming year will approach these figures.

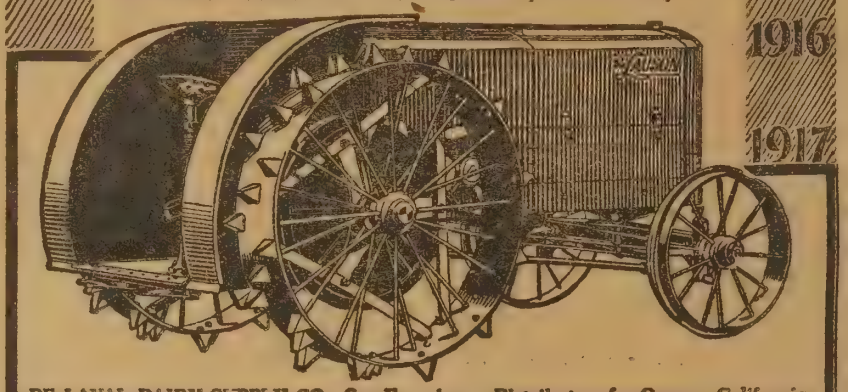
## Backed By Twenty Years of Experience

Every test made in the twenty years we have been building LAUSON farm engines helped to make the LAUSON Kerosene Tractor better. We looked to the future—five, ten years ahead, and worked slowly. The LAUSON reputation demanded a tractor of unquestioned reliability.



To those who know LAUSON engines, we say, "Here's a tractor that merits your confidence because it comes from the same plant as the engines you have found doubly serviceable." To others, we say, "Try it."

**The LAUSON 15-25 FULL JEWEL TRACTOR**

has a powerful *Heavy Duty Four-Cylinder Valve-in-Head Engine.* It is of medium weight, well distributed and built to meet the requirements of the average farm. Ample power for 3 to 4 plows, large ensilage cutter or 24 to 28-inch thresher. Burns kerosene, distillate or gasoline and operates economically. Note that all parts are enclosed from rain and dirt—a great advantage. It is a simple, thoroughly tested and practical machine for all farm tractor or belt work. Hyatt Roller Bearings throughout. Automatic type Steering Knuckles enables short turns and easy control. Driving gears enclosed, running in oil.

*Built up to a standard—not down to a price.*
*Write us or our distributor for name of Lauson dealer in your locality.* 31D

# What Is Next Move?

## *Renewal of Great Drive Is Expected*

The allied armies are waiting and working in the belief that very soon Germany will launch another great drive against the lines of the British, French, American and Belgians on the western front. All allied army headquarters say that the attack is awaited with perfect confidence and that it can not succeed. It is awaited patiently and calmly, with the same plan that has heretofore governed the allies since the great drive was launched nearly two months ago—to allow the Germans to do all the principal attacking, the allied armies saving their own men and equipment as much as possible and inflicting the greatest possible damage and losses on the invading enemy. With this policy successfully carried out, as it undoubtedly has been so far, it means the ultimate wearing out of the Germans, unless they yet prove strong enough to force their way through the allied lines by superior weight of men and arms.

It is generally calculated by the allied leaders that the Germans have about 2,000,000 men on the western front ready for the expected renewal of their drive. No statements are given out as to the number of the allied armies. Where the new attack is likely to be launched is wholly problematical, though it is generally expected that an attempt will be renewed to take Amiens, the railroad center that was the object of the violent attack of several weeks ago, when the Teutons reached within 10 or 12 miles of that city. It is predicted that, while undoubtedly the supreme effort will be made toward some one important objective, strong efforts will be made all along the line from the south to the English channel on the northern extreme.

### Germany Violates Russia.

The German invasion of Russia continues unchecked. The treaty of peace signed a few months ago continues to be but a "scrap of paper" to the outlaw nation. Thousands and thousands of square miles of Russia's best food producing territory has been overrun and placed under German control with a view to its permanent possession, it is believed. In none of Germany's so-called peace proposals has any withdrawal from Russia or restoration of the civil and the economic rights of that stricken country been mentioned. Germany has completely conquered the land cursed by the bolsheviki. Russia is helpless for all time unless the allies, whom she deserted when she fell into the hands of the blind and foolish bolsheviki and through them into the hands of the cunning and devilish Hun, secure her restoration from the latter when final peace is made. Will the allies do this? Can they afford to do less? Will humanity be vindicated until the vandal is driven out of the territory, east as well as west, that he has overrun? If Germany were allowed to maintain control of the great expanse of rich land now held in Russia the peace of the world would continue to be insecure, regardless of the terms that might be made in the west. Limitless supplies of all necessary kinds could be produced in that land, and a quarter of a century hence, were Germany allowed to pursue her own course after the present war, her fighting population could be so rebuilt and her munitions and ordnance so increased that another war as gigantic and inhuman as the present could be inflicted upon the world. Furthermore, this is a war for justice, and can not end until justice is secured for the helpless and unfortunate people of childlike Russia.

### Americans With British.

Official reports say that there is a strong reenforcement of Americans with the British in the north, where General Haig and his men so valiantly and successfully withstood the first great drive of the Germans during the late March and early April. If the attack comes in this region again, as it is expected, Americans will, undoubtedly, be thrown into the defense along with their British allies.

Last week a statement was made that the allies had found themselves in a condition so favorable that they had decided not to use the American army as originally planned, but to wait until such time as the Americans would be in France in sufficient numbers to operate as a separate unit. This statement was later denied. The Americans will be brigaded with the British and French, fighting side by side with them in divisions made up partly of men from all three countries.

The statement from allied headquarters says that some of the Americans will be under the command of British and French commanders, while in some instances British and French troops will be under command of American officers. Wherever the Americans predominate in any division American officers will be in command, and wherever French or British predominate French or British officers will be in command. This means that General Pershing will not be in command of a purely American army, but will have under him a united force of men from several nations in arms against Germany and her allies. It will be a great demonstration of the unity of purpose and the wiping out of nationality that marks the purpose of the enemies of Teuton frightfulness.

### China and Japan Unite.

Information has reached this country telling of the conclusion of an agreement between Japan and China for the protection of their common interests in the far east against German aggression. Although giving few details the reports to the department were said to make it clear that the agreement was only for the period of the war and was solely for protective purposes.

A joint defensive to counteract German aggression in Siberia is known to be contemplated, but information was lacking as to whether this would involve a movement into Siberia by Japanese and Chinese troops. As to the necessity for such action the state department is not informed, but it is assumed that because of their proximity to Siberia Japan and China, with a much keener interest in that country than any other powers, doubtless were in better position to know the extent of German influence there and the necessity of curbing it by military force.

### I. W. W. Would Fight U. S.

That there was a definite movement in the I. W. W. organization for a declaration of war on the United States in retaliation for this country's declaration of war on Germany is indicated by letters presented in evidence at the trial of the 112 indicted I. W. W. leaders now on in Chicago. One letter presented was written by one of the leaders to William D. Hayward, secretary of the national I. W. W. One paragraph of the letter read as follows:

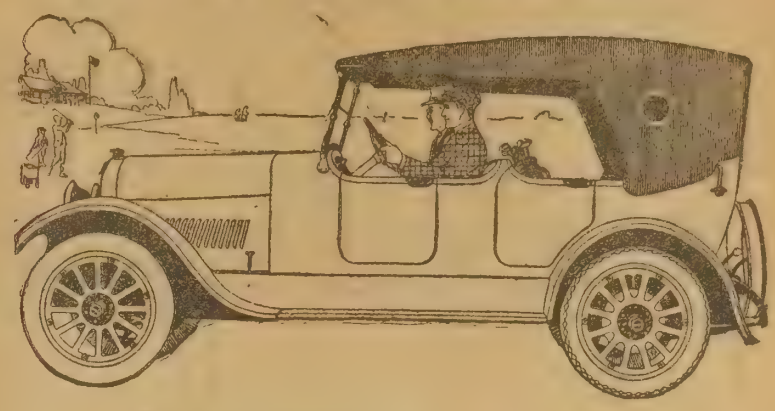
"Like little brooks streaming into one channel our organization would swell into one grand river," Slovick wrote. "All in all, we could muster quite an army. There are in this country Germans, Austrians, Hungarians, Bulgarians and some Irish who for patriotic reasons, if you please, will be willing to fight this government."

## PORK EXPORTS.

### For March 308,000,000 Pounds.

Figures prove that the American people have been giving an intelligent response to the program mapped out by the food administration. During 1917 the consumption of pork dropped month by month, and reached the lowest point in March, 1918. It is interesting to know that when the consumption of pork hit the low point the export of pork reached the high mark. Pork exports for the month totaled 308,010,711 pounds. The exports of beef also hit the high mark in March and totaled 87,244,388 pounds.

The largest exportation of beef for any month in 1917 was in April, when it reached 51,974,963 pounds. In 1916, June was the highest month with a total of 53,328,930 pounds.



The largest exportation of pork for any month in 1917 was in January, when it reached a total of 199,505,465 pounds. In 1916, February was the highest month, with a total of 162,376,306 pounds.

Even with these large shipments the allies have found it necessary to reduce the consumption of all kinds of meats and poultry to a weekly average of about 1 1-4 pounds per person.

### Record Cow Is Listed.

Eminent Jimps Owl, one of the purebred Jersey cows to be sold at the Glen Tana sale next month, has made a record among Jerseys as a milk producer, placing her second in the United States as a 4-year-old, according to a report just made. From May 14, 1917, to May 1, 1918, she produced 16,372.08 pounds of milk. She is beaten by a narrow margin by Lass 66th of Hood farm, Lowell, Mass.

# STEPHENS *Salient Six*

PERMANENTLY IN VOGUE

With respect both to style and mechanical construction, the Stephens Salient Six is built not only to meet the exacting demands of today, but those of months and years to come.

Stephens body lines were created not merely to satisfy existing fashion, but to anticipate the trend of design during an entire series of styles changes. The Stephens will be as up-to-date a year from now as it is today, because it was built by men with vision and the ability to foretell style development.

Along the same line, the Stephens engine was especially designed to burn not only the lowest grade fuels of today, but the still lower grades to come. It develops its full fifty-seven horsepower, smoothly and without a spit or choke, on grades of gasoline that have not yet been forced onto the market by the increasing demand.

Throughout, Stephens cars are built to retain their freshness of appeal and distinctive charm over a long sweep of time. Coachwork of seasoned hardwoods, expertly fitted, and twelve coats of paint and varnish, hand rubbed, insure against depreciation.

*Call and let us show you in detail this car of tomorrow.*

# How to Remove Honey from Hive

## *Ingenius Appliance Aids by Clearing Supers of Bees*

Article 6. by GEORGE W. YORK.

I believe I have before stated that the surplus honey is usually produced in two forms—in the comb and the extracted, the latter being free from the comb. Of course, all honey is produced first in the comb. But when we speak of surplus comb honey we mean that the honey is in the commercial form of the usual frames or boxes, about 4 1-4x4 1-4 inches in size. The surplus extracted honey is the liquid honey that has been taken from the combs by the use of a centrifugal machine called a "honey extractor."

Bee-escape board.

We will suppose that there are several supers of honey in the one-pound boxes or sections ready to be removed from the hive. It is very annoying to the beekeeper and also very irritating to the bees to remove the honey while the bees are still working in the supers or are found in them. So a genius among beekeepers invented what he called a "bee-escape." This is a small metal arrangement, perhaps 3 inches long, 1 1-2 inches wide and possibly an inch thick. It is so constructed that within it are two very small, flat pieces of spring steel, two ends of which are fastened and the other two ends held so that they have but 1-4 inch of space between them.

The bee-escape is then put in the center of a board that covers the whole top of the brood chamber of the hive. This board, with the bee-escape is then inserted directly under the first super of honey, with the bee-space side of the board upward. If the bee-escape board is put on toward evening usually by the next morning or afternoon every bee will have gone down through the bee-escape into the brood chamber of the hive, and they can not return to the supers of comb honey, for while the two springs referred to permit the bees to go down and out of the super, they can not return through them. When all of the bees have passed out of the supers the latter can be removed from the hive to a room in the house

Centrifugal honey extractor.

and the boxes of honey taken out. New or empty boxes can be put in their places and the super or supers returned to the hive to be refilled.

If it is desired to let the bees out of the supers more rapidly, a bee-escape board can also be put on top of the top super of honey on the hive, when some of the bees will fly outside and return through the regular hive entrance. Of course, in putting the bee-escape board on top it must be reversed or with the bee space side down.

The bee-escape board may be used under extracting supers also. After the bees have left the supers they can be removed and the honey extracted with the use of a honey extractor, a picture of which is shown herewith.

The extracting combs are first uncapped on both sides with a honey knife (made specially for the purpose), and then inserted in the wire comb-baskets within the extractor can. By the use of gearing and a crank these comb-baskets are revolved very rapidly, which causes the honey to fly out of the comb through the wire comb-baskets, and run down the inside of the extractor can, when it may be drawn off through a faucet or honey gate at the bottom of the can and stored in any receptacle desired.

When the honey on one side of the combs is all out the combs are reversed by reversing the movable wire comb-baskets and the honey thrown out on the other side of the comb. After the combs are emptied they can be returned to the hive for refilling by the bees. By this process the bees are saved much labor in the building of storage comb, and the cell cappings that are removed before extracting may be drained of all honey and then melted into beeswax. All extracting combs of honey should be full and completely sealed over before removed and uncapped for extracting.

All bits of wax, old comb, etc., should be saved and rendered into beeswax. It can all be heated to the melting point, after putting all the wax into a pan or kettle with water in it. (Don't use an iron kettle, as it would darken the color of the beeswax.) When the water and wax are then cooled you will find that all the wax has formed into a cake on the top of the water, when it can be lifted out. This is the simplest method of rendering comb, cappings, etc., into marketable beeswax. If there is any sediment resulting from melting up old, dirty comb, such sediment will be found on the underside of the cake of beeswax, when it can be scraped off.

### Value of Bees as Pollenizers.

While the bees are of much importance on account of the honey they produce, probably their greatest value is in the pollenization of fruit and other blossoms, which results in larger crops. Some well-informed orchardists offer to pay a beekeeper for moving his bees near their orchards for the sole purpose of aiding in the more perfect pollenization of the blossoms. The manager of the 600-acre Kootenai orchards, located in Boundary county, Idaho, has just recently secured a number of colonies of bees so as to have them there when the over 4000 apple trees are in bloom. While the bees seldom store any surplus honey from fruit blossoms, still what nectar they do gather from them is a great help in feeding the thousands of young bees that are hatching out so rapidly about the time the fruit trees are in bloom. These bees will be the ones that will store the main honey harvest a little later on.

## Farm Labor Supplies.

B. A. Hunter, in charge of federal employment bureau in Spokane, reports sending out about 700 men this spring to farm work. He adds that the rush for farm help is about over for the present.

# Beets Reduce Potato Acreage

## *Summer Fallow Land Should Make Up Apparent Shortage*

There is a large increase in the sugar beet acreage in the Yakima valley this season. There is a large decrease in the potato acreage in the same district. These two facts are closely linked together, it being evident that many potato farmers are reducing their acreage of potatoes in order to produce beets at the contract price of $10 a ton, which is offered this season by the Utah-Idaho Sugar company. Their action is the result, not only of the guaranteed price, which is the highest general price yet paid for beets in the northwest, but of the unsatisfactory condition of the potato market during the last season and up to the present time.

Estimates of the reduction in the potato acreage vary from 20 per cent to 60 per cent, but it is generally agreed that the acreage will not exceed two-thirds or three-fourths that of last season. Y. C. Mansfield, formerly extensively engaged in wheat and sheep production in the Endicott, Whitman county, district, but now operating a quarter section of irrigated land near Sunnyside, believes that the potato acreage in the Yakima valley will not be more than a third what it was last year, and strongly urges upon the foothill and wheat farmers that they plant potatoes on a part of their summer fallow land instead of allowing it to lie wholly idle.

In reply to an inquiry from this paper, J. N. Price, county agricultural agent for Yakima county, estimates that the potato acreage this year will be from 25 to 30 per cent less than last year. His reply to the inquiry follows:

"Replying to your letter of May 10th regarding the potato and sugar beet situation in Yakima county, I wish to say that our farm survey has shown a decrease in the potato planting this year of approximately 20 per cent. This survey was completed before the farmers had become very greatly discouraged over the price of potatoes this spring and I feel sure, therefore, that we will find a greater decrease in the acreage than is shown by the farm survey. The decrease in the potato acreage this year has been placed all the way from 25 per cent to 50 per cent below last year's acreage. I think a safe estimate would be about 25 per cent to 30 per cent. The older potato growers will have fairly large acreages this year, but a good many of the people who planted for the first time last year or those who grow potatoes occasionally will not plant this year.

"The acreage of sugar beets is very greatly increased in the county this year on account of building two new factories. The present acreage of sugar beets contracted for the three factories will be close to 20,000 acres. The majority of this acreage will be in Yakima county. The planting of sugar beets has replaced potatoes to some extent all over the county and especially in the Sunnyside district. The sugar beets are looking well at this time and the work of cultivating and thinning is progressing nicely. The sugar beet labor is taken care of very well this year by bringing in large numbers of Russian families who have contracted with the farmers to take care of the beets for the season. I think we will have no trouble with the labor question with regard to this crop unless perhaps it might be at digging time. Although in cases where the contracts are entered into by the Russian families they contract to take care of the harvesting."

# Why Should Banks Become Interested in Sheep Clubs?

By R. A. BLANCHARD.

Why should a bank be interested in a sheep club? The club idea merely works with boys and girls. What is the benefit? Mr. Banker, the benefit is right here—the boys and girls are the men and women of tomorrow.

The best available statistics we have at present show that from 1910 to 1911 our wool consumption was roughly 450,805,000 pounds, while in the year 1915 it was 821,801,000, but on the other hand our production for the same period has dropped from 321,363,000 to 288,777,000 pounds, and with our population increased approximately 11,000,000 in that time.

The government tells us it costs $156 to clothe a soldier in the trenches in France, and of that amount $100 is spent for things made of wool. We have only 48,900,000 sheep in America, and our army and navy alone need 300,000,000 pounds of wool up to September of this year, and the total production for 1917 was only 291,000,000 pounds. In fact, the rapid progression of events have kept our statisticians in in a whirl. Uncle Sam tells that 20 sheep are necessary for every soldier.

This is the one reason, Mr. Banker, why the bank sheep club has come into existence so rapidly this year. It is a patriotic call in which every available acre that can be used for the production of sheep should be put to work. The banks of the country have a tremendous power in encouraging the farm flock idea. One bank in central Oregon purchased a band of 2000 sheep and distributed these in lots of 25, 50 and 100 on the wheat farms in that region, such that the waste could be taken care of, also fence corners, weeds and the by-products consumed.

The future of the sheep industry is bound to be that of the farm flock. The great ranges, while many will always remain intact, can not be relied upon for the volume they produced in the past.

A successful plan followed by banks in the northwest is as follows: Announcing to the public through the press, distributing pamphlets, literature of any kind that the bank will organize a sheep club to stimulate the interest in sheep production, and will offer to any boy sufficient funds at a reasonable rate of interest, say 6 per cent, with which to purchase his sheep, provided he brings in the contract which is provided, properly signed. The organization of the club is affected through the schools and country community centers, with the co-operation of the extension service of the state and government, who supply the club members with regular lessons and instructions on care, management, feeding, etc., requiring the boy to keep accurate cost, data and everything complete. At the end of the season the sheep can be displayed at local fairs, and in contests for prizes offered.

About 40 boys make a good club to begin with, one having a buck for breeding purposes. It is well to start with a lamb, although some clubs have been successful with the breeding ewe, securing the lamb during the season.

## British Shire Horse Show.

The holding at Newmarket of the 39th annual show of the Shire Horse society, "established to promote the Old English Breed of Cart Horse"—so the legend still runs on the cover of the catalogue—was fully justified, says the London Live Stock Journal. J. Forshaw & Sons had the felicity of again winning the stallion championship, after many years of trying, the last time being in 1906, when Present King II. gave them one "notch" on the society's seventh cup, which, however, fell in the end to the all-conquering Rothschild stud of that period. Their victory this year with Rickford Coming King is a worthy one. The horse was only beaten by a narrow margin by a really great champion in 1917—to wit, Sir Arthur Nicholson's Champion's Clansman.

A fine average was realized at the customary sales, E. C. Fairweather giving 1150 guineas, or about $5377, for Sussex Goalkeeper.

# Flock and Flock Master Disappear

A case interesting throughout the sheep growing districts of the northwest and to persons not interested in sheep but in stories of daring has just been settled in the courts at Vale, Ore. Last winter a flock of 2400 sheep belonging to a land and live stock company, of which W. H. Gess of Nampa, Idaho, is manager, disappeared from the ranges of Oregon, where they were being grazed. Fortunately, Mr. Gess learned of their disappearance and started early pursuit. The man in charge of them on the range was also found to be missing.

Investigations revealed the fact that the sheep had been driven to a shipping point across the Nevada-Oregon line, and started on their way to the markets at Chicago. By wire and otherwise their owner traced the shipment until 1800 head of them were located at Omaha, to which point they had been redirected. The remaining 600 head, however, and their whereabouts are unknown to this day, according to latest reports. The man who had billed them for shipment was detected and arrested in Omaha, and a search for the lost flockmaster was successful in placing him and a third confederate under arrest elsewhere. All three men were placed on trial and found guilty of theft.

The attempted theft of the flock of sheep is one of the largest ventures of its kind known in recent years in the stock growing districts of the northwest. Had the three men succeeded in making good their attempt it is probable that the venture would have netted each of them somewhere around $10,000, bringing to the owners of the sheep a corresponding loss.

## ALLIES NEED MEAT.

### California Man Sums Up Situation.

In an address before a recent meeting of the cattle growers in California, L. A. Nares, federal live stock commissioner for that state, declared that the home and European demands for meat required a production of 1,700,000,000 pounds annually. Speaking of the meat situation, he said:

"To show the extraordinary calls upon meat producers of the nation let us cite the fact that in the year ending 1914 exports of meats from the United States totaled 168,000,000 pounds In 1916 they rose to 437,000,000, and indications are 1918 will require 800,000,000 pounds. Of this beef is estimated at 275,000,000. By saving the wastes on the range and by cooperation we may cut down the cost of meat and at the same time help ourselves. I appeal to your patriotism to join in this endeavor to aid the people."

### Cutting Olive Trees Forbidden.

The felling of olive trees is forbidden by a decree published at Rome March 30, which prohibits also the cutting of the principal branches of such trees except when pruning. It is provided that the regulations may be extended to mulberry trees and fruit trees by ministerial decree. The present decree is effective from the day of its publication until the end of the agricultural year following that in which peace is established.

### Hay Shortage in France.

To the burden of war and the general shortage of food in France is added a serious decline in hay production. Official reports received by the United States food administration show that the 1917 French hay crop was nearly 7,000,000 tons less than production of the previous year, a drop of about one-seventh. This misfortune has seriously affected the live stock industry and supplies for the army.

**Women Form Life Guard.**

Ocean Beach, a seaside resort in southern California, has a life-saving guard of five women.

## MORE STOCK IN FORESTS.

### Government to Issue More Permits.

Figures issued by Chief Forester Graves indicate that there will this year be allowed on the ranges of the national forests a much larger number of live stock than have previously been grazed. They show that half a million more sheep and a quarter of a million more cattle will be allowed forest range this year than last year. Something like 9,000,000 sheep, 2,360,000 cattle and over 50,000 hogs will be pastured this season in the timber. While it is the announced policy of the forest service to increase the number of live stock in the forests wherever possible, it is found that Colorado and Wyoming stockmen are given the greatest assistarce this year.

### Liver Is Green.

To the Editor: Some little time ago we bought some Brown Leghorn chickens and some of them seemed droopy and their combs turn dark. They eat what they can pick up but won't work for it. I killed two of the worst ones and cut them open and found that their livers were green and one was just like small gravel. One also had pink meat in places around the neck. I have penned the sick ones by themselves and gave them kerosene and mash with red pepper in it. Please let me know what I should do.

MRS. G. N.

Brewster, Wash.

The information in regard to condition of the liver is not very clear. If the liver was gritty when touched with a knife or had yellowish gritty spots, that would be a pretty good symptom of tuberculosis. If this is not the case the trouble may be due to digestive disorders which could be corrected by proper feeding. Try epsom salts, one-half teaspoonful per bird. Dissolve the salts in warm water then mix a bran mash with it and feed when the fowls are hungry, being careful to see that all the fowls have access to it. If sour milk or buttermilk is available give them all they will drink. Feed plenty of green feed, all they will eat every day. Keep grit and charcoal before them all the time. Do not give them kerosene. If the above treatment does not remedy the trouble, make further post mortem examinations and report.

## All-Pacific Northwest Power Farming Demonstration

**Pullman, Wash., May 29, 30, 31.**

Under auspices State College of Washington, demonstrating all lines of labor-saving machinery.

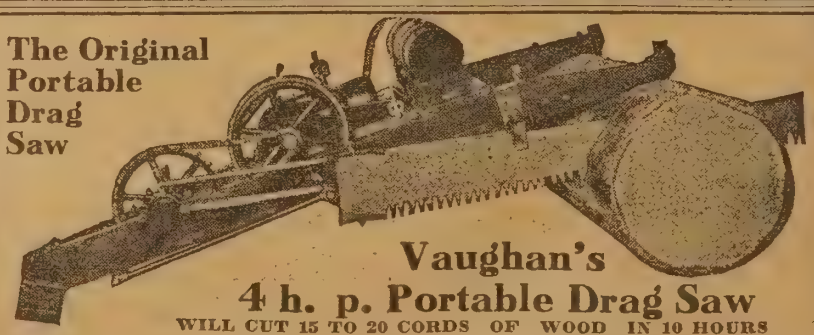
**TRACTORS, ENGINE PLOWS HARVESTING AND TILLAGE MACHINERY, FARM TRUCKS, FARM POWER EQUIPMENT**

Arrange to attend—fare and a third round-trip on all railroads—certificate plan—take a receipt from your ticket agent. Splendid camping facilities. For further information write Dept. Agricultural Engineering, State College of Washington, Pullman, Wash.

**KNOW POWER FARMING**

## Rhodes Harvester Co.

**Manufacturers Combined Harvesters**
**R. F. D. No. 8, Spokane, Wash.**



**A COMBINED HARVESTER WITHOUT AN EQUAL.**

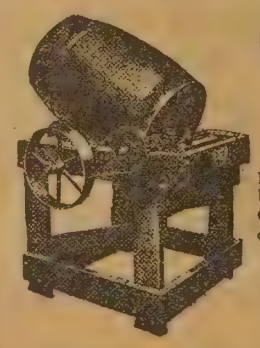
**All steel, lightweight, always level, no hills too steep, no ground too rough, requires less horses than any other machine of same capacity.**

**Made in one size only—16 foot. A horse to the foot.**

**The Original Portable Drag Saw**

## Vaughan's 4 h. p. Portable Drag Saw

**WILL CUT 15 TO 20 CORDS OF WOOD IN 10 HOURS**



Can be operated by one man. Two men can carry complete machine. 4 H. P. gasoline motor mounted on frame. One gallon gasoline required to cut 8 to 12 cords of wood. Engine can be used for other work without removing from frame. No gears, cogs, belts or pulleys. Friction clutch prevents breakage if saw pinches. Saw makes about 125 strokes per minute. Will cut any size log up to 6 feet. Sprockets and cranks, etc., made of cast steel. All working parts guaranteed against defects in material and workmanship.

Net cash price for complete machine as shown in cut, $160 f. o. b. Spokane and common points.

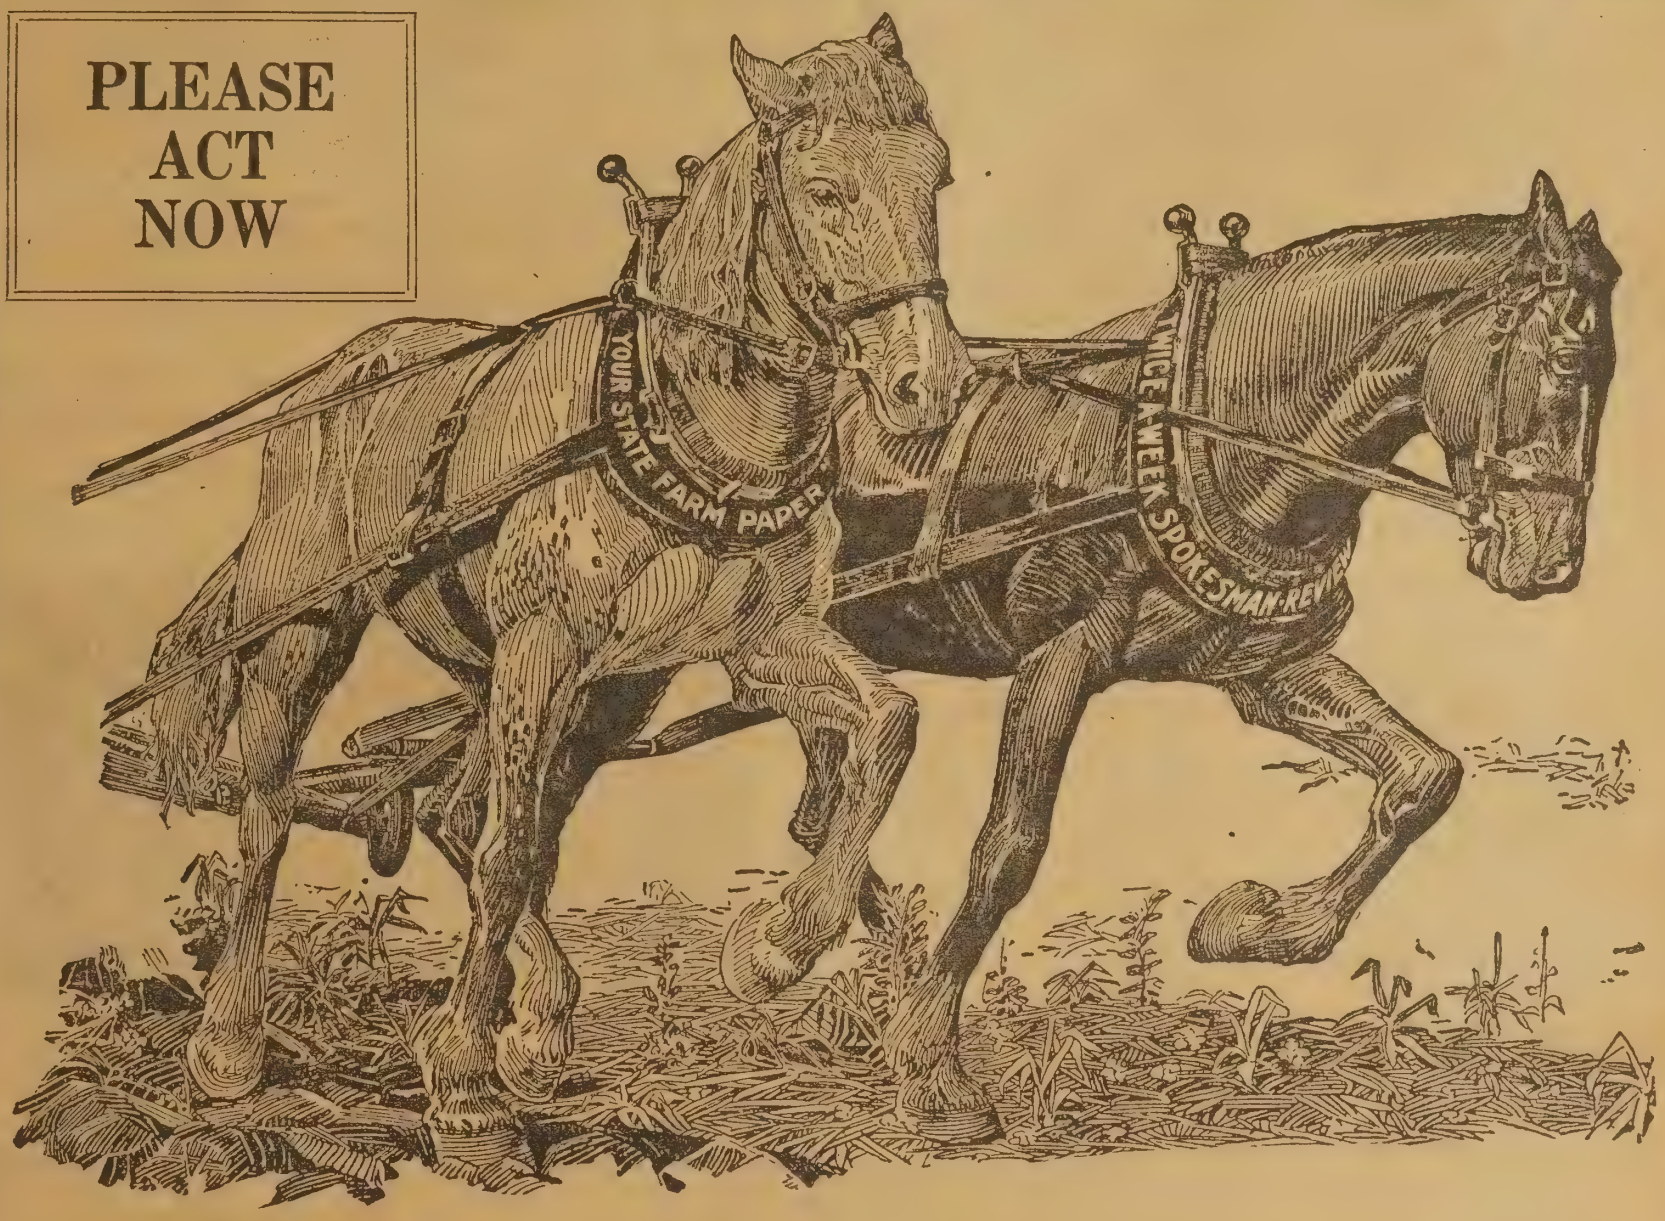
**FOR SALE BY**

**Washington Machinery & Supply Company**

S122 Monroe. SPOKANE, WASHINGTON

## Cut Labor Cost of Concrete on Your Farm to a Minimum

This simple concrete mixer can be run by hand or by power. Will mix concrete more thoroughly than can be done on mixing board with one-fourth the labor. Capacity 15 to 25 yards per day. **Always ready.** Chain drive power tilting dump discharges direct into wheel barrow. Write for descriptive folder and price.



**Hofius Steel Equipment Co**

**Spokane, Wash.**

# Mighty War Is Waging for Food Supplies

## *Fighters Are the Farmers and Weapons the Plow, Reaper and Thresher; Each Must Do His Best*

Daily it becomes increasingly apparent that the war will be won by the side whose food reserves last longest under the fearful stress of the conflict.

This thought should never be forgotten for a day. Farmers can render immensely valuable service to their country by preaching it constantly to their neighbors, to the members of their own family, and to their hired workers.

Take, for illustration, the critical case of our ally, Italy. The Italians are literally living from hand to mouth. A Rome correspondent writes that "the essential problem of Italian resistance in this war has been and continues to be, the problem of giving the people bread." To keep the price down to the point where the people can buy, the government buys wheat and sells it to the bakers at a loss of about 42 per cent. In other words, if the government pays $3 a bushel for American wheat, it sells the same wheat to the bakers for $1.74 and requires them to sell bread to the people at a certain government-fixed price.

The Italians are using every imaginable kind of substitute for bread mixtures—corn, lima beans, chestnuts, rice, nuts, dried figs, potatoes. Bread can be bought on government cards, and the law strictly forbids the buying or selling of fresh bread, which, being more palatable, would be consumed in greater quantities.

"This," says the correspondent, "is the essential fact in the Italian situation, to be considered especially by the United States. Even the grave question of coal falls into second line, except that it becomes of primary importance in relation to its effect on the problem of distribution of wheat at numberless points where it is needed."

The Italians must have wheat from the United States or they will be forced to make terms with the enemy, and if Italy should quit the war the allied cause would probably be lost, for approximately 2,000,000 Austrian and German soldiers who are now on the Italian front would be shifted to the French and Belgian front and give Hindenburg the needed forces to finish his western drive.

On the other hand, the food problem is even more desperate in Austria. A recent cablegram says that in parts of that country the situation is absolutely insupportable. Socialist deputies of Galicia have telegraphed the Austrian premier that the population there is dying of hunger and they demand the immediate importation of grain from Poland.

If Russia had not collapsed Germany and Austria would be suing now for peace, but the enemy is ransacking the conquered areas in Russia for grain and other food and stimulating the planting of large crops for the next harvest.

The situation then stands thus: England, France and Italy are depending on the United States and Canada, while the enemy is staking everything on Russian supplies. While the armies are waging a military war on the fighting lines, another mighty war is waging for food. In one case the weapons are cannon, rifles and bayonets; in the other, the plow, the reaper and the thresher.

With these truths in mind, every thoughtful, loyal American farm worker should spring to the support of the allied cause, working early and late, and putting into his toil the lofty spirit of unstinted service to his country.

# Farm Women Not Slackers

## *Appeal Is Made That Women of America Do Full Duty*

**"American women must quit being parasites and learn to give instead of always taking. An hour or two a few days a week is not enough for any woman to give her country. We must give a full business day, an eight-hour day every day of the week if we are to count for anything while the war lasts."**

The author of the foregoing words is Mrs. Frank A. Vanderlip of New York city, treasurer of the national women's Liberty loan committee, and wife of Frank A. Vanderlip, who has been conducting the thrift and war savings movement for the government. It is a part of her strong appeal to the women of America to assume their full responsibility in the necessary activities of the present war period.

Mrs. Vanderlip is right. Every woman should do her full duty. Every woman should, to the best of her ability, all conditions considered, give a full business day, an eight-hour day as she puts it, six days a week, to productive activity. Every woman who has been a parasite should "quit being a parasite." Every woman who has always been taking should "learn to give instead."

But let it be understood that Mrs. Vanderlip is talking to a class of women who do not live on the farms of the northwest. Where there is one woman on the farm not giving a full "business day" to productive work, there are a thousand who are giving 10 to 16 hours, six days a week, and seven hours thrown in on Sunday for good measure. Where there is one woman on the farm who is a parasite, always taking instead of giving, there are a thousand who are constantly giving more than they receive.

Messages like this are little needed by the farm women of America, though it may well be inspiring to them to know that their sisters in the city are being urged to do their full share of war work and in most instances are responding to the appeal. Mrs. Vanderlip's appeal to those in the city who are negligent of their duty and responsibility, when read with these thoughts in mind, stands out as a strong, loyal and patriotic message. Here are some of the paragraphs from it that deserve reading:

"There is but one standard for measuring a woman in this new day of war. That is dependability. The woman who can be depended upon is the one we want. The one who can not be counted upon is the one who will be dropped forever. A professional spirit is the need of American women, who have been parasitic for too long. We must stop taking and give. Eight hours a day is a short day for this great work we have before us. Two or three hours a day to the Red Cross is not enough for any woman to give as her war work.

"We must get as our personal point of view the realization that we can not have our cake and eat it too. We must ask ourselves, in this war of equipment rather than men, who must go without if we have the things we have been accustomed to. Business and pleasure can not go on as usual if we are successful to conduct this tremendous new business of war.

"We have forgotten, when we are buying new clothes and eating the wheat and sweets that we want and riding in our motor cars, that we are hampering the government. We are standing in the way of the government's business, which is war.

"When you want to spend a dollar for candy or unnecessary clothes (and we buy more clothes than we need because of pride) count that dollar as a traitor dollar. If you save that dollar and invest it with the government you are serving the government doubly, for you are aiding in financing the war and you are releasing the labor and materials needed for the unnecessaries which you have demanded formerly.

"We are fighting an enemy that is far from beaten. It has won everything it started out after. Its dream of Mittel Europa is realized now. Only a military victory can save democracy. We must sacrifice ourselves as we have sacrificed our men folks. We must learn to hate that we may effectively kill the evil thing that is ruining not only the bodies, but the souls of its people and threatens the rest of the world."

**An Allied Rhyme.**

What rhymes with German? Vermin.

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## How the Blind "See" the Objects Their Fingers Touch

Dr. Hirshberg.

Modern psychologists say that psychology is a science which has to do with actions, deeds and behavior, since these alone are the only real and true standards of what is in a person's mind. In other words, the full knowledge of what is in your thoughts is evidenced mostly by your behavior from the cradle to the grave. The extent and perfection of such knowledge is directly dependent upon the minuteness and completeness of this knowledge.

Dr. C. F. Fraser of the American Association of Instructors of the Blind verifies this in his discoveries about the psychology of blind persons. He was forced to conclude from his experiments that persons born blind or those who acquired blindness at birth do not obtain visual impressions in the sense that those who see use the word. Therefore, these blind persons have no visual sense of form.

In order to determine whether what they call "seeing six sides of a block at once" was truly "seeing at once" many tests were made. In answers given, all the blind agreed that they saw the upper fact first and the lower visualized last. The other four sides were not so unanimously judged.

**Differences in Conceptions.**

Although the language of the blind is the language of persons with sight, the mental events which take place in the thoughts of a blind person are merely a rapid succession of tactual images realized intellectually as a cube.

A number of blind persons were tested as to their thoughts of an arm chair. The majority first thought of the right and then of the left arm, then of the seat, the back, and finally of the legs.

The tests with many other objects proved that the mental conception of the blind as to the appearance of things differ from those who see or once saw. These impressions are the difference of thought due to the entrance of reality through the eyes or through the muscles.

**The Limiting Factors.**

Sight is a sense which takes in objects, as a whole and in one impression. You first see objects as a whole and then take in the details afterward.

The pineasthetic and tactual senses—those of the muscles and the touch—are limited in scope of time and space and must take in details as they come in contact and in sequence with the fingers or other structures. The mind, therefore, is made up more gradually at first of individual perceptions.

Of course, as a matter of fact, so swift is this sequence of impressions that a person always blind soon learns instantaneously to anticipate what is coming, just as you do a half-completed tune or sentence.

# Sidelights

**In These Days.**

"No, I am going to marry Fred."

"Then you can give me no hope?"

"Well, of course, Algy, any marriage may turn out not to be a success."—Louisville Courier-Journal.

Dealer—Talks? Why, his last mistress sold him because she couldn't get in a word edgeways.—Boston Transcript.

**Alas, Yes.**

"I have discovered a sad truth."

"What?"

"More men can sing 'Hail, Hail, the Gang's All Here,' than can sing 'The Star-Spangled Banner.'" — Florida Times-Union.

**Key-Whiz.**

Judge—Name?

Prisoner—Smith.

Judge—Occupation?

Prisoner—Locksmith.

Judge—Officer, lock Smith up.—Boy's Life.

**Mental Arithmetic.**

The teacher was hearing a class in mental arithmetic. It was the first lesson in fractions. "Now," said the teacher, "Mary had eight eggs. After using four for her cake, what part was left?" Lulu waved her hand frantically. "What is it, Lulu?" asked the teacher.

"Eggshells," she answered promptly.

**Community Shears.**

A South Dakota state senator tells this:

A customer entered the small town barber shop.

"How soon can you cut my hair?" he asked of the proprietor, who was seated in an easy chair, perusing the pages of a dime novel.

"Bill," said the barber, addressing his errand boy, "run over and tell the editor that I'd like my scissors, if he's got done editin' the paper. Gentleman waitin' for a hair cut."—Pittsburg Chronicle-Telegraph.

**Picnic Was Off.**

Baby's uncle met her in the street one day and asked her whether she was going with a picnic party from her school.

"No," replied the 8-year-old niece. "I ain't going!"

"My dear," said the uncle, "you must not say 'I ain't going.' You must say 'I am not going.'"

And he proceeded to give her a little lesson in grammar.

"You are not going. He is not going. We are not going. They are not going. Now, can you say all that?"

"Oh, yes!" responded Baby heartily. "There ain't nobody going!"—London Answers.

# All the World's a Stage, and All the Men and Women Merely Players

## Relieved of Command.

Admiral von Schroeder, commander of the German naval base at Zeebrugge, has been relieved of his command. His demotion was the result of the successful raid which was recently made by the French and British warships.

## Overloaded Burros in Mexico

One of the depressing sights in Mexico, says "Our Dumb Animals," is the brutal treatment to which the patient, plodding burro is subjected. The Mexican, generally, loves flowers and birds, and is kind to the small animals about the home, but no consideration whatever is shown when loading his flesh-and-blood freighter. Whether the load weighs 300 or 500 pounds it goes on, till often the poor little beast sinks beneath the burden ere many steps have been taken. It is wonderful, however, how great a load the patient, stout-hearted little burro can carry.

## James S. Ramage.

J. S. Ramage, Spokane, has been made an executive officer of the American Red Cross and will leave soon for France.

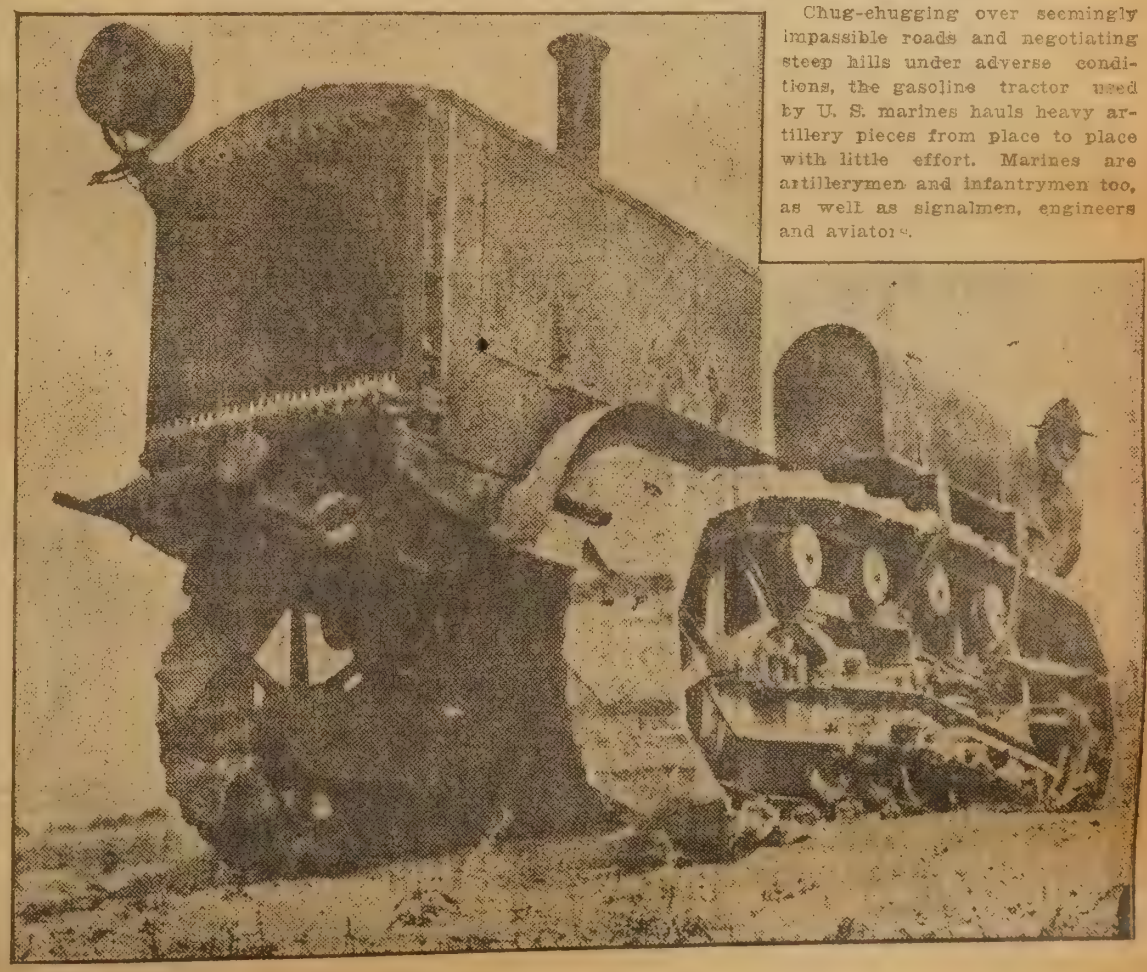
The above illustration shows a number of engineers from the United States. They are at work building a cerduroy road somewhere in France for supplying the front battle lines with equipment.

## What the Good German Sword Did

—Oakland Tribune.



## Fashions Are Certainly Changing

—Kansas City Star.

## Giant Artillery Tractor Used by U. S. Marines

Chug-ehugging over seemingly impassible roads and negotiating steep hills under adverse conditions, the gasoline tractor used by U. S. marines hauls heavy artillery pieces from place to place with little effort. Marines are artillerymen and infantrymen too, as well as signalmen, engineers and aviators.

## Fix Farm Machinery Prices—Why Not?

Congressman Norton has introduced in the house a bill to authorize the president to fix the price of binders, reapers, headers, mowers, wagons and other farm machinery.

Why not? The government has directly fixed the price at which the farmer must sell his wheat and, indirectly, is fixing the price on other farm products.

By agreement with the producers of metals (in all probability the prices would have been fixed by law if the producers had refused to agree) the government has set the price on the steel and other metals used in the manufacture of farm machinery.

The manufacturers of farm machinery buy government price-fixed materials, and their workers eat government price-fixed bread. If it would be "socialistic" to fix the price of machinery, is it not equally "socialistic" for the government to fix prices in other lines?

## Prefers the Farm

The photo below is of a champion wrestler, but also of a farmer boy, Robert L. Taylor. Robert is a son of J. H. Taylor, Jersey breeder, of Montesano, Wash. He graduated from the Washington State college at Pullman, 1917. Robert was captain of the college wrestling team and champion of Washington and Montana. He has done official Jersey testing for the college, has been offered the position of tester for a cow testing association, has had offers of places as school teacher and has had plenty of opportunities along other lines. But he prefers to help his father on the farm and to work with the Jersey herd, especially during these times of labor scarcity. Robert is in the third class, subject to draft, and declares himself glad to answer his country's call whenever it wants him in the army rather than in the ranks of producers.

Robert L. Taylor.

Mr. Taylor has a herd of over 30 Jerseys, 16 of which are now in milk and 15 in the Register of Merit. They include Golden Massy Polo 3rd, 879 pounds of butter as a junior 4-year-old; Gertie's Lily, 845 pounds at 9 years old and 582 pounds at 15 years. All the records were made with only two milkings a day and the herd is practically composed of descendants of these two cows. Mr. Taylor is now using as a herd sire Jacoba Irene's Prince, a bull that is 75 per cent the blood of Jacoba Irene, for many years the world's greatest long distance producer.

The herd is a good producing herd throughout, and Robert shows the spirit of a true American and a real breeder in preferring the home farm to other lines of endeavor. H. A.

### Place 1000 Men a Day.

One branch of the United States employment service is placing more than 1000 men a day in shipyards alone—and there are nearly 300 other branches.

**Berry Boxes Crates**

Secure Your Supply Early.

Many spruce mills not producing slices for hallock making. A big crop of berries will mean a shortage of containers.

Let us quote you now.

**SPOKANE SEED CO.**

First Ave., Cor. Lincoln St.
Spokane.

## Mobilize Threshermen

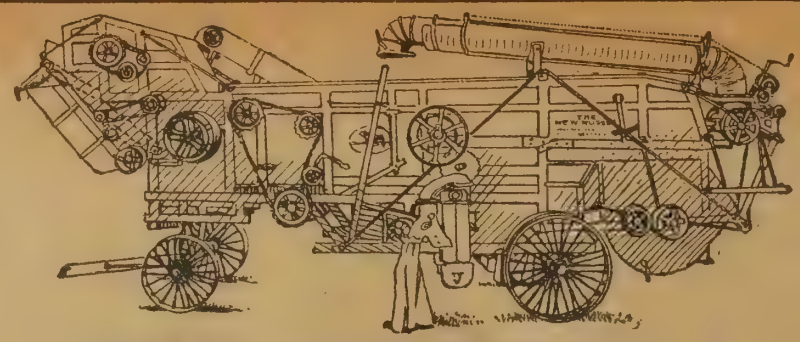
(Continued from page three.)

pay particular attention to problems involving (1) repair of machines; (2) securing of necessary expert mechanical help in cooperation with the department of labor; (3) securing of a sufficient supply of steam coal in cooperation with the fuel administration; and (4) assistant in obtaining sufficient needed repair parts and supplies to last threshermen through the coming grain season.

Help will be extended threshermen and farmers to eliminate waste in harvesting and threshing operations. There are many ways in which this can be done. Chief among the sources of waste are:

(1) Threshing when grain is tough (damp and unripe).
(2) Carelessness in keeping the thresher's cylinders up to speed and in adjustment of blower, etc.
(3) Improper adjustment and dullness of teeth.
(4) Carelessness in feeding bundles or headed grain into the machine.
(5) Carelessness in allowing grain to leak on the ground around and under the thresher.
(6) Careless scooping of grain and bad order of wagon boxes.
(7) Carelessness in raking field and shock rows.

Efficiency in threshing operations is also promoted by the careful selection and instruction of men for certain duties. Men who pitch the bundles of grain into the thresher, for instance, can assist materially in clean threshing by discontinuing the rather common practice of overfeeding the machine in the effort to hasten the work. This is one cause of serious loss, especially when the bundles are large and damp.



Every effort will be made to watch and stop these leaks. Sometimes farmers attempt to justify such waste on the ground that the stock will be benefited when turned in. This year, however, wheat is so greatly needed for human consumption that every grain possible must be saved.

A strong effort will be made to have all machines in the country inspected, and a close plain of cooperation between the threshermen and the county committees agreed upon. Owing to the large number of machines and the short time before the threshing season, it is expected that most of the work of inspection will be done through the hearty cooperation of the threshermen themselves or representatives of threshing machine manufacturers.

Every machine should be gone over to see that the engine has sufficient reserve power with proper pulleys and belting so as to keep the cylinders uniformly at the necessary speed under average conditions. Special efforts are also being made to secure cooperation of manufacturers in supplying repairs for "bad order" threshing machines and otherwise to put and keep all equipment in the best working trim.

The threshing division asks for the cooperation of all concerned in gathering information on the condition of threshing machinery and means for reducing waste. Reports and constructive suggestions should be sent direct to the office of the threshing division, U. S. food administration, grain corporation, 42 Broadway, New York city.

The paramount purpose of the work is to be of assistance and the general plan is the outgrowth of recommendations from various sources followed by a careful investigation of the situation. The National Implement and Vehicle association has already pledged its cooperation. With a hearty response by all, the activities outlined will, it is hoped, result in a large saving of food as well as a direct benefit to persons engaged in the growing and threshing of grain.

# Trappers of the Ozarks

**The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana. Now the State of Missouri.**

By LOUIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

**Summary of Preceding Chapters.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time an unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination—a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their salt making and hunting. After an exciting experience with a bear in a cave they find their first fresh sign of Indians—moccasin-tracks in the snow about their camp and the morning after they find moccasin-tracks in the snow about their camp. The Indians attempt to enter their barricaded cabin at night but are frightened away by a great earthquake. The boys are captured and taken to the Osage village. One day they are given one bullet and one charge of powder each and allowed to go hunting. They dare not attempt to escape for fear of starvation, but lose their way and are found the following day by the Indians who think they tried to escape and are taken to the camp under guard. Ben is tied to a stake and a fire built under him but it is only a ruse to induce him to take as his squaw Watermelon, for the time being an Indian widow, who cuts his bonds and proclaims herself his squaw. Ben declines. The boys make plans to escape by canoe. They accumulate some parched corn and dried meat, steal a canoe at night and paddling far up the river turn into a branch stream and hide in a cave. After two days and a night there they go back down the river, safely past the Indian village and turning into a branch find a cave high up in the rocky face of a cliff. Here they place all their belongings except the canoe, which they conceal. They are discovered by the Indians, and, retreating deep into the cave with their belongings, they find, over a mile from the opening through which they entered the cave, an exit, and start southwest, the Indians undoubtedly in pursuit. The second day a blizzard sets in and hungry wolves follow the boys. Toward dusk they reach a deserted settler's camp, the cabin burned but chimney standing. Here they build a fire and plan to stand off the wolves. A long, hard fight with wolves and cold ensues.

## CHAPTER XVII.

**While the Snapping Turtle Slumbered.**

When at last, at a late hour, Ben and Jodo found themselves growing drowsy, they crawled into their bed and slept peacefully enough. Or at least they slept peacefully while they were asleep. With surroundings so unusual, they naturally awoke from time to time. More than once they got out of bed to put wood on their fire-place fire. All around them the log fire kept up its roaring, and glowed so redly that they had to cover their heads to shield their eyes from its glare.

Day had partly come when they rose and dressed. As yet they could not discover any change for the better in the weather. Indeed, it was now threatening to get worse before it improved. The sky was again overcast with clouds, and some snow was driving before a northwest wind.

Heretofore the smoke from the great burning ring had floated skyward so lightly that it had given the two shut-ins not the slightest inconvenience. But this morning, such was the condition of the air, some of it settled down now and then—enough to irritate both eyes and nose. However, the trouble was not serious.

The partners broiled another rabbit for breakfast, and prepared to spend another day resting. The burning logs were settling down by this time, but their fire, so far from dying out, seemed to be hotter than ever.

While walking along by the ring fire during the day the two came near stepping on a big rattlesnake. The reptile was not dangerous, however. Warmed to life and driven out of its winter quarters by the fire, it had crawled from under the log-heap and into the snow. There it had quickly become torpid again. They killed the loathsome thing, and later tossed it into the fire to be cremated.

Slowly the snow continued to fall during the day, and the weather was not noticeably milder. Ben and Jodo sometimes took a walk around the ring, following the ground where the fire had melted the snow off. But they spent most of the day before the big fire-place, resting from past exertions and for future exertions. As night was coming on, they dug the remaining 'possum out of the snowbank and put him on a flat stone, almost against the fire, to bake. Long before he was roasted brown, thick darkness had covered the earth, and the wolves had again begun their howling and snapping in the surrounding forest. But tonight there were only a few of them.

The 'possum, fat as a sucking pig, made, with a little of their parched corn, an excellent supper for a bitter cold night. There was some of him left.

The big ring was still crackling and roaring, and the wolves were still voicing their disappointment, when Ben and Jodo lay down before their fire to sleep. Having become somewhat accustomed to the glare and the noise surrounding them, they slept soundly, only waking when the fire-place needed more fuel.

At daylight they were up, and after melting some snow in a piece of an old pot they had found, they scrubbed their hands and faces as well as they could. Then they cooked the last of their game, a rabbit, and breakfasted on that. The air was still stingingly cold, but there was no wind, and the sun came up in a cloudless sky. Everything indicated that the weather would soon begin to moderate. The fire was now settling down noticeably, but there was still an unbroken ring of it.

After breakfast Ben said: "Well, the game that made it possible for us to linger here in peace and comfort so long is now almost eaten up. It's high time for us to be on the move. In fact, the longer we hang around here now, the greater becomes our risk of starving."

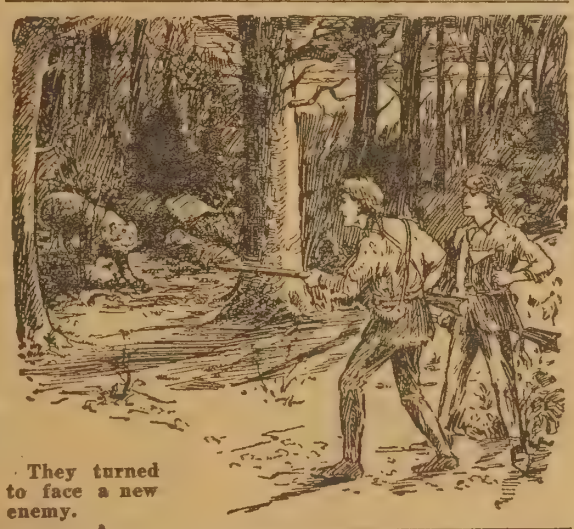
"I'm ready to pack up and travel whenever you say the word. But seems to me it would be well for us to wait till the sun gets high enough to thaw things out a little."

"All right, Jodo. No objection to that, I guess. But the first minute the weather turns warm enough for comfortable traveling, there's danger that the Osages may be out and on the hunt for us again. And this fire spouts smoke like a young volcano. They could see it fifty miles away, I'm thinking."

"Yes, no doubt they could. But how are we to break out of this fire-pen?"

"We'll manage that part all right when the time comes to start."

They waited till 10 or 11 o'clock before the weather seemed mild enough for comfortable traveling. By this time the snow inside the fiery ring was all beginning to melt. Having some of their roasted 'possum left from last night's supper, they decided to eat that before setting out. Then they could keep tramping, without a stop, till night overtook them. They had bundled up their things, and were sitting on their packs before the fire-place, gnawing the 'possum's bones, when they were startled by a familiar voice behind them:



"Snappy Turkle, is that you again? Have you actually followed us all the way over here?"

"Yes, we foller, foller, foller. You and Dodo no run away from Osages nudder time. Yes, Strong Arm, we got you now!"

"Well, I've always heard that the Osages were pretty nice Indians. But if you haven't anything better to do than to tag around after two poor white fellows, that have a hard scrabble to keep from starving, it's all a mistake. You're a sorry lot!"

"What for you big fool run away, Strong Arm? What for you run away leave nice, fat squaw, Watermelon? Watermelon Snappy Turkle's squaw now. Now maybe so chop Strong Arm's head off, Dodo's head off. Maybe so roast um 'live!"

"Not if we can help ourselves you won't," muttered

They turned to face a new enemy.

Ben. But aloud he said: "What good would that do you, Snappy Turkle? You wouldn't want to eat us after you'd roasted us. You'd better let us alone and go and kill a deer. You can eat a deer and sell the skin. And that's more than you can do with us."

"You come out, Strong Arm, and Dodo. You go back by us at Osages' village."

"Yes, we'll come out, Snappy Turkle. But you'll have to wait till that fire dies down. We don't want to burn our feet off. That's fire's hot, I can tell you!"

"You come out now! You come out same way like you go in, Strong Arm."

"But that's just what we can't do. We came in here first, and then stuck fire to the logs and brush. You'll have to wait till they burn down, or come in here and carry up out."

The red men seemed to hold a consultation. After a minute or two, not a little to Ben's and Jodo's surprise, Snappy Turkle announced:

"All right, Strong Arm! We wait. You no can git away from us nudder time."

"The Osages are hard people to get away from," Jodo now called out. "Little good it does us to try to dodge you, chief. You're too sharp for us—too smart for us."

"Snappy Turkle heap big chief!" admitted that worthy, with much satisfaction.

The warriors stood by the fire for a few minutes. Then they sat down and drew their buffalo-robes around them.

Ben also sat down again, on his pack. "We've hung around here just a few hours too long. And this is the penalty we have to pay for our folly," he said, bitterly.

"Is there no help for it? Must we tramp back with 'em to their village and be captives again?"

"Well, that's to be seen. We must start back with them, I guess. They'd shoot us down, probably, if we attempted to get away or defy them. It's true we've got four bullets; but there are seven redskins. Sorry fight we could make. We're practically unarmed. And unarmed people have to do what armed people order them to do—out here at least. I'm hoping they'll give us a chance to slip off on the way back. I wouldn't relish any more of that burning-at-the-stake business.

"Now that Snappy Turkle has married your Pocahontas, there might not be any squaw to scatter the fire next time." Jodo spoke very soberly.

"No. And even being rescued by a squaw isn't the most delightful thing in the world." Ben made a wry face at his recollections.

"You never did appreciate what poor Watermelon did for you. For my part, I'd a thousand times rather be rescued by a squaw than not rescued at all."

"Oh, so would I, of course. What I don't like is having to be rescued. It was foolish of us to linger here so long, with all this smoke mounting skyward. But I didn't believe the red rascals had the hardihood to get out and brave the cold."

"They wouldn't have got out, I imagine, if they'd been even half as comfortable as we were. But it was probably as cold in camp for them as it was on the march—colder, maybe. So they just kept hoofing it, even if they did half freeze. Anyhow, it's too late to correct our mistake now. It's made and can't be unmade. They've run us down and we can't help ourselves."

"They've certainly run us down. Whether we can do anything to help ourselves remains to be seen."

"When they get hold of us again, they'll never let us have another gun in our hands. You can bet your Sunday breeches on that. True we haven't used our rifles since we got away from the redskins. But it has been a great satisfaction to have them with us, and to know that we could use them if we got in a tight scrape."

"Yes, I'd hate like everything to be roaming this country without any shooting-iron. The thing that puzzles me is: What can we do?"

Sitting on their packs before the fire, they discussed every plan they could think of to outwit their enemies. But not one could they name that held any hope of success. And the longer they talked the gloomier seemed the outlook. At length they became silent. Finally Ben sprang up, remarking as he did so:

"Believe I'll walk back and blarney old Snappy Turkle a while. I'd like to find out just what they really expect to do with us.

"Oh, it will just be: 'Maybe so chop head off, maybe so roast um 'live. Precious little consolation to us, in that!" Jodo did not rise, but sat with his chin almost on his knees. Despondency had the better of him.

Ben walked back to the fire-ring, near where the Osages had seated themselves. But he returned at once, stepping noiselessly.

"They've dropped down and gone to sleep—sound asleep—every mother's son of 'em!" he whispered. "That's what made them willing to wait till the fire burn't down. They haven't slept much the last few nights for the cold. An Indian seems never to learn how to make a rousing, roaring fire. And now they've got to our big log-heap and got warmed up, drowsiness and weariness have overcome them. They're half tired to death, and we're as fresh as a spring morning. Let's sneak out of here and make tracks while we can. They think we're safely fired in here, and they're not worrying about us. This is our one chance."

Jodo sprang up eagerly, delighted at the unexpected news. "I'm with you, Ben! Let's not lose a moment! But won't they hear us when we start to opening a way through the fire-ring?"

"We won't open a way. We'll bridge the fire."

Everything was ready. From the pile of poles and rails where they had found the 'possums, Ben caught up four poles in his arms. With these he approached the fire, at the place where the big chimney would be between them and the sleeping Indians. After leveling down the fire a little, he laid two poles across it. They reached about half-way over. Then, walking up the half-bridge, he laid the other poles down so as to complete the bridge. The fire was intensely hot, but he hurried on across. Jodo followed, carrying their rifles and packs, and holding his breath for the heat and smoke.

The fire safely passed, Ben received his own gun and bundle, and they made straight into the nearest woods. Both were stooping low, and they were still keeping the chimney between themselves and where the Indians lay. That was merely a precaution. The fire and smoke completely hid the Indians.

Soon the two fugitives were out of sight in the forest. They were now traveling north. But when safely out of sight and hearing they began to circle. And they kept circling till they were south of the big fire ring. Then they set their faces due south and were off at a trot.

The air out here was still sharply cold, but they little more than noticed it, so eager were they to escape. They knew they were leaving a plain trail in the snow. And they knew there was no telling at what moment the Osages would wake up, discover the trappers' flight and start in pursuit.

"But they're tired out, and we're well rested. If you can keep up with me, Jodo, we'll make 'em wear their legs off to the knees, and still not catch us!"

"I'll be with you as long as I can lift a foot. Anything's better than being dragged back to that Osage village, for nobody knows what."

On they hurried, over all sorts of country, with Ben in the lead and Jodo at his heels and stepping in his tracks. The snow-crust usually broke through, and the person in the rear had easier traveling.

All the rest of the day they tramped at their best gait. When the sun had set the air grew much colder. Pausing for a few moments, they took two blankets out of Ben's sack and fastened them around their shoulders. Also they put on their mittens. When night had come Ben got his bearings from the stars, then changed their course to due east.

"What's that for?" Jodo put the question to Ben's back.

"The Osages are likely to keep straight ahead when night overtakes them. They'll think they know our course, and can easily pick up our trail through the snow when daylight comes again. But we'll fool 'em—fool 'em nicely. The trail won't be where they expect to find it. And by the time they tramp back and pick up our trail we'll be 50 miles ahead and still going like a prairie fire."

"All right, Ben! I'm with you to keep out of their clutches! Of course it's safest to take it for granted that they're close behind and coming fast. But I'm hoping that they're still sleeping peacefully by our big fire."

"That might be, of course, but I doubt it. Indians don't sleep very long at a time, I think, especially when they've got something on their minds. They've waked before this time and missed us, it's pretty safe to say."

(Continued on the following page.)

# Trappers of the Ozarks

(Continued from the preceding page.)

Still the pair of fugitives kept their faces toward the east and hurried on, their heavy boots crunching through the frozen crust as they tramped. Seldom did they speak now, preferring to save their breath for the hard work before them. Some anxiety they felt concerning the wolves, which could be heard from time to time.

At length the fugitives' ears were startled by a loud, fierce scream. It seemed a good distance behind them, but sounded frightfully distinct in the stillness of the winter night. Both recognized the voice of a panther. But when, a few minutes later, the scream rang out again they noticed that it was still behind them, and seemed to be not a little nearer. And when it waked the forest echoes the third time it was certainly not far behind.

"Not much doubt about it, I guess, Jodo. That booger is tracking us!"

"Sounds like it. Do you reckon the creature would be bold enough to attack us?"

"No telling. If it's big enough and hungry enough it might do that very thing. But we've got four bullets for just such emergencies as this."

"These loads have been in our guns and pistols so long, and we've been out in such bad weather. What if they miss fire, Ben?"

"Then it's tomahawks and knives against teeth and claws. We're two to one, and I believe we can take care of ourselves. I'd rather have the varmint behind us, screaming like that, than somewhere ahead lying in wait in a treetop where we'll pass under."

The next scream was not more than a hundred yards behind. Looking back quickly, Ben and Jodo could make out nothing. But later, just after they had crossed a little prairie, they turned their heads and caught sight of the panther. And there coulld not be the slightest doubt that the brute was trailing them.

His method of advancing was peculiar. He would run forward several yards, then crouch down for a few moments. Later he would dart forward again.

"Nothing but a bullet will stop the varmint, I'm guessing," Ben remarked. "But we'll wait till he's almost upon us, so as to make sure of him. That is, unless the gun hangs fire."

The two hurried on, but kept looking over their shouldlers every few yards. Soon the beast rushed silently forward and again crouched to the snow, scarcely 20 steps behind them. His next rush would bring him within leaping distance.

But almost at the same moment there burst out on the midnight stillness a long, quavering howl! That, too, was behind. And something told the fugitives that a timber wolf had discovered their trail and that his howl was to summon assistance in the hunt for big game. Promptly several wolves answered him, some near and others far away.

"Two big varmints tracking us!" gasped Jodo.

"Yes. And the nearest one can climb after us when we try to climb out of the others' reach!"

(To be continued.)

## WASHINGTON GRANGE.

### State Session at Walla Walla.

As already announced the 30th annual session of the Washington State grange will be held at Walla Walla, opening at 9:30 a. m. Tuesday, June 4, and closing Friday night. Notice has been given to all delegates that the railroads will not allow one and one-third fare this year, but will charge one and one-half fare; or, in other words, one-half return fare will be charged instead of one-third as formerly. Consequently, when a delegate goes with auto he is allowed 4½ cents a mile for the shortest railroad distance instead of 4 cents as formerly. Tickets should be bought through to Walla Walla and may be purchased from May 30 to June 5. Certificates should be secured from the ticket agents. Return tickets must be purchased as early as June 11. Both the master and an overseer will be elected at this session.

Fraternal delegates expected are: E. P. Marsh, State Federation of Labor; Miss Lucy R. Case, Joint Legislative league; G. E. Elmon, Washington Farmers' union; Ray McKaig, master North Dakota state grange; C. E. Spence, master Oregon state grange; W. W. Deal, Idaho state grange.

### To Test Walla Walla Cattle.

A. W. Holland, assistant agricultural agent for Walla Walla county, reports that he has just received word that the state veterinary inspector, Dr. J. H. Martin, will be in Walla Walla county about June 10 for the purpose of testing cattle for tuberculosis. This work is carried on by the state free of charge to the owner. Send your name and address, with the number of cows you wish to have tested, to the county agent's office. Send your request early, so that arrangements may be made, and also tell your neighbor.

### Farm Lands Change Hands.

In the vicinity of Palouse the following deals have been closed: John Kamm of the Grinnell district, five miles north of Palouse, purchased 115 acres from B. J. Jones at $102.50 an acre; C. Lepouse bought 375 acres from W. W. Davis, west of Grinnell, for $33,600 and B. J. Jones, across the Idaho line, east of Palouse, paid $100 an acre for 160 acres purchased from C. Lepouse.

## A Wordless War Story

This is the war poster book which has been published by the navy department. It is a collection of twenty-four of the greatest war posters which have been drawn by American and foreign artists. It begins with a picture of the sufferings of noncombatants who are escaping on a life raft from a ship sunk by a U-boat. Then come pictures that sound the call to arms like a bugle note; pictures that tell of the need for men and women at home to back up the soldiers on the fighting line; pictures that convey a thrilling sense of the power of American arms on land and sea; pictures that indicate Prussian brutality; and pictures that flaunt the American ideal of unselfish service to humanity, like the battle flag of a charging regiment.

This book of war posters every American will want to own as a remembrance of the great days through which he is now living. As long as the supply lasts a copy will be sent free to all who use this coupon. Write your name and address plainly.

YOUR

# LOCAL HOME PAPER

AND

# THE WASHINGTON FARMER

## For the Price of Your Home Paper Alone

Through a special clubbing arrangement with a large number of newspapers in Washington, we can now send you **The Washington Farmer** and your Local Home Paper at the regular subscription price of your home paper.

## THE HOME PAPER

You alone know the great value of your local town paper. The part it plays in local affairs, the news of the happenings of your community, the gossip, social and commercial life that you wish to keep posted on. It brings the story of the home boys at the front who are fighting for you and our country.

## THE STATE FARM PAPER

The Washington Farmer is your family paper. It keeps you posted on the agricultural developments of your state. It is a complete family farm paper—all the farm news, latest and best serial stories, department for every member of the family—feature sections of every branch of farming, dairying, stock raising, fruit growing, etc. Also colored comic pages and a children's and family page. It is the biggest and best farm paper published in The Pacific Northwest.

**The Washington Farmer Is Issued Every Week**

We are pleased to state that by subscribing now to any of the following papers and paying the regular annual subscription price of that paper your payment will also include a subscription to The Washington Farmer.

# Save the Ashes

By LISSIE C. FARMER.

It is well to remember, when disposing of the winter's accumulation of ashes from the extra fires, that there are many uses to which they may be put. First, there is their fertilizing value in soils that are heavy, clayey or lack potash. They also help to keep down slugs or other slimy pests which usually do not like to pass through ashes.

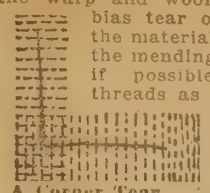
Another use for ashes is to make lye from them. This can be done by boring a few small holes in the bottom or a barrel, box or bin and setting it on bricks or blocks of wood over another vessel (not metal) into which the lye may run. Put about two inches of clean straw into the bottom of the barrel and above the straw two pounds of slacked lime. Then fill the barrel with ashes, leaving a funnel-shaped place in the center of the top. Pour boiling water into this hole sufficient to fill it, and when it has all disappeared, add more. In a day or two the lye will begin to run off at the bottom. This lye is useful for making soap, hominy, in certain kinds of dyeing and for various kinds of cleaning. Preparing an ash drain in this way in "the olden times" was called "setting the leach."

Another very practical use for ashes is to make walks about the house, barn and sheds. They can be thrown by bucketfuls in the center along the place where the walk is wanted so that they will naturally slope to the sides, or boards can be placed upright along the edges of the intended walk and the ashes leveled with them.

## Sugar for Home Canners.

The submarine has forced fighting Europe to a very strict sugar ration and compelled America to look the situation squarely in the face. There is only so much sugar, there are certain definite needs, and the problem before us is finding a practical plan of distribution. The food administration has adopted a certificate system to meet the household needs during the coming fruit season, and to guard against temporary shortages that may occur if more vessels are diverted from the Cuban trade.

The consumer is asked to estimate his needs and fill out a certificate which will be furnished him by his grocer. The dealer is required to forward this certificate to the federal food administrator within one week after it is turned in to him.



This plan puts the question up to the individual, and the food administration asks the assistance of every householder in bringing about a practical distribution. The success of the plan depends on the good sense and good will of the American citizen. Cooperation, prompt action, and a democratic sense of fair play will prevent a sugar shortage in America during the fruit season.

### Searchlights in War.

Searchlights are playing a very important part in the present warfare. In one instance the Germans on the heights of the Italian front were blinded by the rays of many lights while the Italian engineers were building bridges below, working in the dark.

# Mending a Tear

In mending tears one must consider the position of the tear in regard to the warp and woof. For example, a bias tear or corner tear. If the material is woolen or silk, the mending thread should be, if possible, of the same threads as the material. The running stitches which are used should always follow the weave of the material.

A Corner Tear.

### Name German Shells.

There are about 200 separate and distinct kinds of shells fired from German guns, and each and every one of them has been given at least one nickname by our Tommies. Some of them have been given several.

The biggest kind of high explosive shells, for instance, are known indifferently as "Dirty Dicks," "Jack Johnsons," "Coal Boxes," "Flower-Pots," "Crumps," "Black Peters," or "Whistling Willies."

The smaller kind are "Black Marias" or "Woolly Bears," according to whether the smoke they emit when bursting is black or white with a yellowish tinge.

High-explosive shrapnel and trench-mortar shells are respectively "whizz-bangs" and "pip-squeaks," from their habit of giving only these warnings of their approach. "Archibalds" are anti-aircraft shells.

# Maltese Boudoir

By WINIFRED WORTH.

Maltese work is very interesting and the accompanying instructions will tell you just how to make the beautiful boudoir cap as illustrated.

Make four yards of Maltese crochet. Loop enough loops on hook to form a flat piece and join, taking 3 loops for lower edge, 2 for upper. Continue until desired size is made. Gather edge by chain until it measures 23 inches. Five rows of lacets and any fancy crochet flower completes cap. Line with silk of delicate shade.

**Maltese Candle Shade.**

Looks very pretty in light shade of pink or blue.

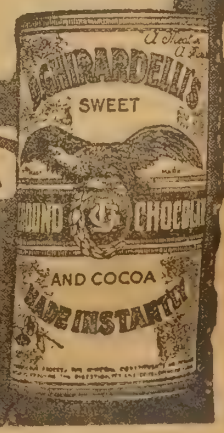
Use 1 ball No. 30 Cordonnet.

Make Maltese lace to required circle of candle shade to be used.

For fringe: 1 dc. into 2 loops of Maltese taken together. 1 ch. 1 dc into next 2 loops taken together, 5 ch.; repeat all along. The long fringe is now made by winding the thread around piece of cardboard about 3 inches wide. Cut threads once, thus producing six-inch lengths. Lay 10 of these together and fold in half. Put hood through hole made by 5 chain and draw through opening loop formed by folding the threads in half. With hook draw ends through loop just made by drawing them through chain. Pull knot up close to work. This completes one tassel of fringe. When tassels have all been put on the shade see that the knots are at even distance from shade proper, then cut entire fringe evenly.

First Aide to Hostesses Who Know

PERHAPS it's only a couple of friends who drop in for a little chat. Or—it may be a knitting party, an Aid Society meeting or what not. Or—who knows?—perhaps it's a big "party"—music and dancing and Japanese lanterns and all that.



In any event, don't overlook the help Ghirardelli's can give you. Whether it's two cups for yourself—or two gallons for your "big affair"—you can make it just as easily.

Just *one* reason why Ghirardelli's has always been first aide to hostesses who know.

*In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.*

D. GHIRARDELLI CO.

## German Potato Bugs.

"The way Germany prepared for a generation for this war was positively uncanny," said a congressman. "Yes, Germany's 40 years of minute war preparation are as uncanny as the story of the potato bugs.

"On an autumn evening a group of Minnesota farmers sat around the fire in the general store and complained of the potato bugs' ravages.

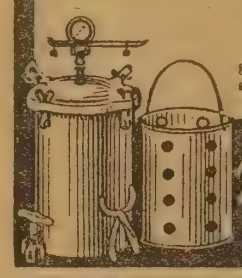
"'The pests ate my whole potato crop in two weeks,' said one farmer.

"'They ate my crop in two days,' said a second farmer, 'and then they roosted on the trees to see if I'd plant more.'

"A drummer for a seed house cleared his throat.

"'Gents,' he said, 'all that's very remarkable. Let me tell you, though, what I saw in our own store. I saw a couple of potato bugs examining the books about a week before planting time to see who had bought seed.'"—Washington Star.

SANITARY CANNING OUTFITS



Home canning is more necessary and more profitable this year than ever before.

Steam pressure canning is the safe, quick and easy way. Our complete outfit saves time, labor and fuel, **hermetically seals** the cans and **sterilizes** the contents.

We include instructions and a $2 book of recipes. Write for free literature.

**Seattle Can Company. Home Canning Department.**

**8th Ave. So., and Adams St., Seattle.**

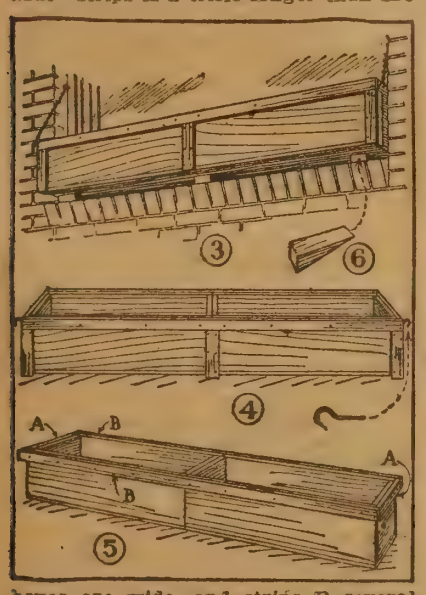
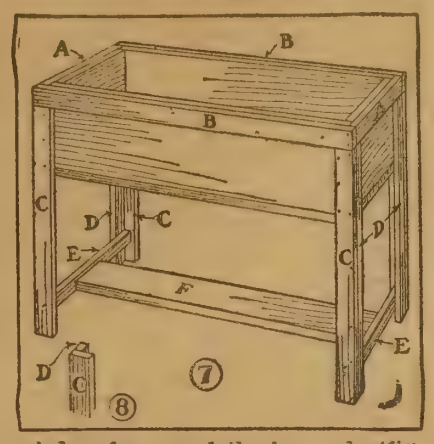
## Porch and Window Flower Boxes.

Everybody wants flower boxes for porch and window gardens, and if you can make them neatly there is a splendid opportunity to earn spending money by manufacturing boxes for the neighbors. Demonstrate what you can do by first making a number of boxes for mother.



The illustrations show some practical plant receptacles made out of grocery boxes, working material every boy can get. Boxes of medium size will cost not over 10 cents, if your grocer charges you at all, and large ones for 15 cents. Ask the grocer for permission to make your own selection from the box pile, so you can pick out boxes without knotty or split boards.

The hanging box in figure 1 must be made of a box of equal width and depth; if you can not get one of these proportions, take a whole box and saw off enough to make the width and depth the same, as indicated in figure 2. Reenforce the nailing of all boards by driving in additional nails; then cut the hanger uprights A (figure 1) and



nail them diagonally across the end. The tops of these strips must be trimmed off even with the corners of the box ends. Screw a screw-eye into each upright and connect a 30-inch piece of iron jack-chain to it by which to hang up to box. Screw screwhooks into the porch ceiling to attach the chains to.

Figures 3 and 4 show how to join two grocery boxes end to end to make a long window box. These may be cut down in length so the combined boxes will exactly fit the window opening. Nail the boxes end to end. Then cut strips A and B (figure 5) 1½ inches wide—strips A a trifle longer than the

boxes are wide, and strips B several inches longer than the combined length. Nail strips A to the box ends, even with the top edge, and with a saw trim off their ends even with the box sides. Nail strips B to the sides of the boxes and saw off their ends even with the surfaces of strips A. The vertical strips shown in figures 3 and 4 are of the same widths as strips A and B. They finished off the corners and conceal the joint between the boxes.

If the window sill is wide, the flower box will not require fastening, but if narrow it will be necessory to support the box by chains fastened to screw-hooks screwed into both the

window frame and the box ends (figures 3 and 4). Wedge-shaped blocks will relieve the supporting chains of a considerable portion of the weight of the filled boxes (figures 3 and 6).

The plant stand in figure 7 is made similar to the window box in figure 4, with the corner strips extended for legs, and a shelf fastened between to brace them.

Nail strips A and B in place first, then cut and nail together each pair of corner strips C and D (figures 8), cutting D enough narrower than C to allow for the thickness of C when nailed to it. Twenty-six inches is a good length to make these legs. When you have nailed them to the box corners, fasten the cross strips E between, and cut and fasten the shelf board F between cross strips E.

If the plant box is to be used indoors it must have a metal liner so water will not drain on to the floor. A tinsmith will make a sheetiron box for between fifty and seventy-five cents, according to size.

Paint your flower boxes with at least two coats of paint. After the first coat has dried putty all cracks, joints and nail holes.

## LIMIT MACHINERY.

### Useless Types to be Eliminated.

The council of national defense has undertaken a careful study with a view to determining what varieties and types of agricultural machinery and implements may be eliminated from the markets without working a hardship on the farming industry of the country. The council is of the opinion that competition of various kinds has led to the manufacture of many machines that are not strictly necessary for maximum production and the object in view at the present time is not only to save the manufacturing facilities for vital war purposes, but to save the material that goes into the manufacture of the unnecessary farm machinery.

It is stated that implement manufacturers are cooperating with the council of defense in the movement. The plan is a part of a much larger plan including practically all of the big manufacturing lines such as cloth and clothing, leather, shoes, paint and the like, the idea beinig to eliminate every unnecessary bit of labor and conserve as much material as possible for war purposes.

## Stock on Ranges Increases.

District Forester George H. Cecil of Portland announces that the total number of cattle, horses, sheep and goats authorized to graze on the national forests of Oregon and Washington during the season of 1918 are 202,950 head of cattle and horses and 1,206,800 head of sheep and goats, an increase of 16,810 cattle and horses and 44,200 sheep and goats over the figures for 1917. This increase in cattle is due to increased carrying capacity of the range, while the increase in sheep is made possible by the discovery of new ranges and readjustment of boundaries on the old ranges. Because of war conditions and the heavy demand for meat and wool, extra stock was grazed last year to the extent of 19,478 head of cattle and 29,102 head of sheep over 1916. The increase in cattle authorizations for the last four years has been 70,000 head.

### Tropical Fruits in Venezuela.

All sorts of tropical fruits, such as oranges, limes, bananas, plantains, mangoes, pawpaw, etc., and all sorts of vegetables are grown in Venezuela in sufficient quantities for local market, where they are very cheap, but none is being exported from this district.

## Farm Service War Flag

Here are some of the requests for the farm service war flags:

J. A. HOOK, Clemson college, S. C.—Please sent farm service war flag to the South Carolina experiment station.

IDA M. DENNEY, Huntsville, Wash.—Enclosed find 30 cents for which send me The Washington Farmer one year, and one farm service war flag.

W. F. HILGERT, Huntsville, Wash.—Enclosed find 35 cents to pay for one year's subscription to The Washington Farmer and two war service flags.

M. MIKKELSEN, Waitsburg, Wash.—Enclosed find 55 cents to pay for three years' subscription to The Washington Farmer and one farm service war flag.

MRS. N. T. SNODGRASS, Waitsburg, Wash.—Enclosed find $1.05 for which please send me your combination offer, The Twice-a-Week Spokesman-Review, for one year, and The Washington Farmer for three years, and also send me one of your farm service war flags.

R. W. LEID, Waitsburg, Wash.—Enclosed find $3.05 to pay for a six-months' subscription to the Daily Spokesman-Review (without Sunday) and The Washington Farmer for three years. Please send me one of your farm service war flags, for which I have included five cents extra.

M. ABE, Zillah, Wash.—I enclose here five cents, for which please send me your farm service war flag.

MRS. DAVID FISHER, St. Andrews, Wash.—Enclosed find five cents, for which please send me one farm service war flag containing two stars, my husband and myself both doing our best at production.

MRS. AGNES L. RAITZ, Valley, Wash.—I am enclosing five cents in stamps, for which I would like to have one of your farm service war flags.

MRS. ALLEN M'NALL, Tonasket, Wash.—Enclosed find five cents in stamps, for which please send me farm service war flag.

ARTHUR LIAN, Milltown, Wash.—Enclosed find five cents in stamps, for which send me as per your offer one farm service war flag. There are six members in our family trying to do their bit on this farm.

## Rural Life Conference at Colfax.

A county rural life conference and meeting of all the school directors of Whitman county is to be held at the Colfax high school auditorium Saturday, May 18, under the direction of the state suerintendent of public instruction and the county superintendent of schools.

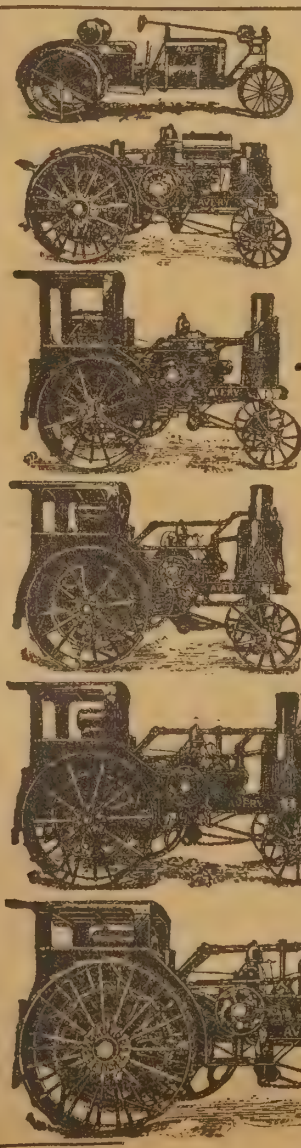
To the Editor of The Washington Farmer: We truly enjoy your paper, as it stands for fair play. Editorials free from bias—advice in all departments, good and to the point.

AL. S. BIGGS.
Justamere Farm, Port Stanley, Wash.

## Boys and Girls Form Club.

The boys and girls of Castle Rock are active in the formation of food production and conservation clubs this season. Patriotism is the keynote of the organization, as indicated by the names of two clubs that are already formed. One is known as Uncle Sam's Garden club and the other as the Stars and Stripes Stock club. A canning and preserving club is in the process of organization also. The following are the names of the officers of the two clubs just mentioned:

Uncle Sam's Garden club—Willie Bacon, president; Edgar Searls, vice president; Florence Edmunds, secretary; Gordon Dean, treasurer.



Stars and Stripes Stock club—Byard Mosher, president; vice president, Juanita Dykeman; secretary, Velta Leaming.

## Half of Food Supply.

H. E. Nicolai of Sunnyside, Wash., is growing garden truck for the market, and much of the family supply comes from it. Turnips and rutabagas follow early potatoes and late cabbage after radishes and lettuce. Nearly one-half of the year's supply of food, including beans and potatoes, are raised in the garden. This year Mr. Nicolai has 15 acres of cantaloupes, one-half acre of eggplants, one-half acre of peppers, one-half acre early cabbages for the Seattle and Yakima markets. Radishes, lettuce, peas and sweet corn are planted in succession.

## Chicks by Parcel Post.

The first parcel post shipment of young chicks has just been received at Wenatchee. They came all the way from California and the entire shipment, according to Postmaster Battles, was alive and thriving.

# Avery Tractors

5-10. 8-16. 12-25. 18-36. 25-50. 40-80

## A Size to Fit Every Size Farm

The world needs men. The world needs wheat and other farm products. The war's requirements in the army and ship building have drawn so heavily on laborers that farmers are left without sufficient help to produce the food crops necessary to feed our men in France, our allies and our people at home. What to do is the problem. There is but one solution—

## Use Tractors—Use Averys

No farm too small, none too large but there is an Avery to fit. Six different sizes, from the little 5-10, weighing 2250 pounds, to the big 40-80, weighing 22,000 pounds, which will pull eight to 10 plows.

The Avery uses less fuel and oil than any tractor of like power now on the market. It is the most dependable and easiest operated, and is always ready.

We carry all sizes in stock. Let us send you catalog illustrating and describing the full line, together with Threshers and Power Cultivators. See them at the Pullman demonstration.

Seattle, Wash.
1312 First Avenue, Spokane, Wash.

Dear Corner Cousins: Though we have all been busy working for our government, selling and buying thrift stamps, sewing for the soldiers, helping the Red Cross and getting busier and busier, yet there have never been so many letters as we have had during the last two months—the last contest—and there have never been so many good ones. It has been so hard for me to decide which were the best. After a great deal of time and study was spent, I have finally awarded the prizes. Imagine Aunt Nellie, at her desk with more than 1300 letters around her in waves and heaps. That has been my work and pleasure.

As I read each letter, how I wished I could know each one of you and talk with you and tell you interesting things to pass the dull moments away. But I do not suppose there are many dull moments on the farm, where many and most of our cousins are. There weren't many when I was a little girl on a farm; there was always something to do, and just when I wanted to go to my favorite spot by the brook, mother wanted me to turn the churn.

Such good letters and so many, and only three prize winners, that I have found it necessary to enlarge the honor roll. Several have asked what the honor roll means. Some letters are very good and yet not quite as good as the three prize winners. If your name appears three times in succession on the honor roll, you receive a special prize.

And what are the prizes, a good many have asked in their letters. I have given cups and saucers, books, beads, bats and balls and the last time I gave thrift stamps.

And will the prizes be given if the letters are written on the subjects I give? The subjects are to help you, but the best letters win, even though they are on some other subject than the one given.

How do I judge the letters? The winners must be well written, with evidences of care, properly spelled, punctuated aright, with good grammatical form and no bad mistakes. I take into consideration whether it is written on one side of the paper or both, whether with pen and ink of pencil, whether carlessly and hurriedly or carefully and with an effort to make it just as good as it can be. I consider the age of those who write; that is the reason why I ask you to put your ages and birthdays on every letter. If you have given it before, put it in again, just after your name.

And then, after I have done all that, I consider what you have said. Is it interesting and well told? Will it please others? That is the secret of good letter writing—to tell things that will interest the person to whom you are writing. And so, while we have fun in writing to our dear Corner, we can learn something in it, too.

When you find your letter printed there, look it over. "Is that the way I spelled those words?" you will say. Not always, for I correct a good many misspelled words. "Is that the way I said that?" "Did I say that?"

Which letter do you like best this week? Pick it out and decide why you like it best. Maybe that will help you write one like it.

And now, dear nieces and nephews, I must not write too much, myself, or I will crowd my little nestlings out, like the unnatural mother bird, and I wouldn't want to do that. Your loving,

AUNT NELLIE.

The new contest will conclude July 1 and the suggested subjects are:

**Helping My Country.**

**What I Saw Yesterday.**

**What I Want to Be.**

The prize winners for the contest just closed are:

**Gladys Mae Plemon, Burbank, Wash.**

**Elsa Mattson, R. 5, Mount Vernon, Wash.**

**Beulah Walker, Cliffs, Wash.**

Special—Ludwig Peterson, R. 3, Olympia, Wash.

**Roll of Honor.**

Emma Monroe, Spokane; Ellen Secrest, Neppell; Irene Clark, Grand Dalles; Ruby Warren, Elma; Wynona Tella, Rockford; Myrtle Lee, Mount Vernon; Helen Calkins, Sunnyside; Edna Peterson, Pomeroy; Selena Deno, Spokane; Hilma Anderson, Olympia; Clara Haida, Puyallup; Evis Erickson, Lynden; Maries Ganguin, Goldendale; Flora Reed, Olympia; Helen Monroe, Spokane; Anna Nymeyer, Lynden; Elva Green, Penawawa; Oscar Nelson, Tumwater; Enna Brune, Iverson Delma Guffin, Warden; Frankie Baldwin, Lacrosse; Ruty Hay, Shelton; Bessie McFarlane, La Center; Ruth Erwin, Prosser; Luella Meeks, Delbrio; Thelma Hilmen, Toledo; Juanita Matson, Pullman; Martha Flock, Hooper; Melvin Hadford, Spokane; Annie Phillips, Wellpinit; David LeRoy, Moose Creek, Ala.; Ellen Hay, Shelton; Virginia Gibson, East Sound.

**A Long Way to School.**

Dear Aunt Nellie: I like to write to the Children's Corner. I go to school, three and one-half miles. I am in the sixth grade. My teacher's name is Mr. Gurnsey. I like him very well. We don't go to school very often, becaues it is too far. Our schoolhouse is named Millcenter. I don't think I will pass into the seventh grade next year. If I do I won't know very much, because I haven't been going very much. There isn't any one writing from Addy, only my sister and I. I went up to Colville Wednesday. We went with our uncle, Lee Dearinger. We went in his automobile. I had a nice time. We live two miles southwest of Addy. We have a telephone. My two other sisters write to two soldiers. The soldiers' names are Jesse Miller, and he is my cousin, and the other one is Elgin Grant. We have been having the whooping cough. I hope the war will end soon. I like to read about it.—Nellie Salvage, Addy, Wash.

**Likes Stories of Adventure.**

Dear Aunt Nellie: As there are not many boys writing to the Corner, I will write and help increase their number. I wish more boys would write. I am 12 years old. My birthday is October 16.

## The Hitchinson Family

Four or more grotesque lifesize figures are painted on a canvas curtain, through which holes are cut where the faces of the figures should be. (See figure 1.) Into these holes the performers put their faces, from the rear

Figure No. 1.

of the curtain, making a comical effect from the front (figure 2). They may thus give any kind of concert or minstrel performance. Some of the figures may be made tall and others short, the persons behind the curtain standing on chairs, or kneeling on the floor, as the

Figure No. 2.

case may require. A showman may introduce the "family" to the audience, giving a comical history and description of each member.

The name "Hitchinson Family" is in imitation of the "Hitchinson Family," a popular band of singers who went around giving concerts from about 1840 to 1860.

I have light brown hair, and have a light complexion. I have been wearing glasses for the last six years, and I don't know how much longer I will have to wear them. I don't like to wear glasses. I went to Everett not long ago to get them changed. I have read quite a number of good books. Among the best are: Rover Boys in the Jungles, Rover Boys in Southern Waters, Rover Boys on the Plains, Deerslayer, Buffalo Bill and His Adventures on the Western Plains, The Jungle Book, Wild West, Peck's Bad Boy With the Circus, Uncle Tom's Cabin, and a number of others. I wonder if any of the Corner cousins have read any of these books. I am reading The Trappers of the Ozarks in the Farmer, now and so far it is very interesting. I like adventure stories best. I have six chickens and a garden. There are 11 pupils in our school. My teacher's name is Miss Hazen. I would like to correspond with Bernard La Pine. Have I a twin?—Victor Anderson, Box 225 Granite Falls, Wash.

**Will Loan Uncle Sam Every Cent.**

Dear Aunt Nellie: My uncle takes the Farmer and I like to read the stories. I have three cats, Kitty, Baby, Streak and Grayman, the cow, one calf named Butterfly, one pig, 80 chickens, 60 baby chicks. We have two horses. Their names are Mert and Dolly. I live a mile and a half away from school. My teacher's name is Miss Grace White. I like her very much. I have three baby bonds and eight thrift stamps. I am going to join the Junior Red Cross. I have three sisters—Clara, Norma and Dorothy. I am 10 years old. I am in the fonrth grade. I live on a four-acre ranch named drytop. I am going to sell papers and lend Uncle Same every cent. My calf is 12 months old. We stopped giving her milk when she was 11 months old. My rabbit's name is Bunny Long Ears.—Kenneth Wallace, R. F. D. No. 1, Zillah, Wash.

**Vacations on Uncle's Farm.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it will not be the last. I live in Seattle, but spend my vacations on my uncle's farm near Fall City. I have lots of fun on the farm. I have a white calf and I call her Snowball. She has the same birthday as I have. My uncle has four horses. Their names are Dan, Dolly, Maggie and Bell. They have a car on the farm and we have some fine rides. In Seattle, I have rabbits for pets. We have 27. I have one called Donald and like him best. I have two brothers and one sister. My brothers' names are James and Rowland. James is 9 years old and is in the fourth grade. I am 8 years old and in the third grade. My sister is 4 years old. Her name is Catherine.—Hector Mae Kinnon Davies, 4241 Greenwood Avenue, Seattle, Wash.

**Vesta Writes to Two Cousins.**

My Dearest Aunt Nellie: I have been reading the letters in the Children's Corner and I thought I would like to join. May I? I have light brown hair and blue eyes. I am 4 feet 10 inches tall. I am 12 years old and am in the sixth grade at school. There are 17 pupils in our room. My teacher's name is Miss Louise Bischoff. My birthday is November 24. I live on a farm, four miles from Bickleton. I like the country fine. I have four sisters and one brother. We ride horseback to school. It is spring here now. There are many kinds of flowers. I am writing to two cousins. Their names are Eva Bond and Gertrude Ruchest. I like to write to them very much. If some of the cousins write to me I sure will answer. Well, I must close now, hoping some of the cousin will write to me.—Vesta Andersen, Bickleton, Wash.

**A Calf Named Liberty Bond.**

Dear Aunt Nellie: This is the first time I have written to the Childrens' Corner. I am 10 years old and my birthday is September 12. We have three pigs, 19 chickens, three horses, one colt and four dogs, and their names are Rags, Queen, Montie and Romie, and we have five pigeons, five kittens and a mother cat. I have one sister and one brother. My sister is 14 years old and her name is Beatrice, and my brother's name is Carmen Holland, and he is four years old. Our horses' names are Bill, Frank Holams and Nellie. We live on a 45-acre farm. My sister and I have one mile to go to school. We have a calf named Liberty Bond. We have a six-room house.—Viola Townsend, R. 1, Box 27, Medical Lake, Wash.

**Ponto Is a Pet Dog.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I will be 12 years old August 14. Have I a twin? If so, I wish they would write to me. I read the letters the first thing after I get home from school. I think they are fine. I have two brothers and two sisters. We have a pet dog named Ponto. There are two mills by our house; one is a shingle mill and the other is a sawmill. I am in the fifth grade at school and my teacher's name is Miss Violet Shellhammer. I had a different teacher, but she went away Christmas. Her name was Miss Paulsen. I have joined the Junior Red Cross. We have a cow and two calves; one calf is mine. We have 16 chickens. I will write again. —Eva West, Lyman, Wash.

**Who Is Edith's Twin?**

Dear Aunt Nellie: I am 11 years old. My birthday is July 30. My hair is brown and my eyes are blue, my complexion is fair. I have one white cat. His name is Snowball. I have one dog, his name is Bobby, and one little calf. It is red and white. I ride a horse to school. Her name is Star. I have three and one-half miles to go to school. I am in the fourth grade. My teacher's name is Miss Beaver. I like her. There are six children in our class. There are 28 in all the room. There are two rooms. Have I a twin? I have four sisters and no brothers. Theirs names are Sylvia, Goldie, Blanche, Ethel and myself.—Edith Mildren Tovis, Turk, Wash.

**Schoolhouse Is Near the River.**

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I walk about a mile and a half to school. Our school is by the river. There are 14 children going to our school. I am in the sixth grade. My teacher's name is Miss Mary Pettijohn. I have two brothers and two sisters. My sisters' names are Frankie and Emma, and my brothers names are John and Harold. We have 24 horses and 12 cows. We have 36 hogs. We have one dog and one cat. Our dog's name is Tango and our cat's name is Tab. I was 13 years old April 25. If I have any twin I would be very glad to hear from them.—Jennie Hoy, Prescott, Wash.

**Marie Likes to Knit.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, and hope it will not be the last. I am 11 years old and in the fifth grade. I live on a 30-acre farm. My teacher's name is Miss Martha Hagen. She is a fine teacher. I belong to the Red Cross. I have two brothers. Their names are Roy and Lyle. Lyle is the oldest. My birthday is November 13. I have knitted four washcloths and now I am knitting socks. I like to knit. My mother has knitted eight pairs of socks. I have bought three war savings stamps.—Marie Christenson, R. F. D. 2, Anacortes, Wash.

**Charlotte's First Corner Letter.**

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I will be 11 years old the 2d of April. Have I a twin? If I have I would be glad to hear from her. I live on a farm five miles west of Prescott and 18 miles north of Walla Walla. There are 800 acres in our farm. I have four horses, one cow, one little calf, one dog and three cats. I walk a half mile to school. I am in the sixth grade. My teacher's name is Miss Mary Petijohn. There are 14 children in our school. Our schoolhouse is by the river.—Charlotte Utter, Prescott, Wash.

**Brother Is in the War.**

Dear Aunt Nellie: This is the first time I have written to the Children's corner. I was 11 August 22 and I am in the fifth grade. I have three sisters and five brothers. Their names are Emma, Gloretta and Dora, and my brothers' names are Elmer, Oscar, Harvey, Edmond and Marion. Two of my sisters are married. I have one brother in the war whose name is Elmer. I will give a few riddles for my cousins to guess: When is it easy to read in the woods? Why are the western prairies flat? Which is the largest room in the world? Have I a twin?—Emil White, Gertrude, Wash.

**Topsy Is Roberta's Pony.**

Dear Aunt Nellie: I am 8 years old and my birthday is February 5. I have brown hair and brown eyes. Have I a twin? I go to school at district 68 and have not missed a day nor been tardy this year. My teacher's name is Miss Nellie Brown and I am in the third grade. I have a kitten named Betty and a dog named Shep. My pony's name is Topsy. We have 150 chickens and get from 80 to 90 eggs a day. I have two sisters and one brother. My sisters' names are Myrtle and Mary and my brother's is Byron.—Roberta Keith, Colfax, Wash., Route 5.

**Iris Is Seven Years Old.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I like to read the letters very much. I am in the second grade. We have a mama pig and 14 little pigs. There are 31 children in my room. I have two brothers and one sister. My brother's names are Ralph and Acel. My sister's name is May. My sister was operated upon three weeks ago for appendicitis. I will write again. I am 7 years old.—Iris Bellingar, Ferndale, Wash.

**Two Sisters, Judith and Minnie.**

Dear Aunt Nellie: I am 11 years old. My birthday is on February 28. I am in the fourth grade in school. My teacher's name is Miss Anderson. I love to go to school. There are 38 pu-

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent by express prepaid for $1.

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

Cuticura For Baby's Itchy Skin

All druggists; Soap 25, Ointment 25 and 50, Talcum 25. Sample each free of "Cuticura, Dept. F, Boston."

pils in our school. We have four cows. Their names are Bessie, Topsie, Beauty and Susie. We have three heifers. Their names are Daisy, Bell and Queen. I have two sisters. Their names are Judith and Minnie. Judith is 3 years old and Minnie is 9 years old. Have I a twin? If so, have them write to me. —Geziena Gelms, R. F. D. 2, Box 71, Blaine, Wash.

**Would Rather Climb Trees.**

Dearest Aunt Nellie: My father has taken the Farmer for a long time and I thought I would like to join the Corner. May I? I will now tell you what I look like. I have light brown hair and dark blue eyes. I have lots of freckles and I am sunburnt, for I am out in the sun very much. I am 5 feet 1 inch tall and I weigh about 83 pounds. I live on a farm and like it very much. I would not exchange with any city girl. I am 12 years old and am in the sixth grade. My birthday is March 16. Our school will end soon. I certainly am glad, for I hate to go to school. I would much rather stay out and wade in brooks or climb trees. I have three sisters and four brothers, so that makes quite a large family, doesn't it? I was writing to two cousins. Their names are Gertrude Ruchest and Mae Nightengale, but Gertrude did not answer my last letter. I do not know why she doesn't. I think they are very nice girls and I like to write to them. My nickname is Bobby, because I have bobbed hair. I think that is a cute nickname, don't you. I will write again. I wish some of the cousins would write to me, for I should certainly answer their letters. Good night, with a kiss for you and all of the cousins.—Elva J. Nelson, Bickleton, Wash.

**Brother's on a Big Battleship.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I enjoy reading the letters. Some of them are so interesting. I had a fine time Easter Sunday. I colored eggs and put rabbits on them. Have I a twin? If so I wish she would write. I was 13 years old April 2. I go to school in Gardena. I used to live in Marengo, Wash., before I came out here. I know a girl that writes to the Children's Corner and she goes to the Lantz school. Her name is Alice Clinesmith. I have five rabbits, and I have one sister and one brother. My sister's name is Maudest and my brother's name is Henry Priddy and my name is Eva Priddy. My brother is in the navyyard on the biggest battleship afloat. Its name is Leviathan. We have a five-acre farm, but papa is renting more land. I have three birds. Their names are Fannie, Sandie and Dickie. They sing all the time. I love birds, horses and rabbits.—Eva Priddy, Touchet, Wash, Route 2, Box 23.

**Live Up to Hoover's Rules.**

Dear Aunt Nellie: I am 10 years old and in the fourth grade. My teacher's name is Miss Bloomquist. We have about 26 scholars in our room. We like our teacher fine. We walk about a mile and a quarter to school. We have a Red Cross organized in school and we are trying hard to help our country by gathering moss, sewing and buying bonds. We all think by doing all we can for the U. S. A. soldiers it will soon help win the war. We also signed Mr. Hoover's pledge and think they are all right. I have two brothers and three sisters. My oldest brother's name is John. He is in the army down in Texas. My second brother, Harold, helps my father; and my sisters' names are Lillian, Gertrude and Harriet. We live on 20 acres. We have three cows, one horse, 30 chickens, a dog and three cats. Have I a twin? I was born on January 21.—George Earhart, Box 131, R. F. D. 1, Poulsbo, Wash.

**Band Expects New Uniforms.**

Dear Aunt Nellie: I have received my prize and your kind letter. I thank you for the prize. I also appreciate your kind invitation to write again, so I am going to tell you what the Liberty school band is doing since I wrote you before. We gave a program and box social for the benefit of the band. The proceeds netted $46.55. We have sent out an order and expect to have new uniforms soon. The other night the band gave a surprise serenade to Clarence Goden, an uncle of one of our band members. He left for the war. We all feel sorry for the sacrifice of our splendid men and hope the cruel war will soon be over. Our school will turn out in a body Saturday to do road work, our wages to be used to buy thrift stamps.—Leland Guffin, age 13, Warden, Wash.

**No Wry Faces About Rye Bread.**

Dear Aunt Nellie: Your little 11-year-old Sunshine is writing once again. I helped work the road yesterday and earned $2. I am going to spend it for thrift stamps, and that is the way I am going to help lick the kaiser. We are Hooverizing, too. Papa brought home some rye bread. He said we need not make wry faces about it; let the kaiser do that when he has to deal with our well-fed Sammies. We are making the cows, hens and the garden help us Hooverize. From the cows we use milk and cottage cheese; the hens furnish eggs, which we boil to save lard. We have green onions from our garden and will soon have asparagus and other garden stuff.—Delma Guffin, Warden, Wash.

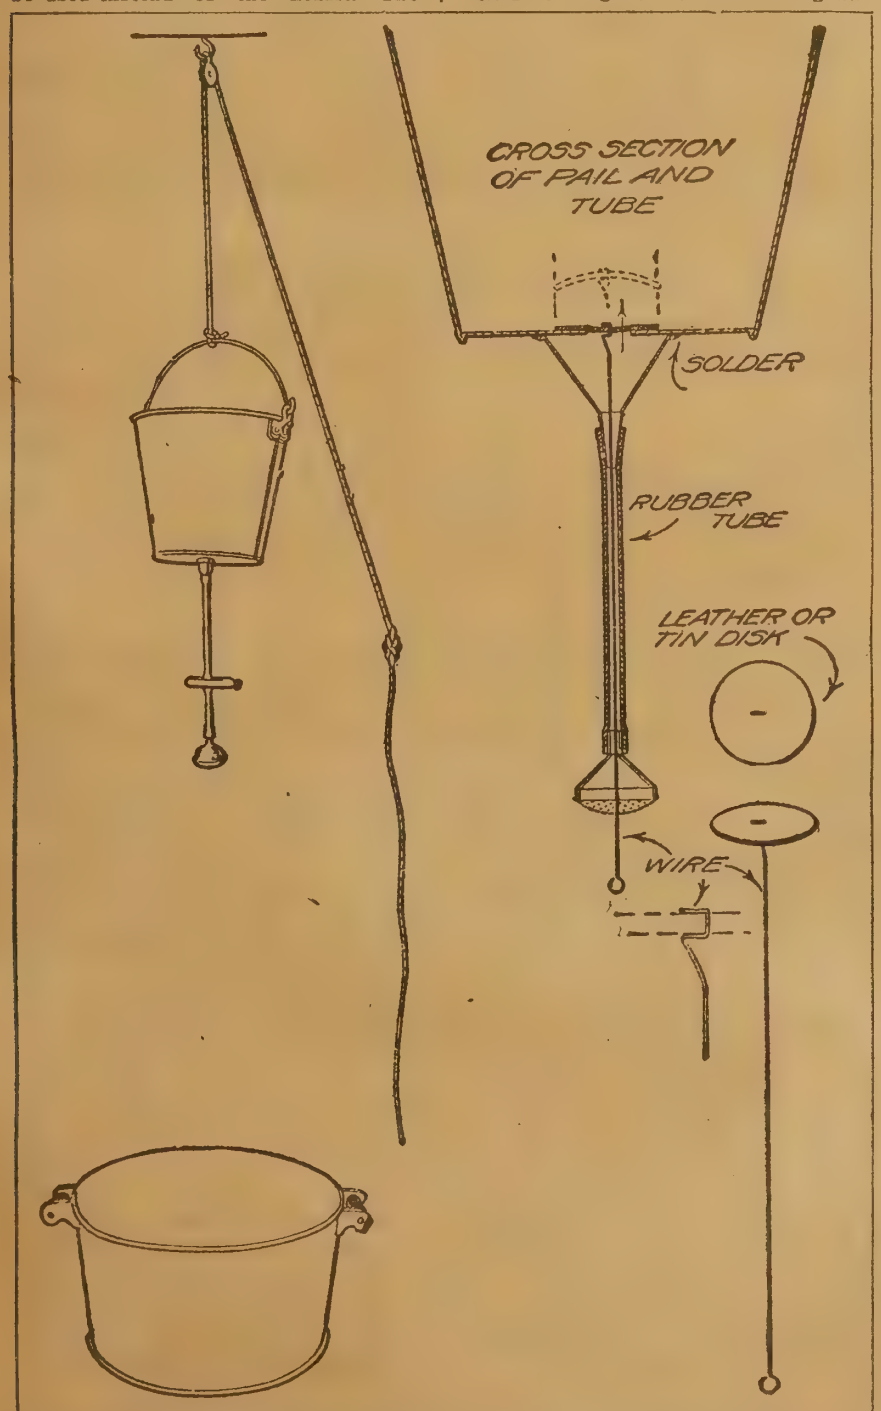
**Many Sweaters Made in This Home.**

Dear Aunt Nellie: I hope this will not be the last time I write to the Corner. I am 12 years old and will be 13 April 3. I have knit four sweaters and three pairs of wristlets and have crocheted two yokes. Twenty-six sweaters have been knitted here at our home. My sister and I have a pony. She is a chestnut sorrel with a white face. She is the finest pony in the country. She threw me once, but it did not hurt me any. We have six mules and quite a number of cows and one dog named Jack. He sure is a nice dog. We live on a 320-acre farm. I am in the seventh grade this year. There are only five pupils, three girls and two boys. I like to read the letters very much. I hope all the cousins are well.—Mary Gustin, R. F. D. 1, box 12, Beebe, Wash.

**Milk the Cow for Grandfather.**

Dear Aunt Nellie: We take the Farmer and I always like to read the Children's Corner. This is my first letter. I am 10 years of age. My birthday is August 2. Is there any one of the children my age? If there is I would be glad to hear from them. I live on a farm and have four sisters and four brothers. My oldest brother is 15 and the baby is one year old. He is just starting to walk now. He is very pretty. We have three miles to go to school. The name of the school is Deer Creek. When the weather was bad we drove with a team of mules, but now when the roads are good we walk. The people around here have almost all their crop in. My sister and I have to milk a cow. It belongs to my grandfather. Each one of us milks her every week and we get 30 cents a week. His hands are all crippled up from rheumatism so he can't milk. We have two horses and two mules and four cows and one calf, about 40 chickens, one dog, three cats, two rabbits and one pigeon. A chicken hawk took the mate to this one. I will write some other time.—Freda Daubel, R. F. D. 1, Colbert, Wash.

**Has Knitted Seven Articles.**



Dear Aunt Nellie: This is the first time I have written to the Corner. I am 11 years old and in the fifth grade. My birthday is March 30. Have I a twin? I have a very good teacher. Her name is Miss Irene Malone. I have had her twice for a teacher. I go to the Colby school. I have joined the Red Cross and have knitted seven things for the Red Cross, four pairs of socks and three pairs of wristlets. I have not missed one day of school this year. I have one brother and no sister. Brother's name is Seval. I am writing this in school. There are four girls writing to you. I have one war saving stamp and six thrift stamps. We have 400 little chickens. There are 21 children in my room. There are four rooms.—Sigen Eastgard, Colby, Wash.

Address all letters to Aunt Nellie, care of the Washington Farmer, Spokane, Wash.

# Here Is Device for Shower Bath

The shower bath is especially useful in homes where there are children, says Farmers' Bulletin No. 927.

A hole is cut in the bottom of a four-gallon bucket and a piece of pipe two inches long soldered in the opening. Rubber tubing four to six feet long is attached to the pipe and a nozzle is fitted on the end of the rubber tubing. A sprinkler from a watering can may be used instead of the nozzle. The tubing serves as a stopcock to cut off the water as desired. The shower can be better regulated by using a device such as is shown in the illustration. The end of a piece of No. 12 or 14 wire is fastened to a disk of leather or tin, or a cap of a tin can, by making a hole in the material used, running the wire through and looping the end. This disk is placed over the hole in the bottom of the bucket and the attached wire extends through the rubber tubing and

bucket can be raised or lowered to suit the convenience of the person taking the bath by a rope fastened to the handle of the bucket and run through a pulley which is fastened with a staple to a joist in the ceiling. The end of the rope is looped over a hook, which is driven securely into the window or door facing, or into the studding in the wall.

A clothespin closed over the rubber the nozzle. The shower can be regulated by the disk being raised and lowered by means of the wire. The weight of the water in the bucket on the disk will form a sufficient seal when no flow is desired.

A large tub is placed under the shower, in which the bather stands. The tub and bucket are more attractive if given two coats of white paint and one coat of white enamel.

# The Real Bo-Peep

Most of us can repeat the poem about Little Bo-Peep. It is one of our favorites. But how many of us know that there was once a real Little Bo-Peep? There was.

Little Bo-Peep had charge of a flock of several hundred sheep, and while she was tending them one day she grew very tired and fell soundly to sleep under a shady hawthorn bush. In the meantime, as is natural for sheep to do, they wandered off to a neighboring field. Now this very field into which they strayed was owned by an enemy of Bo-Peep's master and the shepherd there cruelly cut off each one of the sheep's tails.

Refreshed from her nap, Bo-Peep awoke and missed her flock. She went in search of them and soon spied them coming toward her. Rejoiced, she went to meet them when to her horror she saw they were minus their tails.

Now you know that every shepherd girl has a sweetheart, and Bo-Peep was no exception to this rule. She told him her troubles and he saw to it that the enemy gave her 40 sound and whole sheep for her maimed ones.

The story soon spread across the country, and some poet wrote the thing in the popular way it has come down to us. In those days fashionable ladies sung the words to the music of the spinet, and even now somewhat corrected, we sing them to the piano. Here is the poem:

Little Bo-Peep
Lost her sheep
And didn't know where to find them.
Let them alone
And they will come home,
Dragging their tails behind them.

So little Bo-Peep
A watch did keep,
Nor troubled herself to find them;
And they all came back,
But Alas, and alack!
They had left their tails behind them!

Then she sighed and wept,
And at last she slept,
And dreamt that she heard them a'bleating;
But when she awoke
She found it a joke—
For again they were a-fleeting.

Then her true love took
His staff and crook
And traveled abroad to find them;
And she saw them soon
By the light of the moon,
Dragging their tails behind them!

**100—DISPERSAL SALE—100**

**GLEN TANA REGISTERED JERSEYS**

and

**150—Grade Jerseys and Holsteins—150**

At Glen Tana Ranch, Adjoining Spokane Country Club, 9 Miles North of Spokane, June 5 and 6.

**Registered Stock Sale June 5**

**Grade Jerseys and Holsteins June 6**

Among some of the cows that will be offered is:

Eminents Jimps Owl, daughter of Princess Jimps Eminent; Class AA; producing 359.15 fat, 8492.1 milk; 2 yrs. 11 mos.

First reentry. (Test started May 14, 1917, and up to May 1 has given 16,372.08 lbs. milk, which will easily go 4¼%, and is giving 25 to 30 lbs. milk now, April 10.) How is this for a 4-year-old?

We have many Jersey heifers and bulls from Register of Merit dams that will enable you to form an idea of the quality of stock offered in this sale.

KEEP THE DATE AND PLACE IN MIND. Write for Catalogue.

# News for Breeders

## Pay for Themselves in a Year.

Last November at the Pacific International Holstein sale John Farr of Warren, Ore., purchased Senna J. 2nd's Paul De Kol, paying $525 for her. She was one of William Bishop's foundation cows and has two daughters that each have A. R. O. records of over 25 pounds of fat or over 31 pounds of 80 per cent butter in seven days. In the short month of February the cow produced 2325 pounds of milk testing 3.6 or 83.7 pounds of fat, equal to 104.6 pounds of 80 per cent butter. Oregon Darkness, purchased from P. A. Frakes at the same sale for $225, produced 1891 pounds of milk, testing 4.2 or 79.4 pounds of fat, equal to 99 pounds of butter. Mr. Farr has since bought from Mr. Frakes Oregon Wartina De Kol for $600. She is a daughter and the other Frakes cow a granddaughter of Mr. Frakes' once famous bull, Oregon Lundy de Kol. She produced 2170 pounds of milk, with a test of 4 per cent, making 86.8 pounds of fat, or 108.5 pounds of butter. These records are all made under the supervision of the Warren Cow Testing association.

The first cow referred to dropped a bull calf that Mr Farr sold for $200. The others have each dropped heifer calves for which he would not take $200. D. C. Howard, county agriculturist, who helped Mr. Farr select the cows, presents the figures in about this fashion: The cows averaged 83.3 pounds of fat for February, which was selling at 50 cents a pound, or $41.50 each. But they produced an average of 2100 pounds of milk, which was selling at $3 a hundred or $60 each. At this rate they will pay for themselves in a year. And what, asks Mr. Howard, would scrub cows do? H. A.

## Pure-Bred Sales.

Carnation Stock farms Holsteins are going into many northwestern communities. Recent reported sales include: Forward Prince Segis Lad No. 203036, sold to Thomas Steen of Hamilton, Wash.; Korndyke Segis Klaver No. 207365, sold to Lankhaar Brothers, Everson, Wash.; Verbelle Segis No. 205853, sold to C. D. Young, Chehalis; Governor Tsussie Colantha No. 208024, sold to Henry Anderson, Ferndale; Clothilde Palmyra Canary No. 216424, sold to Piet Bergsma, Ferndale; Mutual Clothide Boelyn Gem 2d No. 292544, sold to Piet Bergsma; Nora Mechthilde Canary No. 292549, sold to Piet Bergsma.

## College Secures Fine Bull.

Professor George Severance reports that the State College of Washington has secured the loan of a Holstein bull valued at $6000 for a period of three years. The animal is owned by J. H. Hulbert of Seattle, and on account of being unable to use him in his herd without inbreeding, he has loaned him to the college.

## Holstein Dispersal Sale.

The Moorehead and Hobson herd of Holsteins at Outlook, Wash., will be entirely dispersed on May 28. One cow has an official record of over 29 ponuds of butter in seven days, another over 28 pounds and heifers from these and other A. R. O. cows, as well as the cows themselves, are in the sale. The two herd bulls are richly bred, both having world's record ancestors. The farm is four miles from Granger, Wash., which is reached by early trains from Yakima, on both roads, and these will be met by autos that will take prospective buyers to the Moorehead farm. H. A.

## Berkshires to Canada.

As far as is known, the first shipment of registered Berkshires to go into British Columbia in recent years from the United States went out a short time ago from Winona ranch, Grants Pass, Oregon, to the University of British Columbia, Vancouver, B. C., Canada. It consisted of two fine daughters of Laurel Champion, one out of the English blood brood sow, Berryton Belle 31st, and the other out of Master's Lady Premier, senior champion sow of the 1914 Oregon State fair.

### Ornamental Trees.

As ornamental trees the Japanese and Chinese persimmons are entitled to high rank. When the trees are in full leaf they are handsome without other adornment. The trees loaded with orange and orange-red fruits are among the most striking objects in the garden. All thrive in California, and not elsewhere except in some southern states.

# Breeders' Department

## SHORTHORN CATTLE

### Firlawn Shorthorn Farm

UNION, ORE.

We offer a young herd bull (registered), ready for service in four months, and 7 yearling heifers, all of imported Scotch blood. Bull and heifers unrelated. Prices reasonable. Write us and come to the Union Stock Show.

SHERMAN & HUTCHINSON, Union, Ore.

## COMPLETE DISPERSION SALE

### Registered Guernsey Cattle

### Wednesday, June 26, 1918

I will sell at public auction Wednesday, June 26, at my home near Satsop, Wash., my entire herd of Registered Guernsey cattle, together with my entire herd of grade Guernsey cows.

Expected military duty compels me to do this, and I desire to be ready when the call comes.

The sale will be made without reserve, as the entire holdings must go.

The blood lines of **KING OF THE MAY** and **GLENWOOD'S MAIN STAY** are the chief factors in this herd.

**50 HEAD OF REGISTERED FEMALES** will be in the offering and two herd bulls and three young bulls.

CATALOG READY ABOUT THE LAST WEEK IN MAY
Write for one to C. D. Minton, Sales Manager, Portland, Oregon,

702 Spalding Building

### E. R. BRADY, Owner

## JERSEY CATTLE

# Working Jerseys

## Complete Dispersal Sale

**TUESDAY, JUNE 11, 1918.**

A herd that has made good at the pail and churn. Must be dispersed on account of my advancing years, ill health, and the present scarcity of labor. Rich in the blood of Golden Glow's Chief, Oregon Exile, St. Lambert, and other great producing strains.

The offering includes the entire herd of cows in milk, young stock of both sexes and herd bull. All registered Jerseys. 30 head, besides young calves that will be born before sales day.

The sale will be held on my farm, four miles south of Salem. Catalog will be issued; send request to E. A. Rhoten, Sales Manager, Salem, Ore., and one will be mailed.

## C. H. CANNON

COL. J. W. HUGHES, COL. W. F. WRIGHT, Auctioneers.

In answering advertisements please mention this paper.

## HOLSTEIN CATTLE

## Complete Dispersal Sale

# MOORHEAD & HOBSON HOLSTEINS

## Tuesday, May 28, 11 A. M.

At the **Moorhead Farm,** 2½ miles north and west of Outlook and 4½ miles from Granger, Wash. N. P. train leaves Yakima at 8 a. m. and O.-W. train leaves at 9 a. m. Autos will meet both trains at Granger on morning of the sale.

This is a complete dispersal of one of the **Greatest Holstein Herds** in the west. **Seventy head of Registered Holsteins,** consisting of cows, calves and bulls, showing official records from 19 to 34 pounds of butter in seven days. They are in fine condition, show cattle of the highest merit and represent the best of breeding.

The herd was established six years ago from the best breeding of the H. C. Davis and E. B. Marks herds. The increase is from sires of world's record breeding.

**Model Annie Segis De Kol,** the senior herd sire, is a grandson of the great King Segis and by a sire out of a world's record cow. His two nearest dams average 31.30 pounds butter in seven days, both having produced over 30 pounds.

**Sir Chimacum Wayne Cornucopia,** the junior herd sire, is a son of the world's record milk cow, Lutske Vale Cornucopia, with over 33,000 pounds milk and 1000 pounds butter in a year. His sire's dam, Chimacum Wayne Boone, has a record of 33.69 pounds of butter in seven days, and his sire's second dam, Margie Newman, at one time held a world's milk record and has world record milk and butter daughters, sons and granddaughters.

**Vesa Duchess** has a record of 29.94 pounds of butter in seven days. She and two of her heifer calves will be sold. **Malteda Mercedes** has a junior 3-year-old record of 28.35 pounds. She and three daughters are in the sale. A 28-pound cow and daughters with official records are among the offerings in this remarkable sale.

These are the kind of cows that make the dairy one of the most profitable departments of the farm. It has taken years to obtain the best. Now the opportunity awaits you. Remember the high prices of grain and hay will not always prevail. They will go down and find the bottom mark. Good cattle are becoming scarce and both beef and dairy products must necessarily remain high. Don't miss this opportunity. Come to Yakima one night and take the early train to Granger, as stated above.

**Liberal Terms** will be given to responsible parties. Arrangements should be made in advance of the sale.

## Moorhead & Hobson

**Owners. Outlook, Wash.**

Auctioneers

### The Advertisements in This Issue Are Well Worth Reading

**They are informative and cover a wide range of subjects. You can profit by reading them carefully.**

# June 12, 1918, at La Creole Farm

Will be sold 40 head choice Jersey cattle. The offering will be a number of choice Register of Merit cows and young bulls from Register of Merit dams and sired by such sires as Golden Cicero, a Register of Merit sire, some of his test daughters, Cicero's Dorothy, 832.7 estimated butter; Cicero's Oxford's Extra, 578 pounds butter; La Creole's Saviour 3 yrs., 502 pounds butter; La Creole's St. Saviour, 3 yrs., 537 lbs. butter. These cows will be in the sale, also a son of Cicero's Dorothy, by Golden Cicero, he large, strong, masculine and vigorous for his age, 10 yrs. There is also a granddaughter and a grandson of Cicero's Dorothy out of La Creole's Dorothy, 553 lbs. butter, 3 yrs.; these two are sired by Oxford You'll Do Jr., a Register of Merit sire, with 2-year-old daughters' records of 458.5 pounds butter and daughters now on test and that will be in the sale. La Creole's Oxford Silky, 271 pounds butterfat in seven months 19 days; La Creole's Oxford's Pearl, 236 pounds butterfat in 8 months; La Creole's St. Saviour's Bell, 2 years old, 129 pounds butterfat in four months. Others I may mention are La Creole's Oxford's Select, 362 pounds butterfat in 7 months 7 days; La Creole's Amy's Queen, 414 pounds butterfat in 6 months 25 days; La Creole's Select Viola, 305 pounds butterfat in 8 months as a 3-year-old; Oxford's Extra Rosie, 121 pounds butterfat in 2 months as a 3-year-old; La Creole's Oxford's Millie, as a 2-year-old, 267 pounds butterfat in 6 months 18 days. He is proving a sire of profitable producers. Although they are young yet, they promise to equal any other blood-line in production with maturity and proper handling; they also have that nice, light, solid color, large, square udders, large, easy-milking teats, properly placed, and quiet, gentle disposition so much admired by all lovers of the Jersey. The sire of Oxford You'll Do Jr. Imp., Imported Oxford You'll Do 111860, has many large producing daughters as high as 1004 pounds butter at 4 years old; he stands at the front with any of the eastern bulls; his daughters are much sought after by those that know the Jersey breed and want the best; 33 of his daughters sold in T. S. Cooper & Sons' 1916 sale at Coopersburg, Pa., for an average of $1038, and 60 of his daughters sold from the same farm within a year's time for an average of $1015 each—one for $3000; he was the sire of many prize-ring winners in America and on the Island; his sire, Gamboge's Knight, is a proven sire of type and production, has daughters with records up to 833 pounds butter.

With this long line of producing ancestors, where could you expect to get better producers than from this farm?

When I started in for Jerseys, 15 years ago, I did not pick up and buy the cheap, inferior cows that are so common with the beginner. I bought the best to be had, regardless of price—the higher the price I had to pay, the better the cow. Morrow's Select was among the first cows I bought, with a record of 884 pounds butter; Cicero's Dorothy, 832 pounds butter, was the second lot I bought for $420; Cicero's Oxford Extra, $400. The prices did not discourage me, yet at that time I had to borrow money to buy them. They soon paid for themselves. My first herd bull, Amy's Chief, proved a wonderful sire of producers, with daughters up to 872 pounds butter; but, unfortunately, before his worth was known, he was sold for beef. The next sire, Sauce King, was bought at 2 months old for $200; he was a great-grandson of the wonderful old sire, Financial King, sire of Financial Countess, 994 pounds butter. My next purchase was Oxford You'll Do Jr., $859. Again, I had to borrow the price, but the herd soon paid the bill; he is still vigorous and good as ever. A number of his daughters are in this sale, also choice sons, including La Creole's Oxford's Dolly Boy, out of Morrow's Select, 884.6 pounds butter; this bull is 2½ years old and a grand animal; have been using him as one of the herd sires, to strengthen the herd. Three years ago I bought the old bull, Golden Cicero, then 9 years old, for $500. They have all proven good investments from both a money value and increased milk and butter production.

What I have done you can take of the same stock and continue to do, also improve and increase production, for I have reached the age where I must step aside and let a more active, younger man take up the work. The most of these cows are bred to freshen this fall, therefore you are the gainer again by soon having two for the price of one.

In the consignment by J. A. Wood you will find a choice lot of well-bred cows of the best blood-lines, all bred to the great sire, Halver, sired by Holger, with a number of daughters in the Register of Merit list, with good records. Halver's dam is La Creole's Select Rose, 811 pounds butter; she a daughter of Morrow's Select, 884 pounds butter. You will find the offering well worthy the place in any herd. Unfortunately, they have never been officially tested, as Mr. Wood has not been on the farm steady so as to give them the attention needed. He has concluded to dispose of the herd. What is his loss will be your gain.

The time is now ripe to buy, when the other fellow has to sell. We are offering you absolutely a clean, healthy, producing herd; no culls. The sire of the most of these cows is a son of the wonderful show bull, Noble Peer; he has 7 daughters in Register of Merit as 2-year-olds, with records of 468.7 pounds, 461.4 pounds, 475.1 pounds, 457.4 pounds, 447.1 pounds, 473.2 pounds, 515.9 pounds butter.

The consignment by McArthur & Stauff consists of six females—five heifers and one cow fresh April 21. The heifers are a typy lot, combining both production and type. Two of these heifers are sired by Noble Emperor, a son of Golden Fern's Noble, the great bull that sold for $25,000. Two are sired by Lucklamute's Eminent Prince, a son of Octavia's Duke; these two are also daughters of a cow sired by Octavia's Duke, making them double granddaughters of this valuable bull. The last heifer is a granddaughter of Rinda Lad, with 21 daughters in R. of M. Rinda Lad is a full brother of their senior herd bull, who has seven daughters in R. of M. and more to qualify—all with splendid records. This heifer is out of a R. of M. cow and a granddaughter of Dimple's Flower, R. of M., class AA, 741 pounds butter. The cow, Gilvie, that McArthur & Stauff are offering, is sired by the well-known bull, Eurybia's Prince, whose blood has proven itself in the line of production. This cow has a R. of M. record of 555 pounds butter; she is the half sister of Katie F. in R. of M., 797 pounds butter. Gilvie is now fresh and milking above 50 pounds milk per day. She is a good tester, her average being above 5 per cent. Indications are that she will make 800 pounds of butter on this test with proper handling. McArthur & Stauff have three of this cow's heifers in their herd and would not part with her, were it not for making room for their Holger heifers.

Complete catalog will be published, and mailed on request only.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, May 20.—Fears of dangerous delays to planting did a good deal today to advance the value of corn. Prices closed strong at the same as Saturday's finish to 2 3-4c higher, with May $1.27 3-4@1.27 7-8 and July $1.43 1-2 to $1.43 5-8. Oats gained 1 3-8 @1 1-2c to 2 1-8 net. In provisions the outcome varied from 10c decline to 30c advance.

Unsettled weather adverse to planting tended decidedly to discourage selling of corn. Bullish sentiment was further augmented by the percentage of damaged corn in current arrivals and by doubts therefore as to whether a liberal amount of contract grade would be available for June and July delivery.

Gossip of a revival of export inquiry helped to lift the oats market.

Big exports of meats gave strength to provisions and so too did higher quotations on hogs. The consequent advance, however, brought out realizing and led to a reaction.

### Cash Quotations.

CHICAGO, May 20.—Corn—No. 2 yellow, $1.72; No. 2 yellow, $1,65@1.67; No. 4 yellow, $1.47.

## Portland Market.

PORTLAND, Ore., May 18.—As it is probable that butter prices will not be further reduced, buying for storage account has become more active and this has strengthened the market. Speculators are willing to pay up to 39½ cents for cube extras. Eggs are also still going into storage, and as the buying keeps pace with receipts this is holding the market steady.

Larger poultry receipts were looked for, but have failed to materialize. Dressed meats have an easier undertone.

Oregon strawberries are becoming more plentiful and are bringing $4@5 a crate, according to quality. The first Kennewicks received were not as good as expected and sold at $3.50@4.50.

The potato market is steadily growing stronger as the end of the shipping season approaches. At loading points buyers are offering 75@90 cents and in the jobbing trade Burbanks are held at $1.10@1.25.

Butter—Cubes, extras, 39@39½c; prime firsts, 38c; prints, extras, 44c; cartons, 1c extra; butterfat, No. 1, 43c delivered.

Eggs—Oregon ranch, current receipts, 35c; candled, 36c; selects, 37c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock. Portland: Tillamook triplets, 23½c; Young Americas, 24½c per pound; Coos and Curry, f. o. b. Myrtle Point: Triplets, 23c; longhorn, 24c per pound; ¼c discount to Portland trade.

Poultry—Hens, 27½@28c; broilers, 40c; ducks, nominal; geese, nominal; turkeys, live, 27@28c; dressed, 37c per pound.

Veal—Fancy, 17@17½c per pound.

Potatoes—Oregon Burbanks, $1.10@1.25 per hundred; New California, 6@6½c per pound.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $29@30 per ton; valley timothy, $25@26; alfalfa, $24@24.50; valley, grain hay, $24@26; clover, $21; straw, $9@10.

## The Wool Market.

BOSTON, May 17.—The Commercial Bulletin will say tomorrow: "The wool trade is still waiting for the government to announce in final form its method of procedure for handling the domestic clip. The report of the special committee which went to Washington recently to confer with the government indicated no material change from the original announcement of the war industries board as to commissions and terms of handling. The final plans, however, are expected to be announced very soon."

Scoured basis—Texas, fine, 12 months, $1.72@1.75; fine, 8 months, $1.50@1.55. California, northern, $1.70@1.75; middle county, $1.55; southern, $1.45@1.50. Oregon, eastern No. 1, staple, $1.78@1.80; eastern clothing, $1.62@1.65; valley No. 1, $1.63@1.66. Territory—Fine staple, $1.80; half-blood combing, $1.63@1.68; three-eighths blood combing, $1.40@1.45; fine clothing, $1.65@1.70; fine medium clothing, $1.55@1.60. Pulled—Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

## Seattle Wheat.

SEATTLE, May 18.—Utter exhaustion of wheat and flour stocks is imminent as the result of orders from the local officials of the food administration grain corporation. Seattle millers were advised this week that as soon as they had completed their 110 per cent grind they will be unable to get any more wheat. They had expected another 10 per cent allotment and there is some hope that the order may yet be modified, as some of the large mills own wheat enough to permit of such alteration. In the event, however, that this order stands as read they will be compelled to turn their grain holdings over to the corporation for disbursement and distribution.

## Portland Wheat.

PORTLAND, Ore., May 18.—There was no interest shown in grain trading in the latter part of the week, and fluctuations on the local board followed these in the east. City trade in flour is quiet, but the mills are well occupied on government export orders. Drastic changes in the differentials on mill feed are soon to be announced. The larger mills are still behind on their current feed orders.

### LINSEED.

DULUTH, Minn., May 18.—Linseed, 3.91½@3.99½; arrive, 3.93½; May, 3.93½ asked; July, 3.97 asked; October, .99 asked.

## Spokane Market.

## Pershing Follows Lord Kitchener.

General Pershing urges the war department to train soldiers in the art of musketry before sending them to France. In this he takes the stand that Lord Kitchener did when organizing his first army to whom he addressed his famous order: "Never mind how they drill or whether they know the right foot from the left. Teach them to shoot and do it quickly."

From time to time the value of marksmanship has been discussed in this column, and what has been said about it has been based on information given by a veteran musketry instructor formerly in the British army. Men who know how to use a military rifle learn quickly to handle any machine gun and most of them can be turned into good artillerymen. Every expert rifle shot knows how to aim any firearm from a pistol to a 16-inch gun. The principle is the same. Such marksmen do not waste ammunition. In spite of barrage fire and other changes in battle tactics, snipers play as important a part as they ever did, and they can do better work now because their rifles have an effective range equal to the distance that a man can be distinctly seen without the help of a spy glass and the powder is smokeless.—New York Commercial.

## The Victory of the "Flivver."

"If Ford runs we're sunk without warning." This is said to represent the feeling among veteran Michigan politicians over the suggestion that the automobile manufacturer make the race for the senate. The explanation is that the contest would be that of half a dozen nonentities against a well-known man. Some of the political workers are downright indignant over Ford's silence. He "owes" it, not to them, of course, but to the state of Michigan, to announce whether he will run or not. It isn't right, they argue, for him to allow the talk to go on until the last moment and then say that he doesn't want the office, never did want it, and will not be a candidate for it. It is easy to imagine how readily they would follow their own advice if they were in Ford's position. The situation is not less piquant for the uncertainty on which ticket his name might appear. He might even run as a nonpartizan and thus necessitate a drastic revision of all political strategy. Ford can hardly be considered ideal senatorial timber, but his lot is not cast in a forest of giants.—New York Evening Post.

## Motor on the Farm

The national council of defense is asking the various state councils of defense to encourage the establishment of auto truck express lines through the country wherever they are needed. The action is taken with a view of relieving railroad traffic as much as possible and at the same time facilitating the handling of country produce. The council cites three important advantages from the war point of view that would be obtained through the establishment of rural auto truck lines. These advantages are stated as follows:

1. Production is stimulated. Farmers invariably increase the variety and quantity of their production when regular marketing facilities are made available. In every section studied, a great increase in the variety and the amount of production followed the establishment of the rural express.

2. The farmers are relieved of their task of hauling their products to market, and the existing farm labor supply is thereby greatly conserved. The investigation shows that in some places the hauling done by five men with wagons can be done by a man with a truck at many times the speed. This leaves the farm laborers at work in the fields.

3. Additional food is made available by tapping the farm communities which have no other good shipping facilities. Much of this additional food is now either wasted or greatly deteriorated because of poor shipping facilities.

I WANT TO HEAR FROM OWNER OF farm or unimproved land for sale. Mrs. W. Booth, Pulaski, Iowa.

# The Greatest Mother in the World

STRETCHING forth her hands to all in need; to Jew or Gentile, black or white; knowing no favorite, yet favoring all.

Ready and eager to comfort at a time when comfort is most needed. Helping the little home that's crushed beneath an iron hand, by showing mercy in a healthy, human way; rebuilding it, in fact, with stone on stone; replenishing empty bins and empty cupboards; bringing warmth to hearts and hearths too long neglected.

Seeing all things with a mother's seventh sense that's blind to jealousy and meanness; seeing men in their true light as naughty children—snatching, biting, bitter—but with a hidden side that's quickest touched by mercy.

Reaching out her hands across the sea to No Man's Land to cheer with warmer comforts thousands who must stand and wait in stenched and crawling holes and watersoaked entrenchments where cold and wet bite deeper, so they write, than Boche steel or lead.

She's warming thousands, feeding thousands, healing thousands, from her store; the Greatest Mother in the World—the Red Cross.

Your help is needed—give till the heart says stop.

***Every cent of every dollar received for the Red Cross War Fund goes for War Relief***

The American Red Cross is the largest and most efficient organization for the relief of suffering that the world has ever seen.

It is made up almost entirely of volunteer workers, the higher executives being without exception men accustomed to large affairs, who are in almost all cases giving their services without pay.

It is supported entirely by its membership fees and by voluntary contributions.

It is today bringing relief to suffering humanity, both military and civil, in every war-torn allied country.

It plans tomorrow to help in the work of restoration throughout the world.

It feeds and clothes entire populations in times of great calamity.

It is there to help your soldier boy in his time of need.

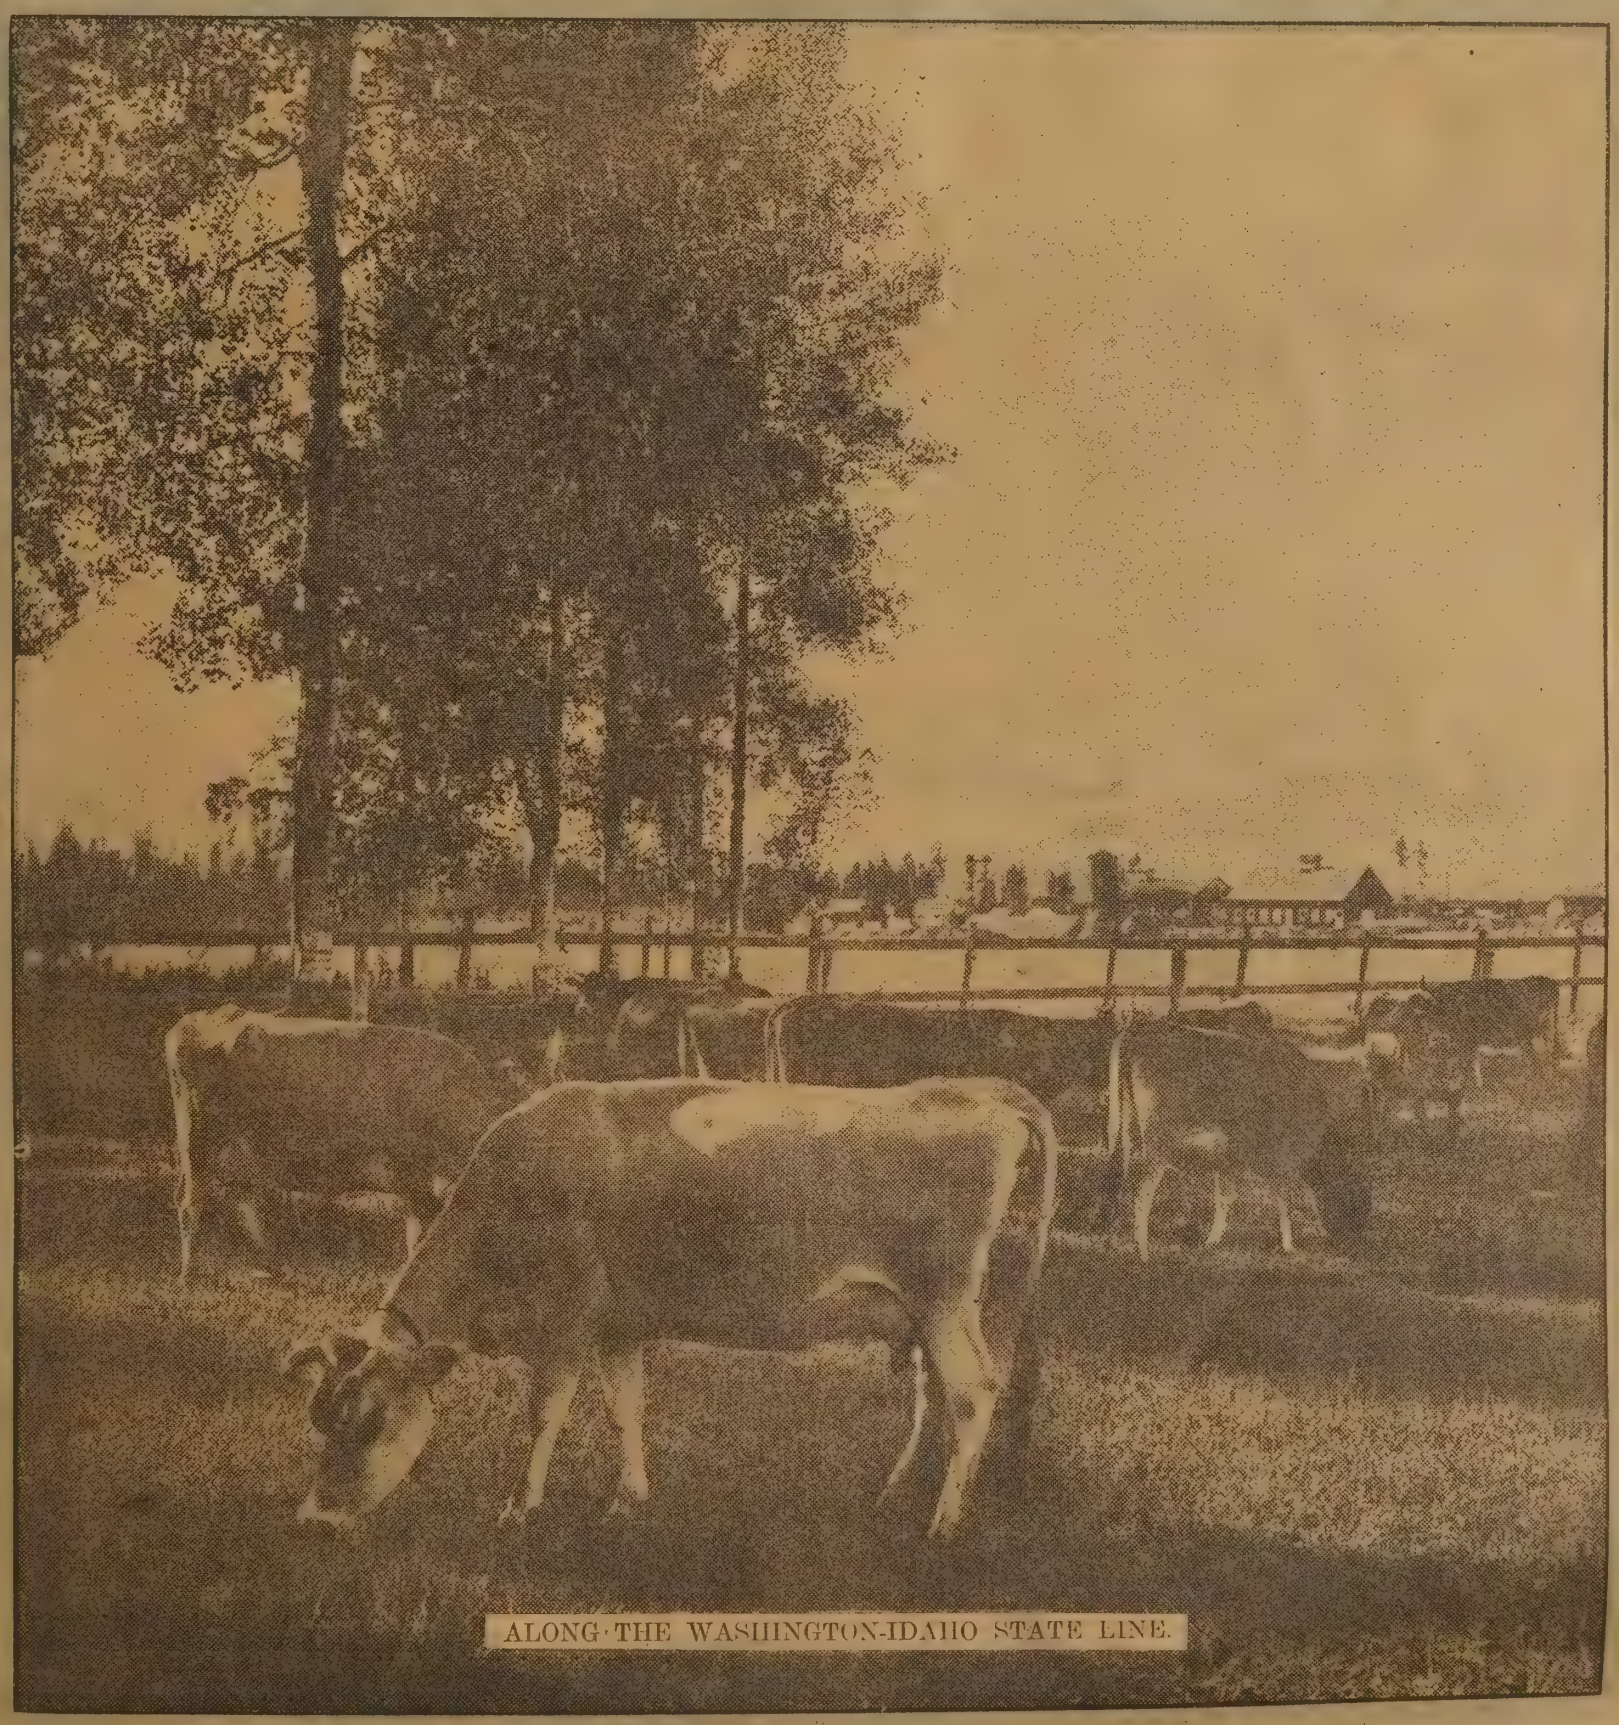
With its thousands of workers, its tremendous stores and smooth running transportation facilities it is serving as America's advance guard—and thus helping to win the war.

Congress authorizes it.

President Wilson heads it.

The war department audits its accounts.

Your army, your navy and your allies enthusiastically indorse it.



Twenty-two million Americans have joined it.

This advertisement gladly contributed to the Red Cross by
Col. Roland H. Hartley, Everett, Wash.

# THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HO[illegible]ND HOOF

VOL. XLI. NO. 22. MAY 30, 1918. ** [illegible]EEKLY.

ALONG THE WASHINGTON-IDAHO STATE LINE.

# ACT NOW

As a war measure, we introduced the "direct-to-the-consumer" idea in our subscription business. Our plan was ultimately to do away with the subscription agent and to secure new and renewal subscriptions by dealing with our readers direct. We are glad to report that the new system is working splendidly. Already, thousands of our friends have taken advantage of the big saving which our offer makes possible.

Much of this success is due to the efforts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those who they feel will be interested in a high-grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appresiaciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices below.

"THE LOVE OF reading enables a man to exchange the wearisome hours of life which come to every one for hours of delight."

—MONTESQUIEU.

## SUMMER READING

***You and Your Family Will Enjoy This Paper This Summer as Well as Next Winter***

We want these friends to remember that the big cut in the subscription price only affects the method of distribution and not the quality of the paper itself. Our constant endeavor will be to give you a bigger, brighter, better home paper than ever. Among the hundreds of experiences which we print from others engaged in the same line of work as you are, you are almost certain to find suggestions which alone are worth several times the subscription price. And what other things can you buy today for less money than you have been accustomed to pay in the past?

## The Cost of Your Reading Matter Has Been Cut

*Following Rates Now in Effect for Subscriptions to The Washington Farmer*

**25c for one year**

**50c for three years**

**$1 for five years**

IF YOU'VE ANSWERED, PLEASE PASS TO A NEIGHBOR

May 30.

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions; thus saving the middleman's cost and releasing men for productive labor.

Vol. 41. No. 22 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF May 30, 1918

# Would Be Gross Injustice to the Producers of Northwest

FARMERS of the Pacific Northwest, your interests are in grave jeopardy. The government is considering a flat increase in freight rates of 25 per cent. This article proves, by figures quoted from the Wall Street Journal, that no such increase is needed by the railroads of the Pacific Northwest, and that at least three of the great transcontinental systems need no increase at all. There is not a day to lose. Every grange, every farmers' union, every nonpartizan league, every farm loan association, every fruit growers' organization, every live stock association should rush emphatic protests to the senators and representatives from the Pacific Northwest, by wiring and by writing to Washington, D. C.

Washington dispatches intimate that Secretary McAdoo, as director-general under government operation of railroads, contemplates a blanket advance in freight and passenger rates of 25 per cent. While some advance is needed to save the government from a deficit in its running of the railroads, the public should protest vigorously against an unjust and unscientific flat advance of 25 per cent.

Some roads need the increase, others do not. It is very doubtful whether the systems that serve the Pacific northwest, with the exception of the Chicago, Milwaukee & St. Paul, actually need any increase.

Northern Pacific and Great Northern, in particular, seem reasonably prosperous for war times. The Northern Pacific's annual report shows that it earned on its own lines last year nearly 10 per cent on its capital stock, after the payment of all operating expenses, interest on bonds, taxes, etc., and the Wall Street Journal says, "The Great Northern will show its dividend covered by about the same margin."

But both of these lines have other rich sources of income. They operate the Chicago, Burlington & Quincy under joint lease, guaranteeing the Burlington's stockholders 8 per cent dividends. The Burlington is the richest railroad in the United States. It earned a surplus last year of $29,406,032, and, while this was $3,500,000 less than in 1916, it was, nevertheless, sufficient to permit payment of the usual 8 per cent dividend, an extra dividend of 10 per cent, transfer of $1,397,030 to sinking funds and investment of more than $8,000,000 in additions and betterments, all without touching the accumulated surplus.

Discussing this remarkable record the Wall Street Journal says:

"Out of last year's surplus Burlington paid out $19,951,038 in dividends, 18 per cent on the $110,938,100 stock, and had left a balance of $9,454,994. Roughly speaking, half this belongs in equity to the Great Northern and half to the Northern Pacific. It means an additional 1.85 per cent on the stock of the former and 1.89 per cent on the stock of the latter. But there was more in Burlington's earnings for the controlling roads than that. The regular dividends of 8 per cent take care of the interest on the collateral trust bonds exchanged for the stock. The 10 per cent extra dividend, except that accruing to holders of the $3,226,000 minority stock, was clear additional income to the two Hill roads, amounting to $5,380,000 for each. Add this sum to half the undivided surplus and there is a total of a little more than $10,000,000 to represent the interest of each of the controlling roads in Burlington's income of 1917."

It would be an act of gross injustice to the producers of Montana, Idaho, Washington and Oregon for the government to increase freight rates and fares 25 per cent and swell to that enormous extent the earnings of the Burlington, the Northern Pacific and the Great Northern.

The Burlington, for example, earned gross in the year ended December 31, 1917, the studendous total of $122,342,706. These figures, it should be remembered, are the company's own report to the interstate commerce commission. A flat increase of 25 per cent would add $30,500,000 to the Burlington's net earnings and increase the profits under the lease accruing to the Northern Pacific and the Great Northern $15,000,000 each. In other words, each of these roads would cut a $25,000,000 slice from the Burlington "melon."

The proposed increase would come chiefly out of the pockets of the producers of this region, and very largely from the farmers. On wheat, for example, it would operate in this way: The government price is now fixed on the basis of the New York market, less the transportation charges from the farm to the Coast and the shipping rate from the Coast cities to New York. If the wheat rate should be advanced 25 per cent the increase will be deducted next year from the price that the farmer is paid for his grain.

Of course the same toll would be taken from every other staple product of the farm—all other cereals, hay, live stock, fruit, etc.

The burden would bear with especial weight on the orchard owners. To the increased cost of production would be added a 25 per cent advance in the freight rate—an alarming prospect to an industry that must seek distant markets in competition with the short haul on the orchard products of the east.

Secretary McAdoo is an over-worked man. His mind is not only burdened with the vast and difficult problem of financing the war, but he has also been made responsible for the operation of the great railway systems of the United States.

There is grave danger that he will make mistakes. There is imminent danger that his desire to find a short-cut solution of the railway financing problem may lead him upon a course that would mean injustice for millions of producers in the west and ruin for many.

The Farmer urges every farm organization in the Pacific northwest to take immediate steps to lodge a protest with its senators and representatives at Washington.

Fill out this coupon, and, together with the whole article, mail it to your senator or representative at Washington, D. C.:

To.....

Will you do all in your power to prevent the flat increase by the government of freight rates and passenger fares of 25 per cent, as this would be an act of gross injustice to the farmers, orchardists and other producers of Montana, Idaho, Washington and Oregon by swelling to that enormous extent the already profitable earnings of the Burlington, the Union Pacific, the Northern Pacific and the Great Northern Railroad systems?

## Live Young Folks

### Pig Clubs, Canning, War Gardens

By WILL S. HORN, Spokane County Club Leader.

The boys and girls of Epokane county are doing their part toward the development of the live stock and agricultural industry of the county. One hundred twenty-five boys and two girls are raising pigs to help Spokane county fill Uncle Sam's pork barrel. Over 50 of these are raising purebred sows and litters. Some very good litters have been secured since the sows began to farrow. The purebred registered stock raised by the boys will be an effective means of introducing stock of good breeding into the various communities. One boy who has a purebred Poland-China sow has already received orders for all the possible pigs his sow may farrow, and illustrates the interest the grown-ups are taking in better live stock after seeeing the work of their boys.

The interest in war gardens is very marked; some 350 boys and girls of the rural schools of the county are engaged in gardening organized under the National Boys' and Girls' clubs. Some very excellent gardens have been planted, and in a few districts the school boards have secured plats of ground for children who were without garden plots. Much of the material raised in the gardens will be dried or canned by the Mother-Daughter Canning clubs and used in the homes this winter.

There are 670 boys and girls enrolled in the National Boys' and Girls' clubs in Spokane county and a lively interest is being shown

## Will License Machinery Makers

### *President Issues Proclamation Looking Toward Control*

The farm implement industry is to be put under license. President Wilson has issued a proclamation requiring all persons, firms and corporations engaged in the importation, manufacture, storage and distribution of tools, utensils, implements, machinery and certain other farm equipment, except those specifically exempted by the food control act, to secure federal licenses not later than June 20, 1918. Retailers who do a business of less than $100,000 a year are not required to take out licenses.

The fact had about faded from the public mind that the food control law passed last August authorized the president to put farm machinery under just as binding license regulations as food products. Now the president is acting under that authorization.

The secretary of agriculture is directed to carry out the provisions of the proclamation and the regulations thereunder. Licensees are required to furnish information regarding their businesses whenever it is thought necessary by representatives designated by the secretary, and must permit such representatives to inspect the property and records pertaining to their business. Information obtained in this manner is not to be disclosed without authority. Unjust profits, resales within the trade without reasonable justification, attempts to monopolize, unreasonable increase of prices or restriction of supplies, and wilful waste of farm equipment are prohibited. Also, licensees are forbidden to sell farm equipment to persons known to have violated the food control act.

Applications for licenses must be made to the law department, license division, United States food administration, Washington, D. C., upon forms prepared for that purpose.

To assist in the enforcement of the regulations, the secretary of agriculture has appointed Junius F. Cook of New York as assistant to the secretary.

The term "farm equipment," wherever mentioned in these regulations, shall be deemed to mean certain necessaries, including attachments and repair parts thereof, required for farm use in the actual production of foods and feeds, as follows: Binders, boilers, brooders, bunchers, carriers, carts, cleaners, covers, crushers, cultivators, diggers, distributors, drills, elevators, evaporators, fencing, forges, forks, fountains, gates, graders, grinders, grindstones, harrows, harvesters, headers, hillers, hitches, hullers, huskers, incubators, jacks, listers, loaders, markers, milkers, mills, mowers, pens, pickers, planters, plows, powers, presses, putters, pulleys, pulverizers, pumps, racks, rakes, rollers, scales, seeders, separators, shellers, shreders, silos, sleds, slings, sorters, sowers, sprayers, spreaders, stalls, stanchions, tanks, tedders, testers, threshers, towers, tractors, trailers, troughs, trucks, wagons, weeders, weighers, windmills and all other tools, utensils, implements and machinery required for farm use in the actual production of food and feeds.

# What I Have Learned in Raising Rabbits

Article 1---By JOE L. ASHLOCK

I began raising rabbits a little over a year ago. Up to that time I had not cared much about rabbits. A little boy who lived near me once had two does. One of them made a nest for her young in his father's wood-house; and the little boy's mother said that for days thereafter when he went out to count his rabbits he would each time find more of them than he had counted the day before. Rabbits are very prolific. That is about all I knew about rabbits.

I had read, also, that rabbits were almost capturing the whole continent of Australia—another evidence of their ability to increase their numbers.

I now have on my place 10 mature rabbits, and 18 little ones. I have had since beginning to raise rabbits over a year ago, more than 100 rabbits. We have eaten two, sold four, and given away two. This leaves many rabbits unaccounted for. Cats caught them, or they died of disease or accident. This means that I have had some experience with rabbits, and from my experience I have learned a few things. These few things I propose to tell in my rabbit story.

One of the two does I bought over a year ago was bred, but we did not know it. These two does had for a nest to use jointly, an old tin tub turned upside down with a hole cut in the side. Rabbits are shy, and like to have a nest of this kind into which they can run when alarmed.

I noticed after a few days had passed that one or the other of the does was filling the hole in the tub full of straw at night. This was to me very annoying. I had put that old tin tub in there for them to use as a nest. Here they were filling up the opening. So I scratched the straw away, and then shoved one of the does in through the hole to acquaint her with the fact that here was a place to hide in when she was scared.

The next morning the does, one or the other, or both, had again filled up the hole, packing the straw in so tight I could scarcely pull it out. Such stupidity was inexcusable, even in a rabbit; but I cleaned the place out again.

That day I chanced to meet a man who knew a good deal about rabbits, and told him how stpuid my two does were. He laughed.

"One of the does has some baby rabbits under the tub," he said. "During the day rabbit mothers close up the opening to the den where their babies are. They open it only at night when they slip in to nurse them."

I was very much surprised, but found that what the man said was true. Cautiously slipping my hand into the nest I felt of the soft, warm fur piled up, and at my first touch the tiny rabbits kicked and squirmed about down in the fur, and uttered tiny, mouse-like squeals.

I should not have opened the nest during the day, of course; nor should I have put my hand into the nest when the rabbit babies were so young. It is best to leave the babies entirely in their mother's care for the first week or so, and even after that, one should disturb them as little as possible.

I now was greatly puzzled, for I did not know how to tell which was the mother of the babies. So, there was nothing for me to do but leave both does in the pen.

A few days afterward I threw some fresh cabbage into this pen, and the does ate it eagerly. This cabbage consisted of a head that had cracked open in the patch, and therefore was unfit for storage through the winter. All such material as this from the garden can be fed to rabbits.

But I should not have given my does this particular cabbage. The next day one of the rabbits was very sick, and in spite of all I could do for her, she died.

For the next day or so the remaining rabbit endeavored to care for the young ones. She closed the entrance each morning, and I hoped that she, not the dead doe, was the mother. But I hoped in vain. Examining the nest a few days later, I found that all the little ones were dead. They were very thin—meaning that they had starved. Their mother was dead.

I discovered, too, what killed the mother. The cabbage I had fed her had a few weeks earlier been treated with an arsenical powder for insects. The rabbit mother had gotten enough of the poison to kill her. She, hungry from nursing her young, had likely eaten more of the poisoned cabbage than the other which escaped without harm.

Since that experience I have been very careful in the matter of feeding my rabbits. I am told that they are quite sensitive to any improper thing in the food they eat, and one can not be too careful. They eat dry table scraps, lawn clippings, dandelions, all kinds of hay, grain and roots of all kinds usually produced in the garden or on the farm.

But what they eat must be clean and unspoiled. In nature rabbits and most of the wild animals, are very clean. Think of the cleanly surroundings of a bird with its nest in the leafy treetop—the clean, blue sky above and the pure air bathing the nest and the little birds! The wild things have all out-of-doors in which to live; so, when you start them to housekeeping in an apple-box you have to make up for this freedom by keeping their nest and pen very, very clean, and their food must be clean and unspoiled. If you do not do this they will sicken and die. It may be one disease, or another; but nine times in 10 some uncleanly condition in food or housing is responsible for their break in health.

I lost some rabbits from sickness before the last winter was over. The feed my rabbits had been eating consisted of alfalfa hay, turnips, ground oats, and bran and shorts mixed. My supply of alfalfa became low late in February, and the turnips were all gone. Presently, I noticed that my rabbits were wet about the mouth. This was true of two litters of young ones. The older ones were not troubled in that way. The trouble continued till I had lost all of two litters and part of another—about 20 rabbits in all.

This trouble is called "slobbers." It is liable to follow the giving of any improper feed to young rabbits. In this case it was due, apparently, to several bunches of mildewed alfalfa hay, which, unnoticed by me, had been taken from the bottom of the haystack. I made the nests very clean, kept the sick rabbits from the well ones, fed them dry feed that was absolutely clean and unspoiled, and the trouble ceased, though not till I had lost many rabbits. Had I fed them properly, they should not have had this trouble at all.

I noticed in the first days of March, when it was rainy and foggy much of the time, that several of my old rabbits had sore ears. There were scab-like scales far down in the ears, and when I tried to lift off a scab the rabbit flinched in pain, and bleeding followed the removal of the scab. These sore places came up out of the ears and eventually reached almost to the ear-tips.

This trouble I found was ear-mange, or canker. I cleaned out the ears very carefully, and then sprinkled powdered boracic acid in the ears. In a week or so the trouble disappeared. About this time the wet weather ceased, and I was able to let my rabbits run in a large, fenced-in pasture of green alfalfa and bunchgrass. I think the fresh, clean pasture had about as much to do with the cure as the boracic acid. I must confess that prior to the appearance of the ear trouble I had been less vigilant than usual in the matter of keeping the rabbit pens perfectly clean. My sick rabbits were the result of this carelessness.

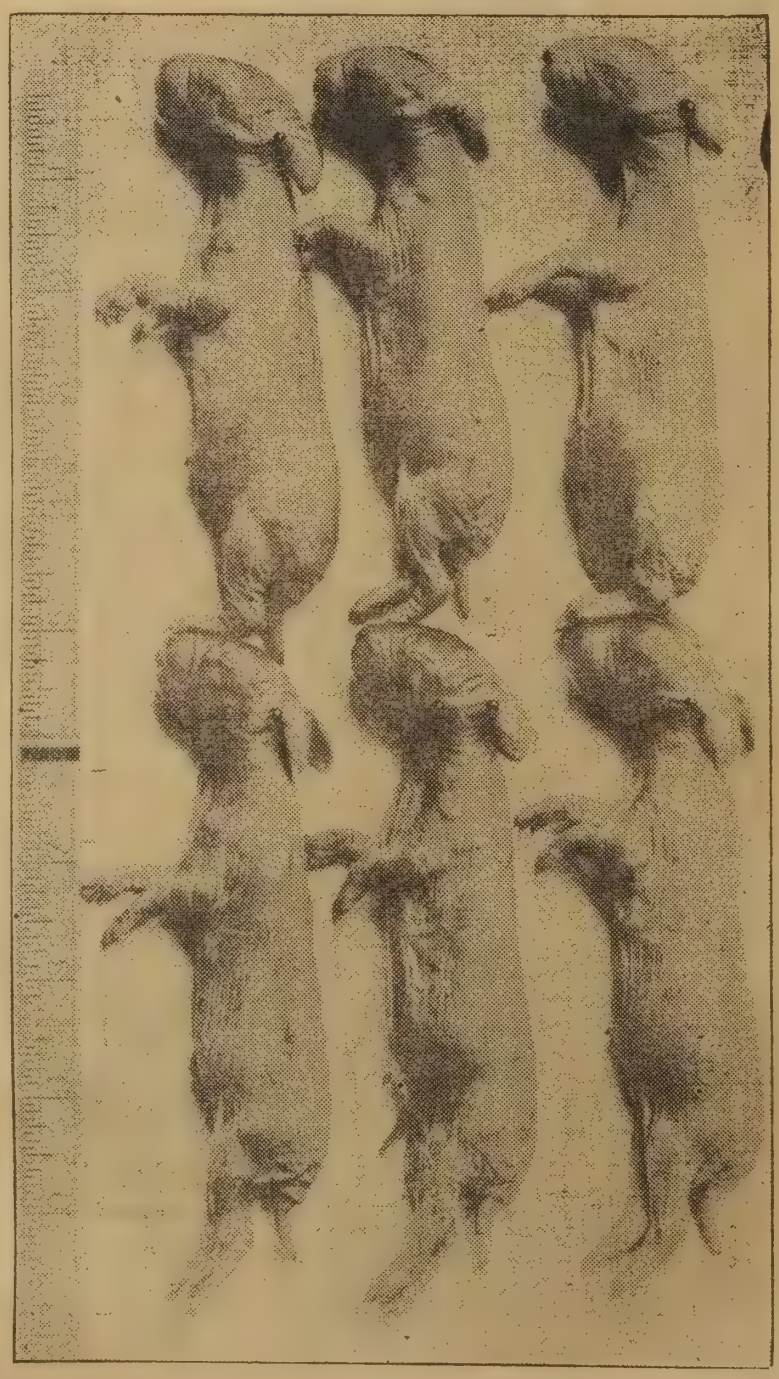
You can not expect rabbits to thrive and keep healthy on a manure pile, and their pen quickly becomes just as filthy as an old manure pile if you do not keep it cleaned out.

While I was treating the rabbits for ear mange I received scratches on my wrists. The rabbits are quick and powerful with their hind feet, and unless you pick them up carefully by the loose skin just back of their foreshoulders they will kick upward and downward in such a way as to strike your wrist with the claws of their hind feet. Never pick them up by their ears.

These scratches on my wrist did not heal up as slight scratches usually heal. It was weeks before they healed. So be careful about these scratches, for this reason:

A rabbit cleans out its ears by turning its head sideways, laying its ear backward at the right angle and then very deftly inserting a hind foot in the ear. With a delicate touch it works its foot about in the ear; then gives its head a quick shake and the job is done.

These rabbits, I very seriously suspect, had been trying to clean out their ears, and the claws of their hind feet had become infected with whatever disease was present in their ears. I do not know what scientists would say about this, but I know the experience I had, and that experience makes me very positive that the scratches on my wrists were infected by the claws of the rabbits. Several times I have been scratched on the wrist by rabbits in perfect health and the scratches healed at once, with no sign of infection.



Another experience I had which cost me a litter of six baby rabbits taught me the unwisdom of negligence in providing a warm, protected nest for an expectant mother rabbit.

Let me explain that the rabbit mother prepares a nest to receive her young by pulling hair from her own body and putting it in the nest. I just now talked to a man who had raised rabbits but did not know this. The fur is very light and fluffy, and will blow all about if touched by the least bit of draft. The expectant doe should have, say, an apple box with a hole in one end. This nest box should be in an enclosed pen or building which itself offers fair protection from the weather. To make her nest the doe should have plenty of clean, dry straw or leaves. She will fill the nest box partly full of the litter, then make a nice, roundish nest in the litter she has carried in, and line the place with fur. When her babies are born she puts them in the fur-lined nest, puts more fur about them, and over the top of them lays another layer of fur, which, in winter, may be a couple of inches thick. She takes no chances. At birth the young rabbits are hairless, so she must wrap them in her own fur to keep them warm.

Understanding this, you can see at once what would happen if wind were blowing through a crack near where the expectant doe was preparing a nest to receive her young. The hair will blow all about the place. This is what happened. My rabbit mother did her best to save her babies. The quantity of fur which she took from her body in her desperation was amazing. It was as if some one had emptied a pillow case full of rabbit fur in her pen. But as fast as she wrapped her babies in fur the wind blew it away; so in the morning all the little rabbits were dead, and the mother was still trying to cover them with her fur.

From this experience I learned to be very sure that expectant rabbit mothers have a good, tight nest box in a protected place which is dry, in plenty of time.

**Here Is the Price of Carelessness.**

**The rabbit mother wraps her little ones when born in fur pulled from her own body and stows them away in the warm nest. In this case the wind blowing through a crack in the nest box blew the fur away and left the baby rabbits bare. In the morning all were dead.**

## "Father Is the Gardener."

Mervin McDonald of Waterville, Wash., has two acres in garden, the same as last year. One-half of the living of the family comes from the garden and "father is the gardener. Potatoes, carrots, parsnips, peas, beans, radishes, lettuce, onions, turnips, spinach and mustard. Successive plantings are made of lettuce, radishes and peas until July, when lack of moisture prevents the continuance of the practice. Have to depend on crops like potatoes, carrots and beans, which do not use excessive moisture to mature a crop. We raise some potatoes and carrots for stock feed if there is not a good market price for them."

## No Lack of Patriotism.

**By Charles Grant, Methow.**

No, I don't find any lack of patriotism in this community. As one of the committee on the third Liberty bond drive, I visited every family in this district and 99 per cent of them bought bonds or saving certificates. The one exception was a family who moved in here last fall and were not yet imbued with the Methow spirit of freely giving.

# Grow Corn and Victory Is Ours

## *Simple Rules Will Give Results in Northwestern States*

**By C. L. SMITH, Agriculturist, O.-W. R. & N. Company.**

If food will win the war, then our destiny is in the hands of the farmer. If each one will grow at least all the corn that he can feed, victory is ours.

For best results the following rules are generally good:

Get acclimated seed. Plow deep. Pulverize and pack the soil. Manure well. Harrow frequently until corn is six to eight inches high. Cultivate shallow. Plant with a lister if available moisture is light. If in doubt plant flint corn.

The time for planting corn will vary greatly with local conditions. In the irrigated valleys the large varieties, which yield around 100 bushels per acre, are planted any time after the first of April.

Where heavy frosts are experienced up to the middle of May, some of the smaller types of corn should be used. Here plantings are generally made between May the 5th and 25th. If frosts are frequent up to the 1st of June or later, the hardier varieties such as Minnesota King, Minnesota No. 23, and the flints may be planted up to the middle or last of June.

For silage purposes plantings are often made of the early maturing varieties as late as the 10th of July.

In the Columbia valley on irrigated land, flint corn planted as late as July the 12th made 6 to 10 tons of good silage last year.

The silo, to the fullest extent that it can be utilized, is the best place to store the corn crop.

Good corn silage fed to a dairy cow up to one-half the daily ration is the greatest known stimulant to milk production. It is equally valuable for brood sows, sheep and beef cattle.

Corn silage fed with alfalfa hay will decrease the consumption of hay by one-half and gives a finely balanced ration.

When growing corn for silage the same general rules are applied as when growing it for grain. As the corn is cut for silage before it is entirely mature a corn of somewhat larger type may be used.

However, as the feed value of silage and its keeping qualities depend largely on the amount of grain that it contains, do not attempt to grow a type that will not mature to glazing stage before fall frosts occur.

Neither should the corn be planted so thickly that only a small number of ears will develop.

In the wheat producing sections, sufficient corn may readily be grown on summer fallow land to feed all the stock that is kept. The objection to this has always been that the following wheat crop was reduced by 10 to 20 per cent. Even if this is true, at this time, when we must have the largest possible tonnage of grain, the loss of even 10 bushels of wheat per acre is many times offset by the crop of corn which yields from 25 to 70 bushels per acre.

The labor problem also affects the corn production, but the corn harvest comes after all other grains are out of the way, and the farmer who really wants to will find a way to handle it.

Where the conditions are unfavorable for corn those conditions may be largely overcome by the liberal use of manure, through preparation of the soil, early and frequent shallow cultivation and careful selection of seed. A top dressing of stable manure just before planting, or even after the corn is up, will stimulate to a more rapid growth.

The selection of seed may prove a serious problem to the beginner. Where seeds can be secured from a neighbor who has grown a successful crop for one or more years, such seed would prove far more valuable and will give surer returns than seed brought from a distance even through the latter be of a higher type.

At the higher elevations, or where the moisture supply is light or the season short, the flint varieties can be depended on to give good returns.

Corn has been the staple food of the fighting legions of America through every war in our history. The independence of our country was won and has has been maintained by soldiers who were fed largely upon corn. In the early history of America, when farms consisted mainly of small clearings in the woods and when harvesting machinery was lacking corn was the staple crop. Corn could be successfully grown on the new land often among the stumps. The harvesting and shelling could be done easily by hand and the crude mills available could readily convert it into meal. Through the civil war the "boys" were often lucky to find a few ears of corn which they could shell, crush between two stones and make into corn pone in a kettle over the camp fire. No other cereal is so easily converted into food. The great drawback to corn at the present time is that shipment over-seas is difficult, due to the tendency of corn to sweat and heat. This tendency is increased when the corn is placed in the hold of an ocean steamer. Here the air is damp, little circulation of air is possible and the corn will spoil very quickly. However, there is nothing to prevent our people eating the corn here at home and leaving the wheat to be sent "over there."

Not only should we eat all the corn possible as a substitute for wheat, but also produce and use more corn as food for live stock. Especially in the Pacific northwest, where it has been the general belief until very recently that corn could not be grown, much corn should be substituted for other cereals now being fed. Throughout Oregon, Washington and Idaho, a large amount of wheat is being fed to stock. The greater part of this is in the form of hay, but considerable wheat is used as grain, especially for hogs. Nearly all of this should be replaced by corn.

# Farm Service War Flag

## *Increasing Orders From All Over the State*

There is a rapidly growing demand for the farm service war flag throughout this state. This is seen in the increasing numbers of orders coming in daily. To give a little idea of this widespread demand we have taken an order from each of the counties represented below.

**L. H. RICHARDS,** Olympia, Thurston County, Wash.—Enclosed find 5 cents for which please send me a Farm Service Flag printed on enamel paper with one extra small star for my wife, as we are both working hard, raising all we can to help win the war. We have taken your paper for years and would not miss it for anything.

**WALTER GORMLEY,** Alstown, Douglas County, Wash.—I am enclosing 5 cents to pay for a Farm Service War Flag, and wish seven small stars, as we all work on the farm. I am 13 years old and helped put in the crop this spring.

**J. J. DEE,** Nordland, Jefferson County, Wash.—Kindly send me one Farm Service War Flag. We are doing all we can putting in crops and raising pork, beef and poultry.

**MRS. E. BANNING,** Kettle Falls, Stevens County, Wash.—Enclosed find 5 cents for which please send me a Farm Service War Flag, printed on enamel paper, with five extraa small stars for farm workers.

**GEORGE KNOX,** Harwood, Yakima County, Wash.—Enclosed find 5 cents for which please send me a Farm Service War Flag, printed on enamel paper, with two extra small stars for farm workers.

**MISS JENNIE NELSON,** Vancouver, Clarke County, Wash.—Enclosed find 5 cents for which please send me a Farm Service War Flag, printed on enamel paper, with five extra small stars for farm workers.

**MRS. J. R. ROBINSON,** Goldendale, Klickitat County, Wash.—Enclosed find 5 cents for which please send me a Farm Service War Flag, printed on enamel paper, with four extra small stars for farm workers.

**JAMES LARSON,** Belfair, Mason County, Wash.—Enclosed find 5 cents for which please send me a Farm Service War Flag, printed on enamel paper, with five extra small stars for farm workers.

**J. S. KINNAMAN,** Elma, Grays Harbor County, Wash.—Enclosed find five cents for which please send me a Farm Service Flag, printed on enamel paper, with five extra small stars for farm workers.

**A. B. GALLAGHER,** Curlew, Ferry County, Wash.—Enclosed find 5 cents for which please send me a Farm Service War Flag, printed on enamel paper, with five extra small stars for farm workers.

**M. C. HERROLD,** Waitsburg, Walla Walla County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, with six extra small stars for farm workers.

**J. L. HARPER,** Mansfield, Douglas County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, with six extra small stars for farm workers.

**L. L. KNUTSEN,** Snohomish, Snohomish County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, with three extra small stars for farm workers.

**F. W. OSBORNE,** Bothell, King County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, with three extra small stars for farm workers.

**HENRY M'LEAN,** Pomeroy, Garfield County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, with eight extra small stars for farm workers.

**MRS. W. LITSCHKE,** Nahcotta, Pacific County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, which two extra small stars for farm workers.

**A. J. SCHOLZ,** Penawawa, Whitman County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, with two extra small stars for farm workers.

**W. G. BARLOW,** Colbert, Spokane County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, with three extra small stars for farm workers.

**ARTHUR W. CAYS,** Dungeness, Clallam County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper.

**CHARLES E. HILL,** Snake River, Franklin County, Wash.—Please send me a farm service war flag for which I enclose 5 cents. Send four extra small stars for farm workers.

**ANNA HAYSE,** Wenatchee, Chelan County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, with three extra small stars for farm workers.

**J. G. WAGNER,** Brownsville, Kitsap, County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper.

**MRS WILLIAM BULLARD,** Alpha, Lewis County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, with seven extra small stars for farm workers.

**MRS. WILLIAM RICHTER,** Chesaw, Okanogan County, Wash.—Enclosed find 5 cents for which send me a farm service war flag with four extra small stars for farm workers.

**MRS. FRANK CASEY,** Burke, Grant County, Wash.—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper, with four extra small stars for farm workers.

**ROY ALLMAN,** Davenport, Lincoln County, Wash.—Please send me a farm service war flag, for which I enclose 5 cents. Please send three extra small stars for farm workers.

THE WASHINGTON FARMER. ..... 1918.
Review Building, Spokane, Wash.
Enclosed find Five Cents (5c), for which please send me a Farm Service War Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Signed ..... Box No. .....

# Growing Tomatoes

## Keep All Branches Slashed Back

**By W. D. BOYNTON, Gig Harbor, Wash.**

I have just finished planting out 1500 tomato hills. I am dedicating this crop to the purchase of Liberty bonds. It is about double the number of plants I usually put out, but I felt that I must make an extra effort however backaching and laborious, to enable me to do something like my share of carrying the great burden our country is now struggling under. I have a green-house, 16x32 feet, in which I grow plants for myself and neighbors; but these plants can also be grown in hot-beds or even in cold-frames in this locality.

It is not an exacting crop. That is, it makes no extraordinary demands upon the soil, or for water or labor. Land that will grow a good crop of corn will grow a good crop of tomatoes so far as the question of fertility goes. While it is a late maturing crop and can not therefore he made from the spring moisture, as an early potato crop can, it does not need any great application of water after the fruit is well set. I have a gravity water system on my place, with a plentiful supply at any time needed; but I make it a point to take the water away from my tomatoes at the last end of the season. If you keep up the moisture supply and the land is fairly rich you will get altogether too much vine growth and too much late setting fruit. If you can concentrate the strength of your plant on setting a dozen good tomatoes in close proximity to the main stem, you will find them of much greater value that three dozen sprawling out on the long vines and maturing much later than the central bunch. The Earliana and most other desirable varieties of tomatoes can be thus handled. Keep all limbs slashed back to within six or eight inches of the main stem. You will get bloom and fruit enough within that scope to produce best paying results.

If a rainy spell sets in just about the time the fruit is beginning to turn color, pick at once and spread out on the barn floor. They will ripen there in good shape, but will not be quite so highly colored as those ripening in the sun. If left on the vines through a wet spell three-fourths of all the fruit, both ripe and green, will crack open and be unmarketable. I have shipped hard, green tomatoes up in Alaska, just as green bananas are shipped to ripen on the road or soon after arrival.

Kept trimmed back as I have describ, the plants can be set quite closely. I am planting 2x3 feet this season. The tomato is not a gross feeder like the cabbage, and good, strong land will carry them set that distance apart.

# More Workers Sent Out

The regents of the state college at a recent meeting decided to add to its extension workers a specialist in gathering and distributing marketing information. The position has been filled by the election of Joseph Passonneau.

Among the members of the state college faculty tendering their resignation at the close of this school year is Mrs. Helen Dow Whitaker, who has been at the head of the department of poultry husbandry. Mrs. Whitaker has been in charge of all northwest egg-laying contests which have developed wide interest among the poultrymen of the northwest. The resignation of B. E. Smead as state pig club leader was announced and Enoch Torpen was chosen to fill the vacancy.

A large number of extension workers were appointed by the regents upon the recommendation of President E. O. Holland of the college. Among them were the following: Grant county agent, Harold R. Vercler; Jefferson county agent, W. W. Henry; Snohomish and King counties agent, A. B. Crane; assistant Whatcom county agent, A. Hall Smith; assistant Snohomish county agent, Robert J. Rodgers, assistant Whitman county agent, Charles E. Holen; state garden club leader, William J. Green; Grays Harbor canning club leader, Miss Eva B. Morey; King county canning club leader, Miss Mary Frazee; Pierce county canning club leader, Miss Lena F. Morris; Clarke county club leader, William E. Dudley; Whatcom county club leader, Fred D. Vander Mei; Yakima county girls' club leader, Miss May L. Mark; Yakima county club leader, William E. Weir; Klickitat county club leader, Curtis Kelly; Snohomish county canning club leader, Abigail Neikirk; Whitman county canning club leader, Blanche B. Henry; Benton county club leader, Melvin S. Lewis; Chelan and Douglas counties club leader, Edith L. Breenberg; Spokane community canning demenstrator, Mrs. Elizabeth Bell, and Lewis county club leader, Homer F. Aker.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on acconut of disease in stock sold through these columns.

## Fine Record of Federal Land Bank

As shown by an official report of the federal farm loan board the Spokane land bank stands second in volume of business transacted in the first year of operation, the St. Paul bank leading. This record is convincing proof of the wisdom of the farm loan board in forming the four northwestern states of Montana, Idaho, Washington and Oregon into one of the 12 districts.

When the board came to Spokane to conduct its hearing the committee that presented the Pacific northwest's claim was a little uneasy over the fact that these states fell short of a twelfth of the country's population, its total number of farms and other determining factors, and reinforced their arguments by pointing out that rapid growth would soon correct that apparent deficiency. But with all their faith in their case the members of the committee never expected that this district would make the remarkable record now credited to it by the federal board.

In large part that fine record is due to the superior cooperative spirit of the farmers of the Pacific northwest. Through various previous cooperative movements, more particularly in the irrigated districts, they had learned the knack of organization and the advantages of cooperation. When the land bank came along they took naturally to the organiaztion of farm loan associations, the basic unit of the great system. This fact, that the farmers of this region were experienced organizers, was also dwelt upon by the presenting committee, representing the grange, the farmers' union and the Spokane Chamber of Commerce, and made a deep impression on the board. The first year's record is a gratifying proof of the soundness of that argument.

## Ruined by Want of Restraint

Russia is the tragedy of our times, ruined by want of restraint. The revolution overthrew the oppressive government of the czar, and the dawn was rosy with fair promise of a better day. Then the accursed bolsheviki seized the reins of power and a sorry wreck they have made of it. They began by poisoning the minds of the soldiers and destroying military discipline everywhere. Then they deceived the workmen in the cities by telling them that they should have big wages for four hours' work a day. About the same time they said the peasants should have the land, and the soldiers, who were largely peasants, threw down their arms and hastened home to get their share of the soil.

Then the Germans marched in, split up the empire, and tricked the stupid bolsheviki into a deceptive peace. A once mighty empire of 180,000,000 people is demolished, ruined, enslaved by German domination.

Read elsewhere in this issue what a life insurance manager has to say of Russia's dreadful plight.

After that appalling record we may be confident that the bolshevik element in the United States will make no headway with their nefarious designs to Russianize the American people.

## Wheat Substitutes Cost Too Much

Herbert C. Hoover, national food administrator, has done remarkable work as head of the food administration. He has been struggling with one of the most difficult problems that ever confronted this country. The people should recognize the difficulty of the problems when they feel like wrongs are being done them. There are some things that the government can not do in a week or a month or a year. Regulation is a thing entirely new in this country, and something that the popular sentiment of the country has been opposed to to a great degree.

But be this as it may, it remains undisputed that the prices of corn meal, oat meal, barley flour, corn flour and other substitutes for wheat are too high. The conservation purpose of the food administration, and be it also said, the purpose of the American people, has been to considerable extent defeated because thousands of citizens have found themselves unable to buy these substitutes. It takes a mighty high grade of patriotism for a man with a small income and a large family to pay $2.15 for 24 pounds of substitutes when he can buy 24 pounds of good wheat flour, the thing he is used to and the thing he likes, for $1.35. Those are exact figures of a transaction that came within the notice of the writer, and they are typical of the price comparison in most localities.

The food administration, says a dispatch from Washington, tells the millers that corn and oats and barley in the form of meal or flour should be selling from 10 per cent to 20 per cent below wheat flour. There should be some pressure from some source of power to compel their distribution at that cheaper figure if the administration is right. The dispatch goes on to say that the administration is getting at the root of the trouble and promises reduction in the cost of the substitutes.

In the meantime let us be loyal even to the point of paying more than we should if we have to. Our country, our liberty, our sense of human righteousness for which the civilized world is fighting, are bigger than any failure on the part of anybody or any organization, and bigger than any temporary injustice that may be inflicted, be it intentional or inevitable injustice.

---

There are still some genuine traitors at large in America—some without a drop of German blood in their veins. There are still thieves and robbers abroad, seeking whom they may rob and plunder. But the conscience and patriotism of this country as a whole were never before so aroused. Out of all the evil of war, good will ultimately come.

---

This is the open season for politics. Campaigns are on in many states. While politics must not be allowed to interfere with the vigorous prosecution of war work, it is grossly unwise for any voter to neglect to study the political situation in his locality, state and country and cast his ballot for a well-understood purpose.

---

It is never too early to begin to think of next year's work. It is never too early to plan. Make your plans now and from day to day revise them so they will be as flawless as possible when time comes to put them into effect.

## Learning a Lesson

A quarter now and then is not missed by the average citizen. Even children are able to lay aside their savings. The government needs vast quantities of money—more, perhaps, than we yet can realize. Thus these small investments in thrift stamps and war savings certificates are of use from the standpoint of patriotism.

And while we are doing our duty and helping our government, at the same time we are learning a lesson in thrift and saving money at a very good rate of interest.

## Coming Events

June 4-7—Convention, Washington state grange, Walla Walla, Wash.
June 12-14—Convention, county school superintendents, Ellensburg, Wash.

**Fairs, Shows, Exhibits.**

September 2-7—Spokane Interstate fair, Spokane, Wash.
September 16-21—Washington state fair, Yakima, Wash.
October 1-6—Western Washington fair, Puyallup, Wash.
Nov. 7-13—Northwest live stock show, Lewiston, Idaho.

**Live Stock Sales.**

June 5-6—Jerseys and Holsteins, T. S. Griffith, Spokane, Wash.
June 11, Jerseys, C. H. Cannon, Turner, Ore.
June 12, Jerseys, W. O. Morrow, Independence, Ore.
June 26, Guernseys, E. R. Brady, Satsop, Wash.

## Washington Gleanings

Over $50,000 had been invested by the children of the schools of Snohomish county up to May 1 in war stamps.

---

Women in the Bunker sawmill at Chehalis are doing light work taking lumber away from the machines, and other employment for which they are suited.

---

The Richland district war council has been organized with the following officers: President, F. J. O'Brien; vice president, S. M. Ross; secretary-treasurer, A. L. Nelson.

---

The Cashmere Fruit Growers' union was recently organized with the following officers: President, H. J. Olive; vice president, W. S. Tallman; secretary and treasurer, J. W. Sussex.

---

At a recent meeting of the Arcadia Valley Fruit Growers' assoviation at Deer Park, I. G. Page was elected president; C. B. DeCamp, vice president, and O. L. Olsen, secretary-treasurer.

---

Clyde Hustead, a Ridgefield boy of 13 years, has been busy raising chickens this spring. Recently he set a hen on 15 eggs and hatched out 15 chickens and one had two heads and four legs.

---

Plans under consideration by the Commercial club of Dayton comprehend an elaborate system of landscape architecture and the building of an amphitheater and a natatorium in the 40-acre city park.

---

Horticulture inspector in the state department of agriculture since 1915, H. W. Samson has resigned to accept a position with the United States bureau of markets as investigator, with headquarters in New York city.

---

The Prosser Sheep company suffered a considerable loss during a recent cold rain-storm, about 270 head of valuable ewes having snuccumbed to the cold. The animals had recently been sheared and were on the range in the Rattlesnakes.

---

Several women have been working with the section gang at Castlerock, thus releasing men for the war. They receive the same pay as the men and they have so far proved successful. Their duties are mostly cutting weeds and grass and removing debris from along the track. The overall costume is adopted.

---

Owing to unsatisfactory express service by rail in securing delivery of milk, the farmers' organization that has the milk concession to supply Camp Lewis with milk and cream products has established an automobile truck service. Some of the milk comes from the Chehalis valley, but it is reported that the trucks make the 53 miles in good time.

---

Eight hundred boys, who are to pick berries on the Puyallup farms this summer are to camp on the order of a regular army camp, at the fair grounds at Puyallup. The boys will have two of the three Y. M. C. A. workers as supervisors. Then there will be leaders for each group of 20 boys. Buildings used for barracks, cook rooms and mess rooms are to be erected soon.

---

With the completion about the middle of this summer of four miles of highway along the north bank of the Columbia river in Skamania county, between Collins and Cooks, and half a mile of road around a point at Wind Mountain, a long-needed automobile road (passable 12 months in the year), connecting western and eastern Washington will be provided. It will stretch from Vancouver to White Salmon, thence through Klickitat county to Goldendale, and on east, connecting with roads to Yakima, Walla Walla, Pasco and other points in the state.

# Memorial Day Becomes International

## *Observation of May 30 Will Be Noted by This Country's Foreign Allies*

TODAY is May 30, Memorial day, a day observed since shortly after the civil war in commemoration of those who, in the words of President Lincoln, "gave the last full measure of devotion" to their country. It will be observed today throughout America as it has always been observed, but with a vastly greater significance to the mass of the people of this country. Not only will it be observed in this country, but the thousands of Americans in Europe and many of their allies in the great struggle for humanity in which they are cooperatively engaged will join in the memorial features of the day. This international feature is sufficient to stamp the day as the most notable like occasion in the world's history perhaps, but there is yet another feature that will add to the solemnity of the day.

President Wilson has issued a proclamation calling upon the people of this country to meet today much in the manner of their meetings on Thanksgiving day, making the day a day of prayer for the welfare of those who are pledging their "lives, their fortunes and their sacred honor" to the cause of world-wide justice and human righteousness.

Today the people will do honor no less to the heroes of '61-5 because they include in their memory and in their prayers, spoken or unspoken, those who have during the last four terrible years, given their lives or offered them on the battlefields of Europe. Indeed the veterans of the civil war will today join with their countrymen, both young and old, in celebrating the heroism of the boys of the war of 1914. When they meet for their annual decoration day ceremony there will be included in it a new feature, one apart from their standing ritual, but one none the less real and heartfelt. Well may they look with pride upon the young men who are carrying toward a world-wide conquest the same principles that the boys in blue fought for under the leadership of the world-revered Lincoln.

One hundred and forty years ago the colonists in America were struggling to set up a government "of the people, by the people and for the people." Nearly 60 years ago America was struggling to learn whether "that nation or any nation so conceived and dedicated can long endure." Today the sons of America are carrying into a world war, supported by the best nations of earth, the grim determination "that government of the people, by the people and for the people shall not perish from the earth."

Today is the first international Memorial day. It is not a great stretch of the imagination to see in the not-distant future England, France, Italy, Belgium, Serbia, the United States and other nations whose people are dedicating their lives to the cause of humanity joining in a world-wide celebration and memorial observance of May 30—celebrating in the assurance that peace and liberty shall reign; solemn memorial in the reflection that it cost the lives of hundreds and hundreds of thousands of their best sons.

### "ALSO SAVE FOOD."

To the Editor of the Washington Farmer: I am sending you 25 cents in stamps for one new subscription to The Washington Farmer. And for my premium I would like paper pennant, 9x22, with one big star for the farm and three small stars. We are on a five-acre tract, and there are three of us, my wife, one child and myself. We are doing all we can to produce food, also save food.

CARL MEEK.

Harper, Wash.

## NORTHWEST SHOW.
### Secretary Reports Fine Outlook.

Acting Secretary O. P. Hendershot of the Northwest Live Stock show at Lewiston is greatly encouraged with the reception of a trip to the Coast. He says:

"I talked with stockmen, business men and politicians in two states who feel their states should make an appropriation to at least take care of the premiums won by breeders of their state, the maximum amount thus provided to be $5000. I believe such assistance will be secured from the legislatures at their next sessions.

"The record breeding associations have already subscribed in cash and trophies about $5000 for the 1918 show and we expect an additional $1000 from this source. We are waiting the national meeting to take action and for this reason the regular premium list is being held up. We will issue an advance sheet of the premium list and this will be in the mail next week. We expect the regular premium list to be ready for the mail by the latter part of June or very early in July.

"We have started out to have $30,000 on hand to handle the 1918 show and we hope to be able to eliminate personal subscriptions after this year. This show is a national institution, is of greater industrial value to the northwest than any other organization and should be permanently financed. Our premiums this year will be 300 per cent more than ever before offered."

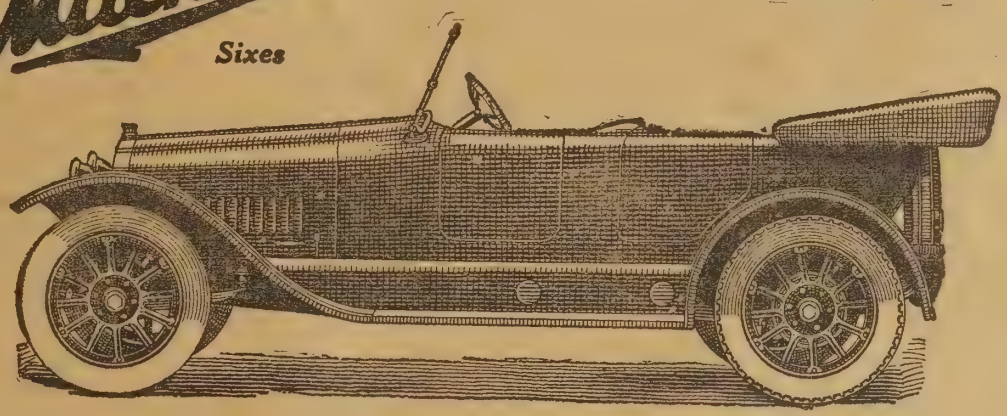
## Ready for Grange
### Session Is Booked for Walla Walla

Indications point to a large and important session of the Washington State grange when it assembles at Walla Walla on the morning of June 4. The program includes the names of a number of prominent grangers and other prominent speakers. Among those on the program besides local people of Walla Walla, who will participate in entertaining the grange, are Ray McKay, George P. Hampton, President S. B. L. Penrose of Whitman college, President E. O. Holland of the state college, E. E. Faville, L. L. Snow and J. C. Lawrence of the grange. Professor W. S. Thornber of the extension department of the state college, will also be in attendance to take up matters of importance to the agricultural industry of the state. It is probable that many of the problems of the farm brought on by the war will be discussed and to some degree acted upon by the members of the grange in session. The election of officers will occur on Thursday, June 6, at which time a master will be elected to fill out the term of the late Master C. B. Kegley. The office of overseer, formerly held by William Bouck, who became acting master upon the death of Mr. Kegley, is also to be filled. Considerable interest in the election is expected to be manifested.

### Flour Hoards Are Seized.

Fifteen sacks of flour have been taken from the homes of hoarders in Gig Harbor, Pierce county, after investigation by Secret Service Agent Foster. The flour was found in all cases fairly well concealed. Some uncertainty as to the length of time the flour had been stored and other conditions led to a decision not to prosecute after the flour had been returned and promises of future obedience to the food laws had been given.

### Apportions Liberty Loan Money.



President Cadigan of the New World Life Insurance company announces that the company he represents, instead of making its Liberty loan subscription in one slump sum from its central office, spread it out in the various cities where local offices are maintained throughout the northwest. The idea was to distribute the loan in the communities from which the company's profits were derived.

### Form Testing Association.

Dairymen in the vicinity of Vancouver, Clarke county, are taking steps to organize a cow testing association. More than 350 cows are already signed up and the association will be doing business as soon as the number reaches 500. There are a little more than 10,000 dairy cows in Clarke county, a decrease of more than a thousand from last year's number.

Mitchell Sixes

$1250 and $1525
f. o. b. Racine

# The Greatest Six

## Which Now Sells at $1250

THIS new Mitchell Light Six has a 120-inch wheelbase. It has a 40-horsepower motor in our finest type of Six. It has distinction in its long, low lines. It has a new, enduring finish, shock-absorbing springs, extra-complete equipment and uncommon luxury. It is uniquely strong and sturdy and very economical. Yet it undersells any other car of this size, class and power.

### We Have Added Vast Endurance

These new Mitchells embody more improvements than we ever before made in one year. And most of them are strength improvements.

We now build these cars to meet export requirements, in countries with bad roads. There the strains are extreme. The cars must be reliable. Cars built to those standards should prove lifetime cars on the average American road.

To get this new endurance we have added many specialists to the Mitchell staff. They have studied every part. They have fixed new tests, new standards. In many a part the strength has been more than doubled. Yet Mitchells have for 14 years been famous for endurance.

We have also doubled our inspections to meet these new requirements. It is almost impossible for a Mitchell to go out with any little fault or flaw.

Never before, we believe, have cars at these prices been built to such radical standards.

### They Show Distinction

These new cars also look supreme. A famous body designer now gives his whole time to the Mitchell. Our new body plant is filled with expert craftsmen. There are no other Sixes so big and roomy, so handsome and luxurious, at Mitchell prices this year.

And note that these are Sixes—smooth-running, powerful, economical, up-to-date. Our engineering staff has spent many years in perfecting Sixes only.

Mitchell D-40, with 120-inch wheelbase, sells at $1250 at factory. Mitchell C-42, with 127-inch wheelbase and 48-horsepower motor, sells at $1525 for 7-passenger touring car. There are also 16 other new-type body styles.

Write for our new catalog and name of nearest dealer. Don't decide on a car until you see what this great factory offers you at prices which no other maker meets.

## FARM CHEESE MAKING.

### Good Milk Is the First Essential.

By A. B. NYSTROM.

Several requests have come in lately concerning the making of cheese in the home. This is a very important work to take up on the farm because cheese will take the place of meat that is now consumed, thereby releasing a product that is necessary for the winning of the war. A pound of cheese will supply twice as much protein as a pound of the very best meat. In Farmers' Bulletin No. 487 (U. S. department of agriculture), the following statement is housekeeper cheese is of importance because of its high nutritive value, particularly its high percentage of protein or muscle-forming materials, because of the ease with which it can be kept and prepared for the table and the great variety of ways in which it can be served."

#### Making American Cheese.

The first essential for good cheese is to have good milk; otherwise abnormal fermentations will develop which will impair the flavor and lower the nutritive value.

For equipment there is needed a vat or some other container such as a wash boiler, in which to set the milk; rennet tablets of extract, cheese cloth, a hoop or a mold in which to press the cheese, a curd knife and a thermometer. All of these supplies may be obtained from any of the dairy supply houses, but where small amounts of cheese are to be made for home consumption the necessary equipment may be improvised from articles found in the home. It is, of course, necessary to buy the rennet, cheese cloth and thermometer. A wash-boiler may be used for a vat and a cider press may be used for the press, or a simple lever press may be improvised.

#### Setting the Milk.

Use fresh, clean milk, cooled or heated to 86 degrees F. Dissolve one small rennet tablet in one-fourth pint of cold water. This quantity of solution is sufficient for about eight gallons of milk. Add the rennet to the milk and stir gently for two or three minutes until it is thoroughly mixed with the milk. Then cover with a cloth to maintain the temperature at 86 degrees F. Do not stir again until the curd is ready to cut. This should take about 20 minutes, but the exact time to cut may be determined by inserting the forefinger into the curd at a slight angle until the thumb nail touches the surface of the milk. A slight split is made in the curd with the thumb and the forefinger is slowly raised up through it. A curd that is firm enough for immediate cutting will part with a clean break leaving no particles of curd adhering to the finger or in the whey.

#### Cutting and Heating the Curd.

The curd is then cut into one-half-inch cubes by means of regular curd knives or a screen with one-half inch mesh. Sometimes a wire toaster may be used for this purpose. Care should be taken to see that the curd is cut and not crushed. After cutting allow the curd to remain undisturbed for about five minutes. Then begin stirring gently, using the hand, being careful not to break the curd, and at the same time raise the temperature slowly to 98 degrees F., at which temperature it should be held for 20 to 30 minutes, until the curd is well firmed. If the curd particles do not adhere closely when pressed together, but rather fall apart, the curd is firm enough and the whey should be drawn off.

#### Pressing the Curd.

Allow the curd to drain for a few minutes, then transfer it to the molds, which should be lined with cheese-cloth, and apply a pressure for about an hour. After pressing for an hour remove the cheese from the mold and dress off the irregular edges. Dip the cheese in warm water to soften the surface and return it to the mold and put back in the press, where it should be left under full pressure for 24 hours. After the pressing is completed the cheese may be salted by soaking in a strong brine solution for 2 days. Then transfer to the curing room which in most cases will be the cellar, where the temperature is fairly constant and cool. Turn the cheese every day for the first two weeks, and after that about three times a week. Should mold form on the outside of the cheese it should be washed off with a warm brine solution. After curing six or eight weeks the cheese is ready for use.

## Dairy Cattle Congress.

The ninth annual dairy cattle congress will be held September 30 to October 6, 1918, in its permanent home at Waterloo, Ia. This is one of the notable dairy gatherings of the year. In the first place, it brings the visitor face to face with the latest achievements for the dairy along the line of labor-saving machinery, and in the second place, the congress brings together high dairy authorities who will talk on subjects that are of vital importance.

FARMERS NOT A POISON POWERFUL DISINFECTANT

FLUSH COWS AFTER CALVING
Most valuable for bringing after-birth and also for treating barren cows and controlling abortion. B-K kills the infecting germs, heals the uterus, removes the slime and acid—no odor—no straining. More effective than lysol, Lugol's solution, carbolic and cresols—much safer. Send for our Bulletin 52 "Contagious Abortion" and testimony from leading breeders. Special Trial Offer

A REMINDER
To write my name and address on the margin below, and mail for the Papec catalog and owners' letters. No obligation on my part.

## IMPROVE LIVE STOCK.
### Keep One Kind in Community.

Improving live stock succeeds best when done cooperatively, and it is the only way that the improvement can be kept up continuously. In England and Scotland where most all the important breeds of live stock were developed, whole communities raised the one kind of cattle, hogs, sheep or horses. So much so that these breeds were usually given the name of the county or shire, as they call it in England, as Shropshire sheep, Hereford (shire) cattle, Yorkshire hogs, etc. In this way they kept on improving the breeds and they are improving them yet.

Several communities in the United States have gone into the raising of one breed and the communities have become known all over the country for the stock they raise, as Northfield, Minn,. for its Holsteins; Waukesha county, Wis., for its Guernseys; Geauga county, Ohio, for its Holsteins; New Salem, N. D., for its Holsteins, and so on. Not only has a great deal of improvement been accomplished already in these communities, but the improvement will keep going on. It is like the snowball that has been started down hill, the further it goes the bigger it gets, says the North Dakota Agricultural college.

# Cutter's
*Germ Free*
# Blackleg Filtrate
*and*
# Blackleg Tissue Aggressin

*The New, Safe and Efficient Agents for Protecting Calves from Blackleg.*

**Cutter's Blackleg Filtrate positively protects** against Blackleg.

**Cutter's Blackleg Aggressin,** made directly from animal tissues, **affords even greater protection** and is recommended for Pure Breds.

**Neither the Filtrate nor the Aggressin can possibly produce Blackleg** in even the most susceptible animals, since **both are germ free.**

**Both have given 100% protection** wherever used.

**Prices—**

| | | |
|---|---|---|
| 10 | dose pkge. Filtrate | $2.00 |
| 50 | " " " | 8.00 |
| 100 | " " " | 15.00 |
| 10 | dose pkge. Tissue Aggressin | 4.00 |

**N. B.**—Cutter's Filtrate (a "cultural product" aggressin) is full 5 c.c. to the dose, as we believe that smaller doses, whether concentrated or not, afford less protection.

**Write for booklet** telling what germ free vaccines are and wherein **"cultural product" Aggressins differ from Cutter's Aggressin** made from animal tissues.

**While these new "germ free vaccines" have advantages** that should be known to every stockraiser, we see no reason for a quick change to them by stockraisers who have had satisfactory results from the use of

## CUTTER'S

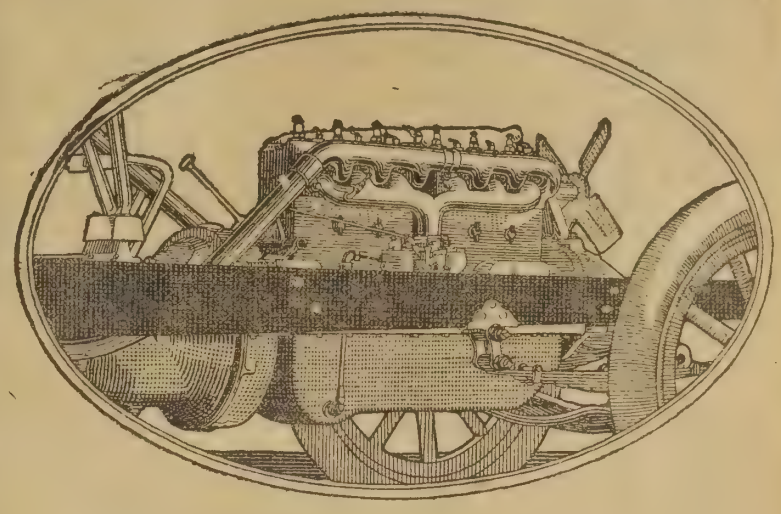
## Veterinary
Dr. S. B. Nelson

**Teat Swells and Breaks**—I have a mare that has something wrong with her teat, or one whole side of bag. This trouble began about 10 days ago. I noticed one teat was much swollen. It kept getting larger until it broke. Then broke again just back of the teat. For awhile I thought it would be all right, but the same thing happened again until it has broken the third time and is still swollen. She had a colt last year, weaned last October. She has good pasture and has not lost in flesh. Can you tell me the trouble and give me a remedy?—A Subscriber, Roy, Idaho.

Your mare is evidently affected with botryomycosis, and she may possibly yield to the following treatment: Open up the little abscesses thoroughly and then inject them very thoroughly with tincture of iodine daily. Put the mare onto an internal treatment of potassium iodine, one dram to one and one-half drams, morning and evening, the doses depending upon her size. If she is about a 1400 to 1500-pound mare, give her the large dose. If she is 1000 or 1200-pound mare, give her the smaller dose. Try this for two or three weeks. If she does not yield to this treatment, you will find it helpful, if you care to do so, to have her operated upon and have the bag removed surgically. This is an infected disease, and may yield to the first treatment, but sometimes the second treatment is also necessary.



**Cow Holds Milk Up.**—We have one young cow that has lots of milk but won't let us milk it down. Is there some medicine that we can give?
J. P.
Malheur, Ore.

As the custom of a cow letting down her milk is one that is influenced by her nerve control, medicine given to the cow will not do any good. The only thing that will be of value is to cause the cow to forget about the milking, and consequently lose control over the udder and the milk may be readily milked out. For this purpose I suggest simply sitting down by the cow and washing the udder quite thoroughly for two minutes with hot water. Gently dry with a soft cloth, rubbing the udder with a gentle massage until the evidence of the dilation in the udder and teats is manifested. Then begin to milk gently. If this is kept up for a time the cow may be broken of holding up the milk.

**Inflammation of the Intestines**—I have a Holstein calf about three months old that took sick a few days ago. Her droppings are clotted with blood, that is, there comes blood clots with it. She eats and drinks fairly well, but not as good as before. She breathes about like a dog when it is very hot. Now it has an empty stomach, but before it was well filled up. Could you give me a cure for it?—S. S., Everson, Wash.

Your calf is very likely affected with inflammation of the intestines. This may be of a light or severe character. I am not able to diagnose that for you. I suggest that you might obtain fairly good results from administering to the calf a tablespoon as follows: Turpentine, one-half ounce; raw linseed oil, eight ounces. Give one tablespoonful morning, noon and night. A couple of raw eggs, beaten into a quart of milk and given as a drench, will also be good for her at this time.

# CHANDLER SIX
*Famous For Its Marvelous Motor*

## First Quality Has Put Chandler in First Place

WHEN men talk now of fine cars selling at medium prices they speak first of the Chandler. Because, for five years, the Chandler has been such a good car, so well built, so dependable in its service on the road. And because now, so distinctly, it offers extraordinary value.

The most distinguished feature of the Chandler Six is its marvelous motor—Chandler-designed and Chandler-built—which, through five years of refinement without radical changes, has been developed to a point approximating perfection.

The life, pick-up, power and endurance of the Chandler motor have been a revelation to thousands of experienced motorists.

The Chandler motor is mounted in a really great chassis, and Chandler bodies offer an attractive range of choice.

## Hen-Killing Embargo

When rule 15 (miscalled 14) was issued by the United States food administration in February, ordering dealers not to buy or sell hens for market till April 30, many poultry keepers thought it a peculiar proceeding. Some protests were made. The reason given by the food administration was that large numbers of laying hens were being marketed and if continued there would soon be a large decrease in the egg yield. The policy was to increase poultry and egg production in order that the people might eat more poultry and eggs and release red meats for shipment to the soldiers of the allies.

The writer recently attended a convention of poultry producers and others interested in poultry production at Chicago, at which this rule 14 was thoroughly discussed. Mr. Priebe, a representative of the food administration from Washington, explained that this order was issued on consultation and approval of the department of agriculture, but it developed that the poultry division of that department knew nothing of the order until it was published, but another division of the department which was not concerned with production, but rather with storage and distribution, advised the embargo. No doubt unwittingly, the proper division had not been consulted.

It does not matter a great deal who was responsible for the order; the main question is, was it necessary. Mr. Priebe explained that the food administration was not interested primarily in production; that is the business of the department of agriculture; but their business was to get food to the soldiers and win the war. In a time of war like this, he said, it was inevitable that there would be some disturbance of business conditions, and some people and some special interests might have to suffer financial loss. Mr. Hoover insisted that the men in his department should think in terms of pounds of food, not of dollars and cents. So that the embargo meant more pounds of food, whether or not it meant more dollars and cents to the poultry-keepers. Mr. Priebe stated further that the administration was besieged with protests and delegations protesting against the order. He spoke of a delegation of commission men from New York calling on him to see if the order could not be modified. One after another insisted that it meant great financial loss. The purpose of the order was explained to them, and finally one dealer arose and said that "it will mean a direct loss of several thousand dollars to me; it may break me up in business, but, gentlemen, if it will help the government to win the war, I am satisified."

It seems fairly certain that the order was in the interest of food conservation and therefore was a help to winning the war. Whether those poultry-keepers who would otherwise have killed off many of their hens, suffered a financial loss by keeping them is doubtful, because during the months of March and April practically all hens are laying. Poor layers lay nearly as well during those months as good layers, and even at the high price of feed with the high production of those months there would be a profit in most flocks.

It has been charged that the order was made in the interest of the packers who had storage stocks to sell, or, whether made in their interest or not, the effect was, first, to raise the price of storage stocks, and, second, with a larger egg production, to enable the packers and storages to get eggs cheaper for storing. On the other hand, the poultry-keepers saw the price of stags and old roosters jump up to unheard of prices when the order went into effect, and they had the opportunity to sell off a great many surplus males at good prices when in ordinary years they are hardly worth shipping to market.

On the whole, it is questionable whether after all the order really prevented many hens being sold, because at that season of the year when practically all the hens are laying, farmers are not in the habit of selling the hens. Later on in the year when they begin to slacken up in laying they are sent to the block in large numbers. If that be the case, there was really no necessity for the order from the standpoint of maintaining a large egg production.

Since April 1st the order was lifted in California, Oregon and Washington; in other parts of the country it was lifted on April 20, ten days before the time set in the order. It is a noteworthy fact that in the coast cities at any rate there was no slump in the prices of hens, the prices being higher then they were ever known to be.

Probably the matter can be summed up this way: Rule 14 doubtless saved some hens from being marketed but not a great many, and to that extent increased the egg supply.

Let us give the benefit of the doubt to the food administration people who are straining every nerve to feed the soldiers who are fighting our battles over the seas. J. D.

## Oats a Good Feed

To the Editor: Not long ago we killed a hen who refused to eat and had acted sickly for some time. Upon opening her we found she was filled with a greenish water, at least a quart of it. Her liver was of a good color and her comb was not pale. Yesterday we killed a rooster which had acted the same way and he, too, was filled with water, but more of a yellowish color, but his liver was pale, although not spotted. Can you tell me what this disease is and what is a remedy? We have been giving the chickens boiled oats about three times a week for their morning feed. Do you think they might have caused a bowel trouble

F. R. N.

Darby, Mont.

So far as I can tell from the description the trouble may be dropsy, caused by a rupture of a blood vessel. However, I can not say positively what the trouble is. Would advise that you take the matter up with the poultry department of the state agricultural college, Bozeman, Mont., sending them one of the sick fowls.

Boiled oats fed in reasonable quantities are a good feed and will not cause bowel trouble. However, there is no particular advantage in boiling them, in fact the reverse. Chickens require some dry, hard grain for best results. J. D.

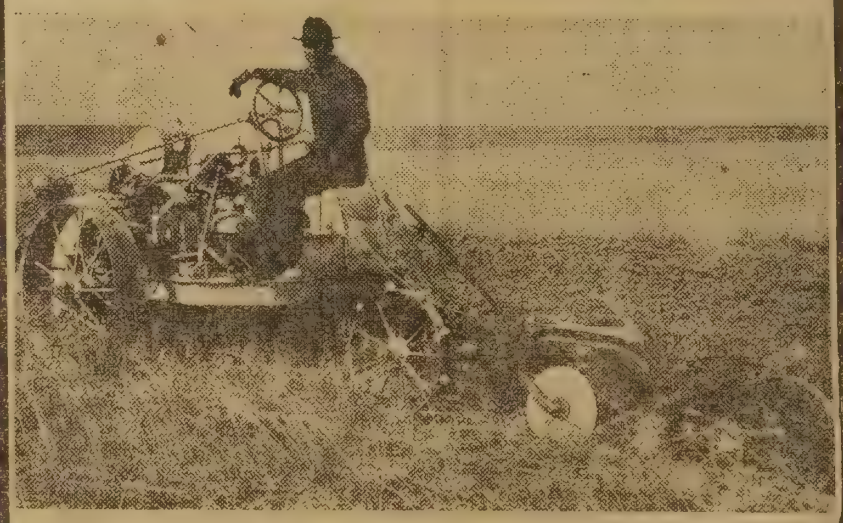
**For Thirty Years**

THE HOLT COMBINED HARVESTER has stood for efficiency and economy. The Holt Harvester reduces operating costs by saving labor. It eliminates waste.

By combining the operations of heading and threshing and handling the grain but once, the machine saves the wheat. Four men can do the work of fourteen, as usually employed in stationary threshing operations. Much needed man power is thus released for other important work.

The Holt "Caterpillar" Combined Harvester exactly fits in with the present national policy of conservation.



¶ Two Million acres will be cut with Holt Harvesters on the Pacific Coast this year.

*The word "Caterpillar" is the exclusive Holt trade mark. It in copyrighted in twenty-five countries and applies both to the famous "Caterpillar" Tractor and the Holt Combined Harvester, including the Self Propelled Harvester shown in the illustration.*

## Some Orchard Pests

There are many varieties of aphides, the most troublesome to orchards, especially to apples, is the "wooly aphis." This variety has a white colored wool-like substance, which is not really wool, but is a flocculent mass of wax, which exudes from the insect and resembles wool. They can not travel like the winged varieties, but are carried by ants to the wounded parts of the trees, where they obtain their food by sucking the sap, or to the tender growing parts of the top or roots, where with their sucking beaks they puncture the bark and suck the sap. The apparent reason why ants are so attentive, in providing them with food, is that the ants in turn feed upon the sweetish, honey-dew like substance which the aphis excrete. The injury done to trees is not only on account of the fact that the insects feed upon the sap, but on account of the fact that in puncturing the bark, the cells of the trees are so disturbed and disarranged, that small knots, or excrescences form and galls result. This is very often the cause of "root galls," by various names. It is recommended to spray with lime-sulphur, before the buds open, but this does no good for those on the roots. After the buds open kerosene emulsion is used, or tobacco leaf. The most difficult thing is to get at the roots, and some do this by placing tobacco leaves around the roots. However, this has not been uniformly successful.

**Formula for Tobacco Spray.**

Tobacco leaves one pound; water, four gallons. Simmer for one hour and strain. Two pounds of tobacco dust may be substituted for the one pound of tobacco leaves. There are manufactured tobacco preparations which may be used according to directions on the package.

**Kerosene Emulsion Formula.**

The kerosene emulsion formula is kerosene two gallons, whale oil soap one-half pound, and water, one gallon. Dissolve the soap in the water by boiling, and add the suds boiling hot to the kerosene, away from the fire. Be sure and keep the kerosene away from the fire, or you may kill something besides orchard pests. The mixture is then to be agitated violently until it begins to emulcify. This agitation is best done with a spray pump, and if it is done vigorously, it about five minutes the mixture becomes creamy. This forms what is called a "stock solution," which can be used, one gallon to 10 gallons of water.

The tobacco spray and the kerosene emulson spray, are the kinds mostly used, for all kinds of sucking insects, such as green aphis, black aphis, brown aphis, white aphis, etc. The time to spray is when the insects first appear. If it is neglected a few days, until the leaves curl, they are so protected by the curled leaf, that the spray does not reach them. Black leaf may be mixed with arsenate of lead, but soap and arsenate of lead should never be combined.

**Bordeaux.**

The bordeaux mixture may be used for grasshoppers, which affect garden and orchard plants, flea beetle, cutworms, black-spot, canker in apples, brown rot, plum, cherry and peach mold, potato blight, anthracnose, etc.

Formula for bordeaux:

Bluestone (copper sulphate), five pounds.

Lime (unslacked), five pounds.

Water, 50 gallons.

Dissolve the bluestone in 25 gallons of water. Slack the lime to an even paste and add 25 gallons of water. Mix well and strain into the spray tank.

**Spraying for Codling Moth.**

There are other broods of moth besides the first, and it takes careful observation to know just when, in any particular community, it is better to spray for the second or the third brood. For instance, in the lower valleys of the Yakima, Wash., the buds open a week or 10 days earlier than at Yakima and vicinity, and in the upper valleys, a week or 10 days later than at Yakima. The insects like the vegetation, develop with the advancing season. It is necessary then, in any particular locality, to watch carefully the growth of the moth, from the egg stage to the larva stage, from the larva stage to the pupa, and from the pupa to the moth. This watchfulness is much more efficient, if a cage of fine wire is prepared, the bottom covered with loose soil, eggs of the moth placed in the soil, and their development watched. When the moth begins to fly about in the cage, it is high time to spray. The next spraying need not be done with such force, as the aim is not to drive the spray into the calyx cup, but to cover the leaves and fruit, so that the moth will get enough arsenate of lead, to kill.

**Spray Formula.**

Arsenate of lead, from one to two pounds; water, 50 gallons. Some believe that one pound of arsenate is all that is necessary for 50 gallons of water, others use one and one-half pounds, and others still use two pounds. The formula sent out by the colleges, generally gives one pound for 50 gallons of water..

To use the bordeaux, or the lime sulphur during the growing season is likely to injure the fruit and the foliage, and in all spraying during this period this should be kept in mind. The time for using them, except with care not to injure the foliage, is after the leaves fall in autumn, and before the buds open in the spring.

G. L.

## Frost Is an Enemy

Everything in nature seems to have enemies. From the broader view of the evolution of life "all things may be working together for good," but every living thing feeds upon some other thing, and everything to live must struggle for existence. Certain insects feed upon the buds, or suck the sap of the tender branches and are called by the general term "orchard enemies." Forms of life too small to be seen with the naxed eye, but that are plainly visible by the aid of the microscope, get into the sap and multiply so rapidly as to devitalize the tree, or cause a ferment that chances the chemical composition and induces disease. These microscopic forms are called by the general name "bacteria."

The principal danger is from cold. The warm spring sunshine causes the sap to flow, the buds to open and the blossoms to appear; then the sudden changes; the strong winds swishing down the valleys from mountains of snow; the cold nights; freezing and frost will kill them. Thirty-two degrees Fahrenheit is freezing. Three degrees below freezing will kill at least one-fifth of the bloom, but eight below freezing, or 24 degrees of temperature, will kill all of them; or so nearly so that when the thermometer registers 24 we never expect a crop.

# Late Frosts Damage Crops

## Alfalfa Short on Account of Cold Weather. Damage Also to Fruit Crop. Farmers Are Beginning to Depend More and More on Each Other

GRANDVIEW, Yakima County, Wash., May 20.—Alfalfa is short on account of cold weather, but on the hills the weather is fine for wheat. Farmers are talking mostly about the late spring and cold weather. I think farmers generally have to depend more on each other now than ever before, especially will this be true at harvest time. Fruit crop will be very short here on account of the late frost, and there are no peaches or cherries in this locality. Most of the retired farmers are working by the day. There are not as many hogs or dairy cows here as there were last year.

E. H. FAULKNER.

### Frost Gets Fruit.

PROSSER, Benton County, Wash., May 19.—The weather is cool for this time of the year. We had a good rain on the 7th and the 8th, which was badly needed. It is most too cold for alfalfa and corn. The frost killed most of our fruit this spring, but I think we will have about one-third of a crop of apples this year in this part of the valley. When one farmer meets another he will ask about the war, and how his wheat crop is coming, for the people "over there" need all there is to spare this year, and with one more good rain soon there will be a good crop of wheat. The retired farmer is not going back to the ranch in this part of the county. There are acres of good wheat ground in Benton county lying idle and should be planted to wheat. If the men that own this land had to pay $5 per acre war tax, or plant it to wheat, there would be more wheat for our boys "over there."

G. W. WILGUS.

### Frost Does Some Damage.

NEPPEL, Grant county, Wash., May 18.—The weather in Grant county is not so favorable this spring as usual, as a dry spell has retarded spring-sown grain, though rye is well headed out now. Our community went over the top with their share of the third Liberty loan, and while it is breaking the Sabbath day a good many of the farmers are seen working on Sunday and some all night, as well as irrigating their fields of alfalfa, as it is necessary to make every hour do its duty in production. As it is, the first cutting of alfalfa will be cut short in quantity, as frost hurt it to some extent, and then a few hot days turned the tops brown in some patches. The retired farmer is an unknown factor in Grant county, as the H. C. of L. has made good patriots out of a few so that they will help win the war, whether they want to or not, as every one must do his duty in earnest.

Most people here are beginning to fully realize the extent of effort necessary to win the war for liberty, and, generally speaking, most of us are doing our level best to produce the food in all forms in enlarged production. Still, there are the slackers here, as elsewhere, and I have had to read the riot act to a few regarding their lack of duty and patriotism and have noticed a good effect, for it has made them awake to the situation. The cool weather has caused a lack of proper pollenization of the fruit crop and in some localities the frost has cut down the early fruit to a small crop. Labor is scarce and some are not able to pay the high wages, and are sure to lose if they try it, and machinery is hard to get and with the raise in value is liable to upset increased production in some instances. Live stock, such as sheep and hogs, are on a good increase in number and a better grade of cattle is being introduced for beef, so the future market is favorable for the live stock production on a sound market basis. The cost of producing a bushel of wheat depends on the yield and facilities for handling, and it would be safe to say the cost has doubled in the last three years. The chances are a moderate yield only will be had of spring wheat this season.

MARTIN PENHALLICK.

### Help Is Short.

OMAK, Okanogan County, Wash., May 19.—We are having a very dry spring and farmers have been unusually busy in cultivating and preparing their land to conserve all the moisture and as this section depends upon irrigation there is much uneasiness as to whether there will be water enough to ripen the fruit and alfalfa. People are not planting many potatoes as there was no sale for the last year's crop, and it would take water needed for fruit. Help is very short and farmers are doing the most necessary work with what help they have. There is considerable increase in stock raising, but hay will be scarce unless we get a good supply of rain. J. O. WOODS.

### War Draws People Together.

OTHELLO, Adams County, Wash., May 10.—We had a fine rain the afternoon and night of the 8th inst. that certainly helped the grain prospect wonderfully. There has been an unusual amount of electric winds during April and this month the fields have blown badly and in some instances are materially damaged. The main topic among the farmers now is the high cost of, and inability to get, feed for their horses to finish their spring work on. There is, I thing, an undercurrent at work among people that will finally draw them closer together, because of some of the boys going to the front. One fine thought was expressed by a man who has no boy at the front when he said, they are "our boys," and I for one have a deep personal interest in each one of them. A. O. LEE.

### Farms Rapidly With Tractor.

G. D. Miles of Fairfield, Wash., one of the large wheat and pea raisers of that district, writes that with his tractor, three six-horse teams and three hired men, he and his daughter plowed and seeded 600 acres this spring between April 5 and May 13.

"With the tractor I have worked three eight-foot disks and a harrow at one time," says Mr. Miles. "In plowing I used seven 14-inch plows on land that was practically level, while in the hills I used five 14-inch plows. My tractor is a simple machine and very easy to manage."

### Scouring Western Wools.

Representative Sinnott of Oregon urges that all wool committees of the councils of national defense and car service commission to order scouring of all western wools before shipment to market. Such a plan, if followed generally, he pointed out, would save several thousand cars a year, as about two-thirds of the western wool as clipped is made up of grease and dirt. Mr. Sinnott suggested this plan at the instance of woolgrowers at The Dalles, Ore. The car service committee expressed keen interest in Mr. Sinnott's proposal and has taken the matter under advisement. Mr. Penwell of Montana, head of the wool committee, also seemed favorably disposed, but Mr. Eiseman, also of the wool committee, and Boston wool dealers objected, maintaining that wool should be scoured at eastern markets as in the past.

### Farmers Back Their Country.

"Having just completed a trip through the south and southwest during which I have visited many middle-sized cities and towns, I have been deeply impressed with the splendid work being performed by Liberty loan workers everywhere," says Secretary of the Treasury W. G. McAdoo.

"The farmers of the country and the people living in the less densely populated districts have supported the third Liberty loan with unusual effect, and their subscriptions in many of the agricultural states have not only been highly encouraging but show that the farmers of the United States are awakening to the gravity of the war and are determined to back their country to the limit in this great struggle for human liberty.

Secretary McAdoo adds:

"It is, indeed, a heartening thing to travel through the country now and observe the loyalty, the spirit of self-sacrifice, and the deetrmined purpose of the people generally. The soul of America is awake—awake with an intensity and a unity which spells the doom of military despotism and the triumph of world democracy."

### Shortage in Cattle Feeds.

Great Britain is confronted with a scarcity of dairy products, chiefly the result of shortage in cattle feeds. Permits to buy milk are issued for certain classes of the population, including children under five years, invalids and nursing mothers. Others are on their honor not to buy milk unless it is for these classes. The statement is made on excellent authority that "an adult can not buy in London a glass of milk, even if willing to pay $20 for it." Not only butter, but all kinds of fats are obtainable only in extremely small quantities. Some families are without any fats for nearly a week at a time. Ice cream disappeared from the market more than a year ago.

### Irrigation Water Supply.

Marvin Chase, state hydraulic engineer, is calling attention to the imperative need for conserving the available irrigation water supply. Small or moderate amounts of snow only have accumulated on the higher elevations of the watershed area controlling the water supply for this purpose throughout the state. With the exception of those in the Yakima valley, and two other small districts, who are fortunate enough to have stored waters, the irrigators of the state must employ the most economical methods of cultivation and irrigation to preserve the moisture contents of the soil and to produce the maximum crop.

**Help Is Scarce**

The Jones Weeder will save 50 per cent of labor; cultivate 30 to 40 acres of summer-fallow per day and do it better, instead of 10 to 20 by the usual method. Couples up like a harrow; use as many sections as wanted. For booklet, prices, etc., write

# Must Work or Fight

## *Useless Occupations Are Dealt Blow*

Provost Marshal General Crowder, at the head of the government army draft operation, together with officials of the war department, dealt a vigorous blow to non-essential occupations last week when he issued an order which requires every man of the 10,000,000 registered a year ago, but not yet called to the colors to secure a position beneficial to the country or immediately prepare to enter the army service. This regulation was not made alone to get rid of the professional idler, but to increase the efficiency of the nation during the war crisis by eliminating unnecessary activities and substituting in their place constructive work of some kind. The department has not made exact announcement as to what occupations shall be classed as nonuseful, but it is understood to include such occupations as gambling, bar tending, pool hall operation, professional baseball and other sports, elevator operation by men of draft age, ushering in theaters and other occupations which older men, women or boys might carry on as successfully. The order is effective immediately, all persons engaged in such activities being required to secure a different line of employment at once or appear before the exemption board to explain their attitude. Whether the ruling will deal a death blow to professional baseball throughout the country is not positively known yet, though it is known that many professional players are subject to the new regulation.

### New Drive Is Launched.

After a month's delay, Germany has launched her expected drive. It covers two fronts, one of nearly 100 miles' length in the southern part of the long battle line, and one much shorter, probably about 10 miles long, on the north. The fighting has not continued long enough at this writing to reveal the exact strategic purpose of the Germans or to indicate their possible success, though the first day did not result in any appreciable gains, according to reports. The new drive does not seem to have Amiens, the railroad center, as its objective, but for the time being any way, an advance on the British channel ports in the north and on Paris in the south.

### Would Stir Up Irish Revolt.

Seizing upon the opportunity afforded by the recent act of the British parliament conscripting the men of military age in Ireland for active service with the allies, German agents have undertaken to stir up a revolt against the British government in that country. As a result of discoveries made by the secret service department of the British and American governments a large number of leaders among those who opposed conscription in Ireland have been placed under arrest. It is understood that the negotiations between the Irish nationalists and the German propagandists went so far as to discuss the possibility of placing German soldiers in Ireland to assist in carrying out the revolt. It is evident that the German war leaders desired to bring the conflict in Ireland just at the moment of the renewal of the offensive on the western battle front, which seems imminent at the present time. Whether the Irish trouble will be successfully met by the British is somewhat problematic, but it is believed that the unionist element in that country is sufficiently strong to insure reasonable success of the working of the conscription act.

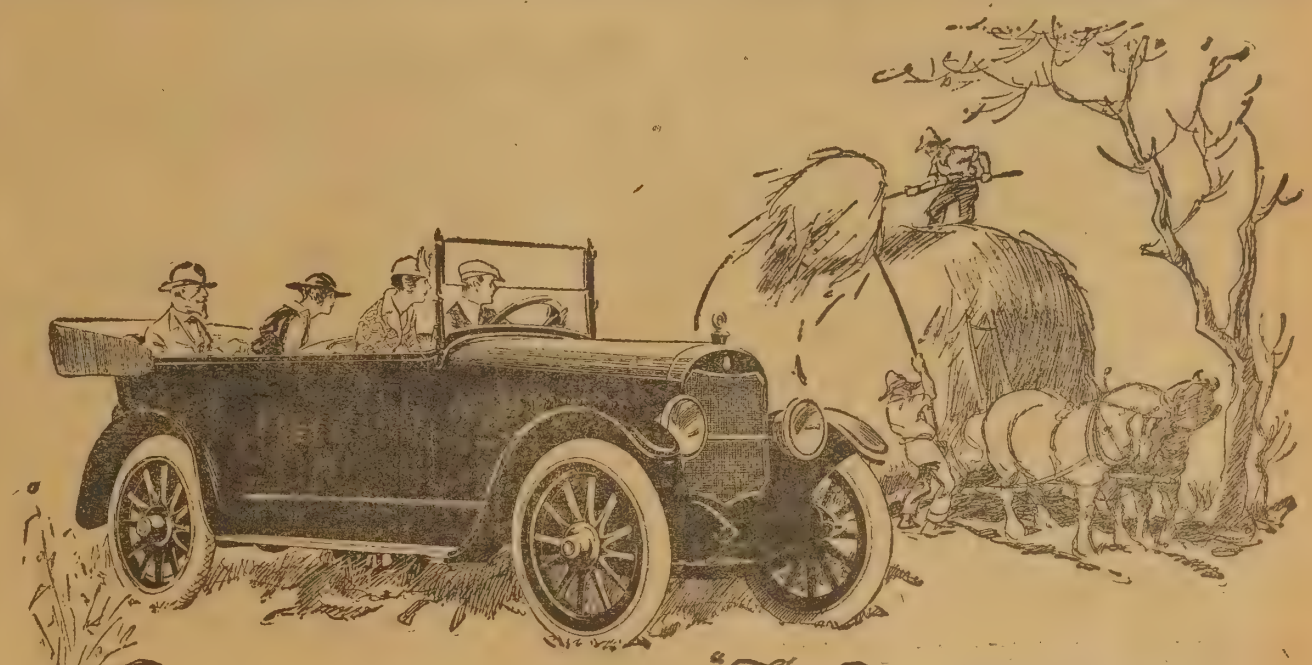
### Must Register June 5.

All young men in this country who have become 21 years old since the fifth day of June, 1917, must register under the recently enacted amendment to the draft act of a year ago. It is anticipated that between 750,000 and a million persons will register under this regulation. The war department has prepared a simple but comprehensive set of questions that will have to be answered by those who register when they go to the places of registration.

### May Remove Army Limit.

Secretary of War Baker, apparently with the approval of President Wilson, has recommended to congress that all limitation as to the number of men and the amount of equipment to be sent to Europe be eliminated, the number and amount to be determined only by the country's maximum capacity to get them to the battle front. If congress approves this recommendation it will mean that all men of draft age will be subject to the call of the war department at any time that the department finds itself in position to train, equip and transport them. Secretary Baker has also recommended that the age under which men may enlist in the service voluntarily be raised from 40 years, as it stands now, to 55 years. His object is to secure a considerable number of men up to that age who wish to enter the service, but are now excluded and whose presence in the army in noncombatant capacity would release a large number of younger men for active battle field service. Should this recommendation be approved the men so enlisting or probably most of them would be placed in the service back of the lines as railroad builders, repair men and supply men of all kinds.

### Railway Men Get Raise.



Director General McAdoo, handling the railroads for the government, has approved the plan whereby the pay of railway employes will be raised. They will receive back pay to the present time from January 1 of this year. Two million employes will receive the increase, which will approximate an addition of $300,000,000 to their wages, an average of something like $150 a year each.

### Oversubscribe for Red Cross.

The $100,000,000 asked by the Red Cross in its campaign of last week was oversubscribed by nearly 45 per cent, the total subscriptions reaching $144,000,000. Every state in the nation went over its quota with the exception of Illinois. Washington, which was asked to give $1,000,000, gave close to $2,000,000, according to latest available figures.

### Total Eclipse of Sun.

On Saturday, June 8, there will occur in the United States a total eclipse of the sun. The eclipse will be total along a strip 50 or 60 miles wide running from Grays Harbor, Wash., diagonally across the nation to Florida. Just outside that narrow belt the eclipse will be almost total, so that all parts of the northwest will see an eclipse ranging from 75 per cent total to complete darkness. Where total, all light will be shut off for something like two minutes.

*"The Car of No Regrets"*

KING "8"

**It acts as "handsome" as it looks. Every farmer's wife or daughter can take pride and comfort in this fine car**

PRIDE of ownership, always a large factor in the selection of an automobile, is selling more Kings this year than ever before.

This pioneer Eight's wide range of performance has astonished many veteran drivers. The ease with which it goes from a crawl to a dash—Its conquering power on hills—A "quick on its feet" quality which gets it ahead in congested traffic and makes it so easy for women to handle—Its extraordinary economy of operation because of light weight and mechanical perfection—A freedom from the necessity of constant and expert repair. Reasons enough for pride in King ownership.

The King's beauty of line, elegance of finish, and riding comfort, are not easily described—but are quickly perceived. The Touring Car (shown above) is graceful, yet roomy. FOURSOME—is the "sport" model, seats four and outdoes all competition in the style and grace of its "destroyer" lines. A luxurious seven-passenger Sedan completes the line.

# Don't Force Flock for Early Eggs

## *Rest Them for Later Production at Better Egg Prices*

Professor Helen Dow Whitaker, head of the poultry department of the State College of Washington, recommends that poultrymen do not force their flocks for laying early in the spring when production is generally comparatively heavy and the prices correspondingly reduced.

"Why force for the cheapest eggs of the year?" she asks. "Better to rest the birds when normally they will lay reasonably well anyway. Then with April and May increase in price of eggs and in growing green stuff, the experienced feeder bends his efforts to hold up the 50 to 60 per cent yield through the summer and well into October, knowing that July and August eggs are more to be desired than February and March eggs."

"Just so in the all northwest egg laying contest, we have used the corresponding months of March and April for a resting period and a conditioning time for all the birds. We have kept up good exercise, exterminated lice, looked over every bird individually as to condition and used the two months generally for putting the birds into the best possible shape we could for the home stretch in the race. Our records for March and April, we have kept up to normal.

"About April 20, however, we gave the signal to go and my May 1 the race was on. Judging from the results of the first 14 days, May records will be the highest ever made in the all-northwest contest.

"We are serving a salad course of dandelions fresh at 9 a. m. The semi-solid buttermilk proved so satisfactory I have ordered 500 pounds for contest use. In April 62 birds scratched for three-quarters of a ton of grain in a ton and a half of straw litter. They ate three-fifths of a ton of sprouted oats and almost a ton of mash. The mash consumption of the Leghorns was proportionately large.

"In singles, November 1 to May 1, S. C. White Leghorn hen No. 251, owned by C. F. Williams, bred by D. Tancred, is still leading with a total of 155 eggs in 181 days or an acverage of 25 5-6 eggs for six consecutive months. These eggs have sold for $6.13. The average White Leghorn in the contest has laid 73 eggs.

"In pens to date Rhode Island Whites, Enery No. 40, five birds owned and bred by Mr. Frederick, have a record of 659 eggs. This pen is still leading all contests in the United States and Canada for the year. Their eggs in six months have sold for $25.89.

"In pens during April the following breeds made the honor roll: Barred Rocks, Rhode Island Whites, White Leghorns, Rhode Island Reds, Buttercups, White Minorcas, Buff Orpingtons. It required a production of 62 per cent to make the honor roll. The winning pen, Barred Rocks from Oregon Agricultural college, laid 112 eggs or almost 75 per cent. The six birds including the alternate laid 137 eggs. The average pen in the contest laid 73 1-2 eggs or very close to 50 per cent.

"Average egg production for April for the leading breeds follows:

| | |
|---|---|
| Rhode Island Whites | 18.5 eggs |
| Minorcas | 17.63 eggs |
| Rhode Island Reds | 17.39 eggs |
| Barred Rocks | 16.14 eggs |
| White Rocks | 15.87 eggs |
| Orpingtons | 15.7 eggs |
| White Leghorns | 14.81 eggs |
| Miscellaneous | 14,68 eggs |

"It costs 26 1-3 cents to feed the average fowl and she returned 14 cents above actual cost of feed and litter. It should be noted this 14 cents is not "profit" but goes to pay for the production of the pullet to laying age, losses in the flock, egg cases, cartage, sprays, wear and tear on equipment, interest on investment and labor. It is obvious that the return is not adequate to meet these expenditures. I wish to reiterate what I said in my letter of last month. A poultry man can not break even on a 50 per cent egg yield with present prices of eggs and feed. Either feed must come down or eggs must go up or the commercial egg producers of the northwest will be forced out of business.

"It is because I am truly patriotic and because I wish to see the food administration's call for increased poultry production met that I am hammering home the fact that conditions must be changed to enable the commercial poultryman to do his part to win the war. I do not ask for him one penny of profit. I do ask 25 cents per hour for labor and that is less than other skilled laborers are receiving. I admit that the farm flock and some of the back-yard flocks can be maintained at a less cost than the commercial flock. The farmer and the back city lot can, in a limited way, produce poultry at a loss as a patriotic measure. But will the supply of poultry products be adequate without the strictly egg farmer? Shall he be sacrificed? We need a megaphone to get a message over from Washington state to Washington, D. C.

"The thoughtful student of the poultry situation is closely studying two problems:

"1. What percentage of chicks hatched will be grown on the war rations and how well grown for winter egg production will they be?

"2. If commercial poultrymen are put out of business who will do the trapnesting, the breeding and the hatching for the renewal of farm and back city lot flocks?

"Herein it seems to me lies the kernel of the nut the food administration has to crack. Something more than surface consideration is vital in the eyes of the food administration.

"If poultry products are not worth to the consumer the cost of production then it is better business and better patriotism to turn the money and labor into some line where production is so vital as to be paid for at cost.

"Meanwhile—just as the soldiers on the western front in France are holding their line so must the poultrymen of the northwest hold the line here. If poultry production is your part and mine, let us give to our utmost, strength and time and funds. Then whatever the justice of the conditions may or may not have been, we shall have played our part nobly."

## BILLION BUSHELS.

### World Hopes for Great Crop.

Last year the United States department of agriculture made a strong appeal to the farmers of the United States to do their utmost toward the production of one billion bushels of wheat during the season that is now on. Only once in the history of the United States has a crop this large been produced, but it is the hope of a hungry world that the record will be made again this season. Up to the present time no official estimate has been made by the department of the spring wheat production, but with a production of approximately 572,000,000 bushels of winter wheat as forecasted by the department, considerable hope is raised that the record for the country can be made to reach the billion mark.

Practically everything in this country now depends upon weather conditions. The farmers have done their part so far as the production of the 1918 crop is concerned, though there remains yet a large problem in the harvesting. Should the season be generally favorable with seasonable rains and cool weather during the filling period this country may make the wheat returns necessary to win the war.

# Wheat Substitutes

## True Remedy Lies With Congress

In all parts of the Union indignant protests are made by consumers against the high prices they are compelled to pay for wheat substitutes. As the law now stands the government compels every consumer to buy these substitutes, but leaves the buyer at the mercy of the profiteering miller and dealer.

Mr. Hoover is doing all he can to check the evil, but the true remedy lies with congress. In a signed statement to his state assistants the food administrator declares that substitute price are excessive and makes it plain that the farmers who grow oats, barley and corn are not to blame for the extortion. Mr. Hoover says:

"At present prices of corn, barley and oats the millers are or should be offering meals and flours from these grain at prices considerably below wheat flour; in fact, corn meal should be selling from the mill door at not over 25 per cent less than wheat flour, and oatmeal even less. White corn flour or barley flour should be selling at not more than 10 to 15 per cent below wheat flour. There is, therefore, absolutely no justification for present price levels in these substitutes.

"I would be glad if you would give wide publicity to these facts. Retailers should not take more than 16 to 20 per cent on the sale price for handling these products. The wholesale maximum margins have been fixed as per our bulletin of April 6 and not over 10 per cent in bulk; therefore, with these criteria to guide you, we would be glad to have you follow up any prices made at higher levels. Where dealers still have stocks bought at higher levels than these prices, every step in the chain of retailer, wholesaler and miller should be prepared to justify their prices as reasonable, and any failure to so justify should be recommended to us for summary action. The time has now come when the readjustment to the prices of these grains should have taken place.

"We are requiring the principal corn millers to report to this office by telegraph weekly the prices at which they purchase corn and the prices at which they are quoting products, and we are directing them to make duplicate reports to you. But without waiting for these reports you can take the above approximate levels as being indicative and instruct your county and city agents to make a drive on the reduction of prices to proper levels as the maintenance by millers and dealers of the price levels which were due to shortage in railway transport last winter, has now become, in many cases, simple extortion. Where dealers have paid more than present prices they run risks of spoilage in endeavoring to hold material for prices at old levels, and the first loss of reducing prices is the smallest loss.

"HERBERT HOOVER."

## Rabbit Pest in New Zealand.

As a fair illustration of the rabbit pest in certain portions of New Zealand, and especially in the drier sections of the South island, it is stated that on an estate lately taken over by the New Zealand government comprising 12,446 acres of freehold and a pastoral run of 19,250 acres there were killed or captured about 120,000 rabbits in order to clear up the property so as to make it suitable for the location of returned soldiers.

## Why It Pays to Buy Advertised Articles

In some restaurants you get an order of some favorite dish for a given price. Then you find that the bread, potatoes, the coffee and butter all cost extra. In another restaurant your order may be quoted at exactly the same amount on the menu card, but the side dishes, like potatoes and bread, are thrown in free. Restaurant number two is the one to patronize.

It is somewhat the same way with advertised merchandise. It is good merchandise to order, because it brings with it so many extra advantages without additional cost. The manufacturer stands back of the articles he advertises, and takes particular care to make sure that their quality is above criticism. More than that when you buy an article advertised in this paper, you know that our guarantee gives you an additional safeguard.

THE WAITER—"YOU GET THESE SIDE DISHES WITHOUT EXTRA CHARGE"

Remember these benefits when you read the advertisements in this issue.

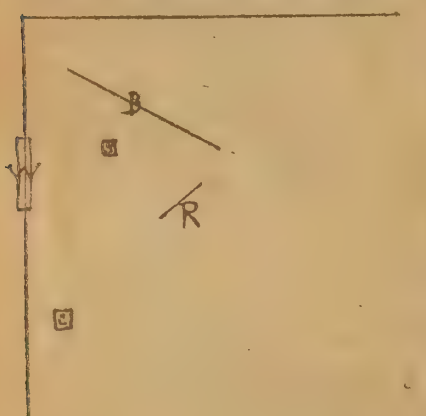
## Vital Matter of "Lighting"



### *Two Opposite Dangers Confront Amateur Photographer*

By PAUL E. TRIEM.

Two opposite dangers confront the amateur photographer when he sets out to make a camera portrait—either he gets too much contrast in his "lighting" or he gets none at all. Either horn of the dilemma may be fatal to securing a real likeness.

When the professional photographer seats you under his skylight he is thinking first, last and all the time of this vital matter of "lighting." In other words, he moves you about until he secures a pleasing arrangement of light and shade, so distributed as to give roundness and character to your features. If you are going to succeed with the more formal kind of amateur portraits you will have to experiment with this same instrument, lighting, until you are able to approximate the effects secured in the photographer's gallery. A mastery of light, to the extent needed for this purpose, is not difficult to acquire.

The first thing to remember is that all of the light which falls on your subject should come from one source, usually a window. Suppose you begin by placing a chair about three feet from an ordinary window, through which no direct sunshine falls. Move the chair back until it is about even

with the back margin of the window. Now seat your victim in this chair and place your camera, on a tripod or other substantial support, close to the wall in the direction of the other margin of the window. The relative positions of window, subject and camera are indicated by the letters W, S and C in the accompanying diagram.

Standing just behind your camera and studying the lighting on the sitter's face you will probably notice that the light side of the face is very light in comparison with the shadow side. To correct this trouble, block out the lower half of the window with cheesecloth or white muslin. This will diffuse the light coming through below and will make the upper half of the window the principal source of illumination. The diffused light from below, falling on the face to be photographed, helps soften the lighting. To complete this part of the work, bring a high-backed chair, covered with white paper or a sheet, into the position marked "R" in the diagram. You will have to experiment a little with this improvised reflector to get it to throw enough reflected light over the junction of light and shade on the sitter's face to blend the one into the other, and also to light the shadow of the face just enough to make it look "natural" in the final print. Without this use of a reflector the side of the face farthest from the window probably would not show at all in the print.

"B" in the diagram is the background. If the color of the wall is sufficiently even and neutral to form an unobtrusive background you will need nothing else. Otherwise pin a dark blanket up behind the sitter. Obtrusive details in the background, bright patches of light, for instance, break up the harmony of your portrait.

Here, then, are the factors you will have to consider in making a successful indoor portrait: the source of light, usually a window; position of the sitter, which should be about even with the back margin of the window and removed from it as far as the window is wide—three feet from a three-foot window; reflector, to throw reflected light on the shadow side of the face; background, if you need one, and the position of your camera. By experimenting a little you will soon learn by direct observation more than a whole library on photography could teach you.

Even professional photographers are breaking away from conventional photographs. Home portraits and outdoor portraits are taking the place of pictures made in the gallery. The amateur has many advantages in this branch of portraiture, provided he will keep in mind a few principles not difficult to understand or remember.

First, in making an outdoor portrait, try to secure a lighting on the face that is neither flat nor too contrasty. If your subject faces the sun squarely, for instance, most of the face will be equally bright to your eyes or to the film. This is a flat lighting. If you turn him at right angles to the sun, shining full upon him, the shadow thrown by the nose and other features will show black, when contrasted with the lighter portions. Try the effect of diffused daylight, such as you find in the shadow of a building, and you will be able to secure more pleasing effects.

The background is the second important element in making outdoor portraits. This background should not be obtrusive or spotty. An even, almost neutral background, pleasing as far as it goes but not sufficiently "scenic" to call attention away from the real subject, is the ideal to be sought. Heavy masses of shrubbery usually are good, while the clapboarded side of a building with its tiresome monotony of parallel lines is about the worst background imaginable. Outdoor portraits with the sea or a large lake for a background are often wonderfully attractive.

## Sidelights

**In France.**

Sympathetic Hun—Now, Kind, ask Gott to look after your mother and father.

Petit Pierre—Ask him yourself, you big stiff; I can't speak German.—Harvard Lampoon.

**More War Economy.**

Husband—Why don't you wear your coat?

Wife—It's last winter's.

Husband—It's just as warm now as it was last winter

Wife—True; but I don't need it so much. When I see all my neighbors with new coats I feel hot enough without a coat!

**An Honored Arrival.**

St. Peter (calls to guardian angel)—Here, Angy, give this feller anything he wants.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## How to Plan Now to Solve the Summer's Heat Problem

Dr. Hirshberg.

The heat produced by the bodily structure in summer is neither more nor less than that produced at any other time during the year. The external heat of the air, however, makes the anatomy seem much warmer in summer time and adds to bodily discomfort.

The human mechanism can never create less than a definite minimum amount of heat, though much heat energy is added by a great deal of muscular exercise and by certain foods.

The muscles of the human structure are massive and naturally active, and therefore produce the greatest amount of heat energy of any part of the body. Any great increase of physical exercise for that reason is bound to create an excessive volume of energy, which is often manifested by the appearance of perspiration, a flushed skin and sometimes skin eruptions.

Diet consisting of much meat, fats and starches is conducive to the production of much heat within the bodily mechanism. This, in addition to the intense heat of summer air makes for much discomfort and often for much suffering. The elimination of as much as possible of these foods from the menus in summer time will lead to the reduction of the total amount of heat to be endured in the summer months.

Under conditions of quiet and repose the human mechanism usually takes care of its own heat dispositions without artificial assistance. Much heat is lost directly by the respiratory process. Heat is sent out of the bodily mechanism by means of the breath. The breath is nothing more than gaseous liquids, chiefly water. The air taken into the bodily structure is cooler than that which is already in it, and, consequently, some heat is lost when this outside air is brought up to the internal temperature of the anatomy.

**The Clothing Problem.**

The skin does much toward aiding to dispose of much of the animal heat produced. Through its millions of pores the skin brings to the body's surface surplus heat in the form of perspiration. When this water evaporates from the skin by contact with the surrounding air a cool sensation is felt, the result of the drying up of the water by the air.

The problem of summer clothing is always a perplexing one. Cotton garments are excellent conductors of heat, and allow the free passage of the surplus heat from the skin to the outside air.

In a climate of sudden and great variations in temperature the heat-conducting power of cotton permits the body to feel any change of temperature. Under such conditions, when the individual has perspired to a great extent and becomes suddenly exposed to a draft the evaporation of the perspiration takes place so rapidly that the skin is left suddenly cooled and hence becomes chilled. The result of such change is usually a "cold in the head," an inflamed throat or the inflammation of the entire respiratory tract, which sometimes leads to such serious conditions as that of pneumonia.

Although cotton clothing gives less discomfort for the time being it is, nevertheless, not to be exchanged for woolen garments if these can be endured. Wool is a poorer conductor of heat than cotton, and for this reason makes a splendid winter garment. It is not to be cast aside in summer time, however, for, although it functions quite differently in hot weather, its value is by no means decreased.

**Drinking Water and Baths.**

In winter wool prevents the heat of the body mechanism from escaping into the outside air. In summer, it prevents the rapid change from heat to cold and vice versa. Thus, if you wear a woolen undergarment and change your position suddenly from a place in a corner to one near an electric fan, the sudden change in the motion of air around you can not penetrate through to your skin and so cool it in a hurry.

It is well to drink plenty of pure water in warm weather, but not too cold. If the water is ice cold and you are hot, your tubes become cooled too quickly, and you are apt to suffer from internal disorders.

Baths in summer time should not be too cold, any more than drinking water. The water should be tepid, about 85 degrees F. If possible, it should be applied by means of a shower, followed by a brisk rub. Thus reaction takes place and normal bodily functions are resumed.

## Russia's Plight

### Demolished, Ruined, Enslaved

If you are not as thankful as you think you ought to be that your lot is cast in the "land of the free and the home of the brave," read the story of Russia's dreadful plight as told by Frederick M. Corse, general manager in Petrograd for the New York Life Insurance company, who has just returned from the afflicted land:

"The commercial outlook is nil, so long as the bolsheviki are in power. There is no chance for business. The banks have ceased to operate, credit has collapsed. So it will go on until despair and starvation seize the peasants, and that is coming this year. The Germans are not able to capitalize the lands they have seized and they fear to put their troops in, as they can't control the situation. The German troops begin to get under the influence of the bolshevik propaganda.

"There has been local resistance to the Germans, but no military resistance is possible at present because of the utter demoralization of the men.

"The great crisis will come some time this year at the hands of the peasantry. They are at each other's throats now over the division of land. The big estates are taken over and on the property there is very little sowing this spring and consequently there will not be much to harvest.

"When the peasants cry for relief they will probably ask for a monarch, so the question of promoting democracy in Russia has got to be devoted to promoting limited democracy. The problem that confronts the allies now is to see that the monarch is not named by Germany.

"Wholesale confiscation of private property, real and movable, is practiced at the present time. Life is safe nowhere in the country. When I left Petrograd the intelligent and property classes were openly soliciting Germany to come and establish order. The proximity of German troops to the town was far less disquieting than the growing anarchy within.

"There is everywhere in Russia a great labor upheaval. The maximum wage and minimum work is the order of the day. The destruction of capital is going on at such a rate under bolshevik management that if it continues during the current year, not only will the state be bankrupt, but years, perhaps a decade, must elapse before the country can repair the damage done."

**Always After Mary.**

They were having a lesson in history at a public school. The teacher was examining the pupils on the subject of British sovereigns.

"Who came after Henry VIII.?" asked the teacher.

"Edward VI.," answered a pupil.

"Right. And who succeeded Edward VI.?"

"Mary," answered the second little bright-eyes.

"Correct; and who came after Mary?"

There was a puzzled pause. Then a pupil who had heretofore not contributed much to the progress of learning, had an inspiration. He raised his hand, and, being called on, answered, triumphantly:

"The little lamb!"—People's Home Journal.

## Free Information

### Also Some Valuable Books

The service rendered by The Washington Information Bureau, at Washington in distribution of publications is designed to be continuous.

From time to time new books have been listed, but those previously announced are still available.

Either of the following may be obtained for a 2-cent stamp to cover cost of mailing. There is no charge of any kind.

Book on Canning.
"German War Practices."
Book on Colds.
Garden Book.
Book on Knitting.
War Cookbook.
Book on Navy.
Book on Drying Fruits.
Book of Recipes.
Bread Book.
"How War Came to America."

Write today and ask for free copy. Inclose a 2-cent stamp for return postage and be sure to write your name and address plainly. Direct your letter to The Washington Farmer Information Bureau, Washington, D. C.

P. S.—The information bureau at Washington will answer any question you may submit. Answer will be sent by letter. Just inclose a 3-cent stamp for return postage. Note carefully the address given above.

**The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana. Now the State of Missouri.**

By LOUIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

**Summary of Preceding Chapters.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time an unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination—a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their salt making and hunting. After an exciting experience with a bear in a cave they find their first fresh sign of Indians—moccasin-tracks in the snow about their camp and the morning after they find moccasin-tracks in the snow about their camp. The Indians attempt to enter their barricaded cabin at night but are frightened away by a great earthquake. The boys are captured and taken to the Osage village. One day they are given one bullet and one charge of powder each and allowed to go hunting. They dare not attempt to escape for fear of starvation, but lose their way and are found the following day by the Indians who think they tried to escape and are taken to the camp under guard. Ben is tied to a stake and a fire built under him but it is only a ruse to induce him to take as his squaw Watermelon, for the time being an Indian widow, who cuts his bonds and proclaims herself his squaw. Ben declines. The boys make plans to escape by canoe. They accumulate some parched corn and dried meat, steal a canoe at night and paddling far up the river turn into a branch stream and hide in a cave. After two days and a night there they go back down the river, safely past the Indian village and turning into a branch find a cave high up in the rocky face of a cliff. Here they place all their belongings except the canoe, which they conceal. They are discovered by the Indians, and, retreating deep into the cave with their belongings, they find, over a mile from the opening through which they entered the cave, an exit, and start southwest, the Indians undoubtedly in pursuit. The second day a blizzard sets in and hungry wolves follow the boys. Toward dusk they reach a deserted settler's camp, the cabin burned but chimney standing. Here they build a fire and plan to stand off the wolves. A long, hard fight with wolves and cold ensues. This fight was hardly won when Snapping Turtle and his warrior band surround the boys, who later effect their escape unseen by their enemies.

## CHAPTER XVIII.

**At Bay in a Burning Tree-top.**

Soon the howling was heard again. This time it was somewhat closer, and there seemed to be two or three wolves together.

One thing the two fugitives, who were now going at a run, noticed as they kept flinging glances over their shoulders. As the first wolf-voice rang out, the panther stopped and gazed back, as if suspecting that he himself was being hunted. At the second howl he turned, snarlingly, and faced the other way. And his manner indicated that he was not a little excited—so much so that he seemed to have forgotten his intended prey ahead. And when wolf-voices were heard the third time, the panther turned aside and went bounding away through the woods, quickly disappearing from view.

Much relieved at having got rid of one enemy, the fugitives hurried on. The wolves were still a good distance behind, but gaining steadily.

"Hadn't we better climb a tree?" Jodo panted, after they had run several hundred yards—till it seemed evident that flight could not shake off their pursuers.

"Yes. But not till we've started a fire. A tree is a cold place tonight—cold a-plenty to freeze us stark."

"But how will a fire keep us from freezing after we climb a tree?"

"We'll kindle the fire against a tree, then climb up and sit over it. That's our only chance to be both warm and safe. Then if the wolves get too hungry to be afraid of the fire, they can't reach us anyhow."

"Good! That's the very idea, Ben! Why didn't we think of that sooner? And we'd better stop right away. The varmints may run onto us now before we can get our fire to burning."

"All right! We'll stop in a minute or two—just as soon as we can find a hollow log."

They were not long in finding one. The hollow was not large, but on feeling inside of it they found what they needed—some dry leaves which the wind had blown in there, and some dry, rotten wood. Near by was a big tree with many limbs, some of them hanging rather low.

While Ben was raking away the snow at the foot of the tree, Jodo brought dry leaves and pieces of dry wood and laid them against the trunk. Then, while Jodo was breaking off many twigs from the top of a fallen tree, Ben struck fire and quickly had the leaves blazing. A fire started, both began to break off limbs from the fallen tree and lay them on the blaze.

Frantically they worked, for by this time the nearest wolves were almost in sight.

"Take to the tree, Jodo, and be quick about it! I'll hand tup our things and then climb myself. Up you go! I'll boost you!"

Promptly Jodo clasped the tree-trunk, and his partner pushed him till he could grasp a limb. He quickly drew himself up, then crawled out along the limb till beyond the smoke. Ben reached up their rifles, which Jodo laid across two limbs. On the rifles he laid their packs.

Ben now began to throw more wood on the fire. But by the time he had piled a few snowy sticks on the dark, smoldering mass, several shadowy forms came rushing out of the forest. He sprang upon the smoking pile, mashing it down, leaped for a limb, grasped it, and had barely time to swing himself up when the whole snapping, snarling pack were swarming around the tree!

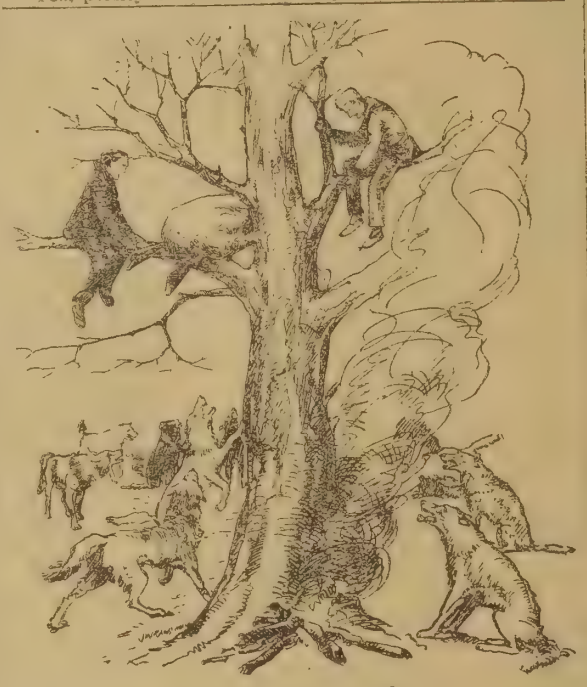
The fire was making plenty of smoke, but no light as yet. And the wolves, unscared by the little fire concealed under the snowy wood, crowded close around, and even leaped upon the wood, till the smoke drove them back.

"We didn't climb a minute too soon! Don't you think that fire's about to go out, Ben? It'll be hard on us if it does."

"No, it'll gradually eat its way through, I think. A lot of snow on some of that wood. And then I stepped on it and mashed the snowy wood down on the fire. We're in for a cold time of it if the fire does fail us. We'd better wrap our blankets closely around us, and protect ourselves as well as possible."

Each now found as comfortable a seat as he could, on a big limb, and got his mittened hands under his blanket and into his pockets.

"This smoke is about to strangle me!" Jodo soon complained.



"That's good! Where there's plenty of smoke there's bound to be some fire. Move out on your limb. Or lie down on the limb with your head out and your body in the smoke. Then the smoke will warm you. But don't I wish we had plenty of powder and lead? We'd soon clean out these impudent rascals!"

The wolves were still swarming around the tree, snapping and snarling, and leaping upward toward their hoped-for victims. Indeed, a big brute would sometimes leap a yard or more from the ground.

The tree they were perched in had a hollow trunk. And at the ground was a small hole leading into the hollow. Dry leaves had blown in there, and rotten wood had fallen down, both of which had caught fire from the fire outside. The hollow, lined with dry, rotten wood, extended upward, and 15 or 20 feet from the ground was another hole. A draft got started through the hollow, and soon the whole inside of the big trunk was a roaring furnace, with flames from it shooting out at the upper opening.

"Plenty of fire there!" exclaimed Jodo. "No danger of our freezing up here now. When we get cold, we can hug the trunk, or we can climb up there and warm ourselves at that blazing hole. Just watch the fire shoot!"

"Yes, plenty of warmth in easy reach now. I'm a little afraid we've got more fire than we want; or at least that we've got fire where de don't want it."

Treed in freezing weather.

"How so, Ben? What objection have you to fire there?"

"None whatever to the fire itself. I didn't know it when we started a fire against this tree, but it's dead—dead and dry. It hasn't been dead long. Got all of its twigs on it. But it's dead just the same. You can tell by breaking a twig. And the trunk is so dry inside, and is burning so fast, the fire may soon have the tree tumbling down with us."

"It won't be apt to burn so fast after the rotten wood has burnt out."

That was true. But the fire in the trunk still kept roaring like a furnace, and flames still kept shooting from the upper hole.

"I only wish we had some snow up here. I'd climb up and stuff it down that hole. Then I'd feel surer that this tree will stand till we're ready to climb down."

"But, do you s'pose these wolves will keep us up here till daylight?"

"Ten chances to one they will—will do that very thing."

"And is it certain that they'll hunt their holes even then? Won't they be likely to keep us treed till the Osages come and find us roosting up here?"

"That's possible. But I hope not. And I don't believe they will. The wolf is a night-prowling varmint. He's bold in darkness. But as soon as daylight comes he likes to slip off and find a hiding-place. That is, if he's not too hungry. Hunger will keep him on the jump. I've seen plenty of them hunting in broad daylight."

Slowly the fire under the wood at the foot of the tree ate its way through, till there was a good fire outside the tree as well as inside. But that only increased the probability that the tree would burn down before morning. However, the air in the tree-top was much milder because of it, and the two found themselves fairly comfortable so far as the cold was concerned.

While the wolves had been under the tree, Ben had lain down on his limb, tomahawk in hand, in the hope of being able to split some of their skulls when they leaped upward. But they had been too wary. After the fires began to burn, so as to light up under and around the big tree, the wolves had retreated. But they were still very close, their teeth snapping hungrily, fiercely, and their eyes shining like live coals off in the surrounding darkness. Had either of the treed men climbed down or fallen from the tree, the wolves would have rushed upon him in spite of the light.

"Make yourself as comfortable as you can, Jodo, and rest as well as you can. I only wish we could sleep a little. There'll be no rest for us when these wolves go. We've got to travel and travel fast—travel for our very lives. We can't put this fire out, I think. The Osages will sight the smoke and know just where to come. I picked out the wrong tree to build our fire against. A green tree was what I wanted."

"Well, I don't see that it matters a great deal. Our trail in the snow would have guided the Osages anyhow. They can follow that as fast as they can travel. They can't see this light unless they happen to be right close by; and they won't be able to make out the smoke till morning. So I don't think the fire will do us much harm."

As the heat from the fire below increased, the two crawled outward and lay along their limbs, keeping their bodies in the heat and smoke, but their heads out of the smoke. They rested as well as they could, and ate something from their nearly empty provision-bag. After eating they got themselves in safe positions and both fell into a doze.

In time they were aroused by the screaming of a panther—the one that had trailed them or some other. The screams sounded as if only a few hundred yards away, but might have been farther. Again and again they rang out, startling, on the frozen stillness. At length they began to recede, each one sounding further away, till they died in the distance. Then the treed fugitives dozed again.

Finally, just as the faintest trace of dawn was beginning to streak the east, Ben roused himself. Soon he spoke:

"Wake up there, Jodo boy! This tree is about ready to topple over! We've got to get down from here before we take a tumble!"

Jodo sat up drowsily on his limb. He gazed around. Day's breaking. It won't fall till daylight, will it?"

"It's going to fall now in a very few minutes."

"Are the wolves hanging around?"

"Some of them are. The others got tired of waiting for us and set off in quest of other game. Plenty of fire down there now. I believe we can make them keep their distance till daylight comes. I'll let myself down and drop to the ground, and you can hand our guns and things down to me."

"Ben, can you make out which way the tree is going to fall?"

"I couldn't be sure, but it seems to me to lean a little—to be settling a little in the other direction."

"If it falls with this side up, we have only to cling to these limbs we're on. "They'll stand up high enough to keep us out of the wolves' reach."

"Yes, guess maybe they will. But we shall have to hang to our rifles and bundles, to keep them from falling."

Each had only time to get hold of his gun and pack, when they felt the tree going down with them. Fortunately, as Ben had foreseen, it fell toward the far side. They had barely time to clutch the limbs they were on, when the top struck the ground with a crash, followed by the breaking of the under limbs. The falling tree threatened to roll over, but stopped before rolling far. When it came to a settled position, Ben and Jodo felt frightfully jarred; but they were still clinging to their big limbs, and were still 8 or 10 feet up in the air. They climbed a yard or so higher, then fixed themselves as comfortable as they could to wait.

Soon after the tree fell, the wolves had rushed out of the darkness, hungry for prey. Disappointed, they snarled a little, then retreated. The fires made too much light for them, and they withdrew till only their dark forms could be dimly made out and their glowing eyes seen.

Slowly a bright, cold morning dawned. As the two had hoped, the wolves made off with the approach of day, skulking away into the forest, perhaps for a hungry sleep in their dens till darkness came again. And scarcely had the brutes gone when the young fellows perched in the tree-top slid down to the hot trunk—it was still burning inside—and then, with their things, got out of the brushy tree-top.

For a minute or two only they stood by the fire, while fastening their packs on their backs. Then they shouldered their rifles and tramped away over the crunching snow, through the forest. Now their faces were toward the south. The weather was still intensely cold.

Hour after hour the fugitives tramped, almost without pausing. When the sun was well up, they ate a breakfast of dried venison and parched corn while hurrying on. Not till a good while after noon-time did they stop for dinner, and then only about an hour. The sun was shining brightly, warmly, and the air was fast growing bild. Already the snow was thawing wherever the sunshine could strike it.

The fugitives spread their blankets in a dry, sunny place, and stretched themselves at full length on them, so as to rest to the best advantage even while eating. When the hour they had allowed themselves was up, they shouldered their guns and tramped on again.

Two or three times during the afternoon they halted to drink at little streams; but scarcely for a moment did they pause for anything else. Their powers of endurance were pretty well matched. For while Ben was the stronger of the two, Jodo was lighter and more wiry. Late in the day they both seemed barely able to life their feet, but not for a moment did they pause till dusk. They had promised themselves a good night's rest, but only on condition that they do no resting until night.

With the disappearance of the sun the air had grown cold again. But this night would not be so cold as the night before. The travelers stopped in a wild gorge, and camped under an overhanging rock.

Laying aside their things, they collected wood and piled it in a semi-circular pile, with the ends of the

(Continued on the following page.)

# Washington Boys in War Service

From the Twice-a-Week Spokesman-Review.

**BYRON O. VANCE, Prosser, Wash.**—Entered the naval service August 2, 1917, with a friend, Elmer Shedd, and is now on the U. S. S. Philadelphia, Puget Sound. He lived on a wheat ranch near Prosser, Wash., before enlisting in the navy, with his parents, Mr. and Mrs. B. H. Vance.

**CORPORAL J. A. KETCHUM, Winchester, Wash.**—Is now in training at Camp Kearney in the signal corps, 158th infantry. He entered the government service November 6, 1917. He is the only son of Mr. and Mrs. H. W. Ketchum, who live at Winchester.

**ALBERT VICTOR LOOK, Meyers Falls, Wash.**—Was called to service, November 5, 1917, and is now serving with the 420th squadron, A. S. S. C. Polson Logging company, Camp 7, at Hoquiam, Wash. He is the second son of Mr. and Mrs. V. R. Look of Meyers Falls, who live on a farm.

## State Fair Auditorium

The foundation for the $12,000 auditorium at the State fair grounds at Yakima Wash., has been laid and the building will be ready for this fall's exhibition. There will be a program every day and night. A sheep school will be held in connection with the sheep sale. Commissioner of Agriculture Benson has invited F. R. Marshall, chief of the U. S. Bureau of Animal Industry, Professor W. C. Coffey of the Illinois Agricultural college; W. T. Rich, sheep expert, who has been traveling in Australia, and F. S. King, breeder of Corriedale sheep at Cheyenne, Wyo., all of whom are expected to deliver addresses. The sheep sale, which was such a success last year, will be held again on Tuesday and Wednesday and a still greater sale is anticipated.

Secretary Meredith is planning much work and many exhibits along conservative lines. The state college at Pullman will present moving pictures as will the Child Welfare League and probably the Y. M. C. A., the latter of work with the army in France. A concert will be held every night in the auditorium. There will be a good amusement program as usual, including high class horse racing, with Monday, the opening day, devoted to auto racing. In spite of labor shortage, a good stock show is expected.

H. A.

## Trappers of the Ozarks

(Continued from the preceding page.)

semi-circle agains the rock. Then they fired the wood in various places, and sat down to eat their supper. And immediately after supper they made their bed and stretched themselves out to sleep. They were sleeping shut in between the fire and the rock.

"Well, if the Osages overtake us here, it will be because they're better men than we are," Ben said, wearily. "We've nearly tramped ourselves to death to leave them behind. And I believe we've left them behind—far behind, too."

"If I knew the whole Osage tribe would be here and around us by morning, I couldn't drag myself another mile tonight," Jodo had barely strength to answer, as he was falling asleep.

Both slept the sleep of exhaustion, and slept straight through till daylight. More than once they were dimly conscious of hearing wolves close by. But they had confidence that the fire would keep all animals of prey back, and they slept on.

The breaking of day found them up and eating their breakfast. They ate as heartily as they dared. And when their hunger was satisfied, but little of their venison and corn remained—not half enough for their dinner. For supper, if they had any supper, they would have to depend on their rifles. By the time daylight had fully come, they had extinguished their camp-fire, by raking the burning sticks out into the snaw.

On the first high point they came to they stopped and looked for smoke. And smoke they saw, though it was many miles away. But it was back toward the north, on the route they had been traveling, and there was little room to doubt that Indians had kindled it.

"We'll make old Snappy Turkle and his bunch mighty sick of this trip before they overhaul us," Ben remarked, grimly, when they were tramping on again.

The sun was shining through a haze, and the day was not so mild as the day before had been. About noon the travelers threw themselves down, on a bed of dry leaves, to rest and eat what little remained in their deer-skin bag.

"Now it's shoot straight or starve," Jodo remarked, as he ate the last grain of the corn Watermelon had parched for them.

"Yes. If we don't knock over some game between now and dark, there's nothing for us but to go to bed hungry."

"We ought not to have much trouble finding a turkey."

"But we can't afford to waste a whole precious bullet on a turkey. Nothing smaller than a deer dare we shoot at. One bullet must get us meat enough to last several days. The other bullet we want to save for emergencies, such as a hungry bear, or a greedy panther, or a blood-thirsty wolf."

**(To be continued.)**

### Alfalfa in New Zealand.

The raising of lucerne or alfalfa in New Zealand is receiving much attention of late, and the different varieties are being tested, with the result that there was cut during 1917 three crops of Turkestan lucerne with a total of 6 1-5 long tons per acre of the green lucerne, weighing shortly after cutting 11 1-2 tons of Peruvian per acre, 12 3-4 tons of Poitou, 11 1-4 tons of Russian, 12 tons of Spanish, 12 1-3 tons of Hungarian, 14 tons of Patagonian, and 14 1-4 tons of Marlborough lucerne. It is estimated that the Patagonian and Marlborough lucerne, when converted into hay would give an approximate yield of 3 1-2 tons each, which at $19.46 per ton gives a total value of $68 13 per acre.

### The Beaver in Norway.

The beaver is a very scarce animal in Norway, only living in small colonies at a few places in the country. It is absolutely forbidden to kill the animal. The farmers, however, claim that the beavers do great damage to their forests and have now asked the government for right to kill them off whenever it can be proved that they are doing damage. If not allowed to kill the animals the farmers will ask the government to reimburse them for the damage done to their property.

### Sucker Born Every Day.

Suckers are so common in this country that it has become necessary for the United States department of justice to warn people against an army of fortune tellers who claim to be able to tell the folks at home all about what the American soldiers in France are doing, will do, or will have done to them.

**"WITH EIGHT STARS."**

To the Editor of the Washington Farmer: Enclosed find 5 cents, for which please send paper farm service war flag, with eight stars.

MRS. JAMES A. M'CRERY.
Dayton, Wash.

YOUR

# LOCAL HOME PAPER

AND

# THE WASHINGTON FARMER

## For the Price of Your Home Paper Alone

Through a special clubbing arrangement with a large number of newspapers in Washington, we can now send you **The Washington Farmer** and your Local Home Paper at the regular subscription price of your home paper.

### THE HOME PAPER

You alone know the great value of your local town paper. The part it plays in local affairs, the news of the happenings of your community, the gossip, social and commercial life that you wish to keep posted on. It brings the story of the home boys at the front who are fighting for you and our country.

### THE STATE FARM PAPER

The Washington Farmer is your family paper. It keeps you posted on the agricultural developments of your state. It is a complete family farm paper—all the farm news, latest and best serial stories, department for every member of the family—feature sections of every branch of farming, dairying, stock raising, fruit growing, etc. Also colored comic pages and a children's and family page. It is the biggest and best farm paper published in The Pacific Northwest.

**The Washington Farmer Is Issued Every Week**

We are pleased to state that by subscribing now to any of the following papers and paying the regular annual subscription price of that paper your payment will also include a subscription to The Washington Farmer.

# It Rescues Horses

## Horse Hospitals Do a Noble Work

Until recent times a horse seriously injured on the battlefield or in war service anywhere was immediately shot. Practically no thought was given to the possibility of saving his life, the only thought being to relieve him of his suffering.

This has been changed, however. Not only are efforts made to relieve his suffering, but successful efforts are made to heal him of his injuries and enable him to continue his important part in the activities of war. Following the lead of the Royal Society for Prevention of Cruelty to Animals of England, this country has built up a strong organization, already familiar to many, known as the American Red Star Animal Relief. Dr. William O. Stillman, for many years president of the American Humane association, is director-general of the Red Star.

The Royal Society of England has hospitals behind the battle lines adequate to care for more than 12,000 horses at one time. Reports of its work say that it has succeeded in curing more than 80 per cent of the animals brought there for care. It is estimated that the work of this society has saved army horses worth $30,000,000 during the present war.

Similar work is being organized back of the lines by the American Red Star and will make a specialty of caring for horses that serve the American army, but which, like the Red Cross, will be no respector of persons when need of help is observed. It is estimated that there are between 4,000,000 and 5,000,000 horses on the battlefields of Europe at the present time, a majority of which are horses from this country.

# Two Salad Dressings

By LISSIE C. FARMER.

To make the following sour cream salad dressing, which is one of the most delicious imaginable, put a cup of good, thick sour cream in a bowl and set the latter in cold water, if the day is warm. Add one tablespoon of lemon juice, one-quarter teaspoon mustard, one-half teaspoon sugar, and a dash of cayenne. Mix, avoiding too rapid or too much stirring. Add more lemon juice or a little vinegar, if you like a more acid taste. This dressing can be used on any vegetable salad, or a very rich salad can be made by using it on meat, fish, or egg or cheese combinations. If used with fruit salad, add more sugar, less salt and cayenne, and omit the mustard.

Here is another dressing which is easily made and economical: Put a teaspoon of cornstarch in a bowl and add a dash of cayenne, teaspoon sugar, one-half teaspoon salt, and mix well. Break an egg into this mixture and stir till smooth and the egg thoroughly separated. Then add three teaspoons each of vinegar or lemon juice and olive oil, adding them alternately and stirring as you add. The mixture is now ready for cooking, and for this purpose the bowl may be set into the top of the teakettle. If the water in the kettle is boiling, it will cook the dressing in a short time. When well cooked allow to cool, then stir in enough sweet or sour cream to give the consistency you like.

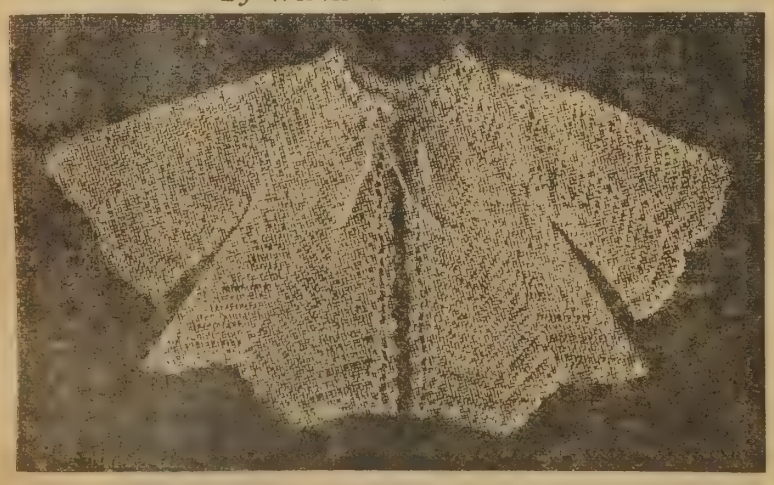
If you want to use this dressing on vegetables, fish or meat, add one-half teaspoon mustard and stir well into the dressing. During the summer you can keep this dressing on hand by making in larger quantities and sealing while still hot, in glass jars or in jelly glasses, the latter covered with parafine. Do not add the cream to this reserve supply until you are ready to use a portion of it.

For the foundation of your salad, you can use lettuce, cress, nasturtium or very young dandelion leaves. Always crisp this portion of your salad by putting it one ice or in cold water before using. Almost any vegetables, fruit, fish or fowl, can be used cold in a salad; also, cottage cheese, well seasoned with salt and pepper.

# Some Canning Tips

"It is well to remember that sterilization is the most important thing in canning, says Farm and Fireside. All jars, covers and rubbers should be thoroughly washed and cleaned. When the open-kettle method is used, the rubbers, covers and jars should be washed and then put into a large pan on a rack or thick pad to prevent them from resting on the bottom of the pan. They should then be covered with cold water, which is brought slowly to the boiling point and allowed to boil 10 minutes.

Scalding and blanching is absolutely necessary in preparing vegetables and some fruits for the cold pack. It consists in immersing the prepared vegetable into boiling water or steam and leaving it there for a few minutes. This process shrinks the material.



The cold-dip process should always immediately follow the scalding and blanching. It consists merely in dipping the blanched material into very cold water. If the sack containing the material to be blanched is fastened on the end of a stick there will be no danger of burrning the hands.

Syrups are usually added to fruits and brines to vegetables. When the jar is tightly packed with materials, the brine or syrup should be poured into the jar until it is completely full.

Canning syrups are prepared by mixing two cupfuls of sugar and three cupfuls of water and boiling for different lengths of time. Thin syrup is just brought to a boil, medium thin is boiled two or three minutes, medium thick is boiled six to eight minutes, and thick syrup is boiled eight to 12 minutes. With the present sugar shortage, corn syrup should take the place of at least part of the sugar.

# Crochet and Tatting Designs

By WINIFRED WORTH

**Infant's Sack.**

Ch. 150; 2 open s., 12 gores (6 rows before widening for sleeve). In each gore 1 dc. in 1 ch. twice, 3 dc. in 1 ch. twice, 1 dc. in 1 ch., sk. 2 ch. before beginning next gore. One row 3 in middle, next 5 to widen.

7th Row—Begin 2 new gores on 3d, 4th, 9th and 10th for sleeve, continue 7 rows, then join under arm; make 11 rows; put on border 2 rows colors and 2 plain white, if desired.

Scallop for edge 5 dc., join; widen sleeve 3 times and continue desired size.

# Ways to Use Potatoes

Suggestions for helping to make use of this country's big potato crop are contained in a menu issued by the dining car department of the Baltimore & Ohio railroad, which besides giving the method of preparing potatoes in 17 ways, quotes the prices at which these dishes will be served to patrons dining on the road.

"Thirty million bushels of potatoes may go to waste. Eat potatoes—save something else," the menu urges. This special potato menu card is printed in the form of a folding post card, so that it may be mailed by patrons of the dining cars to their friends.

The menu follows:

**Au Gratin Potatoes**—Raw potatoes cut in small dice, when cooked, mix with cream sauce, put in au gratin dish, sprinkle with grated cheese, bake in oven, 25 cents.

**Algerienne Potatoes**—Raw potatoes cut in large cubes, steam or boil, when cold, saute in butter, sprinkle with chopped parsley, 15 cents.

**Cottage Fried Potatoes**—Cold boiled potatoes cut in slices, saute in butter, 15 cents.

**Hashed Brown Potatoes**—Cooked potatoes, minced and fried in butter, 15 cents.

**Julienne Potatoes**—Raw potatoes cut in fine shreads lengthwise, fried in very hot fat, 15 cents.

**Lyonnaise Potatoes** — Cooked potatoes, either minced or thinly sliced, seasoned with salt and pepper, minced fried onion, chopped parsley, 15 cents.

**French Fried Potatoes**—Raw potatoes cut in strips, fried in hot fat till done, drain, sprinkle with salt, 20 cents.

**Hashed in Cream Potatoes**—Raw potatoes cut in very small dice; when cooked, drain, cover with cream sauce, simmer a few minutes, 15 cents.

**Barabant Potatoes**—Cold boiled potatoes cut in squares, saute with minced shallat and chopped parsley, 15 cents.

**Potato Croquettes**—Steamed potatoes, dry mashed, salt, butter, raw yolks egg added, form in cork shape, breaded and fried, 15 cents.

**Potatoes Maitre d'Hotel**—Raw potatoes peeled, cut in section like quartered orange, steam till barely done, simmer Veloute sauce, chopped parsley, lemon juice, 15 cents.

**Duchesse Potatoes**—Steam potatoes, mix with yolk egg, passed through pastry bag to a baking sheet, brushed with beaten eggs, and baked, 15 cents

**O'Brien Potatoes**—Hashed brown potatoes, mixed with chopped pimentoes, saute with butter, 15 cents.

**Potato Pancakes**—Raw potatoes, cook and mash while warm, add egg yolks and milk, whip the white egg firm, and stir in just before frying, 15 cents.

**Potatoes Natural**—Plain cooked potatoes, cut in any shape, 10 cents.

## Cottage Cheese Recipes.

The following are some new and excellent recipes using cottage cheese, sent out from the U. S. department of agriculture:

**Cream of Cottage Cheese Soup.**

Make a thin cottage cheese sauce from 1 cup milk, 1-2 teaspoonful shortening, 1-2 teaspoonful flour, 1-3 teaspoonful salt, a dash of pepper, and 1-4 cup cottage cheese, and 1-4 to 1-2 teaspoonful soda to neutralize the acid in the cheese. Season by reheating with the soup a slice of onion, a small slice of the yellow part of the lemon rind, and a blade of mace or a little nutmeg. No one of these flavors should predominate, and the seasoning should be very delicate. Serve croutons with this soup.

**Eggs with Cottage Cheese.**

Cut six hard cooked eggs into quarters and place about one-fourth of the amount in a greased baking dish. Cover this layer with a part of a cup of white sauce into which half a cup cottage cheese has been folded and sprinkle over it a layer of sliced green or red sweet pepper. Repeat until the dish is full. Sprinkle bread crumbs on top, dot with butter and brown in a hot oven.

**Cottage Cheese and Bread Loaf.**

Mix together 2 cupfuls cottage cheese, 1 cup chopped nuts, 1 cup cold leftover cereal, 1 cup dry bread crumbs (corn or Victory bread), 2 teaspoonfuls chopped onion, 1 teaspoonful fat, salt, pepper, 1-3 teaspoonful soda (or more to neutralize acid), poultry seasoning or mixed herbs. Bake in a greased pan in a hot oven till top and sides are well browned over. Turn out on a hot platter. Serve with a brown or tomato sauce if desired.

## War Thrift Sponge Cake.

Sponge cake without flour or sugar is as delicious as it is Hooveristic. Miss Edna E. Walker, assistant state leader of home demonstrations of the state college of Washington, recommends it as one of the best she has ever used. Following is the recipe:

Yolks of 4 eggs well beaten. Add 1 cup syrup and gradually beat in 1 cup rice flour with a pinch of salt and flavoring. Fold in the 4 egg whites which have been beaten stiff.

Here is one of Miss Walker's recipes for cocoanut macaroons, which can be eaten by the patriot without a feeling of guilt:

**Cocoanut Macaroons.**

Two eggs, well beaten, ½ cup brown sugar, 2 cups cornflakes, 1 cup shredded cocoanut. Drop by spoonfuls. Bake in moderate oven.

**Kill All Flies!** They Spread Disease

Placed anywhere, Daisy Fly Killer attracts and kills all flies. Neat, clean, ornamental, convenient, and cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Ask for

## The Soldier of the Soil.

Oh, he hears the bugles calling,
And the rolling of the drums.
And the steady tramp and rumble
Of the army as it comes,
And his eyes are bright and wistful
As he straightens from his toil.
But, behold! he is enlisted
As a soldier of the soil.

Though he dreams of distant trenches
And the glory to be won,
Where the Stars and Stripes are flying
Underneath an alien sun,
And the earth is sodden crimson
And the air a mad turmoil,
Those are not the fields of duty
For a soldier of the soil.

His the drill of seed and harvest,
For the soldiers must be fed,
And they look to him to furnish
Beef and beans and daily bread.
So beside the hero's saber
Hang the implements of toil,
For the power of the army
Is the soldier of the soil.

—Anonymous.

SANITARY CANNING OUTFITS

# Is Your Name Here?

Aunt Nellie is glad that the girls and boys are taking such an interest in the Corner and that letters from new cousins and old ones, too, are coming in so fast. Some of you are, perhaps, getting discouraged and are wondering why your letters have not been published yet. They are going to be in the Corner, every single one of them, just as soon as room can be found. So just keep on watching and waiting for yours to appear. Letters from the following cousins are on hand and Aunt Nellie has enjoyed them all:

Laura Taylor, Delila Taylor, Cassie Taylor, Elzina Rogers, Margueritte Anderson, Bessie Violet Moser, Anna Apold, Grace Agnes Garner, Beulah Garner, Teresa Germont, Anna Aronin, Louise Hannah, James Prince, Doris Decker, Saloma Zier, Hattie Wade, Hazel Wade, Effie Lewis, Linda Anderson, Ida Irmer, Alice E. Johnson, Gladys May Plemon, Jennie Margaret Van Skiver, Marie Potter, Marguerite Selde, Edith Tiedo, Ivan Graham, Violet Gray, Pearl Mathis, Auretta Barnes, Willis Botsford, Carl Allison Tubb, Blanche Hamilton, Rosie Wietz, Gwen Baldsin, Jennie Hoy, Roy Seger, Royaline McMurry, Muriel Stein, Enna Brune, Ora Hayden, Elizabeth Vantrojen, Alice Watson, Vera Gustafson, Bertha Herdlick, Edwin Anderson, Gladys Strong, Mary Kochever, Ina Moller, Esther Schulenor, Alice Graham, Edrie Lois Colbert, Pearl Droullard, Ada Jennings, Agnes Westlund, Anna Thomson, Marie Houk, Lorena Thomson, Zelorna Tuttle, Reno V. Carmack, Charlie Franklin Divers, Ruth O. Toyn, Florence Crocker, Henry Besel, Freda West, Edner Sofdahle, Rea Mathews, Lola Ferrell, Fanny Osterberg, Freda Nelson, Bertha Nelson, Martha Weber, Esther Hellena Reimann, Luella Venneberg, Edith Marie Van Ausdle, Bonnie F. ## When Answering Riddles.

My Dear Corner Cousins: I have noticed that many of the cousins have repeated the riddle and then given their answer, just as they would do in school if their teacher asked them: "What is the largest body of fresh water in the world?" and you would say: "Lake Superior is the largest body of fresh water in the world," and not just "Lake Superior." Don't you think this would be a good way, and perhaps it might help some cousin who has not seen the riddle before? We have had so many riddles that I expect some of us are mixed up on them and there are so many good ones, too. You know, when so many are writing, and the Corner has over 1300 cousins, it would help Aunt Nellie, too. What do my cousins think about this? Your loving

AUNT NELLIE.

### Ruth Will Raise a Garden.

Dear Aunt Nellie: I enjoy the Corner letters very much. I wish to become a cousin. I was 13 years old April 10, and am in the seventh grade. I like to go to school. Have I twin? I have four brothers, Harold, age 21; Clifford, age 17; Maurice, age 14, and Floyd, age 2 years and 10 months. I live on a 160-acre ranch. We have five head of horses. Their names are Bessie, Babe, Queen, Bird and Topsy. we have about 15 hogs, 12 turkeys and 12 head of cattle. I live one mile from school. We have one dog named Sport. He is a shepherd dog. He is a very good cattle dog. This is not the last time I intend to write to the Corner. I joined the junior Red Cross and am going to learn to knit for the soldier boys. I have one uncle in the army. He is in Seaside, Ore. His name is Robert Palmer. I have one brother in the National Guards. He is in Tacoma. His name is Harold. I have blue eyes and dark hair. I am going to raise a garden this year. I am the only one in our family going to school. My teacher's name is Mr. Harader. I am going to buy thrift stamps to help the government. I live 37 miles from Chehalis.—Ruth Walsh, Mossy Rock, Wash.

### Pet Pig Is a Bother.

Dear Aunt Nellie: It has been a long time since I wrote to the Children's Corner. I am 11 years old on January 20. Have I a twin? If I have I wish they would write to me. I would surely be glad to write to any one, a boy or girl, it doesn't make any difference. The boys are just as nice as the girls sometimes. I have one brother and one sister. My brother's name is Clark and my sister's name is Fyrne. I have two cats. One is maltese and the other is white. The maltese is called Blue Bell and the white one's name is Fluffy. We have one dog. His name is Shep. He is a black and white Shepherd. He is very pretty. We have a pet pig also. We can make him lie down by scratching his stomach. He is very large. He is getting to be a bother now because every time we go outside he is there to meet us to be fed. He is a Poland China hog. I hope to hear from some of the cousins.—Helen Esther Schoenberg, Prosser, Wash.

### We Have Not Forgotten, Beulah.

Dear Aunt Nellie: I have not forgotten you yet and hope you have not forgotten me. I think our Corner has grown very much. I hope after a while it will grow to two pages. I like Aunt Nellies' letters and hope she likes my letters. I also like the cousins' letters. I have learned to knit and think every girl should knit. I am sure Aunt Nellie is knitting for our soldier boys in France. This has been a beautiful winter. I joined the junior Red Cross at school. My teacher said we might have to learn how to knit, but I know now. I am knitting a wash rag. Mamma is knitting a sweater. I know there is something every girl can do to help win the war. They can buy war saving stamps, and many other things. I gave some money to the Y. M. C. A. and joined the junior Red Cross. Some of the cousins write very good letters. I was 10 April 11.—Beulah Violet Shaw, Grandview, Wash.

### Papa Tends to the Crops.

Dear Aunt Nellie: I am writing to you for my first time. I am nine years old. My birthday comes the seventh of October. I am in the fourth grade. My teacher's name is Miss Nichols. I like her fine. I have three brothers and no sisters. My oldest brother's name is Winslow. My next brother's name is Thomas and the youngest is Kenneth. Have I a twin? If I have will they please write? I live on an 80-acre farm. We have four horses, one cow and calf. The horses' names are Minnie, Topsy, Tim and Dolly. The cow's name is Rosie and the calf's name is Lady Isabella. I love to live on a farm. We have a large orchard. In the spring mama cans the fruit and papa tends to the crops. I can crochet and tat. I started to knit a muffler for the Red Cross, but I had to take it out.—Mildred Marion Self, R. F. D. 4, Colfax, Wash.

### Cousin Leona Writes Again.

Dear Aunt Nellie: Thought I would write again. How are all the cousins and Aunt Nellie? We live on an 80-acre farm. We have some cattle and a few work horses. I haven't much to say so I will give you some riddles to guess. Eleven pears hanging on a tree, 11 men rode by, each man picked a pear and left 11 hanging there. I have a little sister; they call her peep, peep, peep; she wades in the water, deep, deep, deep; she climbs up the mountain high, high, high. My poor little sister has but one eye. Something that is always going only when you are dead. Papa's birthday was last Thursday. He was 47 years old.—Leona Ohms, White Swan, Wash.

### Goes Fishing Every Night.

Dear Aunt Nellie: My teacher's name is Miss Grace Thomas. I like her fine. I have brown hair and brown eyes. For pets, I have a kitty, a dog and some baby chicks. My sister's name is Bernadette. She is four years old. My brother's name is Donald. He is eight years old. I am the oldest. My birthday is March 5. Have I a twin? If I have I wish she would write to me. I am in the fourth grade at school. I got 48 valentines. I made 32. For Easter I got a little basket and 24 candy Easter eggs, one dollar, a chicken and six eggs. We are going to have a surprise party on our teacher some time. There are 32 scholars in our school. My brother is in the second grade. My sister goes not go to school. I like to gather wild flowers. About every night I go fishing. Last night I caught 12 fish. I am a member of the Red Cross. I have learned to knit and hope the other cousins know how to. The cherry and apple trees are in bloom. So are the pears, peaches, prunes and plums. I have read Emmy Lou, Polly and Dolly, the Brown Owl, Light Water and Black Beauty. I have eight thrift stamps and hope to get some more. I walk one mile to school. We have a Ford car. I wonder when the war is going to end? I have often wondered when Aunt Nellie's birthday is. I have tried the paper beads and they came out fine. I have an uncle in the war, but no brothers.—Margaret Lee, Pcnawawa, Wash.

### Drive a Pony to School.

Dear Aunt Nellie: We live 10 miles from town. I go to the Guyette school and I am in the fourth grade. We go to school in a cart and we drive a pony. There are three of us going to school. Our names are Lillian, Eunice and Dorothy. Dorothy is in the first grade and Lillian is in the seventh grade. We go to Sunday school sometimes at the schoolhouse. Mama teaches our class and our school teacher's name is Miss Carpenter. We have had three teachers this term. Next time I will write more.—Eunice Lork, Toppenish, Wash.

### In a Grade by Herself.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old. I will be 12 in June. There are 19 in our school. I am in the sixth grade. My teacher's name as Miss Hess. I'm in a grade by myself. I have a cow of my own. Her name is Spot. Then I have a calf. Its name is Cherry. We live on a 66-acre farm. I have a brother and sister. My brother's name is Clifford. My sister's name is Bernice. Clifford is 3 years old—Verna Anderson, Route 5, Tampico, Wash.

### Lots of Rain Where Grace Lives.

Dear Aunt Nellie: This is the second time that I have written to the Corner and I hope it isn't the last. I was 10 years old the second day of August. I am in the fifth grade. Have I a twin? If I have I wish she would write to me. We have had lots of rain. I will write you a few riddles. When the clock strikes 13 what time is it? Why is B like a bawling child? What is invariably blue? I think that I have written enough.—Grace Jones, Box 84, Vaughn, Wash.

### Three Miles to Go to School.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 7 years old. My birthday is July 19. Have I a twin? If I have I wish she would write to me. We have 320 acres of farm land. I have three miles to go to school. We have five horses—Prince, Chub, Flora, Dolly and Babe. I enjoy reading the letters very much. I hope I will see my letter in print soon. I will write again.—Helen Huster, R. F. D. 2, Cheney, Wash.

### Making a Quilt for the Soldiers.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I read the Children's Corner. I am in the third grade. I am 9 years old and my birthday is December 6. I have a bob-tailed cat. She is the prettiest cat in the world. I am making a quilt for the soldiers. We have four cows, one horse and one dog. The cow's names are Nellie, Dollie, Timie and Delia. The horse's name is Goldie. The dog is Bingo.—Connie May, North Bend, Wash.

### Fun to Watch the Rabbits Eat.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and my birthday is January 16. We have 19 rabbits, 14 of them are small ones. It is lots of fun to watch them eat. My sister has a cat named Tommy. She dresses him up in doll clothes and wheels him in the doll buggy. I am trapping squirrels. I have a dog named George. He goes with me every day to the traps.—Melvin M. Hadford, R. F. D. 6, Spokane.

### A Little Colt Named Jack.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters so I thought I would write. I am in the third grade. I am 8 years old. We have six horses and one colt. Their names are Pike, Dick, Charley, Betsy, Fannie and Baby and a little colt named Jack. I hope to see my letter in print.—Lena Bailey, R. F. D. 4, Box 171, Yakima, Wash.

### Ruth Has Become a Cousin.

Dear Aunt Nellie: This is my first letter to the Corner. I will be glad to become a cousin. I have one brother and two sisters. I have one sheep. My sheep is named Fannie. I am 9 years old. I go to school. I am in the second grade.—Ruth Bailey, Fruitland, Wash.

### Has a Garden Every Year.

Dear Aunt Nellie: I live way up in Skagit county in the country right on our farm. I can knit and have kitted three wash cloths and started a cap for the Belgian children, at school and at home I started a pair of socks for my brother. My brothers' names are Martin, John, Theron and Warren. I was 11 years old December 22. Have I a twin? My mother gets about nine dozen eggs a day from her hens. I have a garden every year. I would like to hear from a girl named Elvira Anderson, who lived in Ferndale up in Whatcom county.—Ellen Steen, Hamilton, Wash.

### There Are Two In Ora's Class.

Dear Aunt Nellie: I am 10 years old. My birthday is June 10. Have I a twin? We have a small farm and we have some rabbits, chickens, five horses and two cows; but the best of all is the car. It is a Ford. This is the first time I have ever written to the Farmer. I have one brother and no sister. I go to the Central school. I am in the fourth grade. There are two in my class.—Ora Lynch, R. F. D. 6, Spokane, Wash.

### A Cute Kiten Named Mopsy.

Dear Aunt Nellie: I live five miles from school and go in a big bus. My teacher's name is Miss Sargent. I like her fine. I am in the third grade. I like school very much. I was 8 years old September 23. Have I a twin? I have a little kitten. Her name is Mopsy. She is very cute. We have eight cows, two horses and 100 chickens and get 75 eggs a day.—Sylvia Richardson, Friday Harbor, Wash.

### Wrote a Story About Thrift.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I was 9 years old October 16. I have a sister who was 5 years old January 15. I thought I would tell you about my school. My teacher's name is Miss McKinnon. I think she is a good teacher. I wrote a story about thrift.—Brooks McCain, 720 Garfield Avenue, Mt. Vernon, Wash.

### Want 100 Per Cent of School to Join.

Dear Aunt Nellie: I have a light complexion and yellow hair. I will be 10 years old February 8, 1919. I am in the sixth grade. I love my teacher. Her name is Josephine Bennett. I have knitted two wash rags and made one trench pillow. I have joined the senior and junior Red Cross and pretty near all the school has. If 100 per cent of the school joins we can float a Red Cross flag with our American flag. I live by the Skagit river in the country. It is by the side of the river so they call it Riverside. I have three-fourths of a mile to go to school. We have the woods right behind the house. We have two heifers, two calves and five milch cows.

(Continued on page twenty-four.)

# Get the War News

**Twice-a-Week Spokesman-Review, One Year**
**The Washington Farmer 3 Years, Both for** **$1.00**

THIS liberal offer puts within your reach a paper which you and your family will surely want in these stirring war times.

We recommend The Twice-a-Week Spokesman-Review to our readers because its news is complete and reliable. Its semi-weekly summary of the war will keep you up-to-date without your having to wade through a great deal of reading matter. The Twice-a-Week pays particular attention to the events of special interest to the people of the Pacific Northwest; covering the progress of the draft, troop movements, and all other details in which you are particularly interested. Names of killed, injured and missing will always be given as soon as issued by the military authorities. In addition the Twice-a-Week brings you a reliable summary of the general news of the day and many entertaining and instructive features for the family.

Purchased in any other way The Twice-a Week will cost you $1.00. For that $1.00 you can now get The Twice-a-Week for a year and your state farm paper for three years as well. It is a remarkable offer at any time; especially so in these war times.

# Children's Corner

Aunt Nellie

(Continued from page twenty-two.)

I have one big mother cat. Her name is Pussy. I will answer a riddle. Round as a biscuit, busy as a bee. Answer—clock. I will now give three myself. Flower of England, fruit of Spain, met together in a shower of rain, put in a bag tied round with a string. Tell me the answer and I'll give you a ring. Little Nancy Etticoat, in a white petticoat, with a red nose; the longer she stands the shorter she grows. A little yellow man lives and lives on a hill. I wish some one would write to me. I think the Children's Corner is very interesting. Have I a twin? If so would she please write to me. Give my best regards to all.—Sylvia Joslin, box 174, route 2, Riverside, Wash.

**Traps Set for Squirrels.**

Dear Aunt Nellie: I am 13 years old and am in the seventh grade. I will be 14 years old, August 24. Have I a twin I am tall and slender. I have blue eyes and brown hair. My brother and I belong to the Red Cross. The way he and I are helping win the war is: My brother drives five horses to a gang plow and I help my mother do the house work and tend the chickens. We have 13 traps set for squirrels and my papa gives us 5 cents for every squirrel we catch. We are going to use the money to buy thrift stamps. If I have a twin I wish they would write. I will answer their letters.—Margaret Simmons, Farmington, Wash.

**Helps Sister With the Work.**

Dear Aunt Nellie: How are you and the Corner cousins? This is the first I have written to the Corner. I am 8 years old and will be 9 July 11. Have I a twin? If so I wish she would write to me. I have two rabbits. Papa has seven horses and six milch cows and eight calves. My mama has a lot of chickens and three geese. I have one sister and no brothers. My sister's name is Hilda. My mama is sick in bed and has been sick since July. My sister has to do all the housework. I can milk cows and wash dishes, sweep floors and feed the chickens and my rabbits.—Jennie Gibbs, R. F. D. 5, Spokane, Wash.

**Edna's Brother Is in France.**

Dear Aunt Nellie: This is the first time I have written to the Corner. We have five horses, three cows, one dog, one cat and one pig. The horses' names are Jewel and Babe and Tracie and Tom and Fritz. The cows' names are Bessie and Jersey and Goldie. The dog's name is Rover, and the cat's name is Tommy. I have seven sisters and one brother. He is in France. Their names are Minola, Agnes, Elsie, Ruth, Laura, Emma, Leontina and Albert. I am seven years old and my birthday is December 19. Have I a twin? If I have I wish they would write to me. We have 22 little chickens. I have two little nieces. I am in the second grade. There are 22 pupils in my room. My father takes the Farmer. I like to hear the letters. We sell milk in the morning and in the evening. We had a little Tom Thumb wedding play at the school and I was in it.—Edna Lenora Stoller, Box 338, Quincy, Wash.

**Geanie Lives in Alaska.**

Dear Aunt Nellie: I am going to write and ask you if it would be all right to join the cousin's club. We do not live on a farm, but one of our friends takes the paper and they let us read it. I enjoy reading the letters of the boys and girls. I am trying to make some paper beads. I have made a few and they came out nice. If it would be all right for me to join the club, I would be much pleased. I used to live on a small farm in Illinois, but three years ago we moved to Alaska. Ketchican is the first port in southeastern Alaska. I am 12 years old and am in the sixth grade. Geanie Amundson, Ketchican, Alaska, P. O. Box 237.

(We are very glad, Geanie, that you want to be a cousin. Write and tell us of your home in Alaska.—Aunt Nellie.)

**Are Making Gun Wipers.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner, and I hope it won't be the last. I am 8 years old and am in the fourth grade. My birthday is April 7. Have I a twin? There are 21 children in our school. I have two sisters and three brothers. Their names are Kathy, Blanche, Robert, Kenneth and Ralph. I have joined the Red Cross. We are making gun wipers. We have six horses and one colt. Its name is Dick. The others are Bessie, Topsy, Bird, Prince, Mollie and Kate. We also have three cows and three calves. Their names are Bell, Butter, Fly, Valentine, Rosy, Violet and Bopeep. We live on a farm of 160 acres. We have two pigs. Reta Cantrell, Box 101, R. F. D. No. 1, Winlock, Wash.

**Clara's Three Playmates.**

Dear Aunt Nellie: May I join the Children's Corner? This is the first time I have written to the Corner. I am 11 years old and in the sixth grade. I will be 12 years old November 16, 1918. Have I a twin? I have three playmates. Their names are Lillie Baker, Irma Moore and Dorothy Dickinson. My teacher's name is Miss Pepper. There are 29 pupils in our room. I have one dog and two cats. The dog's name is Shep and the cats' names are Minnie and Ted. I have a brother named Clarence. He is 9 years old.—Clara Larson, Box 133, Napavine, Wash.

**Esther Likes to Sew.**

Dear Aunt Nellie: This is the second time I have written and hope it will not be the last. I am 11 years old and my birthday is August 9. Have I a twin? I go to Lambert school. I am in the fifth grade. There are about 32 children going to school. Our school has only one room. I have one mile to go to school. I am a member of the Junior Red Cross. On Friday afternoon we work for the Red Cross. I have made one treasure bag and one handkerchief. I like to sew very well. I wish some of the cousins would write to me.—Esther Bergman, R. 2, Ridgefield, Wash.

**Farm Is All Cleared.**

Dear Aunt Nellie: I read the Children's Corner every week. This is the first time I have written to the Children's Corner and I hope to write again. We live on a 40-acre farm. It is all cleared. We have 12 cows and four calves. I am in the fifth grade at school. I will be 12 August 18. I have light brown hair and a light complexion. Have I a twin? If I have please write to me. I go to the McKrae school. Our teachers are Mrs. Wallace and Mrs. Bexterham.—Vera M. Coselman, Box 68, R. F. D. 2, Bow, Wash.

**What Ella Does on the Farm.**

Dear Aunt Nellie: I am going to tell you what I do and what I have and where I live. I live on a ranch. I am 10 years old and will be 11 October 3. I go to school with my two sisters. I am in the third grade and about to the fourth. I have a little gray pony. His name is Prince. I ride him to school and I have a little blue cat and little kitten. The kitten is gray. My papa bought a new Ford car from a man at Hunters, Wash. The man he bought it from was Mr. Sparling.—Ella Sophia Brown, Miles, Wash.

**Eula Likes Her Teacher.**

Dear Aunt Nellie: May I join the Children's Corner? I am nine years old and will be 10 years old November 22, 1918. I will ask if I have a twin? I will describe myself. I have a few freckles on my nose. My teacher's name is Miss Fleeta Kindor. I am in the fourth grade. I like my teacher fine. I have two brothers. Their names are Raymond and Robby. I have one sister named Jessie.—Eula Manis, Waitsburg, Wash.

**Likes to Live in the Hills.**

Dear Aunt Nellie: I would like to join the corner. I enjoy the cousins' letters very much. I am 12 years old. My birthday is November 8. Have I a twin? I am in the sixth grade. My teacher's name is Miss Fitzsimmons. I walk a mile to school. They have consolidated our school with two more schools. I will write again. I have two sisters. One is my twin sister. Her name is Winifred, and my other sister's name is Margarete. She is 15 years old. There are hills all around our school. I like to live in the hills. I have yellow hair and gray eyes. I am a blonde. My chum is a brunette; she has brown hair and brown eyes. I forgot to tell you my chum's name. It is Florence Anderson. I have chummed with her for five years. I would be very lonesome if she moved away. She is one year older and in one grade ahead of me. I wish Sally Garry would write to me. I have four cousins in the army and navy. Three are in France. I will write if some of the boys or girls will write to me.—Bessie Charlotte McFarlane, box 178, R. F. D. No. 1, La Center, Wash.

**Grandma Knits for Soldiers.**

Dear Aunt Nellie: This is my fourth letter to the Corner, but not the last one. I belong to the Junior Red Cross and hope all the other children do. For the Red Cross I have made a handkerchief, and next time am going to make a wash cloth. I am 12 years old and in the sixth grade. My subject is Red Cross work. My grandma knitted four pairs of wristlets, a wash rag and finished a sweater for the Red Cross. She has yarn for another pair of wristlets. I have made some paper beads and a very pretty way to string them is to make 34 beads and then string with beads between, 14 on a side, then between the two bottom beads, fasten them, put some small beads at bottom and draw thread through and it leaves a very pretty stand. For pets I have a dog named Shep and a pony named Bonny. She has two little colts, Dazey and Jack. Shall we always put our age just after our name? Hazel Saltmarsh, age 12, Coulee City, Wash. (Yes, Hazel, always give your age, because Aunt Nellie needs it when judging the letters.—Aunt Nellie.)

**Elvin Is Eight Years Old.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I go to school and I am in the fifth grade. There are 18 children in our school. I have a brother and two sisters. My brother's name is Chester, and my sisters' names are Rena and Ella. My brother is 16 years old. We have four horses and six cows and two calves. My age is 8. We have a Ford car. We got it last July.—Elvin Littlejohn, Tumwater, Wash.

**Ella Will Write Again.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters very much. I go to the Independence school. I am in the second grade. I am six years old. My birthday is July 12. Have I a twin? I have two brothers and one sister. My teacher's name is Mrs. Craddock. There are 78 children in our school. I will write again. —Ella Littlejohn, Tumwater, Wash.

**Loves to Read the Corner.**

Dear Aunt Nellie: I am 8 years old. My birthday is June 12. Have I a twin? We have a cow named Eva. We have 14 chickens. We live in town. I have one brother named Frank. I am in the third grade. My teacher's name is Miss Pearson. She is very good. I love to read the Corner. My father takes the Farmer. I hope I can join. —Ruth Carlson, 1509 Pacific avenue, Aberdeen, Wash.

**Merle Loves Farm Life.**

Dear Aunt Nellie: I like to read the letters very much. I live on a 400-acre farm. I love farm life. I have one brother 6 years old. We go to No. 1 school. My teacher's name is Miss Circle. I am 12 years old and in the eighth grade. Brother is in the third grade. My birthday is June 5. Have I a twin? I have a pony and love to ride horseback. We ride to school.—Merle Holman, R. F. D. 1, Mondovi, Wash.

**Having Lovely Weather.**

Dear Aunt Nellie: I am in the fifth grade. My teacher's name is Miss Meyer. She is a good teacher. Papa is a school director. We are going to move in a little while. We will be farther away from school then. I am 10 years old. My birthday is October 26. Have I a twin? We are having lovely weather.—Elizabeth Bowen, R. F. D. 2, Oroville, Wash.

**Go to School on the Stage.**

Dear Aunt Nellie: I am in the fifth grade at school. My birthday is June 25. Have I a twin? If so, I wish she would write to me. I go to school on the school stage. My teacher's name is Miss Stewart. We have 40 cows, five horses, five dogs, one cat, and about 25 chickens.—Jennie Lane, Box 294, R. F. D. 2, Bellingham, Wash.

**Loves the Country the Best.**

Dear Aunt Nellie: This is my first letter to the Corner, but I hope it will not be my last. I am 12 years old and I am in the sixth grade. My birthday is March 1. I have one brother named Richard and two sisters Veronica and Loretta. I live on a large farm. I like the country much better than the city.—Catherine Whalen, No. 5, Box 37, Colfax, Wsh.

**Pet Cat Is White and Pretty.**

Dear Aunt Nellie: This is the second time I have written to the Corner. We have one mule that we call Betty and 13 horses and 12 cows and 25 pigs. I have one pet cat. It is white and it is very pretty. We have an incubator setting with 200 eggs in it. My pony's colt had blood poison and we had to kill it, poor thing. Its name was Trixie. The roads are getting good, so we can run our car. I planted carrots, cucumbers, lettuce, radishes and turnips. Is that not all right for my war garden? I planted potatoes, corn and onions, too. I take music lessons in the summer. I crochet and knit. I crochet yokes and laces of different kinds. I joined the Red Cross. My papa bought three liberty bonds. There are eight children in our school. There were 17, but most of them are out now; some passed the eighth grade examination. I like to play jump rope. I will give some riddles. As I went over London bridge I met my sister. I cut off her head and left her body standing. Round as an apple, busy as a bee, prettiest little thing you ever did see. Have I a twin? If I have I wish she or he would write to me. I am 11 years old. My birthday is December 1. I like to read the letters in the Corner very much. I hope there will be more join the Corner. I wish the cousins would write to me for I love to write to them. —Loretta Owens, R. R. 2, Oakesdale, Wash.

**Violet and Her Chum Have Fun.**

Dear Aunt Nellie: I am a little girl 8 years old. I will be 9 years old February 27. I have blue eyes and black hair. I am in the third grade. I have a chum. Her name is Eva. She has brown hair and brown eyes. We have lots of fun at school together. Our teacher will not let us sit together at school for we whisper too much. We have one cat. Her name is Lightfoot. My chum's mama has some gold fish. My sister is taking music lessons. I belong to the Red Cross. I am learning to knit. I will write again.—Violet Thomason, Wauconda, Wash.

**Has Mary a Twin Cousin?**

Dear Aunt Nellie: I was 8 the 2d of March. I am in the fifth grade. Have I a twin? There are six pupils in our school. My teacher's name is Miss Rhorer. May I join the Children's Corner? I have two brothers. Their names are Murray, age 5, and Warren, age 6. I have a cat. His name is Johnny. I have read Elsie Dinsmore, Jack and Jill and Five Little Peppers and How They Grow and heard Swiss Family Robinson and A Brownie.—Mary Kennett, Hover, Wash.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

## Big War Map for Two Subscription Orders

A splendid four-page war map of the battle front in France, originally published in the Spokane (Wash.) Spokesman-Review, will be sent to any one who secures and mails us two new subscriptions to The Washington Farmer.

This map is printed in four sections and when pasted together, according to directions furnished, will give you a map 64 inches long and 21 inches wide; presenting the details of the great fighting territory in such a way that you will be able to follow every detail of the big battles which are now brewing.

Send orders for new subscriptions and war map to

**The Washington Farmer**

Review Bldg., Spokane, Wn.
617 Central Bldg., Seattle, Wash.

# News for Breeders

## Thirty Registered Jerseys.

H. L. Weister of Swamokawa, Wash., has the largest number of purebred dairy cattle in that famous little dairy region. M. Weister has about 30 head of registered Jerseys, besides a good herd of grades. His first bull was purchased at the Ross Nelson sale and his offering were mostly heifer calves. One bull from J. C. Brown & Son, of Shedd, Ore., has several heifers now in milk and all heavy milkers. Mr. Weister purchased one very fine bull from Ed Cary, but had the misfortune to lose him; not, however, until 12 cows were bred to him. From them he is expecting still greater production.

Mr. Weister's dairy barn, 150 feet long, with one end round and with an arched roof, with no supports, is the pride of the valley and might well be the pride of any other region.

Another dairy breeder in the valley is P. C. Greengstad, who has 15 head of registered Ayrshires. A Robin Hood bull from the Clise farm heads his herd. Roselawn Queen, one of his cows, milked 55 pounds when fresh early in the spring and tests four per cent or better. H. A.

## Canadian Ayrshire.

At the annual meeting of the Canadian Ayrshire breeders in Toronto it was resolved that the R. O. P. test be changed to 300 days with a time limit for freshening of 290 days. L. J. Tart of Montreal was elected president and A. S. Turnet of Ryckman's Corners, secretary-treasurer. W. W. Ballantyne, in his presidential address, emphasized the injustice of paying for milk on weight basis. He asked that the breeders demand of the government that all records be published on the basis of butter fat—not butter, as at present.

## Reports Fine Horse Sales.

M. C. Metz of S. Metz and Sons, stallion dealers of Pendleton, Ore., returned to his home in Illinois, May 5, leaving that prince of hostlers, Jack McNeal, in charge of five young horses that will be fitted for the coming fall and winter shows. In common with most horse dealers and breeders, Mr. Metz reports fine sales the last season—the best in fact since the Pendleton barn was established. H. A.

## Live Stock Notes.

Fifty-three Shorthorn heifer calves have been distributed to the boys and girls by the First National bank of Galesburg, Ill. The plan was worked out by the Illinois Shorthorn Breeders' association.

The 80 head of bulls sold at Omaha, Neb., under the auspices of the American Aberdeen-Angus Breeders' association, averaged $231.

## Nice Little Problem.

Here is a nice little problem in arithmetic for those who have studied percentage, as well as those who are interested in breeding. A son of Gertie's Lad was bred to an unregistered cow and got a daughter; this heifer was bred back to her sire, and again a heifer was a result; this second heifer was bred to a double grandson of Gertie's Lad and the heifer which resulted was bred back to her sire. Heifer No. 4 belongs to A. A. Markannan of Yankton, Ore. The animal is typy, promising and coming along nicely. The problem is: How much blood of Gertie's Lad does the heifer carry? It sounds easy, but of three who have tried to solve it no two answers are alike. Try your hand at it. What do you think of it as an example of inbreeding?

## Scottish Ayrshires.

Alexander Cross of Knockdon has been relected president of the Ayrshire Cattle Herd Book society of Scotland. John Howie was reelected secretary-treasurer. The total entries in volume 40 of the herd book was 8036 (a decrease of 336 in the previous issue. However, these entries are much in excess of the average and ranks in point of numbers as fourth highest in the history of the society.

## Alternating Teams.

One farmer reports to the Percheron Society of America that he has just finished seeding 170 acres of oats in three and a half days' time with one drill and eight registered mares. One set of four mares started at daybreak and worked till noon, being replaced by the other four, which stuck to the job until dark.

**Laugh About It.**

Did you ever try a laugh when you felt least like it?

## HAMPSHIRE SWINE

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, May 27.—Ideal conditions to make seed germinate and to promote growth brought about a material decline today in prices of corn. The finish was nervous, 1 3-4 to 2 1-4 net lower, with June $1.35 3-4 and July $1.37 1-2 to $1.37 5-8. Oats closed unchanged to 5-8 down. In provisions the outcome varied from 2 cents off to an advance of 12 cents.

Auspicious weather seemed to govern the corn trade to the exclusion of all other factors. Knowledge that to some extent rains were interfering with field work seemed to be generally ignored.

Oats sympathized with the weakness of corn. Besides, for the first time in months, the visible supply was in excess of last year's corresponding figures.

Announcement of big exports of lard and meats gave strength to provisions. Downturns in the value of hogs depressed the market at first, but had no lasting effect.

**Chicago Futures.**

**Turpentine**—Bulk, 65c gal; cases, 85c gal.

**White Lead**—Strictly pure white lead in oil, ton lots, 11¾c lb; 50-lb lots, 12½c lb.

## The Wool Market.

BOSTON, Mass., May 24.—The Commercial Bulletin will say tomorrow: "The government's plan for handling the domestic wool clip has been completed so far as its essential details are concerned. Further modifications are likely from time to time. The new domestic clip is coming forward in small quantity, but with fair celerity."

Scoured basis: Texas, fine 12 months, $1.72@1.75; fine eight months, $1.50@1.55. California: Northern, $1.70@1.75; middle county, $1.55; southern, $1.45@1.50. Oregon: Eastern—No. 1 staple, $1.78@1.80; eastern clothing, $1.62@1.65; valley, No. 1, $1.63@1.66. Territory: Fine staple, $1.80; half-blood combing, $1.63@1.68; 3-8-blood combing, $1.40@1.45; fine clothing, $1.65@1.70; fine medium clothing, $1.55@1.60. Pulled: Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

**HOPS, HIDES, WOOL.**

NEW YORK, May 27.—Hops, steady; state, medium to choice, 1917, 35@43c; 1916, nominal; Pacific coast, 1917, 20@23c; 1916, 14@15c. Hides and wool unchanged.

## Seattle Market.

SEATTLE, May 25.—The outlook today is for carload lots of Washington strawberries next week and with the coming in large lots of Kennewicks, White Salmons, Hood Rivers, Olallas, and possibly Winslows the market is due to settle to a normal basis of lower prices.

Early black Wenatchee cherries in lug boxes were among the novelties of the week, 16-pound crates selling at $2. Seattle jobbers are offered a ton and a half of this fruit for immediate delivery.

Asparagus cleans up as fast as received. Buyers group about the curb with every wagon delivery. Going prices for fancy stock are 15@20c. Warm weather increasing production, it is expected, will force the market lower.

Spuds are dull and the market nominal. The sale of new California potatoes has been heavy, relegating the local holdovers for the week.

Two flat crates of hothouse tomatoes from Wenatchee, pronounced the finest eastern Washington hothouse stock ever seen on Western avenue, arrived today and are offered at $3 per crate.

Brokers and jobbers are watching the market for first Walla Walla yellow onions, due in July. No fancy prices are expected for onions this season and dealers are preparing to handle them on a normal basis.

The fresh ranch egg market moved up a cent today and is firm at 38@39c. There has been an unusually heavy demand. Storage for the season is practically completed and the market is left in a firm condition. Futures look higher.

The tone of the butter market is slightly easier without any indications of a decline. Operators feel that should the market fall the deflection would be only a cent or two and all surplus offered would be quickly cleaned up and prices tightened accordingly. There has been some storing, but little has gone into the coolers under 40c and the bulk has cost 41c to date. There is some hope that the market may decline with warm weather and the increased cream production to follow, but storage preparations generally are based on 40 cents or higher.

Poultry demand and supply is about evenly adjusted and buyers will pay this week's prices beginning Monday.

**BUYING PRICES.**

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 37@39c per dozen; eastern Washington, Oregon and Idaho, 35@36c.

Poultry—Broilers, 20@35c. lb.; spring roosters, live, fat, 26@27c. lb.; geese, fat, live, 18@25c.; ducks, live, fat, 27@30c.

Beef—Buying prices: Prime beef, steers, 14@15c; cows, fat, 13@14c lb.; heifers, 14@@15c.

Hogs—Light, 21c lb.; heavy, 19@20c lb.

Veal—Fancy light, 18@19c lb.; heavy, 15@18c lb.

Hides—Salted, 14c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 11c lb.; green calf, 23c lb.; dry calf (under 8 pounds), 29c lb.; bulls and dry salts, 4c lb. less; green, bulls, 9c lb. Clean, long wool, western Washington flint dry pelts, 39c per lb.; heavy to clean eastern Washington flint dry pelts, 30@35c lb.

Asparagus—Kennewick, 12½@15c lb.; Oregon, 15@20c; Granger, 15@20c.

Apples—Winesaps, $3.50; jumble Winesaps, $1.25 box.

Potatoes—Puget sound, $17@22 per ton; eastern Washington, $28@30 per ton; seed, 1¼@1½c per lb.

Feed—Bran, $34 per ton; shorts, $35.50; scratch feed, $78; all-grain chop, $74; oats, $72; sprouting oats, $73; rolled oats, $72; whole corn, $75; cracked corn, $77; rolled barley, $72; clipped barley, $77; alfalfa meal, $36; oil meal, $72; egg mash, $62.

Hay—Eastern Washington timothy, $36@37 per ton; do double compressed, $38@40; alfalfa, $26; Puget sound, $26@27; straw, $15.

Strawberries — Kennewick, $3.50; White Salmon, $4; Olallas, $3 per crate.

## Portland Wheat.

PORTLAND, Ore., May 25.—Grain dealers find their chief employment now in watching the crop situation. Local experts predict the wheat crop of the northwest will break all previous records with the large increase in acreage and the ideal growing weather, but the out turn of oats and barley will be below the average.

No trading was reported in the last week in the market and prices were generally steady. Sacked oats at the close were posted at $60 bid and eastern bulk oats at $50@52.50.

Substitutes have a declining tendency. A leading local mill has cut barley flour $1 to $11 a barrel and reduced cereal rolled oats 50 cents to $12 a barrel.

## Portland Market.

PORTLAND, Ore, May 25.—Press reports announce the appointment of a federal wool administrator for this point, but there has been no official confirmation of it yet, nor any word as to the formation of a classification committee. In the meantime much new clip wool is coming from eastern Oregon and consignments are also being made direct to the east, as it is optional with growers to ship to any designated classification point.

The potato shipping season is drawing to a close as new stock is cheaper in the south than Oregon potatoes can be put there for. To date shipments have been 1768 cars from Oregon, against a total of 3989 last season, 2527 from Washington against 3674 last year and 6793 from Idaho against 5896 last season. The local jobbing market is steady at $1@1.25 for Oregons and $1.35@1.50 for Washington Gems. In the country buyers are quoting 75@90 cents for Burbanks.

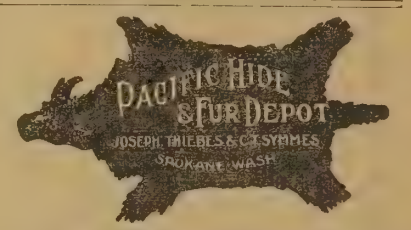
Strawberry receipts are still moderate and prices remain high, local selling at $3@3.50 and Californias at $2.25.

Egs are firmer with the decline in receipts, sales being made at 37 cents case count. Butter is steady and unchanged.

Potatoes are weak with very liberal arrivals and a large part of the supply was carried over at the close of the week. Country dressed meats are steady.

Butter—Cubes, extras, 39@39½c; prime firsts, 38c; prints, extras, 44c; cartons, 1c extra; butterfat, No. 1, 43c delivered.

Eggs—Oregon ranch, current receipts, 37c; candled, 38c; selects, 39c per dozen.



Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 23½c; Young Americas, 24½c per pound; Coos and Curry, f. o. b. Myrtle Point: Triplets, 23c; longhorn, 24c per pound; ¼c discount to Portland trade.

Poultry—Hens, 25@27c; broilers, 30@32c; ducks, nominal; geese, nominal; turkeys, live, 27@28c; dressed, 37c per pound.

Veal—Fancy, 17@17½c per pound.

Potatoes—Oregon Burbanks, $1@1.25 per hundred; New California, 5½@6c per pound.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $29@30 per ton; valley timothy, $25@26; alfalfa, $24@24.50; valley, grain hay, $24@26; clover, $24; straw, $9@10.

**WANTED--1000 tons of mixed country scrap iron**

in carload lots of not less than 25 tons each. Write for prices if interested.

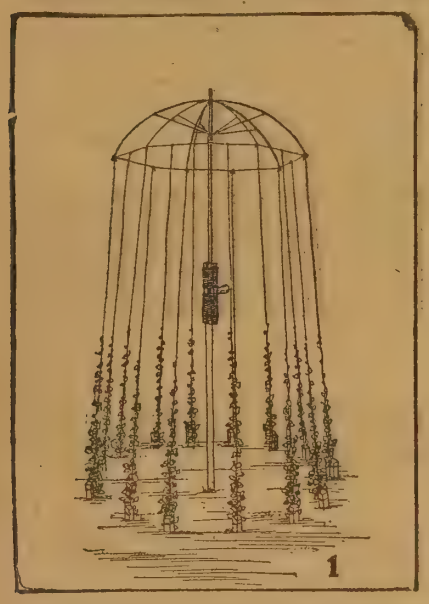
# Handicraft For Girls



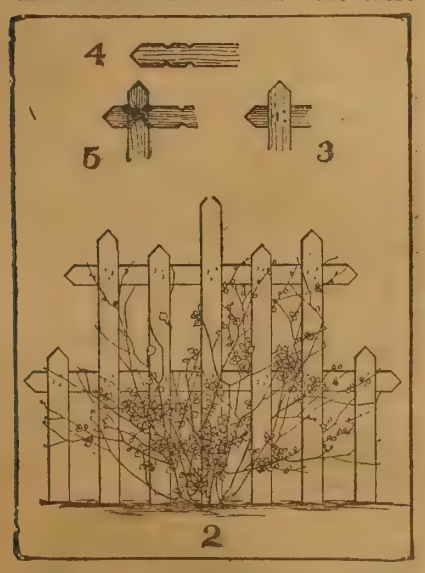
## By Dorothy Perkins

(Copyright by A. Neely Hall.)

### Trellises for Vines.

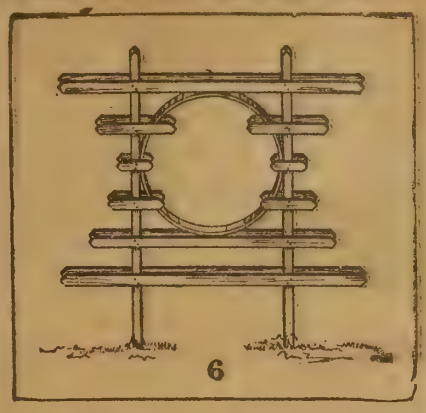
Every girl who owns a garden will need a few trellises over which to train her climbing vines, and by following the instructions and the drawings given below it will be a very easy matter for her to make these herself without having to call upon her father or brother to help.

The frame from an old umbrella is required for the top of the vine bower shown in Fig. 1. This is a splendid support for morning-glory and wild cucumber vines. If any of the ribs of the umbrella you use are broken, take pieces of heavy wire, and bind them to the broken parts; and if any of the connections between the ribs, braces,



1

and handle are rusted through, wire these parts in place with fine wire.



Use the handle from a broom, or a stick of about the same size, for the center support of the umbrella-bower, and by means of two strips of wood about 12 inches long splice the umbrella handle to the end of the broom-handle, binding the strip in place with heavy wrapping-twine as shown in Fig. 1.

Run a cord around the ends of the umbrella-ribs, slipping it through the eye of each rib, or sewing it to each eye if the cord is too thick to thread it through. Then bury the end of the broom-handle in the ground to a depth of 6 inches, and with it in position take more cord and tie a piece to the end of each rib, and a piece half-way between the ribs to the cord you have fastened around the ribs. Cut these

cords long enough to reach the ground, and drive a stake into the ground in the right position to fasten each cord to. Plant the vines you wish to have run over the frame, beside the stakes, and entwine the small tendrils around the strings to give the vines a start. Then by guiding the little fingers, as the vines grow, so the vines will spread over to the adjoining strings, the spaces may be completely interlaced, and by the time the top of the umbrella frame has been reached you will have a thickly covered bower.

The small trellis shown in Fig. 2 is made of laths. Any carpenter will furnish you with what you need for a few cents. The laths may be nailed together with brads as shown in Fig. 3; or the edges may be notched as indicated in Fig. 4 and the ends lashed together with cord as shown in Fig. 5.

6

Cut the ends of the lath strips pointed with a saw. The lower ends of the trellis should be driven several inches into the ground.

A trellis of a more elaborate design, though one that is quite as simple to make, is shown in Fig. 6. The center circular frame is a barrel-hoop, the upright pieces each side of this are sticks about 1 1-2 inches square, and the crosspieces are laths. It is easiest to build this trellis flat upon the ground, and then set it in position. First fasten the barrel-hoop between the uprights; then cut the lath crosspieces to the right length, and nail them to the uprights.

We still need a few more settlers to finish our 6000 acres, which is being sold in 40-acre farms at $25 per acre. Ten yearly payments at 6 per cent interest.

By selecting your future home in this splendid tract at Bryant, Snohomish county, you are not alone buying a fertile and productive piece of land, but you are buying the best investment in the state today. Railways, paved roads, schools, churches, canneries, creameries and mills.

The best proposition on the market for the man who wants a farm. For further information address the owners, BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

DIVERSIFIED FARM.

240 acres; 3 miles from city limits of Spokane; 100 acres cultivated; live stream and spring; family orchard; 5-room house; barn for about 8 head of stock; all fenced; about 4000 cords of wood. This is a very desirable place. Price $10,000. Will take Spokane residential property up to $4000.
HOUSE & LAND ASSOCIATION.
514 RIVERSIDE AVE. SPOKANE, WASH.

RANCH STOCKED COMPLETE.

480 a., 10 miles from Lyle, Wash.; 5 mi. Warwick; 5-room house, frame barn, 40x60; new granary; chicken house, other outbuildings, all in good repair; 60 a. wheat and oats; 35 a. summer fallow; 60 a. more sod to be broken; 80 a. fine bottom land; all fenced hog tight; 17 head cattle, 2 horses, chickens, hogs; machinery; school, church, ½ mi., mail route, telephone. Price $25 per acre, ½ cash, bal. own time at reasonable rate. I. E. Foss, owner, Lyle, Wash.

FOR SALE—FORTY-ACRE RANCH; ONE and one-half miles from Kent; 14 miles from Seattle; twenty acres under plow, balance logged-off; fenced and cross-fenced; eight-room modern house; barn accommodating 25 head; two good wells; hen houses and yard for 600 hens; also have ten acres logged-off land, same locality; good three-room house. Address Geo. S. Harper, 1023 E. Pike, Seattle, Wash.

CHOICE FARM FOR SALE—500-ACRE ranch, in choicest part of Palouse country; all good wheat land; two sets buildings; two family orchards; two never-failing springs and good well; 300 acres fall wheat and balance in oats. One of the best producing farms in Palouse country. Can be bought with or without crop. Price on application. L. E. Gilmore, owner, R. D. 2, Palouse, Wash.

DAIRY FARM FOR SALE—NOW GOING $250 to $300 cash business a month; 14 dairy cows and all equipment for handling milk route. Price $3700 cash or terms. Young stock and horses can also be bought reasonably. A good opportunity to raise cattle. Lots of free range. For particulars write A. Enstrom, Box 330, Ephrata, Wash.

GOOD SOIL, GOOD CROPS, GOOD ROADS, good schools, good neighbors, good transportation for the owners of Thurston county farms; 10 to 40 acre tracts of rich alder bottom and clay loam, now selling at $75 an acre; ideal climate, good district, settling up rapidly. Write us. A. H. Reid & Co., 314 New York blk., Seattle, Wash.

682-A. IMPROVED WHEAT FARM; SEVEN miles south of Hartline, Wash.; on Sunset highway; good land; all in cultivation except 15 acres; 300 a. in summer fallow; all fenced; large house, fine barn, good outbuildings; plenty water. Only $45 per acre. $6000 cash will handle. A. L. Tucker, Coulee City, Wash.

FOR QUICK SALE—ONE-HALF SECTION farm, 4 miles from Moscow. Price right to sell, and liberal terms. The place is all in crop, one-third of which goes to the purchaser. Possession given Oct. 1, 1918. If interested, write P. O. Box 393, Moscow, Ida.

MY 79 A. IS TOO MUCH FOR ME TO work; all good land with water; 9 mi. from Vale. If sold at once, crop and land $6000. $3000 cash. Write my agent, O. E. Carman, Vale, Ore.

FOR SALE—IN BITTER ROOT VALLEY, Mont.; 20 a.; 9 a. orchard; 10 a. barley; prospects bumper crop. $3000 takes it. W. S. Schraedl, Corvallis, Mont.

GOVT. LAND, ORE., CALIF. BOOKLET. Joseph Clark, Sacramento, Calif.

### FARM LANDS—WANTED 654

I WANT TO HEAR FROM OWNER OF farm or unimproved land for sale. Mrs. W. Booth, Pulaski, Iowa.

# True Tire Economy

'Chain' 'Usco'

The most economical tires you can buy are

First—Tires that will travel the greatest number of miles per dollar of cost.

Second—Tires that will give you the greatest use of your car.

United States Tires are long mileage tires. They reduce your tire expense by the mile and by the season.

United States Tires are sturdy tires. They are built for endurance. They will give you continuous, uninterrupted service enabling you to get the most out of your car.

Both factors are more than ever important in these times of war.

Economy is a national duty,

—the nation demands utmost service from every car,

—the country is calling on every farmer to further increase his magnificent efforts of last year toward supplying food for the World.

Equip with United States Tires. There is a United States type and tread to suit every car, every road, every service.

The nearest United States Sales and Service Depot will be glad to help you in selecting right tires for your needs.

*For passenger cars—'Chain', 'Usco', 'Royal Cord', 'Nobby' and 'Plain'. Also tires for Motor Trucks, Motorcycles, Bicycles and Aëroplanes.*

*United States Tubes and Tire Accessories Have All the Sterling Worth and Wear that Make United States Tires Supreme.*

## The [illegible] Spokesman-Review

This is a splendid semi-weekly home newspaper which brings you every Tuesday and Friday a complete, accurate, condensed review of local, national and world events. It gives you a reliable narrative of history in the making. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from every far-flung battle line.

We are very glad to be in a position to offer THE TWICE-A-WEEK SPOKESMAN-REVIEW at a big saving when taken in combination with THE WASHINGTON FARMER. It is a paper especially appropriate for our subscribers because it is a paper primarily designed for busy readers.

# A REMARKABLE CLUBBING OFFER

*Twice-a-Week Spokesman-Review, 1 Year*
*The Washington Farmer 3 Years, Both for* **$1.00**

These are days of high and rapidly rising costs in the publishing business. Clubbing offers are rare. This fact makes the clubbing proposition of The Twice-a-Week Spokesman-Review with your state farm paper especially noteworthy. Our advice is not to delay but to accept this liberal offer at once. Remember that the summer is the time of greatest activity at the front.

# Tractor Plowing Draws Crowds of Farmers

## *Bring Their Wives and Daughters to Witness Power Farming on Palouse Summer Fallow*

**The biggest one thing in farm demonstration which has been put on in the Pacific northwest, and one that will stand out well as a national farm demonstration, was the power farming demonstration by the Washington State college near Pullman Wednesday, Thursday and Friday of last week. The State college had the efficient aid of the Pullman Chamber of Commerce in promoting this notable enterprise. There were far more exhibits of tractors, trucks and accessories than were at first expected, and the crowd was up to the fullest expectation. Over 2000 were present on Wednesday, and on Thursday at 1:30 I counted all the autos in the parking strip and found the number to be 528. A constant stream of autos were coming into the grounds as I was counting and other automobiles belonging to the exhibitors and managers were also on the ground. The road leading to the farm was lined with more machines, as well as portions of the fields beside the road. It would be safe to say that there were a thousand or twelve hundred autos at the demonstration on Thursday.**

From one of the heights on the 200-acre tract, the scene of the tractor demonstration at Pullman, one sees the Empire of the Palouse spread out before him—the growing green of the incoming grain, the patches of summer fallow brown, and in the midst of it all the town of Pullman nestling among its own hills. Could the Tempter find a more alluring promise of the kingdom of this world to offer? I thought of what the late B. T. Byrns of Moscow once told me. He was in the habit of visiting almost every year different farming sections of the entire country, had been in most, if not all, of the states of the Union. Said he: "Nowhere in all the country have I seen an equally tempting section of farming lands in one body than that of the Palouse country."

Certainly no one could ask for a fairer vision of Mother Earth than which can be picked out on the heights of the Pacific northwest—not confined by any means to the heights of the Palouse.

The demonstration was held on a 200-acre summer fallow tract on the Savage farm, about two miles west of Pullman the farm being under lease to Arthur Cole.

The round-wheel tractors and all others not desiring to work on the hills were given space in a field where the maximum grade was 19 per cent. Twenty-two machines entered this field. The machines of the track-laying type were assigned to the hilly ground south and east of the tract.

Four machines plowed around the steepest hill with a maximum grade of 57 per cent, these being the Holt "45," drawing six plows and turning over seven feet of soil; the Best "40," drawing four plows and turning over a five-foot furrow. The Trundaar—"20-35" pulling three 14-inch plows and the Yuba "20-35," pulling four 14-inch plows. The powerful Holt "75," which attracted wide attention Wednesday by its successful performances on steep hill sides, drawing nine plows and turning the soil for a width of 10 1-2 feet, met with an accident when the draw bar on the three bottom plows broke, putting the gigantic tractor out of the demonstration.

A feature of the big crowd was the prevailence of women, many of the farmers having brought their wives and daughters to witness the demonstration. Interest on the part of the women centered around the Russel tractor, operated by Mrs. Roy King of Portland, while large groups of them watched the power exhibits in the main tent, where methods of lightening the duties of the farmer's wife, from the power operated churn to the sewing machine and washing machine, were demonstrated by the companies exhibiting electrical and gas engine appliances for the farm and farm home. The farm lighting and the farm water system attracted special attention.

Hundreds of farmers eagerly followed the tractors that successfully wound around the steep Palouse hill. They came from all parts of the surrounding country, from more distant parts of Washington and Oregon and Idaho and even Montana. They wanted to know what the tractors would do in actual operation on a farm where the work needed to be done.

For example, there were such representative farmers present as J. F. Richardson, A. E. Shaw, Joe Coon, George Price, Homer Fitzsimmons, Matt Beal, Fred Hungate from the Big Bend district of Wilbur, Wash.

Among the representative farmers of the Nez Perce country of northern Idaho may be mentioned William McCormick, Owen Mounce, Lafe Mounce, J. W. Whitaker, E. M. Freese of the 21 ranch, George Rakes, Henry Herman of the Columbia ranches, Elmer Beaver, Fred Teel and the Madden brothers.

There were many men present who are the agricultural leaders of this section. For example, J. S. Klemgard and Henry J. Young of Pullman, the Miller brothers and the Comegys brothers of Thornton, J. L. Dumas of Dayton, John McGregor of Hooper, E. E. Flood, Sam Glasgow and Tom Wren of Spokane.

What especially interested me was to notice the eager interest of the progressive young farmers who are to be the leaders tomorrow in the great farm industry of the Pacific northwest. Such young men as Houston McCroskey of Garfield, Roy Peringer of Belmont, Roy Adams of Fairfield and Harry Goldsworthy of Rosalia.

The one big fact brought out at the tractor demonstration was the eagerness of the farmers themselves to learn something definite that might deeply affect their own farming operations by the introduction of more power farming on their own farms. The very air was charged with an undercurrent of sentiment that an epoch-making change was about coming over the methods of farming and that it was up to each farmer present to see to it that he investigated this subject thoroughly; that he should ascertain to what extent the tractors should take the place of horses on his own farm; how much land and of what character and of what kind of farming would warrant the introduction of the tractor, as well as which of the 20 kinds of tractors present would be best suited to his own needs.

One of the older farmers with whom I talked, who was farming 800 acres, still hesitated to enter upon tractor farming, thinking that it was for even larger farming operations than his own, while a younger man who was not farming as many acres declared his belief that during this year he would save nearly enough to pay for the tractor if he did not have to buy expensive feed for his horses; that one farmer told him that his plowing with a tractor cost 41 cents an acre, while with horses it could not be done for less than $1 an acre.

All sorts of opinions were expressed, but everybody wanted to know.

I was talking with one of the machinery men H. E. Caldwell of the Holt Manufacturing company. Mr. Caldwell was brought up in the farm implement business, his father being one of the pioneer implement men of Portland, Ore. He tells me that in the early days, not so very long ago, the Palouse hills were declared to be out of the question as farming land; that certain favored spots lying comparatively level were taken up as farms. Gradually the incoming settlers plowed the land higher and higher up, until pretty nearly all of the country is under the plow. A similar problem is now being carried out. It has been deemed that only level spots can be successfully cultivated by power machinery, and yet these machines are advancing upon steeper and steeper grades. However, Mr. Caldwell himself says he does not believe it practicable, while it is possible, to plow 55 per cent grade with even the Holt Caterpillar.

The following were the exhibits at the tractor demonstration:

**Tractors.**

Avey tractor and cultivator, Hodson Feenaughty company, Spokane.

Aultman & Taylor, Aultman & Taylor company, Spokane.

Moline Universal, Oregon Moline Plow company, Spokane.

C. L. Best, Farm Motors company, Pullman.

Case, J. I. Case Threshing Machine company, Spokane.

Cleveland tractor, McNeff Tractor company, Portland.

I. H. C.-Titan, International Harvester company, Spokane.

Waterloo Boy, Deere Plow company, Spokane.

Monarch Neverslip, Mitchell, Lewis & Staver company, Spokane.

Advance Rumley Oil Pull, Advance Rumley company, Spokane.

All-Work tractor, Freeman & Sons, Portland.

Lauson, T. G. Young, distributor, Spokane.

Trundaar, Larson Bros., Spokane.

Russell, A. H. Averill Machinery company, Spokane.

Holt caterpillar, Holt Manufacturing company, Spokane.

Samson Sieve Grip, Eldridge Buick company, Spokane.

Yuba, Yuba Manufacturing company, Spokane.

Twin City, Seiler Machinery company, Spokane.

Four-Drive, Snyder Motor company, Spokane.

Bean Track Pull tractor, Bean Spray Pump company, San Jose, Cal. Spokane.

Nilson tractor, Nilson Sales company, Portland.

**Auto Trucks.**

Duplex Four-Drive, Northwest Auto Supply company, Portland.

Garford, Western Motor Truck and Tractor company, Spokane.

Federal, Oldsmobile Auto company, Spokane.

Velie Grain Tank truck, Interstate Auto company, Spokane.

Maxwell, Floyd J. Logan, Spokane.

G. M. C., Eldridge Buick company, Spokane.

Packard, John Doran company, Spokane.

Republic, Auto Sales and Service company, Moscow, Idaho.

Nash, Fosdick Auto company, Spokane.

**Gang Plows.**

P. & O., Parlin & Orendorff, Spokane.

Oliver, Oliver Chilled Plow company, Spokane.

Deere, John Deere Plow company, Spokane.

Vulcan, Mitchell, Lewis & Staver company, Spokane.

Moline, Oregon Moline Plow company, Spokane.

**Gas Engines.**

Fairbanks-Morse, Fairbanks-Morse & Co., Spokane.

Fuller & Johnson, Hughes & Co., Spokane.

Novo, Hofius Steel and Equipment company, Spokane.

**Farm Lighting Systems.**

Edison, Nixon & Kimmel, Spokane.

Swartz, Swartz Electric company, Spokane.

Lalley, Garbe Motors company, Spokane.

Western Electric Power and Light plant, Western Electric company, Spokane.

Fairbanks-Morse, Fairbanks-Morse & Co., Spokane.

Delco, C. P. Michaelson, Pullman.

**Farm Water Systems.**

Leader, Hughes & Co., Spokane.

**Threshers.**

McCormick Combine, T. C. Martin, Pullman.

American Pea and Bean Thresher, T. C. Martin, Pullman.

Russell Pea and Bean Thresher, A. H. Averill Machinery company, Spokane.

**Other Exhibits.**

Garden City Feeder, M. M. Preston Machinery company, Moscow.

Smalley Ensilage Cutter, T. C. Martin, Pullman.

Rude Spreader, Parlin & Orendorff company, Spokane.

Western Land Roller, Freeman & Son, Portland.

Puritan Motor Oil, Pure Oil company, Spokane.

Monogram oils, Kilmer & Son company, Spokane.

Zerolene, Standard Oil company, Spokane.

Reliable Drag Saw, Hofius Steel and Equipment company, Spokane.

Sheldon Concrete Mixer, Hofius Steel and Equipment company, Spokane.

Colfax Wagon and Truck Loader, Colfax Manufacturing Co. Colfax.

Champion Spark Plugs, Chanslor & Lyon company, Spokane.

**J. B. Davidson, head of the department of agricultural engineering of the University of California, conducted dynamometer tests to ascertain the draw bar pull of the plows drawn by the different tractors on all types of land. Mr. Davidson was assisted by E. J. Stirnaman, recently from Iowa, and just added to the state college faculty. The tests were to show the draw bar pull of**

## Only One Profit Allowed

The federal authorities have undertaken to eliminate what has been a grave evil in the feed situation in this country, namely, all dealers' profits except one. The food administration points out that last year, as an illustration, most of the mills had oversold their output, making it necessary that dealers should buy one from the other. In one case that is cited, several hundred tons of feed changed ownership seven times before it finally reached the farmers who wished to feed it to their stock. The farmers who bought it paid each one of the dealers a profit, making seven profits instead of one.

Under the regulations being put into effect by the food administration now only one wholesale and one retail profit are permitted. If feed passes through more than one wholesale and retail establishmen the profit, as limited by the administration, must be devided among them. Another point in the regulation is that where either the wholesaler or the retailer may be eliminated in a transaction, the particular profit that such dealer would have been allowed may not be claimed by the other dealer in addition to the one which he is legally allowed.

This is but an instance of the problems that confront the federal government as it faces the task of regulating the necessary industries of the country during the war. While there have no doubt been serious failures or only partial successes in some of the regulations that have been adopted, the sincerity and determination of the food administration can scarcely be questioned.

## Give the Past a Square Deal

The past is a guide if we know how to use it properly; if we do not use it properly it may be a stumbling block. For instance, suppose we say: "I made no money on potatoes last year, therefore I will never plant potatoes again." This is not giving the past a square deal.

We should examine the evidence of the years gone by very carefully before we form a judgment on them. We know of some men who are shrewd in this respect, for, following an overproduction, they plant the crop sown too lavishly the previous year, believing that so many will be discouraged by previous experience that there will be a shortage.

## Greater To Be American Farmer

An enthusiastic patriot exclaimed, "Oh, it's great to be an American." Then, looking at the recent government crop report, he added, "But it's greater to be an American farmer."

It is great to be a farmer in the United States—great in peace and greater in war. What finer or more inspiring thought could one have as he goes to his morning's work on the farm than the cheering knowledge that his production will help his country to win the war; that his grain may go into the army ovens in France to feed the heroic soldiers who are holding back the Huns; that food from his acres will drive hunger from many a door?

That inspiring thought should be given meditation by every farmer every day, and by every working member of his household. It will make a joy of toil and serve to dispel the weariness at evening time. N. W. D.

## Genuine American Foods

The western hemisphere has made a number of notable contributions to the world's foods and they deserve consideration.

Perhaps the best known is the American grain, corn. No more remarkable plant grows anywhere. Tropical by nature, it has been adapted to climates hot and climates cold, wet and dry, high and low, and it has few rivals as a feed or food. It bears heavily per acre and does not deplete the soil to the extent that some other grains do.

The potato, which some say is the mainstay of our great enemy, Germany, grew wild in both North and South America before Columbus made his discovery. Whole nations have been saved from starvation because of the productivity and nourishment of the potato, and probably there is no cheaper food grown nor one more generally satisfactory.

We do not want to start an old controversy raging again, so it does not make any difference whether the tomato is a fruit or a vegetable, but most people will admit its value from a dietetic point of view. Against prejudice it fought its way until today it stands high as a valuable addition to the table, not for a sauce, but as a food of value. Cooked or raw, fresh or canned, alone or combined with other foods, it is of fremendous value.

While few domesticated animals originated in this country, one fowl of great value was found wild in the Americas—the turkey. This fowl has not been developed as much as it deserves, but we have confidence that this will come.

With such valuable originals improved as greatly as they have been, would it not be a good thing if we turned our attention to them and used them both as a matter of pride and patriotism and also as a combined duty and pleasure?

---

"I CAN'T eat wheat; it chokes me!" was the response made by a woman to one of the war workers who spoke at the recent food conservation conference in Spokane. That woman caught the spirit behind the fact that the only way to make good our promise of wheat to the allies who are fighting our battles is to stop eating wheat ourselves until the next harvest.

WE are responding to the appeal. We have shipped 110,000,000 bushels of wheat to Europe, where normally we would have shipped only 30,000,000 bushels. But we must respond yet more. We must ship 50,000,000 bushels more between now and August, where, normally, we would ship none.

IT takes no longer to light a cave that has been dark a thousand years than to light a room that has been dark only five minutes. It takes no longer for truth to dispel an illusion that one has labored under for years than one of an hour's standing.

GET ready to celebrate July 4, but not in the usual wasteful, thoughtless, sport-loving manner. Reaffirm devotion to the principles of liberty. July 4 should be a day of sacrifice this year.

A SCHOOL girl writes that she has figured out exactly how many vegetables she will eat during the year, and is going to raise at least that many. That's real patriotism.

THE kaiser is just as much pleased when we Americans eat or waste wheat and meat as when one of his submarines sinks a cargo of them.

WE risk nothing when we eat wheatless meals, but the soldier who is fighting our battles risks everything.

## What Is This Urge?

What is that which causes the child to become dissatisfied with its crib, its bed, and the furniture in its room, since it is there that food, shelter, clothing and all physical wants are supplied?

Why does it tire of its toys, long to be out of doors and to become acquainted with grasses, shrubs, trees, animals and things?

At first it seemed a little animal with only sense desires. Later it seems an intelligent creature, longing to acquire, to know and to be.

It starts out to acquire and to become the possessor of things which have a money value and which are called wealth. But no amount of wealth satisfies and something urges it on to greater accumulations. What is this URGE?

Sometimes wealth is sacrificed for power; but the men who have reached the greatest heights of human power have not been satisfied, as the histories of Alexander, Caesar, Napoleon and others prove. What stimulated the desires of Caesar and Napoleon to become world rulers and Alexander to weep for other worlds to conquer? Had Alexander lived in this generation and been compelled to meet the conditions of modern warfare, with chemical appliances, explosives, mechanies, machine guns, aeroplanes, submarines and other scientific inventions, he probably would have had a task equal to his ambitions; but even then his ambitions would have been proportionately greater, for there is in man progressively enlarging ideals, insatiable longings, a desire to transcend all limitations to conquer the unconquerable; to know the unknowable and to create by putting into concrete form whatever his imagination conceives. What is it? G. L.

## War Argument Prevails

For more than a generation the liquor business has been gradually losing in the fight against prohibition. Since the war a new argument has been advanced that can not be met with any logic, facts or figures yet presented. This argument is that in the emergency of the war we can not afford to take one billion dollars' worth of food products per annum and manufacture them into liquors when millions of our allies in Europe are underfed and thousands of families starving. Some say a billion dollars is an overestimate; but others say it is an underestimate. No matter whether the figures are strictly correct or not, the fact remains that a large amount of food products each year in the past has been manufactured into alcoholic drinks of different kinds, and from the viewpoint of the prohibitionist worse than wasted, because it devitalizes and demoralizes the great army of workers as well as of fighters.

## Your Farm Service War Flag

Designed by The Washington Farmer in connection with The Oregon Farmer and The Idaho Farmer for the farm homes increasing food production to help win the war. The large star in the center is for the farm home. Small stars may be added for every farm worker in the family—man or woman, boy or girl.

# Germany Makes Drive on Paris

## *Allies Stubbornly Resist Formidable Attacks of the Huns*

For the second time since fateful August, 1914, the Germans and Austrians are driving toward Paris, with the capture of that city, the French capital, as their evident purpose. The first drive was at the very opening of the war nearly four years ago, when Paris was saved by the heroic stand of the French on the River Marne. Again the battle is on the Marne. Can France and her allies again stop the oncoming horde of Teutons? That is the question that the whole world is seeking to answer.

At the present time indications are that the drive has been almost if not quite checked by the allies, who are making a stubborn resistance. Little ground has been gained anywhere since last Saturday.

Conditions are different now than when the first drive was made. Then Germany's aims were not so sweeping. She thought a quick drive on Paris would result in that city's capture and a general victory for the central powers. Now she is fighting the entire world, and the battlefront is something like 200 miles long. This is both an advantage and a disadvantage to both sides. Germany can not concentrate her whole efforts on Paris. The allies can not concentrate their whole effort in defending that city.

It is an admitted fact that Germany and Austria have the allies far outnumbered in fighting men now. It appears that General Foch, supreme allied commander, is calmly giving ground, declining to enter into mortal battle with the enemy while the scales are unevenly balanced. It appears that his purpose is to take the greatest possible toll from the enemy with the least possible loss to the allies, preferring to give even large territorial concessions rather than suffer an actual army defeat now. In the meantime, the allies can build up faster than the Germans. America is coming forward strong and rapidly. If the invaders can be kept from victory for a year there seems every evidence that the man power of the allies, with perhaps 2,000,000 or more Americans added by that time, can be made to equal that of the enemy. Then, but not until then, it would seem sound policy for the allies to make either a firm stand or begin a real offensive. If Germany can be kept out of Paris and out of the English channel ports until winter she is forever defeated. Next spring the allies will be in position to strike back.

In the meantime, however, there is the ever present possibility of a psychological breakdown somewhere—a breakdown of morale. Somewhere, possibly in France, possibly in England, possibly in Italy, Austria, Germany or even in the United States, the people may become panicky or lose their judgment, as did the people of Russia. This war may be won or lost in a day or a night. Let France lose self-control this week, with Germany at her doors pounding away for admission, and next week Germany will be ravaging that city. On the other hand, let Austria suffer the internal conflict that is threatening there and the central powers would be so greatly handicapped that further offensive might be impossible. It therefore becomes of utmost importance in every country that courage, nerve, grit and confidence be maintained.

During the drive of the last week the German and Austrian armies have advanced at some points nearly 20 miles nearer Paris. They are now within 45 miles of that city. The drive has been so terrific that some critics believe they will now or very soon dig in and rest for a while, during which they can rebuild and concentrate their powers for a renewal of the offensive. Others believe that no cessation will be permitted until Paris is reached or the invaders are defeated by the allies on the battlefield. By the time this writing reaches the readers something to clarify the situation may have occurred.

### Submarines Raid U. S. Coast.

At this writing it is known that eight vessels have been torpedoed and destroyed by German submarines within 200 miles or less of the Atlantic coast within the last few days. The shipping tonnage lost, and the number of lives lost in these sinkings is reported to be slight. Most of the vessels were small. Most of the crews were saved. No transports were sunk. The principal vessel destroyed was the Carolina, having on board 220 passengers and 130 crew members, and having a tonnage capacity of 8000.

It is believed that the submarines have been directed to the United States coast to try to break up the transportation of troops to France, but no troop ships have been attacked because of the special protection given them by the navy. Secretary Daniels of the navy says there is adequate protection, and that there need be no fear of any serious interference with even merchant shipping. It is reported at this time that one of the submarines has been captured, and the navy is making a campaign against the menace.

### Expenses of War Are Stupendous.

It will cost the United States approximately $23,000,000,000 to play its part in the war during the coming 12 months, according to the best estimates that officials are able to compile. During the last month about $1,500,000,000 have been expended, including the loans made to this country's allies. Approximately $11,000,000,000 will be required during the six months from July 1 to December 31, according to the estimates, and when President Wilson addressed congress recently on the raising of war revenue he indicated that the greater part of this amount would have to be raised by a fourth Liberty loan bond issue sometime during the coming fall. Congress begun legislation for the raising of this enormous war revenue by the passage last week in the house of representatives of the bill appropriating more than $12,000,000,000 for the financing of the army during the coming year. The measure has been presented to the senate, which is expected to take action upon it in the near future. It also carries a provision authorizing the present call into the service, under the draft regulations, all the men that he and the war department consider necessary for the prosecution of the war. It contemplates the raising as quickly as possible of an active army of at least 3,000,000 men.

President Wilson has made a special appeal to congress urging that body to take adequate action on revenue measures before adjournment for the summer vacation. The funds which he asks to be appropriated for military purposes are the greatest ever known

### National Thrift Day Is Named.

For the purpose of increasing the economic thrift of the people of the United States and at the same time make more efficient the government's war machinery, President Wilson has officially designated June 28 as national thrift day. In a message to the American people he urges them to cease purchasing things that are not essential to their welfare and to bend all their financial efforts toward the winning of the war. "This war is one of nations—not of armies," says the President's message, "and all of our 100,000,000 people must be economically and thoroughly adjusted to war conditions if this nation is to play its full part in the conflict."

### Shipbuilding Is Being Rushed.

Director Charles M. Schwab of the United State shipbuilding division, has announced that there are 700,000 men employed in the shipbuilding industry of this country. Half of these men are actually working on ships in the yards and the remaining half are working on accessories or the equipment of vessels. During the month of May the director's report says the United States built and put into commission new vessels having carrying capacity of 250,000 tons. Contracts let during one recent week for the building of ships totalled $250,000,000.

### Greater Sacrifice Is Urged.

Food Administrator Hoover has issued a special appeal to the American people urging greater sacrifice in food conservation during the coming year. He says that during the year 1917 consumption of the staple foods needed by the armies was reduced in this country about 7 per cent and he urges that it be reduced 15 per cent during the coming year, which he says can be done without harming any one. The food administrator says that as a result of the efforts made by the American people, the allied food situation is improving, while evidences that he has at hand indicate that the situation in Germany is becoming more serious.

### Workers Must Not Strike.

Director General McAdoo, in charge of the railroads under government control, issued a strong statement to railroad employes last week following the strike of a number of shop men at Alexandria, Va. Mr. McAdoo pointed out that the railroad workers are today employes of the government and that any strike by them is a strike against the government. "The government can not be coerced or intimidated by any of its employes," said Mr. McAdoo, and later in his statement he said, "While in the German drive now going on the sons of railroad men and the sons of Americans of every class are dying on the battlefields of France to save America and democracy in the world, shall there be found among us any man or set of men who are unwilling to sacrifice something of their personal views and individual desires to support America's heroes who are making the supreme sacrifice for us?"

The shop men at Alexandria struck because they were dissatisfied with the increase in wages announced recently by the director general of the railroads. The increase announced was such as to make a total to all the employes of the railroads of approximately $300,000,000, an average of something like $150 a year each.

# Protest Without Delay

## *Boosted Railroad Rates Unwarranted*

**Protest to your senators and representatives in congress! Protest to Secretary McAdoo! Protest to your state railway commission!**

As forecasted by The Farmer last week, Director-General McAdoo has issued an order raising freight rates 25 per cent. But Mr. McAdoo recognizes the right of appeal, apparently realizing that a general and undiscriminating order of this drastic nature will impose injustice on many interests and communities.

As pointed out last week, the producers of the Pacific coast, and particularly the farmers of the Pacific northwest, will suffer gross injustice unless this order is greatly modified.

The government has taken over the operation of the railroads under a plan that guarantees their owners reasonable profits. If the earnings are insufficient to meet the guarantee, the deficit will have to come out of the United States treasury. To make the railroads self-sustaining, Mr. McAdoo says he must raise rates 25 per cent. If that vast increase is needed to make the roads self-sustaining, the public will not object, for Mr. McAdoo's proposition that the government should not bear the burden of the deficit is sound.

But the burden of the increase should be equitably distributed, and it is not equitably distributed under this order. Regions that are already supporting their railroads will be unjustly required, under this crude, rule-of-thumb order, to help pay the freight rates of other regions where the railroads are not self-supporting.

The Pacific coast is supporting its railroads. If the roads of the country in general were earning as much as the roads that serve the Pacific coast, there would be no need whatever of any increase in freight rates and fares. With the exception of the Chicago, Milwaukee & St. Paul, all the transcontinental railroads are enjoying a high degree of prosperity. Last week this paper analyzed the 1917 earnings of the Northern Pacific, the Great Northern and the Burlington. The Union Pacific system is even more profitable.

As an example of the way in which the Pacific coast is supporting its railroads, we now have the record of

(Continued on page fifteen.)

## *Coming Events*

June 4-7—Convention, Washington state grange, Walla Walla, Wash.
June 12-14—Convention, county school superintendents, Ellensburg, Wash.
August 19-25, national encampment, G. A. R., Portland, Ore.

**Fairs, Shows, Exhibits.**

September 2-7—Spokane Interstate fair, Spokane, Wash.
September 16-21—Washington state fair, Yakima, Wash.
October 1-6—Western Washington fair, Puyallup, Wash.
Nov. 7-13—Northwest live stock show, Lewiston, Idaho.

**Live Stock Sales.**

June 11, Jerseys, C. H. Cannon, Turner, Ore.
June 12, Jerseys, W. O. Morrow, Independence, Ore.
June 26, Guernseys, E. R. Brady, Satsop, Wash.

## *Washington Gleanings*

The farmers' cooperative creamery at Centralia has employed R. W. McKie as buttermaker.

A new mill is to be built by the Northwestern Lumber company at Hoquiam in place of the one recently burned down.

Henry Steve, a successful Indian farmer of Marysville, has purchased a fine registered Guernsey bull for his herd.

William T. Tract, a stallion breeder of Kennewick, is improving his farm, and will have quite a wheat crop this year.

The Dewey postoffice has been discontinued, and residents of that section will hereafter be on the rural route from Anacortes.

The Skagit County Fair association is arranging for the holding of its farmers' annual picnic on the fairgrounds at Burlington, July 4.

Between 30 and 40 high school students of Bellingham will work in Alaska this summer for the Pacific-American fisheries at $70 per month and board.

D. G. Goodman of Yakima donated 40 acres of Naches valley land to the Red Cross, which was auctioned and the cash turned in to the Red Cross fund.

The Grays Harbor district is shipping better than 100 carloads of lumber daily to outside sections. Much of the stock moving is spruce for airplanes and fir for shipbuilding purposes.

When the steamer Franstand sets sail from Tacoma, June 9, six women oilers will be in the crew. The Franstand is a freighter plying between Hongkong, China, and Pacific ports, and will be gone six months.

J. T. Alexander, a well-known farmer of Chehalis district, has contracted to grow a considerable acreage of Boston marrow squash this season for a Seattle seed house. The yield of squash seed is said to run from 400 pounds up per acre.

E. E. Perry, district horticulturist, with headquarters at Chehalis, has been granted a leave of absence by the state to make a special investigation of the land settlement plan in force in California, wherein the state handles colonization plans.

Yakima Indians are ready and willing to go to war, according to returns made on questionnaires sent out by the exemption board and returned recently. Only a few unmarried ones claimed deferred classification, many saying "Want to serve right away."

After two years without a fair Walla Walla county, Washington, will again have an agricultural and live stock fair. Farmers are interested in the stock of the association to a greater extent than ever before, and it is believed a successful fair can be held.

C. W. McAllister, representative of the Portland Union Stock Yards company, says he thinks now is a good time to begin a movement to change our immigration laws. They have been too loose and carelessly constructed in the past and have not served the nation nor the immigrants themselves.

Last year Charles Hemmings of Puyallup planted his parking strip to potatoes. The parking strip measures 252x15 feet, and up to the time it was put into potatoes it was, of course, just so much waste land. The crop did splendidly throughout the season, and in the fall Mr. Hemmings sacked up one ton of fine potatoes, produced on this previously idle land.

A new department has been formed by the women's committee of the Whatcom county council of defense, to be known as the department of patriotic educational propaganda, and the object of the work will be to help mold public opinion in support of the government. The field of activity will be primarily that of women among women, though men speakers and mixed audiences will not be barred.

The idea that has been prevalent that the conservation of wheat after harvest would be less necessary than it has been heretofore is declared to be erroneous. The food administration is laying plans to conserve every kernel of wheat possible during the coming year as the success of the allies depends absolutely on the possibility of keeping the food rations of the armies adequate. Thousands of families throughout the United States are now living on a strictly wheatless ration.

Relative to the purchase of nonessentials, President Wilson says that "thoughtless expenditure of money for nonessentials uses up the labor of men, the products of the farms, mines, and factories and overburdens transportation, all of which must be used to their utmost and best for war purposes. I earnestly appeal to each man, woman and child to save constantly and buy as regularly as possible the securities of the government and do this as far as possible through membership in war savings societies.

# State Grange Is in Session

## *Big Problems Being Faced This Week at Walla Walla*

### Master Bouck's Address.

**On page 16 of this issue is a digest of the address of Master William Bouck before the state grange convention now in session at Walla Walla. As the Farmer goes to press the convention is dealing with important problems. Next week's issue will contain a comprehensive report written by a special representative of this paper, who is attending the session.**

For the thirtieth time the Washington state grange is in annual convention, and never before has it faced greater problems nor greater opportunities to be of service, not only to its own members and the agricultural interests as a whole, but to the United States and to the world. How best to serve in the present world crisis is the great question in the minds of the several hundred delegates at Walla Walla this week. One of the problems that is being threshed out, both in session and out, is how to effect the greatest speed in producing the food that the allied armies must have to win the war from mankind's enemies.

The program has several speakers of note, among them, in addition to Master William Bouck and other state grange representative, George P. Hampton, representative of the grange at the national capital; Roy McKaig, master of the North Dakota grange and active in the Nonpartizan league; President E. O. Holland of the state college of Washington, and President S. B. L. Penrose of Whitman college.

The election of officers is an important matter to be settled before adjournment, both a state master and a state overseer being up for election.

In interest perhaps only second to the demands of war in the considerations of the grange is the matter of its relation to the Nonpartizan league. Whether or not the convention will indorse the league is not known at this writing, but in view of sentiment expressed officially in both the Agricultural Grange News of this state and the National Grange Bulletin it is hardly considered probable that official indorsement will be given. Under the title of "The Grange and the Nonpartizan League," the Grange News in its last issue says editorially:

"While the grange has always been nonpartizan in its principles and has always stood for the idea that in nearly all of our elections parizan politics is not necessary, but is, rather, detrimental to the best interests of the voters, by placing party above principle, yet we have always been warned to be careful to keep political discussions out of the grange, so, while many farmers, including, in many instances, members of the grange, have combined themselves in the nonpartizan league, in order to more effectively carry out the principles of nonpartizanism, and they are apt to feel that the grange is a proper place for the boosting of the league. In this we believe they are wrong, for although many of us are strictly nonpartizan in our political leanings, yet we have in our midst many who are just as conscientious in their belief that party politics are essential to true government as the rest of us are that parties are unnecessary appendages, and as there are so many questions of vital importance on which we can all agree and unite it is hardly wisdom to risk inharmony in our grange and thus weaken our influence in the many questions on which we should all be united.

"We believe that it is unwise to bring the question of the nonpartizan league into the grange. We, as individuals, may be as active as we desire, in both organizations, but let us keep the two separate and distinct, even though we feel that in many ways their aims are the same."

Expressing the same sentiment, but more strongly, the National Grange Bulletin for April says:

"Some of the best friends of agriculture in the United States, who have proved by their works that their devotion to its welfare is sincere, are seriously disturbed over the spread of a movement in the northwest which bears every indication of containing a positive menace to the highest progress of the real farmers of the country, and which is destined to injure the very cause which it professes to espouse.

"Reference is made to the so-called farmers' nonpartizan league in several of the states in the northwest, which by whirlwind methods, by extravagant promises and by radical pronouncements has been gathering great momentum in some sections, while the movement is also gaining a foothold in some of the eastern states. The very nature of the new organization does not point in the direction of permanence, nor does it contain those elements of strength that assure any abiding service to the farm people in any state; while the unfortunate entanglements this organization has permitted with those whose purpose is clearly to undermine the American government to reduce its fighting efficiency and to give aid to the enemy is an indictment against the nonpartizan league from which it can never clear itself in the estimate of patriotic, red-blooded American citizens, farmers and otherwise.

"If the nonpartizan league has not actually surrendered itself to disloyal practices, it has at least trifled with its reputation to a degree sufficient to put it under suspicion in the eyes of every true American.

"But the chief purpose of this article is to make clear that the grange is not identified in any way with the nonpartizan league and that the grange stands sponsor in no way for its principles or its results. Efforts that have been made, in countless cases, to so entangle the grange should be repudiated at every point, for the grange and the nonpartizan league are moving from absolutely different viewpoints and have no common basis. The grange was here, doing valiant service for the farm people of the United States, long before this new movement of the northwest was ever dreamed of, and it may still be here after that movement has been forgotten.

"The grange is nonpartizan in the true, broad sense. Its service is unselfish and continuous for the farm interests of America. The grange seeks no class legislation or special favors for farmers, simply because they are farmers, but names as its supreme ideal 'The greatest good to the greatest number.' The grange is absolutely loyal to its goyernment and tolerates within its meetings and among its leaders no spark or even the suggestion of disloyalty. On these four decisive issues the grange and the nonpartizan league are as wide apart as if oceans separated them. Let this fact be here and now made clear to every one, that whatever may be the future of the nonpartizan league, no responsibility for that future rests upon the grange or upon the real leaders of the grange. As the two organizations go on, the fruits of each shall prove it, of what manner it be."

Preliminary reports from Walla Walla indicate one of the most valuable sessions in the grange's history in this state. The local grangers, assisted by the Walla Walla Commercial club and private citizens, have done everything to make the gathering successful and pleasant from the standpoint of entertainment and conveniences. Officers of the grange and committee heads arrived on the grounds early and had everything in readiness when the session opened Tuesday morning. As indicated in Master Bouck's address, as reviewed on another page of this issue, the statistical report shows notable activity on the part of the order during the last year

# Tractor Plowing Draws Crowds

(Continued from page three.)

the plows drawn on different slopes and on different kinds of soil, thus ascertaining the amount of power necessary to pull the plows under different soil conditions. The figures showing the draft of the plows follow:

Three 14-inch plows, 8½ inches deep, north slope, draft 1390 pounds, draft per plow 463 pounds.

Three 14-inch plows, 9 inches deep, south slope, draft 1465 pounds, draft per plow 488 pounds.

Two 14-inch plows, 9 inches deep, south slope, draft 1080 pounds, draft per plow 540 pounds.

Three 14-inch plows, 8 inches deep, south slope, clay soil, draft 1815 pounds, draft per plow 605 pounds.

On my way to the demonstration with a party of friends we drove out to the Miller ranch from Thornton and saw a 75 Holt Caterpillar with nine 16-inch bottom plows easily and successfully turning the summer fallow at the rate of 25 acres a day with two men on the machine. There was no display about it, there was no demonstration in it. This was simply doing farm work without horsepower and with a minimum of manpower. I think they said it would have taken 40 horses to do an equal amount of plowing. In fact, while on the way we noticed other farmers plowing with eight horses and having only two bottom plows.

Too much credit can not be given Professor J. P. Fairbanks of the farm engineering department of the State college, who was in charge of the details of the demonstration, nor for the foresight of President Holland of the State college, which permitted the inauguration of the enterprise, and for his hearty support, which made it possible. The tractor men themselves lent every assistance, and all were indebted to the experienced advice of A. E. Hilderbrand, manager of the national power farming demonstrations. This big association authorized this show and promised that no others will be held in the state this year under its auspices.

C. A. S.

### Grow Grain on Lowlands.

Reports from Cowlitz county in southwestern Washington indicate that some of the newly reclaimed lowlands of that district will this year produce excellent crops of wheat and oats. Near Kelso approximately 1000 acres have been added to the grain producing acreage through the formation of diking districts. The weather for the last several weeks has been ideal for the planting and growing of the crops and in some instances yields running well up towards those of the far-famed Skagit valley of northwestern Washington are anticipated.

### What to Produce Is Big Problem.

In view of the government restrictions on the use of wheat for poultry feed, as well as for feed for other live stock, Commissioner E. F. Benson of the state department of agriculture urges upon the people of the state the production everywhere possible of some wheat substitute for feed.

"Chicken feed should be grown wherever possible," he says. "Small tracts, strips along the fence rows or ditch banks will produce sunflowers, milo maize, sugar beets or some other feed for chickens or pigs that will relieve you of the necessity of buying for your own stock.

# Washington Boys In War Service

From The Twice-a-Week Spokesman-Review.

**ALLEN SMITH, Reardan, Wash.**— Enlisted in company C, 162d infantry, and is now helping to rid the earth of German militarism "somewhere in France." Private Smith was working on a ranch near Reardan before enlisting. His parents are Mr. and Mrs. J. J. Smith of Kiona, Wash.

**C. F. SAYLES, Dixie, Wash.** — Enlisted at Walla Walla, October 4, 1917, with the 146th field artillery, battery E. At present he is attending the army engineering school "somewhere in France." His parents, Mr. and Mrs. W. H. Sayles, reside near Dixie, Wash.

**ELMER M. SHEDD, Bryan, Wash.** — Entered the naval service August 2, 1917, and is now training on the receiving ship U. S. S. Philadelphia, Puget sound, Wash. He lived, before enlisting in the navy, with his parents, Mr. and Mrs. J. W. Shedd, on a wheat ranch near Prosser, Wash.

# Summer School

## Gives Six Weeks to Farm Studies

"Four-thirds of the American people depend on agriculture—one-third as producers and three-thirds as consumers," is the way that Frank O. Kreager puts it. Mr. Kreager has charge of the Puyallup summer session of the State College of Washington. With regard to the agricultural studies at the Puyallup summer school Mr. Kreager significantly adds: "Six weeks is only a beginning; but six years or six centuries without a beginning is nothing." Here is another paragraph:

The untrained farmer in the future will not be a farmer; he will be a day laborer. Only the trained man will have an earning power able to command the capital necessary to operate a farm. When land costs $500 an acre, only the trained man can pay interest on the investment. In the past every American, whatever his parentage or wherever his birth, was born owner of a farm. He had but to go west and settle on it. In the future only the trained—or the rich, can acquire land. Land owned by the rich and farmed by the poor is a national calamity. One-third of the coming generation must be trained, highly trained, for agriculture.

At the Puyallup summer school there will be courses in

Horticulture and gardening.
Soils, crops and farm management.
Live stock and dairying.
Poultry raising.
Agricultural economics.
Bee keeping and rabbit raising.

The class in gardening will be limited to 27 people. Twenty-seven small gardens have been plowed and planted. These gardns will be in midsummer growth June 25 when the summer session opens. A garden will be assigned each student to cultivate during the session. Another plat will be given each student to prepare, plant and cultivate the first six weeks of growth.

# Public Sale Best

## Shorthorn Breeder Try Experiment

**By R. A. BALCH, Assistant Sales Manager Day & Rothrock Company.**

The demand for purebred Shorthorn cattle this spring is the greatest the breeders of the northwest have ever experienced. Foundations are being laid for new purebred herds of both milking and beef type Shorthorns, and herds already existing are being enlarged.

One might suppose that the people demanding this grade of cattle would prefer to go to the breeders' farms and made their selections and that money could thus be saved. This is not the case, however. The average seeker of good purebred Shorthorns wants to purchase where he can compare one animal with another; where he can make the different breeders compete for his patronage, and where he can meet and talk with the different breeders and other authorities on Shorthorns so as to get as much advice and pick up as much gossip and information as possible before making his selections and backing his judgment with his money. So he wants to purchase at a public sale. The same observer might be led to think that when the demand is unusually good the breeders would prefer to sell privately. This is also untrue. The breeder, like every other business man, has his problems of marketing. Private, individual sales mean that much time must be consumed in showing each prospect the herd. Then he goes away to another breeder to make comparisons of animals and prices and then to another, and then back to the first breeder he saw, and finally buys something from some one that suits him and at a price which seems to him to be right. It will thus be seen that the feature of competition is not eliminated by the private sale, but that the breeders are bidding against each other, whereas, at public sales the purchasers do the bidding. This is due to the fact that at private sales the breeders compete with each other on price only, whereas at public sales they compete on the merit of their consignments. Some animals that would sell at private sales would never be consigned to public sale to compete with consignments of other breeders. The competition of bidders at public sale is offset by the fact that at the private sale the breeder can set his price, while at the public sale he can not. But the purchaser sets his own price at both public and private sale and thus is protected by his own judgment at all times. Reliable statistics show that it actually costs the breeder more money to sell at private than at public sale, and the breeder has the additional advantage in the public sale of cleaning up all of his salable animals at one time.

Then there is the good fellowship

(Continued on page twenty-eight.)

# What I Have Learned in Raising Rabbits

Article No. 2---By JOE L. ASHLOCK.

I suppose there are many ways of keeping rabbits clean, and any way is good if it keeps them clean. One must use his ingenuity, and the means at his disposal. I chanced to have an abundance of clean, dry, bright wheat straw, and plenty of dry earth that was well pulverized. So, twice a week I spread half an inch or an inch of the dry, pulverized earth on the wood floor of my pens; and over this I scattered two or three inches of clean, bright, dry wheat straw.

Along with this went clean food in good variety, clean water in clean drinking pans that are kept bright, protection from animals that would give them fright—and children and grown-ups also—and constant watchfulness for cats.

The cats got 20 of my young rabbits almost before I knew they were about at night. Mornings, I would find the uneaten feet, heads, and fur of the young ones. These cats all at once fairly swarmed over my place, and having eaten my rabbits, kept me awake with their unearthly yowlings.

So, I set out a saucer of milk in which had been dropped a piece of cyanide as large as a pea. Any cat that drank as much as two tablespoons of this milk at once ceased yowling and eating baby rabbits. Cyanide is a deadly poison, and fed in milk this is almost instant death. Be very careful in handling it. Do not put the poisoned milk where the rabbits can get it. They may mistake it for water and drink of it.

My first cat was a huge, white rascal, a most repulsive looking creature with ears partly chewed off in many fights, and indications of mange or a similar disease about its mouth and neck. It was an act of charity to rid the neighborhood of such a creature. A big black cat with vicious claws and long fangs was the next.

I took pieces of fresh meat, inserted small bits of cyanide. Taken this way the poison seems not to act as quickly as when dissolved in milk; but from what I know of the deadliness of cyanide, I have no doubt that the cats that ate the fresh meat in my rabbit yard died before they got far from my place. In a night or two, cats ceased to roam and yowl and slay young rabbits in my back yard.

I confess that I put the poisoned fresh meat in my rabbit yard with some qualms; but, to my knowledge, rabbits will not eat meat. Anyway, none of my rabbits ever have suffered from eating poisoned meat in their runways, though I have excellent evidence that outlaw cats have suffered abundantly from this bait. It is better to keep such poisoned meat out of the pens for the rabbits may nibble at it.

### Pens Four Feet Square.

I now have my does with young shut up in pens, each doe having a space about four feet square. This is more than they often are given, but not too much, I think. The bucks, young and old, are running in a pasture of alfalfa, bunchgrass and wild rose bushes 90 feet wide by 150 feet long. A situation of this kind is not available where rabbits are kept in city back lots, and, as a matter of fact, they get along very well in much less space. But when you have a large number of rabbits in a small space you have to clean out their pens, and the more you have in a pen, the oftener you have to clean it out. If they run at large in a pasture the problem of sanitation takes care of itself.

My small, half-grown bucks do not fight each other out in the open, though if they were penned together in a smaller space they likely would fight, especially those of different litters. The grown-up bucks fight if they meet each other in close quarters, but, apparently, by mutual consent, they have decided not to meet one another. The big New Zealand buck keeps in his preserve in the bunchgrass end of the pasture. The big Flemish Giant buck is often in the clump of wild rose bushes. Another buck, a cross of New Zealand and Flemish, stays about the buildings where the does are confined. The young bucks run at large through the preserves of the older ones. Now and then one of the old bucks grazes out into the ground held by one of the others, and they all come to a common watering-can; but, most of the time, each of the big bucks stays in his own camp.

I keep the rabbits in this pasture by a device which I think is a discovery of my own, and is one which, I think takes advantage of the psychology, or "thinking" of the rabbits; or, perhaps I should say the rabbit's lack of thinking. It is clear to me that rabbits do not think very much.

I have, first of all, a five-foot poultry wire fence with posts at intervals of one rod. This wire is not sunk in the ground to keep the rabbits from digging under it. Now, here is the trick: Another course of poultry netting 36 inches wide, is run inside the outer wire, 18 inches on the posts, and 18 inches on the ground. The part lying on the ground is weighted down with stones or heavy sticks.

### Digging Out.

Now, when the rabbit thinks of digging out, naturally it goes up close to the fence and tries to dig. At once it encounters the wire netting lying on top of the ground. They never think of moving 18 inches back from the fence and digging there, since they have at that point encountered no obstruction. It fools them every time. I have kept rabbits of different breeds and of all sizes in the pasture, and no one of them has ever solved the problem. They dig a few times, or try to, against the fence that stands upright, and then give up for good. Farther away from the fence they may dig all they wish, naturally, and never escape.

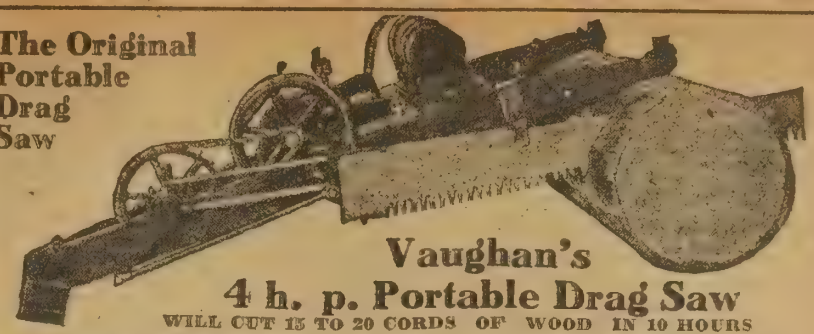
A summary of the things I have learned about rabbits in a year's study of them accompanied by many losses, each of which taught its lesson, should convey hints of value to boys and grownups who are without experience with this valuable meat-producing animal.

Housing quarters that are clean and dry, warm in winter, cool in summer, always well ventilated, but free from draughts, are a prime necessity. Feed that is clean, not spoiled, and in some variety, is necessary if the rabbits are to be kept growing and in health.

You may feed a rabbit alfalfa hay till it will eat no more, apparently having finished its meal. Throw it a turnip, a

(Continued on page thirty-one.)

## *Keep Rabbits Clean and Comfortable*



The time-honored saying: "Cleanliness is next to godliness," applies with force to rabbits. You may wish to know how this or that ailment of rabbits may be prevented. Answer: Keep them clean and comfortable.

In winter rabbits are comfortable when they are warm and dry in hutches or pens kept so clean that there is never the slightest odor in them. Along with this attention they should have the things a rabbit should eat which also should be clean; and the helpless little ones should be protected from cats.

A stray cat that sleeps under sidewalks during the day and forages at night when only thieves are abroad will scheme and plot for hours if there is the slightest chance to fasten its claws and fangs into a furry, fat, helpless little rabbit.

Have no mercy on cats. Not only will they kill your baby rabbits, but they will kill the birds. At all times, and certainly in time of war, rabbits and birds are more precious than stray cats and dogs. There simply is no excuse for allowing these thieving animals to prowl about your premises at night. If a cat or dog has a home and will not stay there at night, then it is no better than the outlaw animal that steals about in the dark and hides in brush piles, under sidewalks, or in deserted buildings during the day. Treat the runaway as you treat the outlaw.

The Original Portable Drag Saw

Vaughan's
4 h. p. Portable Drag Saw
WILL CUT 15 TO 20 CORDS OF WOOD IN 10 HOURS

Can be operated by one man. Two men can carry complete machine. 4 H. P. gasoline motor mounted on frame. One gallon gasoline required to cut 8 to 12 cords of wood. Engine can be used for other work without removing from frame. No gears, cogs, belts or pulleys. Friction clutch prevents breakage if saw pinches. Saw makes about 125 strokes per minute. Will cut any size log up to 6 feet. Sprockets and cranks, etc., made of cast steel. All working parts guaranteed against defects in material and workmanship.

Net cash price for complete machine as shown in cut, $160 f. o. b. Spokane and common points. FOR SALE BY

## MILK PRODUCTS.
### Their Increased Use in Army.

At the conference of the National Dairy Industry, held in Chicago, April 12 and 13, 1918, two sets of resolutions were unanimously adopted. Under the first set, attention was directed to the erroneous, but widely accepted public belief in the necessity of saving milk and its products; to the curtailed market due to lack of export shipping facilities and to the activities of manufacturers of butter substitutes; and to the necessity of educating the public to the unique place of milk in the diet of human beings—a place which scietnific experiment has proven can not be filled by any substitute. Following this preamble, the conference went on record as favoring a public announcement by the food administration encouraging the wise and liberal use of milk and its products. After pledging producers, manufacturers and distributors of milk products to demand only the cost of operation plus a reasonable profit during the period of the war, the conference farther asked that steps be taken to insure the use of butter in the army, rather than oleomargerine, that cheese be placed in the army food ration; that the formation and operation of cooperative associations of farmers be encouraged; and that a bureau of dairying be created by the secretary of agriculture.

The second set of resolutions called attention to the basic difference between storing milk products and such nonperishables as wheat and other grains. Because of the greater cost of storing butter, cheese, etc., the conference went on record as favoring such regulations and restrictions of the creamery and cheese manufacturing business as will encourage capital to finance production and particularly storing of butter and cheese and during the summer season of heavy production. "In view of the present situation," concludes this resolution, "we believe our food administration should do all in its power to encourage the investment of capital in the coming butter and cheese crop, to the end that we may accumulate the reserve stocks necessary to the future."

### What About Mill Feed?

To the Editor: In a reply to a dairy question in a recent Farmer you say: "I would advise you to eliminate the shorts, as it does not add anything to your ration except a price." How is this to be understood? I thought that bran and shorts were fed to cows in order to assist them in producing milk. A few lines above the quoted words you say: "For a grain ration feed one pound of apples to each three and one-half to four pounds of milk produced." Apples is certainly a misprint and should read bran or, as I supposed, shorts or barley or something, and then you advise eliminating shorts. Please enlighten me on this. E. S.

Answer—The shorts we get these days seem to be little but a mixture of middlings and bran and is not the same as the standard wheat middlings or shorts we used to get. Still we pay as much for it. Why do we feed bran? There are three reasons why dairymen use bran. In the first place it is rich in digestible protein, and it may be used to balance a ration rich in carbohydrates. Secondly, it is bulky and is used to lighten heavy feeds such as corn, barley, oilmeal, etc. Lastly, it has a beneficial laxative effect due to a certain phosphorus compound. Shorts has but one of these properties, namely, that of furnishing protein, and from that standpoint alone, we would never consider either bran or shorts, because we can buy protein much cheaper in the form of linseed oil meal, soy bean meal or other high protein feeds. Why then pay $2 or $3 per ton more for a feed that will not produce as good results as bran?

One word of caution must here be given. When changing from shorts to bran be sure to feed as much by weight of the latter as you did of the former if a comparison is going to be made. Bran is much lighter than shorts. Apples should be fed at the rate of about three and one-half pounds to each 100 pounds of live weight of the animal. Grain is usually fed at the rate of one pound of grain for each three and one-half to four pounds of milk produced.

## Cow Nets $20 a Month

"King's Roberta," the 4-year-old purebred Jersey cow of S. E. Gearhart, a highly progressive farmer, residing on his highly developed farm between Meridian, Idaho, and Boise, is said to yield her owner a daily revenue of $1, or a net revenue of $20 a month. "King's Roberta" produces 42 pounds of milk a day or about two pounds of butter. Her average butter production has been 60 pounds a month and her test is 5.10 per cent. Mr. Gearhart estimates that the expense of feed amounts to about $10 per head for each cow of his herd of nine cows. For a number of years, he has been engaged in the dairy business with high-grade cows, but he is now embarking into dairying with purebred cows only, and for the leader of his herd he has purchased a son of the champion Jersey cow of Utah, a bull of "The Noble of Oakley" type. "King's Roberta" is of the St. Lambert type. Mr. Gearhart, who ranks as one of the leading dairymen of the Boise valley, takes a very optimistic view of the future of the industry. J. R. S.

### Regarding Milk Goats.

I would like to get some information regarding milk goats, how much they will give and quality as compared to cows' milk and what it costs.—E. T. H. Hillsboro, Ore.

A government bulletin states that a doe that produces three pints of milk a day is considered only a fajr milker, two quarts is good and three quarts is excellent if lactation period is from seven to 10 months. Goat milk is similar to cow milk in constituents. The same authority states fat percentage from a mixed herd at from 3.2 per cent to 4 per cent. The fat globules are finer in goat milk and harder to separate. The feeds suited to cows are suited to goats; six to eight goats may be supported on what one cow requires. Goats are browsers by nature and prefer twigs and leaves to grass. For good returns goats must be cared for properly.

If you expect to go into business, we suggest that you write for Farmers' Bulletin 920, Department of Agriculture, Washington, D. C. The bulletin goes into the care of goats fully and in detail.

I AM enclosing 25 cents for one year for a new subscription to The Washington Farmer. I see you are awarding pennants for subscriptions and I want offer No. 1, the paper pennant.

## Reception for 3590 Visitors

The latest thing in dairy cattle promotion is a "family cow" campaign that was started by state dairy agents and some bank officials in Raleigh, N. C. Lady Ursine, a full-blooded Jersey, and her baby calf were pressed into service to add some real "cow interest" to the display that was held in the lobby of the bank. A comfortable stall with some bedding was set up on the floor in the main banking room and Mrs. Jersey Cow and daughter held a reception for the 3590 visitors who called. It was pointed out that one in every six families in the United States is cowless.

### IN EUROPE ALSO.

### Swiss Have Milk Price Trouble.

The dairy farmers and dairy products consumers of the United States are not the only people in trouble over the cost of milk. Word comes from Switzerland announcing considerable strife between the producers and consumers in that country. Milk is selling there in general at seven cents a quart, the report states, which the consumers consider exorbitantly high. The producers declare they can not make expenses at that price and are demanding an increase to nine cents a quart. The socialist organization of Switzerland is reported as declaring that if the price of milk is put at nine cents, whether the government assists in meeting the increase or whether the consumers have to pay it, it will call a general strike of business. The milk producers declare that unless the increase is allowed they will cease to produce milk. Under a government regulation the government itself has been paying the last increase in the milk price, the payment being something in the nature of a subsidy to the milk producing industry.

### Best Shorthorn He Ever Saw.

Giving some personal recollections in his charming manner before the National Shorthorn congress, Alvin H. Sanders of the Breeders' Gazette said: "My love for and interest in Shorthorn cattle was not simply acquired It was inherited. My ancestors all came from old Virginia, where in the valley of the south branch of the Potomac river the business of beef making from corn and bluegrass, with the aid of Shorthorn blood, first originated in this country soon after the close of the war of the revolution. It was Colonel Lewis Sanders who took over into Kentucky more than a century ago that high enthusiasm for good cattle that bore fruit in the first direct importation ever made from England into the Ohio valley states—the historic importation of 1817—and who founded in central Kentucky the first live stock show ever held west of the Allegheny mountains. My own father brought into the section of the state of Iowa in which I was born one of the first Shorthorn bulls—as well as the first Percheron horses—ever seen in that region. This must have been about the year 1868, and the impression made upon me as a barefoot boy in short trousers by that red yearling bull has never been eradicated. I think he cost $75, and in after years I knew he was a Bates-topped calf, bred by W. J. Neeley of Ottawa, Ill.—a distant relative of my father—who figures to some considerable extent as a patron of the American Shorthorn herd books of that period. You know there have never been any pies baked such as mother used to make, and so I am going to insist that this level, straight-quartered calf of 1868 was very much the best Shorthorn I have ever seen."

E. J. IDDINGS, Editorial Contributor

# "Walking Disease"

## Its Prevention and Its Cure

That the so-called "walking disease" which is more or less prevalent among horses in certain of the wheat growing districts of eastern Oregon and Washington is caused by an over-infestation of bots, is the conclusion arrived at by Dr. W. H. Lytle, state veterinarian for Oregon.

"In eastern Oregon from May until late in November the climatic conditions are such that the bot fly can live," says Dr. Lytle. "Inasmuch as the majority of eastern Oregon horses are allowed to inhabit pastures, it is thought that an unusual opportunity is thus afforded for a very long period of egg laying on the part of the botfly."

Whether this particular species of botfly carries a poisonous virus or whether the disease is due to poisonous byproducts thrown off during its life in the body of its host is not known. Mules apparently are immune to walking disease. If the number of infesting bots is kept below a certain point, the animal is able to resist their influence; beyond this point the victim is apparently overwhelmed by the products coming from the parasite.

"Prevention of the malady," continues Dr. Lytle, "hence depends upon getting rid of the parasites or at least the harmful number. This is best done by the administration of carbon-biulphide in two to three drachm doses, two hours apart, giving in all three doses, on an empty stomach. This drug can only be administered by means of capsules."

This treatment, which is to be followed 24 hours later by the administration of three drachms of tartar emetic in a pint of milk, should be given by a veterinarian. Where no vetreinarian is available, tablespoonful doses of flowers of sulphur, once or twice daily, followed by the tartar emetic treatment as above described can be safely administered, says Dr. Lytle. Certaain stock foods and tonics containing iron, arsenic, nux vomica, gentian, ginger, sulphur, foenugreek, resin, and nitrate of potash, when administered over a considerable length of time, seem greatly to aid in the expulsion of the bots and also in building up the resistance of the animal against the malady. When the disease has once manifested itself, however, the carbon bisulphide treatment or the flowers of sulphur treatment should be used at once.

Clipping or singeing the long hair from the legs, breast, and particularly from around the mouth and face, is helpful in preventing the laying of the eggs. Horses that are curried and kept in stables are quite free from attacks of walking disease.

# Values of Hog Feed

By E. L. Potter.

The extremely high prices of feed make it necessary that we give most careful attention to the matter of actual values. Some feed prices have increased more than others, hence, feeds which were once the cheapest are now out of reach, while others which were once considered high are now relatively cheap. This condition leads us to offer the following table showing the relative values of the common feeds in per centages. These values are not absolute, but apply within the ordinary ranges of feeding. Since ground barley is the staple feed of the northwest it is taken as a basis and its value figured at 100. The figures for the other feeds indicate their value in relation to barley.

Here is a table showing the values of 100 pounds of various feeds in terms of finely ground barley:

| | |
|---|---|
| Fine ground barley | 100 |
| Whole barley | 88 |
| Whole corn, dry shelled | 100 |
| Dry cornmeal | 106 |
| Ground wheat | 100 |
| Ground oats (not over one-third of the ration) | 100 |
| Middlings (for suckling pigs | 105 |
| Middlings (for fattening) | 87 |
| Oil meal (when added to a ration already balanced) | 125 |
| Oil meal (when used to balance the ration) | 200 |
| Tankage (when added to a ration already balanced) | 150 |
| Tankage (when used to balance a ration) | 300 |
| Skim milk (when added to a ration already balanced) | 15 |
| Skim milk (when used to balance a ration) | 30 |
| Rutabagas or turnips | 15 |
| Cottonseed meal | Dangerous |
| Corn silage | Not recommended for hogs. |
| Bran (suitable only for maintaining breeding stock) | 77 |

A ration of grain may be balanced with clover or alfalfa or rape pasture, or with skim milk, oil meal, or tankage. Where pasture is not used, 6 pounds of tankage, 10 pounds of oil meal, or 200 pounds of skim milk will balance 100 pounds of corn, wheat, or barley. Where prices are favorable larger amounts may be used, but it is seldom advisable, regardless of price, to feed over 10 pounds of tankage, or 15 pounds of oil meal, or 600 pounds of skim milk with each 100 pounds of grain.

There probably never was a time when the use of supplements was more profitable than now. The price of most of the supplements have gone up about one-half, while the prices of grains and mill feeds have doubled, or more.

## College Herd Head Sold.

Montana Terono, head of the Jersey herd at the Montana State college has been sold to R. E. Logan of Stevensville, Mont., who owns one of the best Jersey herds in the state. This bull was bought from the Hood farm at Lowell, Mass., and has been used the last four years on the college herd with good results. He is sired by Pogis 99th of Hood farm, whose sire Hood Farm Pogis 9th has more daughters in the advanced registry than any other Jersey bull.

The creaking of a door may be stopped by rubbing the hingers with a piece of soap. This does not spoil the look of the paint as when oil is used.

Uncle Sam Wants an Army of Calves

To make into beef, fats, hides.
Raise calves on Lilly's Calf Meal. It takes the place of milk because it has all the necessary elements for calf nutrition.
It is not only a scientific, but it is common-sense food, endorsed by Pacific Northwest dairymen everywhere. Dealers sell it.

Dr. S. B. Nelson

**Bag Is Swollen.**—Can you please tell me what to do for my cow? One front quarter of her bag has swelled up very much and is quite hard. She eats well, but does not seem to take on flesh. Have been milking her over a year. The swelling started just recently. A. H. S., Picabo, Idaho.

I must suggest that the treatment, mammitis, is a serious matter and takes considerable time on the part of some one. It requires the frequent bathing of the udder with hot water in which has been dissolved a handful of common salt. This pailful of water should be as hot as possible without burning the animal. Wash the udder until the water is cool, then rub dry and apply a little of the following liniment: Fluid extract of belladonna, two ounces; fluid extract of phytolacca, two ounces. Then massage. The application of this medicine should not be severe. In bad cases it is advisable to give a teaspoonful to a tablespoonful of the fluid extract of phytolacca morning and evening. Sometimes it becomes necessary to poultice the udder. Take about five yards of 7-cent or 9 cent, unbleached muslin, tear the ends into strips and tie these over the loins, so that the udder is supported in the bandage. Cut four holes where the teats of the udder should come through. Now fill in the poultice made of dried hop leaves. The leaves should first be pulled apart, then soak with hot water in order to keep the poultice hot. I have found that a Chinese hand warmer is very fine. This is a small tin box, in which tinders made of charcoal, rags, etc., may be burned, and which, when wrapped up in a piece of cloth and placed in the poultice, so as not to burn the cow, will keep the poultice warm from two to three hours. Frequently it is advisable to give the animal, at the beginning of the treatment, one pound of epsom salts in about two quarts of water.

**Mare Has Paralysis**—I have a 9-year-old mare, which I will use during summer. She was in a poor pasture all winter, suckled a colt as well, and when I got her 30 days ago she was covered with ticks and lice, just a mere skeleton. I find the right side of the mouth seems to be paralyzed while the left side seems normal. As the one side hangs loose and the other normal, the mouth appears to be drawn to one side. When I took her over I started her off on a quart of bran and a handful of third cutting alfalfa. In a few days I gave a quart each of brand and rolled barley, kept on gradually increasing up to date. 30 days after beginning she has gained 125 pounds, shed the old hair and is as slick as a mole, but no change in the condition of her mouth. She picks up grass or grain with her teeth instead of gathering it up with the lips. Can anything be done to overcome this condition? A SUBSCRIBER.
Hermiston, Ore.

Your made has a partial face paralysis due to a possible injury to one of the facial nerves. Friction on the side toward which the lips lead might be of greater advantage. Also you might give the mare 15 grains of powdered nux vomica on her feed once daily. After a week increase it to twice daily for a week and then go down again to once daily, and then let her have a week's rest. The entire treatment covers a month. Then repeat the treatment if you see any benefit from it.

**Apply Mechanical Contrivance.**—What can one do for a cow that sucks herself? This is her first calf and she does not do it all the time. We have to keep her tied up at night. Please let us know what to do for her? E. T., Omak, Wash.

The only thing that you can do to keep the cow from sucking herself is to put some mechanical contrivance on her, which makes it impossible for her to reach around and get hold of her teat. This may be done by putting a strap around the body, putting a halter on her head and then attaching between the front legs to the strap around the body and to the halter a stick, which will not allow her to get her head near the udder, but still will allow her to feed and drink and lie down.

**Milk Is Bitter.**—Can you tell me what is wrong and what will right my cow's milk? The heifer freshened 25 days ago and the cow seems healthy enough, but the milk is bitter when set for cottage cheese. A pan full leaves only a small handful of curds, which looks and works like wet papers and tough, rubbery stuff. It does not cheese at all. The cream is sweet for one day and then it gets bitter, too. Is the milk dangerous to use? J. T., Grangeville, Idaho.

Wash the heifer's udder thoroughly several times before milking with a 2 per cent solution of lysol. Rub dry. Also give her one pound of epsom salts in about two to three quarts of water. If the bitterness continues after this treatment you might try heating the milk before setting it away. The buttermilk is sometimes caused by a bacterium, and when that is the case the milk has to be heated to destroy them, and other times it is due to the food which the cow may eat, or to a little trouble in digestion, and the other treatment ought to remedy that.

**To Rid Cattle of Lice.**—What is the most practical way of ridding cattle of lice? A Subscriber, Ferdinand, Idaho.

The best way of ridding cattle of lice is by using a solution of any of the coal tar creosote disinfectants. Use them in accordance with the instructions which go along with the package. If you have only a few animals they can be treated by using a small spray pump. If you have a large number, then they should be dipped in a dipping vat. In order to destroy the eggs, as well as the mature young lice, it is generally necessary to make two dippings about 15 to 16 days apart.

**Little Pigs Die**—I have a Poland China sow that has 13 little pigs. She raised 10 of them to be nine or 10 days old and then two would die at a time, and two again, till now they are nearly all gone. They have what is called the thumps. What is the cause of this? Is it overfeeding the sow? I cut her feed down and she is losing them just the same.—W. P., Stevensville, Mont.

I am not able to form an opinion regarding the trouble that might have affected the little pigs and caused their death. It is possible, however, that the cause originated with the sow. The thumps is a condition affecting the diaphragm and is generally caused by overfeeding and to the collection of too much fat about the heart. It is not always that fat hogs have this occur, but some do. I can offer no suggestions except the possible one of raising the pigs by hand. Otherwise, I can give you no advice.

**Hard Lump in Teat**—Have a three-year-old cow, fresh the second time one week ago. In right front teat is a hard lump which obstructs the flow of milk. It is not stationary, but can be pushed up. Can get but a few drops of milk from that teat, which is now almost dry. Can this obstruction be removed? She is a good cow and I do not wish to beef her.—A Reader, Loomis, Wash.

Yes, a lump of this kind can generally be removed surgically. There are instruments made by the various instrument houses which can be inserted into the teat and the tumor removed. This operation must always be performed under absolute aseptic conditions. It would be difficult for you to do it yourself, unless you could possibly arrange for a veterinarian to stop in some time he is in your neighborhood. I am quite sure he could operate for you with good results.

**Trouble With Pigs:** One of my brood sows farrowed the 15th of February eight healthy pigs and one dead one which was decomposed, and one that died in a few minutes. The navel cord was black. Also had a gilt that dropped her pigs three months and 11 days. What is the cause? We have good shelter and pasture, also feed cooked potatoes and shorts. The pasture is dandelion and ferns. J. G.
Elma, Wash.

I am not able to diagnose what the trouble was that the sowe had with the newly born litter of pigs; whether it simply was an accident or whether there was some specific cause for it I do not know. Your description is too limited for me to be able to form an opinion and offer advice.

# How the Armies' need for meat was answered

IN a fighting man's ration, meat is the important item. Twenty ounces of fresh beef, or its equivalent, is called for daily.

To supply the meat needs of an army that was suddenly expanded from 100,000 to 1,500,000 is a tremendous task. Added to the needs of the Allies, it is a staggering one.

The American stockman and the American packer may justly take pride in the way they have met these needs.

During 1917, stockmen sent to market nearly 2,000,000 more cattle than during 1916. Yet at the end of 1917, the Department of Agriculture reports more cattle remaining on American farms than at the beginning of the year. The production of hogs has also been increasing. All of this in spite of high feed prices, and scarcity of labor.

How the packers have done their part is shown by the fact that in one week, Swift & Company was called upon to supply the Allies and the American Armies abroad 24,000,000 pounds of meat and fat—enough to have fed America's peace-time army for more than six months.

An order of this size means the dressing of 13,000 cattle and 200,000 hogs.

To move the finished products, 800 freight cars were needed. Of these 650 were from the Swift refrigerator fleet.

Three days after the order was received by Swift & Company, shipments began, and the entire amount was rolling seaward within a week.

Since January 1, 1918, over 400 carloads of our products per week have been shipped abroad on war requirements.

The nation's meat supply machinery has stood the test.

Not once has there been a failure on the part of the American farmer or the American packer to supply the government's needs.

On their part, Swift & Company performs their service without governmental guarantee of profit and with a limit of 9% return on capital employed in the Meat Departments, which means about 2 cents on every dollar of sales.

Swift & Company, U.S.A.

**JAMES DRYDEN,**
**Editorial Contributor.**

The people of the northwest have had an opportunity to see and hear in the last few weeks the world's foremost authority on the poultry industry, Edward Brown, F. L. S. Mr. Brown has long been known to all students of poultry culture through his books and writings, and it has been an extreme pleasure for many of them to meet him in this country. The writer had a profitable conference with him 12 years ago in New York state, and has had a running correspondence with him ever since. His lectures, on his present trip, which is under the auspices of the United States government, are mainly concerned with the food situation of the allies, but he takes pleasure in talking to gatherings of poultrymen in every state, in addition to his regular food lectures. In addition to being an expert poultryman he is a broad, well-informed man and an eloquent speaker. His war talks have been said by many to be the best and most comprehensive that the necessities of the war situation have brought to the front. J. D.

**Not a Mortgage Lifter.**

Roosevelt, who has owned ranches at various times, was once asked to define a gentleman farmer. "A gentleman farmer," said T. R., "is a chap who never raises anything except his hat."

# The Northwest Egg-Laying Contest

The April report of the contest, which ends the first six months of the race, shows a pen of Rhode Island Whites, owned and bred by F. W. Frederick of Phoenix, B. C., in first place, the record of this pen being 659 eggs, five hens in a pen, an average of 132 eggs a hen. The report states that this is the highest record made this year at any of the several egg-laying contests in the United States or Canada. A pen of Barred Plymouth Rocks from the Oregon Agricultural college is second with 619 eggs. These are very good records. Records as high as these in the first six months of the hens' laying indicate a laying capacity of considerably over 200 eggs in 12 months. The highest pen record for April was made by the pen of Barred Rocks from the O. A. C., with 112 eggs, and the second by the pen entered by Frederick of British Columbia, 110 eggs. The highest individual hen record to date is 155 eggs by a White Leghorn hen entered by C. F. Williams of Salem, Oregon.

The average production of all the hens in the contest was 14.7 eggs, or 49 per cent yield, against 75 per cent for the highest pen. The feed cost per dozen eggs was 21.48 cents for all the hens. The return above feed cost for average hen was 14.11 cents, and 50.68 cents for best hen.

The 20 best pens for the six months are as follows, the figures indicating the number of eggs laid:

| | |
|---|---|
| F. W. Frederick, Phoenix, B. C., R. I. Whites | 659 |
| Oregon Agricultural college, Corvallis, B. Rocks | 619 |
| Paul B. Towne, Tekoa, Wash., W. Leghorns | 617 |
| H. Otto, Greenacres, Wash., W. Leghorns | 603 |
| Mrs. Monona Van Cise, St. Maries, Idaho, W. Leghorns | 587 |
| H. E. Caldwell, Canutillo, Texas., R. I. Whites | 586 |
| L. E. Harris, Missoula, Mont., W. Leghorns | 573 |
| H. J. Kingsbury, Twin Falls, Idaho, R. I. Whites | 580 |
| J. R. McRae, Milwaukie, Ore., R. I. Reds | 559 |
| Oregon Agricultural college, W. Leghorns | 555 |
| D. Tancred, Kent, Wash., W. Leghorns | 553 |
| Mrs. H. V. Rominger, Underwood, Wash., R. I. Reds | 553 |
| C. F. Williams, Salem, Ore., W. Leghorns | 548 |
| C. C. Coolidge, LaGrande, Ore., W. Leghorns | 541 |
| J. R. McRae, Milwaukie, Ore., W. Leghorns | 539 |
| C. H. Numsen, Centralia, Wash., W. Leghorns | 537 |
| B. O. Langsdorf, Lebanon, Ore., Minorcas | 527 |
| F. J. Wirtner, Mica, Wash., B. Rocks | 522 |
| S. C. Leghorn Club, W. Leghorns | 519 |
| F. E. Kneedler, St. Libory, Ill., White Rocks | 515 |

The above are the best pens out of 135 in the contest. J. D.

## MUST CONSIDER MEAT.

### Egg-Laying One Qualification.

In selecting the kind of poultry to produce it is not enough to consider only the egg-laying qualities of the breed to be selected. Especially is this true in these times when meat production is a vital matter. It must be remembered that approximately half of the chickens raised will be males, valuable only from the meat point of view, and it must likewise be remembered that the laying hens must be disposed of for meat purposes after a comparatively few years' laying period. With this in mind it is seen that in at least this one respect the heavier birds, such as the Plymouth Rocks, have an advantage over the lighter breeds such as the Leghorns, though the Leghorns as a class may have demonstrated their superiority as egg producers.

On the other hand it must be remembered that the larger hen as a rule will consume more food than the smaller hen which is a point in favor of the strictly egg-laying type.

### Late Chickens.

It is getting too late now to be hatching chickens for winter layers. It is all right, however, to hatch them late for war purposes, as they will produce meat if not eggs. There will be little profit in it, however, unless one has cheap food. On the grain farms there is usually enough waste grain during the summer and fall to raise and fatten considerable numbers of chickens. Help to beat the Hun with the hen. J. D

### Tractor Plowing in Italy.

The number of tractor plows which are now employed in Italy is 600; 400 others are at present at Genoa and Naples, where they have been unloaded, and these are awaiting orders as to destination. In addition to the tractors already in Italy, there are 1000 additional machines on the way. All these tractors are of American manufacture.

# Ajax Shoulders of Strength

## More Rubber Where It Should Be

These bracing Shoulders of Strength—found only on Ajax tires—give to Ajax tires a greater resistance to wear. Because of these reinforcing shoulders, built in on both sides of the tread, Ajax tires have more rubber where it should be—more tread on the road.

With Ajax Shoulders of Strength, Ajax tires—**guaranteed in writing, 5000 miles**—roll up mileage records far beyond the guaranteed distance.

## 97% Owners' Choice

Ajax tires are 97% Owners' Choice. This huge percentage is chosen by individual owners to replace other tires that come on their cars. In 1917, Ajax tires won the title, "Dirt Track Champions of America." They swept the field in 237 dirt track races, at state fairs all over the nation.

# Must Pollenize

## Nature Sometimes Requires Help

By GRANVILLE LOWTHER.

Pollen is the fine dust-like substance of the flower, the fecundating or male principle, and it is either carried by winds or by insects to the place of pollenation or fertilization. The varieties of flowers fertilized by the wind have very fine, light pollen grains, easily carried by the breezes, as in the case of oaks, willows, pines and most grasses. The pistils of these plants are long and feathery and to those who argue for "design in nature," they would seem specially formed to catch the pollen dust as it flies through the air. To those who do not believe in the "design" argument, it shows that through the long process of the evolution of life the tendency has been to the survival of the fittest, or best adapted, and the forms not adapting themselves by successive changes to their environments became extinct.

Cherry blossoms and those of other fruits are pollenated by insects and have showy colors, perfume, and a sweetish substance called nectar, to attract various forms of insect life, especially honey bees. As the bee reaches down for the nectar, which is near the bottom of the flower, it becomes dusted with the pollen; then when it visits another flower, some of this dust is almost sure to be brushed upon the stigmas awaiting to receive it. Does this seem a slow process for so small a fruit as the cherry? Well, it takes longer to describe it than to fertilize the flower. I have seen hundreds of bees at work in a single tree, and have soon a single bee visit more than 100 flowers in 40 minutes.

### Cross Fertilization.

Cross fertilization means the carrying of pollen from one tree to that of another variety. The Black Tertarian, Governor Wood, and other varieties, are sometimes crossed with Bings, Royal Anns and Lamberts. This is done for various reasons. The first is that it has been observed that almost universally cross fertilization gives greater vigor to the offspring. This is true in corn, wheat, oats and animals, so that it is recognized as a general law, with very few exceptions. Most trees have both the male and the female organs, yet it often occurs that a tree will not set fruit with its own pollen, and in such a case it is called "self sterile." If it sets fruit with its own pollen, it is called "self-fertile," but even then the fruit is more vigorous if the pollen is taken from a tree of another variety. In setting an orchard, it is well to observe this law, and set a few trees at least for pollenating purposes. In case the orchard is already set and this provision has not been made, then a few grafts of pollenating varieties may be inserted into each and every tree. Year before last A. H. Irish of Parker, in the Yakima valley, cut large bouquets from the Black Tartarian and Governor Wood varieties, placed them in picking buckets and hung them up in the trees he desired pollenated. The results were a very heavy crop.

# Potato Grading

## According to the U. S. Regulations

The "Potato King of the United States" has become famous and wealthy by a reputation for correctly grading potatoes. He is a Japanese merchant, and a millionaire. It has taken several years to build up a trade on that plan, but he has built it and accomplished more in a few years than most Americans accomplish in a lifetime.

At different times within the last few years I have written several articles on that subject, based on the analogy of apple grading, but now the theory is demonstrated by the success of one of the most successful men in the United States.

Furthermore, the government has undertaken recently to regulate the grading of potatoes and has sent out to the farmers in a very limited number certain printed regulations which make the following requirements:

U. S. grade No. 1 consists of potatoes of similar varietal characteristics, which are practically free from dirt or other foreign matter, frost injury, sunburn, second growth, cuts, scab, blight, dry rot and damage caused by disease, insects or mechanical means. The minimum diameter of potatoes of the rounded varieties must be one and seven-eighths inches, and the long varieties one and three-fourths inches.

U. S. grade No. 2 consists of potatoes of similar varietal characteristics, which are practically free from frost injury and decay and which are free from serious damage caused by dirt or other foreign matter, sunburn, second growth, cuts, scab, blight, dry rot or other disease, insects or mechanical means. The minimum diameter must be one and one-half inches. G. L.

### Diversity in Unity.

There is something of life in an atom;
There is something of love in a rose;
There is something of limitless power
In every wind that blows.
Out of measureless space comes matter;
Out of eternity, time;
And out of the discords of ages
Grow harmonies divine.
—Granville Lowther.

### Platinum in Spain.

Platinum deposits in the south of Spain, in a mountainous region known as the Serrania de Ronda, are reported to be extensive. The 12 or 14 rivers of the district may profitably be dredged for platinum gravel for some years to come.

# With Self Starter and Electric Lights

Here's what one man and a Moline-Universal Tractor can do in one day of 10 hours:

Plow 7 to 9 acres.

Disc 27 acres with a 7-ft. tandem disc.

Disc 38 acres with a 10-ft. disc.

Harrow 76 acres with a 20-ft. peg tooth harrow.

Plant 22 acres with a two-row planter.

Plant 43 acres with a four-row planter.

Cultivate from 14 to 20 acres with a two-row cultivator.

Drill 35 acres with a 10-ft. grain drill.

Harvest 25 acres with an 8-ft. grain binder.

Harvest 10 acres with a corn binder.

Mow 25 acres with an 8-ft. mower.

Rake 40 acres with a 12-ft. rake.

Rake 25 acres with an 8-ft. side delivery rake.

Load 12 acres of hay.

In addition, it can be used on the belt for running threshers up to 24 inch capacity, silo fillers, corn shellers, feed grinders, wood saws, clover hullers, hay presses, pumps, lighting plants, etc.

There is no end of odd jobs that can be done with the Moline-Universal Tractor.

Announcing the New

# MOLINE UNIVERSAL TRACTOR

## Model D

BECAUSE of its ideal design, construction and performance, this new Moline-Universal Model D enables one man to farm more land and produce more food than ever before possible. It is the world's most dependable farm hand and solves the farm help problem.

### Most Advanced Construction

New features include self-starter, electric lights, electrical governor, perfected overhead valve, four-cylinder engine that is free from vibration; complete enclosure of all moving parts; differential lock which increases traction in soft ground.

Every part is designed on the basis of quality and service. Drop forgings, heat-treated parts, steel cut gears and unusually large bearings add extra years of endurance.

These new features, together with the well known Moline-Universal type—all the weight on two wheels, one-man control and ability to do all farm work including cultivating—make the Moline-Universal Model D the best tractor that money can buy.

### Phenomenal Pulling Power

Of its total weight of 3380 lbs., 98% is used for traction. That's why the Moline-Universal has phenomenal pulling power.

Conservatively rated at 9-18 horse-power, the Moline-Universal Tractor has more than ample power for heavy belt work. Its greater speed enables it to plow as much in a day with two plow bottoms as the ordinary three-plow tractor. Yet it is light enough for such work as cultivating, mowing, etc., which do not require as much power.

### One Man Operates Entire Outfit

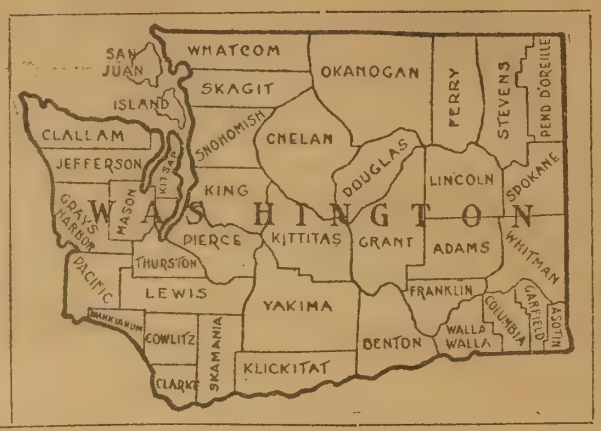
The Moline-Universal attaches direct to the implement, forming one compact unit. It turns in a 16-foot circle and backs with the implement attached as readily as it goes forward. One man has complete control of the entire outfit from the seat of the implement and can thus do the same work that requires two men with other tractors. Operation of the Moline-Universal is so easy that a woman or boy can handle it.

In fact anyone who can drive an automobile can run a Moline-Universal Tractor.

### Moline Tractor Implements

The greatest care has been used in designing a full line of implements for use with the Moline-Universal. "Moline" trademark on a tractor or implement is a guarantee of dependable service.

Moline dealers are now accepting orders for Model D Tractors, and our new and modern plant—the world's largest exclusive tractor factory—is being crowded to the limit in an effort to build tractors fast enough to keep pace with the demand.



*On request we will be glad to send you our Tractor Catalog which completely describes the new Moline-Universal. Address Dept. 50.*

MOLINE PLOW CO., Moline, Ill.

*Manufacturers of Moline Quality Farm Implements since 1863*

# Rain Puts Life in Wheat

## Farmers Talk Elevator Because of high Price and Scarcity of Sacks—Alfalfa Will Make a Good Crop—Prospect of Fair Fruit Crop.

HARRINGTON, Snohomish County, Wash., May 20.—Spring planting is all done and most everything is up and looking well. We are having plenty of rain, but it is a little too cold. The farmers around here are aware that each man has to work a little harder and produce a little more to make up for those that are gone. Everybody has put in as much ground as possible. Less ground has been planted to potatoes, but more oats, peas and roots for the stock, as mill feed is so high that farmers will have to get a substitute in order to make a profit on his milch cows. There is a good prospect for a fair crop of fruit. There are still quite a few spuds left unsold as present price is about $1 per 100 pounds weight. Eggs are 40 cents per dozen and butterfat about 47 cents per pound. Stock is looking fairly good. Owing to the high wages farmers compelled to do their own work as much as possible.

A. B. NEIDERPRUM.

### Crops Look Good.

METHOW, Okanogan County, Wash., May 24.—The crop conditions are good right now. The rains and the cool weather is putting lots of life into the wheat. Alfalfa is growing right along and will make a good crop. The wheat farmers are mostly talking about building an elevator at Pateros owing to the high price and scarcity of sacks; the fruit farmers about the prospects for the prices on fruit this year; the dairymen on the butter prices, and all on the war. There are no retired farmers here to speak of, only heretofore the boys who are now in the service did most of the team work and the father the chores and now the latter has to do it all.

CHARLES GRANT.

### Seed Industry Is Growing.

MOUNT VERNON, Skagit County, Wash., May 24.—The rains of the last 10 days have put the crops in splendid condition. Pastures are in quite satisfactory shape and the oats are doing very well. Most of April and the first of May were almost without rain and crops were needing rain, but they are in good shape now. The milk price has dropped to $2.25 per hundred. In the face of the fact that official estimates put a price of $3.29 as the average cost of producing 100 pounds of milk during 1917, the farmers are not satisfied with returns from the dairy business. Quite a number of farmers have sold their entire herds and many have cut the herds down considerably. The seed industry is gaining here. There are between 500 and 600 acres of spinach for seed, probably about the same in cabbage seed and much in beet seed and peas. When grain prices become more nearly normal, the dairy business will again be more profitable. The average quality of the cows is being raised by culling out the inferior cows.

DR. C. S. PHILIPS.

### Spring Grain Looks Good.

CENTERVILLE, Klickitat County, Wash., May 20.—The grain crop development here in Klickitat county is in a very spotted condition. In a great many fields of winter wheat there is a very poor stand, being generally thought to be the poorest winter wheat in years, while the spring grain sown is in fine condition, probably offsetting to some extent the winter wheat condition. There is a small part of the winter wheat crop in extra good shape. The good rains in the last two weeks are making an extra good prospect for at least spring-sown grain, also the finishing of the summer fallowing, which is mostly through. It is also quite cool here, which is not very encouraging for gardens or the planting of corn. The farmers are mostly discussing how we will be able to get the harvest work done on the amount of help obtainable. With our sons going to the front all the time the boys on the streets are very conspicuous for their absence. We are getting nearer together as neighbors in that we are knowing more about our third Liberty loan, also Red Cross work, and that as a school district community everybody did their share. I know but very few retired farmers that are able to help but what are at it in some way or another. All the extra wheat that the farmers had stored in bins at home is being moved to the warehouses now. Not a great amount, but it will help a little. The fruit condition is rather frosty through this part of the valley, but is good along the Columbia river.

CLARENCE A. LESTER.

### Expect Heavy Yield.

COLVILLE, Stevens County, Wash., May 23.—Conditions in his county have improved greatly, with the continuous rainfall of the past week. Seeding is all done, and most of the grain is up and looking well. There is promise of a heavy crop, which will be a relief after two lean years. A bad frost following the rain nipped some of the early potatoes, but the main crop is not yet above ground and was uninjured. Sweet cherries are a failure, but all other kinds of fruit appear to be safe and promising a heavy yield. The labor situation is satisfactory. There is little complaint of shortage, and it does not appear that this section will have any trouble in taking care of all its farming operations. The farmers' minds are wholly on the season's work; the prospect for rain at the right time to insure the harvest; the possibility of early frost shortening the growing season; the importance of the crop in its relation to the needs of the government and the winning of the war; criticism of the inequalities in prices which farmers have to pay for supplies and machinery—all these are topics of conversation. Without doubt there is a deepening of patriotic interest in the outcome of the war. The Liberty loan went far into the back districts and the Red Cross drive found its heaviest support out in the country. Given a good crop year and the farmers will almost entirely take care of the next Liberty loan.

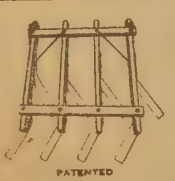
E. E. ELLIOTT.

### WHATCOM COUNTY.

#### The Season Is Ideal for Farmer.

Help shortage is felt in Whatcom county as in most places of the state. This spring has been ideal for farming, however, and we have had very little rain, which is unusual. Gardens are looking fine and oats and hay are coming right along. Milk is now selling at $2.35 a hundred and cream brings 40 cents a pound.

Dr. Pelton, state veterinarian, and Dr. Saperstein, a local man, have been very busily employed the last two weeks testing for tuberculosis in a great many dairy herds in the vicinity of Ferndale. A very small percentage of the herds tested reacted.



### Sheep and Hogs Increase.

W. S. Thornber, head of the extension department of the state college, is authority for the estimate that there are 20 to 25 per cent more sheep in this state this year than last year. His estimate on the hog increase is that there are in the state this year about six hogs where there were only five last year, an increase of something like 20 per cent. Dairy stock and other live stock, other than hogs and sheep, he believes to be about holding their own.

### Trouble With the Aphis.

In parts of western Washington there is considerable anxiety over the aphis. Some of the vetch fields are practically ruined by them. In some cases fields that were seeded last fall are being plowed up and seeded to spring grain because of the small chance of getting a crop of vetch. There apparently is no remedy.

A. B. M.

**Help Is Scarce**

The Jones Weeder will save 50 per cent of labor; cultivate 30 to 40 acres of summer-fallow per day and do it better, instead of 10 to 20 by the usual method. Couples up like a harrow; use as many sections as wanted. For booklet, prices, etc., write

**C. E. Jones, Heppner, Ore.**

**THE SELF-OILING WINDMILL**

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load

We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

**The Moline Grain Binder**

**The Best Work Under the Worst Conditions**

THE Moline Binder has a record of of over 50 years of good, honest service wherever grain is grown. In difficult work, in continuous running without stops or breakdowns—in short, in an emergency, Moline superiority is apparent.

The Moline Grain Binder is built from the ground up of the best materials by skilled workmen and has been gradually developed and improved until it is as near perfection as possible. It is built to do the best work even under the worst conditions. That's why a Moline Binder user is never satisfied with anything else.

When you buy a Moline Grain Binder you get the benefit of 50 years' service, the lightest draft, the greatest stability, the strongest construction and the greatest reliability in a grain binder—you get crop insurance.

A typical instance of Moline performance under unusual conditions is reported by Jerry Rivard of Boubonais, Ill., as follows:

The Moline 8-ft. Binder bought of you I used in cutting 110 acres of grain. I cut seven acres of new ground where I did not think it could do the work, being very trashy ground, and the men present insisted I was doing wrong to try to cut it with a binder, but the Moline Binder went through, cutting all. I never missed a bundle and never broke anything. I consider this remarkable, considering the condition under which the test was made.

We have many letters such as this on file, all equally enthusiastic over the work of the Moline Binder.

The frame of the Moline Binder is extra strong, making it particularly good for tractor use.

See your Moline Dealer about the Moline Binder now, or write us for full information.

## Protest at Once

### Railroad Rates Are Boosted High

(Continued from page five.)

the Atchison, Topeka & Santa Fe system. The figures quoted below are taken from the annual report of that railroad, as submitted by President Ripley at the annual meeting two weeks ago:

For the calendar year ended December 31 last, the Santa Fe earned $165,529,519. After the payment of operating expenses and taxes, a balance remained of $48,346,700. After payment of interest on bonds there remained nearly $32,000,000. After the payment of $16,486,402 in dividends on the common stock, equivalent to 7 1-2 per cent, there still remained a surplus of $15,490,460. In other words, the Santa Fe common stock actually earned nearly 15 per cent in 1917.

The Pacific coast industries are supporting their railroads handsomely. But in some other sections of the Union railroad earnings are in distress and the government is facing a large deficit under its guaranteed plan of operation.

To meet that deficit Director General McAdoo has ordered a sweeping increase in freight rates and fares of 25 per cent, to be applied indiscriminatingly to all the railroads of the country—to the roads that are earning enormous surpluses as well as the lines that do not pay.

If that unscientific and unjust plan should be permanently applied, it will mean that the people and the industries of the Pacific coast, in addition to supporting their own roads, will have to go deep down into their pockets to help support unprofitable roads in the south, New England and some parts of the central west.

It may be true, as Mr. McAdoo says, that the increases will not inure to private profit.

"If they turn out to be more than are needed to meet the grave public exigency," he says, "they will promptly be readjusted so as to prevent any unnecessary burden upon the public, but pending such readjustment, the excess, if any, will be for the benefit of the people of the United States as a whole and not for the benefit of private railroad owners or any of them."

But that dos not alter in the slightest the fact that the people and the industries of the Pacific northwest will suffer a grave injustice. They are to be excessively taxed for the relief of distant communities.

This is a big issue—none bigger now confronts the producers of Washington, Oregon, Idaho and Montana. How shall it be met?

By quick, emphatic protest.

Protest to your senators and representatives in congress.

Protest to Secretary McAdoo.

Protest to your state railway commission, for while Mr. McAdoo holds that state commissions have no authority to change the rates, he has telegraphed to the chairmen of the state commissions that he will welcome suggestions for readjustments and these will be referred to the interstate commerce commission for its consideration in passing on specific complaints. State commissions may also enter formal protests direct to the interstate commerce commission.

Every producers' organization should call immediately a special meeting to act upon this dangerous situation. Protests should roll in from granges, from farmers' unions, from farm loan associations, from fruit growers' organizations, live stock associations, and from the Nonpartizan league.

Don't delay a day. Protest now.

## Implement Retailers

### Must Not Make Too Much Profit

Retailers of farm equipment are not required to secure licenses, but they must not profiteer, says a statement issued by the United States department of agriculture explaining certain features of President Wilson's recent proclamation establishing a licensing system for the farm implement trade.

The provisions of the food control act of August 10, 1917, under which was issued the president's proclamation of May 14, 1918, bringing under license the manufacture, importation, distribution and storage of tools, implements, machinery and certain other farm equipment, expressly exempt retailers as such from the licensing requirements, and define a retailer as "a person, copartnership, firm, corporation or association not engaging in the wholesale business whose gross sales do not exceed $100,000 per annum." However, under the provisions of the food control act, retailers will not be allowed to profiteer; under the regulations issued with the president's proclamation retailers engaging in such practice will not be able to secure a supply of farm equipment.

The regulations provide that a licensee shall not, without the express sanction of the secretary of agriculture, sell any farm equipment to any person engaged in the business of selling or utilizing such equipment, if the licensee has knowledge that such person, after the regulations became effective, has violated the provisions of the food control act by making an unjust or unreasonable rate or charge in selling or otherwise handling or dealing in such equipment or by holding, contracting for or arranging for a quantity in excess of the reasonable requirements of his business for use or sale by him for a reasonable time.

## Uncle Sam Wants Hides.

Dealers in the west must give the government first chance at the hides that they have to sell, according to an announcement from the national capital. Before any hides are offered on the general market they must be offered to the government and it be given 48 hours to reject or accept the offer.

### Had No Terrors for Him.

Murphy, says the San Francisco Argonaut, was making his first trip across the Atlantic, and he felt unspeakably awful. He failed to connect the fact of his being on the briny ocean for the first time with his agony. The doctor came to him as he tossed about in his berth.

"Cheer up, man," he said heartily. "I know you're feeling rotten, but you're not going to die."

Murphy opened horrified eyes. "Not going to die?" he wailed. "Faith, doctor, I thought I was! That was the only thing that kept me alive."

# No Worry About Harvest

HAVE you noticed how discussion of the food supply situation seems to center around the number of acres it is possible to plant rather than around the harvesting of those planted acres?

It is an unconscious, but none the less wonderful, tribute to the genius of the inventors of the reaper and binder that the American public takes the harvesting of the greatest grain crop ever planted as a matter of course. The sole question now is, "How many acres can we plant?" The power and help required by the planting will be amply sufficient for the harvest where **Champion, Deering, McCormick, Milwaukee** or **Osborne** binders and binder twine are used.

And, where they are used, the harvest will be complete. No matter whether the grain be tall or short, heavy or light, standing or down, lodged and tangled, an International Harvester binder cuts and binds it all without waste.

It is an easy matter to be fully prepared for harvest. Buy the largest binder you can use. An 8-foot is better than a 7, and a 7 better than a 6 or 5 because the larger sizes conserve labor. Buy a new machine if there is any question about the efficiency of the old one. There is a limit, you know, to the dependability of repaired machines, while a new one is absolutely reliable.

Through our 90 branch houses and over 30,000 dealers, we furnish promptly either new machines or repairs for old ones. Do not hesitate to call on our organization for any help we can give in the harvesting of this year's grain crop—the most important crop ever raised. See the local dealer or write us direct.

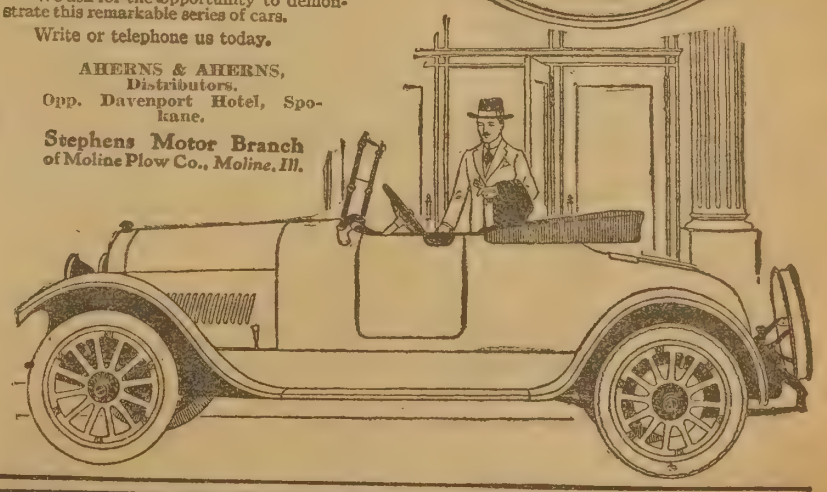
# STEPHENS *Salient Six*

HEAT IS POWER

*With Perfected Overhead-Valve Engine*

The heat caused by the burning of gasoline gives the power to drive the engine. Unless the gasoline is all burned, power is going to waste.

The Stephens Salient Six perfected overhead-valve engine burns all the gasoline, no matter how poor. Its manifold in the cylinder head, surrounded by heat, completely vaporizes the gas and puts it in condition for burning. Large valves feed it into a small, cylindrical combustion chamber, where it is completely consumed, with every ounce of its energy exerted directly against the piston. There is no waste.



Stephens body models, five in number, give a range of choice to satisfy the most exacting demand. They are up-to-the-minute in design, with a quiet, conservative individuality. They afford plenty of room, and their balance and spring suspension are such as to make smooth riding on the roughest road.

We ask for the opportunity to demonstrate this remarkable series of cars.

# Grange Master Reviews the Year

## *State Organization Hears Recommendation for Its Future Endeavors*

The farmers must continue to feed the allied world; they must continue to stand loyally behind the government in the prosecution of the war to a successfull conclusion. This is the declaration made by Master William Bouck of the Washington State grange in his message to the state convention of the order at Walla Walla this week. His message covered a wide range of subjects. Among the points emphasized by him were the following:

The price of things the farmer has to buy should be regulated if the price of what he sells is regulated; that

The real farmers have not been adequately represented in governmental affairs; that

The war should be financed by taxes on excess profits, and not by bond issues; that

Government operation of the merchant marine and the railroads is desirable after the war as well as during it; that

The "infamous long and short haul proposition" as to freight rates should be wiped out of existence; that

The government should take over control of waterpower, mines, oil wells and phosphate rock deposits; that

Unfair dealing on the part of the large packing companies should be vigorously suppressed; that

Cooperative farm distilleries for the manufacture of denatured alcohol for power fuel purposes should be developed to utilize certain wastes of the farm; that

A federal law should be enacted providing a system of personal credit to farmers; that

A workable federal marketing law should be enacted and marketing facilities operated cooperatively; that

A standing committee of farmers be alert to work for the improvement and equitable administration of grain grades; that

The grange must work for national woman suffrage;

The legislature can be and should be controlled by the farmers and other producers; that

Commission government is preferable to the present form; that

The grange members should stand behind the initiative measures presented by the order's legislative committee; that

The general property tax should be superseded by a straight land value tax; that

Good roads are utility roads, and the grange stands for the utility policy; that

The grange is still strongly behind the prohibition movement; that

The grange favors improved educational systems and methods; that

The California system of free text books should be adopted by this state; that

The state college should receive the warm support of the grange; that

Genuine cooperation must be adopted and common cause made with the nonpartizan league and other farm organizations, and that

The spirit of the grange is nonpartizan, but that it sees good in all parties and must take an active part in politics for the general welfare.

**New Granges Organized.**

Speaking of the condition of the Washington grange, Master Bouck said: "During the period since the last state grange session there have been organized about 75 subordinate granges, as compared with about 40 the year previous, two pomonas, and one pomona has been reorganized. Without doubt the condition of the order in the state is as good as it has been for several years, and the statistical report of the secretary will show the largest number of members for several years. We have been hampered much by lack of workers, caused by older ones wearing out and passing away, and during this whole year we have had to break in new deputies. Nevertheless, we point to the fact that, due to the loyalty and willingness of the patrons of the state to work for the cause, instead of a slump, as some thought inevitable last year, we are showing a substantial gain.

"In this respect I must say that much depends upon the pomona master, and in counties where the pomona master visits his granges there is not much need of help from the state grange. I am more and more of the opinion that each pomona should establish a fund for traveling expenses of its master and then see that the master makes his regular visits to the different subordinate granges. Indeed, this seems to me to be the solution of 75 per cent of grange troubles.

"The strength of the order is the subordinate grange. Every effort and thought that can in any way aid in strengthening this, the vital part of our organization, should be put forth at this meeting. The great inspiration of a grange is work and service. When the burden of the farmer once impresses itself upon the body of a grange and the members all get a spirit of service there will be no stopping the growth and influence of that grange. One way to bring this condition about is to get a large number of working committees and their reports coming in, as they will, on the many subjects. This will go a long way to arouse and educate the members to the value of their organization. From this to getting under the farmers' burden, is a short step, and this and other steps can often be guarded by the Pomona master if he is watching the granges as he should be."

Relative to the relation of the grange to other farm organizations, the master said:

"I believe the time is at hand when the grange must make common cause with other farm organizations in this state. We can not be indifferent to the mob attacks on the nonpartizan league and its leaders; we can not stay divided in the face of the enemy profiteers, who will attack us as soon as this sister organization is ruined; this band of plunderers are whispering to some grangers: 'It is just disloyalty we are after.' It is the organized farmer they are after. Let no one be deceived. And, to be right with ourselves and the other farmer, we can not ignore this lawless attack on the nonpartizan league."

**Must Play Political Part.**

Concerning political activity, he declared that the grange has always been in politics and can not stay out. "Many well meaning farmers of the old school believed that it was right to stay out of politics," he said, "but when they viewed their tax receipts, or hefted the returns from their crops representing their year's labor, they found the other fellow was in politics for his benefit and their destruction, and that same fellow encouraged the farmers to stay at home and raise more crops and let him tend to the political game—which he did, to the farmers' undoing and ruin. This is becoming better understood by the farmer every day, and he is now taking up his political duties. In a democracy like ours, no one class of society can neglect civic duties or civic obligations without suffering the consequences. This is as immutable as the laws of the universe. The farmer has come to a realization that the 35 per cent he has been receiving for his products is a direct result of shrinking his duties as a citizen. If he is not ready to assume these, he had better change his residence to Germany or some other autocracy, where he will not have to think—some one else will do that for him.

"The grange is not a political party—we see good in all parties. The platform and spirit of our order is nonpartizanship, and in this light, and with this weapon, and with this spirit, we are going forth to win our principles. I believe all members and prospective members should study the declaration of purposes of the grange carefully."

The following statement as to the initiative measures was made by Master Bouck:

"Your joint legislative committee has prepared and now are circulating three peititons to be placed upon the ballot this year. They are all measures indorsed by the grange over and over again. They are:

(1) No. 31, a marketing and public ownership measure which, if adopted, will make each community economically independent, as recommended by Brother Kegley in his message last year. It will be the means of aiding the farmer to market his own goods in a manufactured form direct to the consumer.

(2) No. 32, an anti-injunction measure. If you will take the trouble to look up the history of the attempts of farmers to set a price on their own products you will at once see the need of this law in our state, where the farmer will soon be doing this if you adopt this previous measure, No. 31. This is also desired by the labor unions of the state.

(3) No. 33, the nonpartizan measure we tried to get on the ballot two years ago and failed. Before the farmer can control the legislature he must have a nonpartizan law on the statute books, for the farmer has not gotten to the same point as the business men of regarding politics as a business proposition and party as second to this.

"This proposed law will also stop any paper from taking money to influence elections and any paper publishing any advertisement must state who paid for it. This is one reason why so many of our papers and politicians are opposed to this law. I wish to introduce the figures on officials and measures of our last election. Study them carefully until you get the full significance of that vote and when you do so as a body, nothing will stop the farmer henceforth from getting his own measures through."

**Colored Comic Pictures.**

The comics, in which the little folks and lots of the older folks find so much pleasure, are omitted this week because they did not arrive in time. They will be in next week's issue, and they will be funnier than ever. Look for them June 13.

# Honey Marketing Should Be Studied

**Article 7, By GEORGE W. YORK.**

It is one thing to produce a crop of honey, and quite another thing to dispose of it profitably. Very few beekeepers are salesmen—or saleswomen. Many a crop of fine honey has been secured, and, because of ignorance as to the best way to put it up for market, or else ignorance of the proper prices or values, it has been sold for much less than its real value, or at a positive loss to the producer. Here is where a bee paper with honey market quotations is worth many times its yearly subscription price.

If the surplus honey crop is produced in the one-pound sections, and is to be sold to grocers, the best way is to put it in the usual 12 or 24 pound shipping cases; but first, of course, see that all bits of bee glue or comb are scraped off the outside of the wood sections. Some even go so far as to sandpaper the outside of the sections before placing them in the cases.

If the cases of comb honey are then to be sent to a distant market about eight of the cases should be put into a crate that is made to hold them snugly around the sides and deep enough so as to have several inches of straw or hay under the cases, to act as a cushion, which prevents the combs from breaking out of the sections when shipping by freight. It is also a wise precaution to have handles on these large crates, so that the freight handlers can get hold of them easily, and not turn them over.

But if the honey crop is in the liquid or extracted form, then it should be put into five or ten pound friction-top tin pails, with neat labels on them. This is perhaps the most convenient and economical form in which to put it up for sale. Quite a good deal of extracted honey is put up in glass packages, either the one or two pound sizes, but these are expensive and can not well be shipped without risk of breaking in transit.

There are few families but what can afford to buy at least five pounds of honey at one time, and as it keep indefinitely it is cheaper to get it in such quantities.

**Where to Keep Honey.**

Some who are unfamiliar with honey make a mistake in keeping it in a cold place, such as a refrigerator. Honey of any kind should be kept in a dry, warm temperature. The top pantry shelf is a fine place.

Most honey will granulate in time, and especially in cold weather. Some people prefer to eat it in that form. But if it is preferred in its original liquid form, then all that is necessary to reduce the granulated into liquid is to heat it, but care must be taken not to overheat it, as that would spoil its delicate flavor. It will stand as high as 160 degrees, Fahr., but only for a very short time. But it is not necessary to heat it to so high a temperature, for it will become sufficiently liquid at a lower degree of heat.

Since the war has required a saving of sugar, honey is very rapidly coming into its own as a staple sweet. For many years it has been considered as a luxury, which is indeed a big mistake. While its price has, for a long time been about twice that of sugar, its sweetening power is also about twice that of sugar. And besides, honey is so much more healthful than sugar, for honey is somewhat predigested, and thus is more readily assimilated by the human system. It is very strengthening and nourishing, and really should be used much more regularly on the tables of all than it is today.

Because of the great value of honey as a food, and also because it is so easily secured by all who live in the country, are two of the principal reasons I am urging every farmer to keep a few colonies of bees. Yes, I know some of the expert beekeepers are opposed to the general farmer keeping bees, on account of their carelessness in regard to bee diseases, but I do not advise any one to keep even a few colonies of bees unless he or she will get all the information possible on the subject and be determined to do the work in a proper manner. Most states now have good bee laws that are fairly well enforced, and surely any one who desires to produce honey even for home use will be glad to keep his bees free from disease, or at least cooperate with the legally constituted authorities to prevent the spread of any disease should it get started.

Later on I will write an article on wintering bees, for this is a very important subject, but before closing this one of the series I want to suggest that women consider the keeping of bees. More and more our women folks are entering fields of labor that some years ago were thought unsuitable for them. But beekeeping, like poultry keeping, dairying, etc., is well adapted to women, as they (the women) are usually careful, neat and well adapted to attending to details, and surely beekeeping is a business of details, and yet coming easily within the strength and ability of the ordinary woman.

I made an investigation some years ago and found that in a list of some 6000 beekeepers there were 300 women, or one in 20. I could name quite a few women in the United States who are today making a fine success with their bees. More of them could just as well follow their examples if they were determined so to do. One of the bee papers has a department exclusively for women, conducted by Miss Emma Wilson of Illinois, who has been very successful with bees for upward of 30 years.

**Serve Double Purpose.**

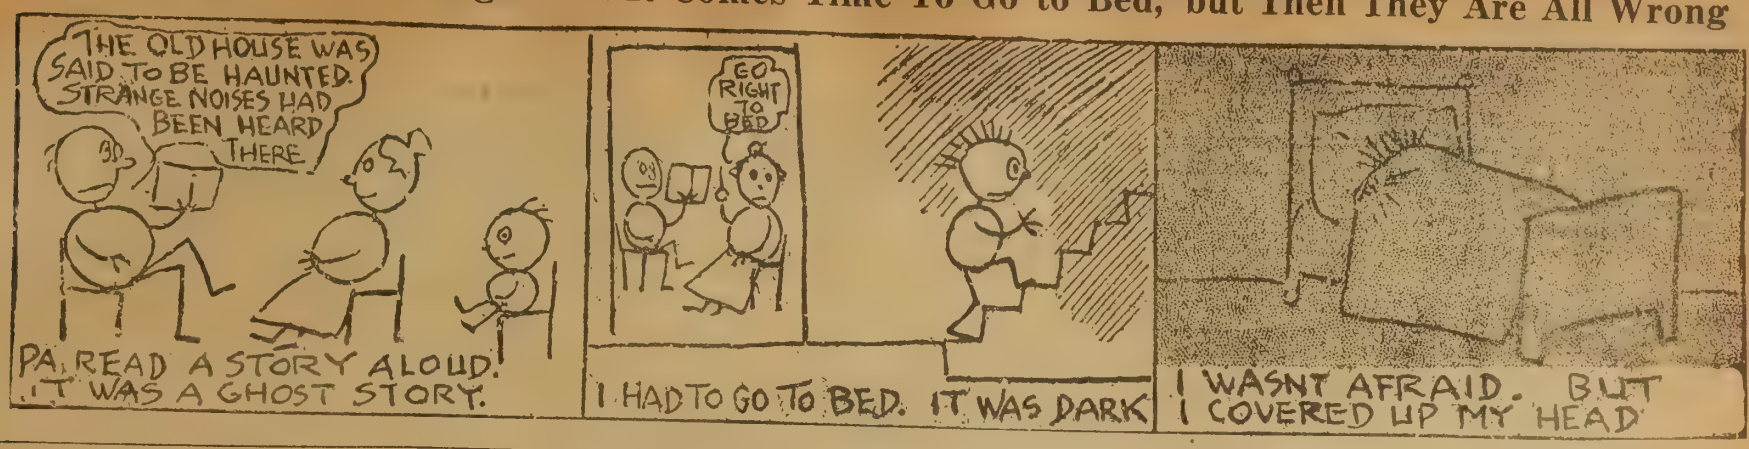
American Y. M. C. A. trucks and automobiles were placed at the disposal of the allied armies and used in transporting wounded men during the recent drive on the western front.

## Free Information

### Also Some Valuable Books

The service rendered by The Washington Information Bureau, at Washington in distribution of publications is designed to be continuous.

From time to time new books have been listed, but those previously announced are still available.



Either of the following may be obtained for a 2-cent stamp to cover cost of mailing. There is no charge of any kind.

Book on Canning.
"German War Practices."
Book on Colds.
Garden Book.
Book on Knitting.
War Cookbook.
Book on Navy.
Book on Drying Fruits.
Book of Recipes.
Bread Book.
"How War Came to America."

Write today and ask for free copy. Inclose a 2-cent stamp for return postage and be sure to write your name and address plainly. Direct your letter to The Washington Farmer Information Bureau, Washington, D. C.

P. S.—The information bureau at Washington will answer any question you may submit. Answer will be sent by letter. Just inclose a 3-cent stamp for return postage. Note carefully the address given above.

## Ghost Stories Are All Right Till It Comes Time To Go to Bed, but Then They Are All Wrong

F. Opper, in the Chicago Herald.

### Explained.

The solicitor had been away in the country calling upon a client, but on his returne there were signs of loafing and laziness on the part of the junior clerk.

"Thomas, that typewriter has not been touched today!' snapped the man of law.

"Oh, sir!" ejaculated the junior. "Why, I was using it only an hour ago!"

"Then," thundered the employer, "how comes it that there's a spider on the machine, and that he's woven a web over the keybyoard?"

"Sir," remarked the lad, 'I'll tell the truth." There was a fly in the works of that machine. Rather than waste my time in entrapping the insect, sir, I-er-introduced the spider, sir!"—Exchange.

### Pat Came Out Winner.

There was no doubt about it. Pat was in a bad state. His nose had assumed twice its normal dimensions, his left eye had gone in for art shades, and he badly wanted a new set of teeth.

"Shure, and it was that baste Maloon did it!" he remarked in reply to his wife's indignant question.

"Phwat? D'ye mean to say as ye were licked by a mean, grousy, little whippersnapper loike Maloon? Why, he——"

"Whist!" said Pat painfully. "Don't shpake evil av the dead!"

### Where They Belonged.

Whistler was once taken by a friend to the home of a newly rich millionaire who had been gathering a collection of dubious paintings supposedly by old masters. After Whistler viewed the collection his friend said:

"Now, Whistler, Mr. Blank wants to make provision in his will to bequeath these paintings, and he would like a suggestion from you as to which institution to give them."

Promptly came the answer: "The East End Institution for the Blind."—Grit.

### An Inconvenient Arrangement.

Little Betty, just initiated in the first teachings of Sunday school, has displayed especial interest in a future life.

"Mother, will I go to heaven when I die?"

"Yes, if you are good."

"Will my dog go, too?"

"No, because dogs have no souls."

A pause, then, eagerly, "Well, will our cow go?"

"No. Animals have no souls."

"Oh, then we'll have to go to hell for our milk."—Harper's Magazine.

### Time.

They were at the first gate in the moonlight and he had asked her to be his wife. With outstretched arms and a throbbing heart he awaited her answer.

"George," she said in a nervous whisper, "you must give me time—you must give me time."

"How long?" he hoarsely asked, "a day, a week, a month, a year"

"No—no, George," and she quickly scanned the sky, "only until the moon gets behind a cloud."—Portland (Me.) Journal.

### In Another Form.

Two British soldiers went into a restaurant at Saloniki and asked for Turkey with Greece. The waiter said:

"I'm sorry, gentlemen, but I can't Servia," whereupon the Tommies cried: "Fetch the Bosphorous!"

When that gentleman arrived and heard the complain, the manager said:

"Well, gentlemen, I don't want to Russia, but you can not Roumania."

And so the poor Tommies had to go away Hungary.—The Scottish-American.

### Real Generalship.

"Here, boy, take these flowers to Miss Fannie Honeysome, room 8."

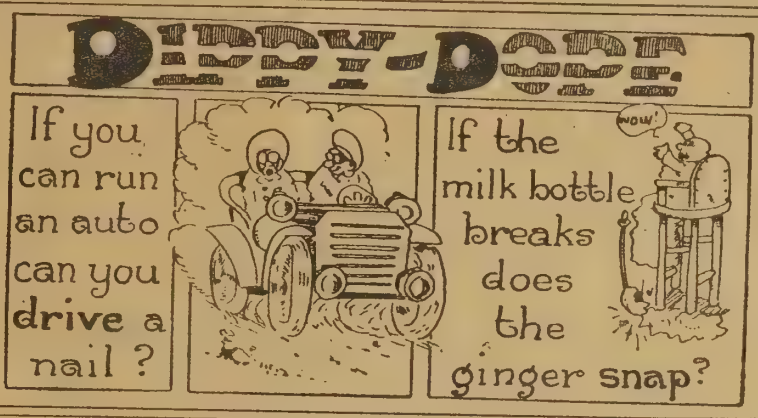
"My, sir, you're the fifth gentleman wot's sent her flowers today."

"What's that, you grinning dub? What's that you say? W—who sent the others?"

"Oh, they didn't send any names. They all said: 'She'll know where they came from.'"

"Well, here, take my card and tell her these are from the same one who sent the other four boxes."—Anonymous.

### Next Best Thing.



A very punctilious officer, who was a long way from the resources of civilization, sent one day for the sergeant, to ask him how long it was since the men changed their shirts.

"A month, sir," was the reply.

"But the regeulations say that the men must change their shirts once a week at least."

"They haven't any shirts to change into, sir."

"Then let them change shirts with one another."

## Great Spectacle Coming Saturday

Some of the people of Washington, Oregon and Idaho are to have the rare privilege day after tomorrow, Saturday, June 8, of seeing a total eclipse of the sun. All the rest of the people of the three states will be treated to a partial eclipse, ranging from the slightest bit of light to one with perhaps one-tenth of the surface of the sun exposed.

An eclipse of the sun is not something wonderful or supernatural. It is merely unusual, but quite natural. All the bodies in space, including the sun, moon and earth, are in motion traveling in regular orbits or routes about each other. The eclipse of the sun occurs when the moon comes exactly between the sun and the earth, shutting off the light from the sun.

The movements of the sun, moon and earth are so accurately known by astronomers that they can calculate exactly the time that an eclipse will occur and exactly the place that it will be seen at that time. The eclipse for June 8 occurs as follows:

It begins in this country on Willapa Harbor, Wash., traveling in a southeasterly direction from the Pacific ocean. It travels in the same direction across the United States, going out into the Atlantic ocean in Florida. It will be total at any given point along this path for about two minutes or a little less. The path in which it will be total will be about 70 miles wide. Outside this path the eclipse will be partial, the light becoming greater the farther one is away from the path.

The darkness that will be seen is nothing more or less than the shadow of the moon, like the shadow that a marble, if suspended in the air between an apple and a light, would cast on the apple. This shadow appears at or near South Bend, Wash., at 2:55 o'clock in the afternoon, standard time, or 3:55 by the advanced time of this country now. It will reach Baker City, Ore., at 3:05 standard time, or 4:05 by the advanced time. This shows it to be traveling along the earth surface at the rate of about 25 miles a minute. From this it can be calculated about when it will appear at any of the places along the path.

The eclipse will be total along a path including, among others, the following places:

**Washington**—South Bend, Raymond, Centralia, Chehalis, Toledo, Castle Rock, Mt. St. Helens, Goldendale and nearby points.

**Oregon**—Blalock, Ione, Heppner, Baker City, Durkee, Huntington and nearby points.

**Idaho**—Weiser, Payette, Idaho City, Hailey, Carey, American Falls, Pocatello, Soda Springs, Montpelier and nearby points.

South Bend and Goldendale in Washington, Baker City in Oregon, and Pocatello in Idaho are practically in the center of the path of the eclipse. It will be total for a short period of time at any point 30 to 35 miles distant from a line drawn between these cities on the map. At a distance of 100 miles 97 to 98 per cent of the surface of the sun will be hidden by the moon. At a distance of 200 miles from 94 to 95 per cent of the surface of the sun will be hidden. From this it appears that at no point in the states of the northwest will the eclipse fall much below nine-tenths dark.

## City Is So Different From the Country Anyway

### It Always Pulled Him out.

A gentleman who was visiting his lawyer for the purpose of making his will, insisted that a final request be attached to the document. The request was that his Ford car be buried with him after he died. His lawyer tried to make him see how absurd this was, but failed, so he asked the gentleman's wife to use her influence with him. She did the best she could, but also had to admit failure.

'Well, John," she said finally, "tell me why you want your Ford car buried with you?"

"Because I have never gotten into a hole yet but what my Ford could pull me out," was the reply.—Everybody's.

### A Possible Reason.

Beanborough always looks on the bright side of things."

"Why?"

"Well, the other day I went with him to buy a pair of shoes. He didn't try them on at the store, and when he got home he found that a nail was sticking right up through the heel of one."

"Did he take them back?"

"Not much. He said that he supposed the nail was put there intentionally to keep the foot from sliding forward in the shoe."—Harper's Magazine.

# Women War-Workers

Women at work in a British shell-filling factory

A tractor being overhauled by British women mechanics

Women and girls doing rough work in British naval yard

British official estimates state that since the war began, some 1,400,000 women have directly replaced men, and some 600,000 are employed directly on munitions. The replacement of men by women has, comparatively, not been extensive in the United States as yet. But day by day we hear of new occupations entered, and old ones extended. Women are the reserve labor power of the nation, and, if the war goes on, will inevitably be called into industry in greater and greater numbers. Increasing demands will be made upon them, unwise sacrifices will without doubt be demanded, short-sighted attempts will be made to break down labor laws. But because, in the light of England's experience, and of our own best industrial practice, we know that exhausted workers mean decreased production—and because in the case of women workers, they mean, too, a deterioration of the race, the people of the country must be on guard with that "vigilance" demanded by its chief of ordnance "lest the safeguards with which the people of our country have sought to protect labor should be unwisely and unnecessarily broken down."

"In view of the urgent necessity for prompt increase in the volume of producion of nearly every article required for the conduct of the war, vigilance is demanded of all those in any way associated with industry lest the safeguards with which the people of this country have sought to protect labor should be unwisely and unnecessarily broken down."

This sentence sounds the keynote of the industrial policy of the two great divisions of the United States army—today placing numberless contracts of fabulous size and value—the ordnance department and the quartermaster's department.

In "General Orders No. 13," from which this sentence is quoted, issued not long ago by the ordnance department and later adopted by the quartermaster general, are set forth in some detail the principles of this policy, and in no uncertain words the reason for its existence. "It is a fair assumption," it goes on to say, "that for the most part these safeguards are the mechanisms of efficiency. Industrial history proves that reasonable hours, fair working conditions, and a proper wage scale are essential to high production," Enlightened patriotism, in other words, demands not that the workers shall work long hours at top speed for the least possible wages, but that for the sake of output they shall make a steady, reasonable expenditure of strength for reasonable length of time under proper conditions. We have long heard these things demanded for the good of the workers, but now a new partnership has been formed. Efficiency and humanity go hand in hand, is the burden of a statement just issued by the women of the National Defense council.

From the time of our entrance into the war, the importance of conserving labor standards has been emphasized and reemphasized by important officials in the government. The president himself, in welcoming at the White House the British labor commission which visited this country last spring, said that "nothing would be more deplorable" than "to set aside even temporarily the laws which have safeguarded the standards of labor and of life," when we are fighting in a cause which "means the lifting of the standards of life."

What are these standards, and why are standards for working women of such prime importance to the nation at this time? Proper conditions of women's labor have always been of peculiar importance to the state. In peace times the United States supreme court held that, for the sake of future generations, it was constitutional to limit the working hours of women to eight hours a day. Today in war time limitation of hours is important for an additional reason. Modern warfare is not fought in the trenches alone. The army at the front is helpless if the second line of defense, the army in factories, is not able to keep up production of supplies. In emphasizing the necessity of rigid enforcement of existing legal standards, and urging that "even where the law permits a nine or 10-hour day, efforts should be made to restrict the work of women to eight hours," the ordnance department has in mind primarily the output of munitions. In urging the prohibition of night work, they state that "English investigators have found that night work for women involves proportionately larger costs for supervision and protection." The human cost of night work has long been known to social investigators. A world war has brought out its pecuniary extravagance.

The Saturday half holiday—"an absolute essential for women under all conditions"—adequate meal and rest periods, and one day's rest in seven, also find place in this government list of industrial standards. Even with the best will in the world, and despite the most ardent spirit of sacrifice, human beings can not do continuous work without losing their efficiency.

Proper regulation of hours alone, however, will not solve the problem. The ordnance department knows that it will not help production to limit hours if the men and women who work these hours are not secured in the fundamental necessities of life—if they are hungry, poorly clothed and improperly housed. Therefore, it is urged that standards of wages "already established in the industry and in the locality should not be lowered," "that minimum wage rates bear a constant relation to increases in the cost of living," and that, in the case of replacement of men by women, there should be equal pay for equal work. In justice to our soldiers at the front, the standards of the jobs they have left behind must not be lowered by these new recruits, who will, in increasing numbers, take their places in the industrial army.

**WHAT ABOUT LIMITING THE HOURS OF LABOR OF THE WOMEN FOLKS ON THE FARM, AND IS THERE NO DANGER OF "A DETERIORATION OF THE RACE" IN THE RURAL SECTIONS WITH THE ADDED DEMAND MADE UPON THE FARM WOMEN IN SPEEDING UP FOOD PRODUCTION WHILE THE YOUNG MEN ARE AWAY AT WAR?**

## Refuses to Change Time.

The following item from California, if representing a situation which really exists in that state, probably likewise exposes a situation prevalent throughout this state as well:

"Old Bossie, the family cow, has declared the daylight saving law unconstitutional.

"Exertmely conservative and highly temperamental, Bossie refuses to take judicial notice of the fact that there is a war going on somewhere, and, withholds the milk supply when California milkmaids hustle out to do the chores an hour earlier than formerly. Hence high school girls in the rural districts have appealed to W. C. Wood, state high school commissioner, to have school time moved back to cow time.

"Educational authorities are considering the appeal, and Old Bossie, her back to the wall, is chewing her cud with deep determination."

## Win the War Wig.

A wig to help to win the war has been "invented" by an American cotton manufacturer. It is made of a fibrous material in two colors—green and reddish brown.

It fits down tight over the helmet and, while the soldiers are sneaking through the woodlands, blends into the forest so splendidly and naturally that 300 feet away nobody can tell that a company or a regiment of soldiers is on the move.

Then when out of the woods and back in the trenches all the soldier must needs do is to take off his wig and reverse it and he is topped with a reddish-brown top piece, invisible against the earthwork of the trenches.

## Lady Mole Catchers Now

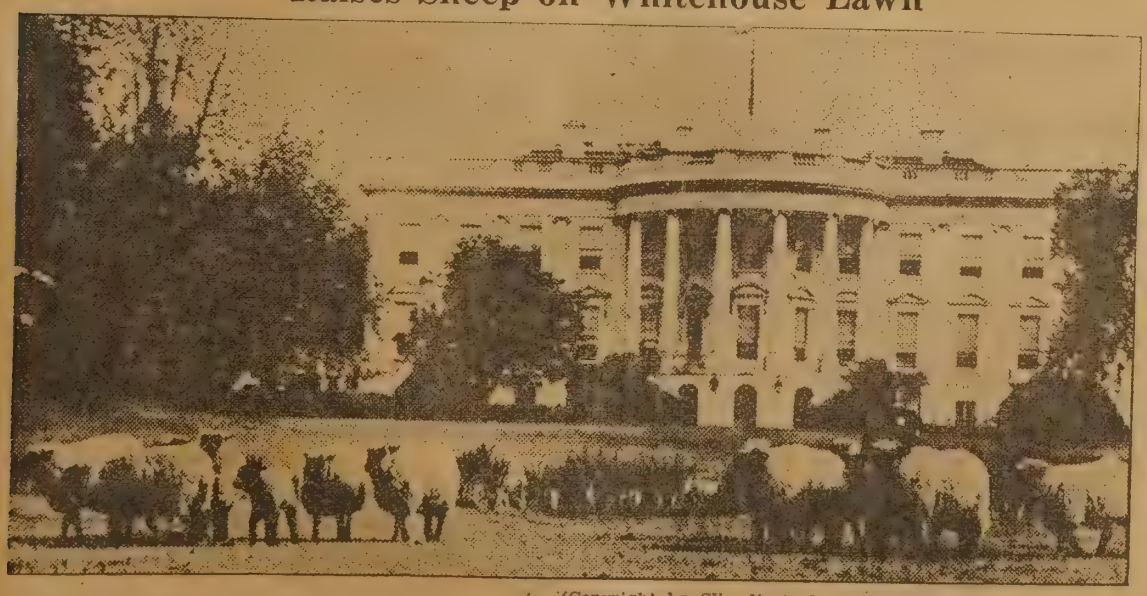
(Copyright, Underwood & Underwood.)

So that there will be plenty of mole skins for use in the making of good, warm coats for army men, and of course, some for civilian use, lady mole catchers are at work in Great Britain now. The above photograph was taken on the beautiful estate of Sir Gerald and Lady Sybil Codrington on the Cotswolds. In this photograph it will be noticed that the lady catcher has just got hold of a mole which will help to keep some soldier warm and comfortable.

## Systematically Destroy Farm Implements

Systematic destruction of farm implements belonging to the peasantry of northern France was a reature of the German retreat last year. The machinery was collected at designated stations where experts in destruction demolished similar vital parts in all machines. By such a scheme it was possible to render valueless the largest number of machines in the least possible time and with the least possible effort. While the French were equally systematic in having this damage repaired, the Germans were able seriously to hinder the carrying on of farm work in northern France. This official French photograph shows one of these collection stations where machinery was destroyed.

## "Dolling Up" for the French



Copyright, Committee on Public Information.)

The above illustration shows a few members of the United States marines "washing up" after detraining at their camp in France. These are the boys who are soldiers and sailors too. On board ship they work with the sailors, but they are always ready for "distant service" and their kits contain everything needful, even to tents with folding poles for protracted landing expeditions.

## Raises Sheep on Whitehouse Lawn

(Copyright by Clinedinst, from Underwood & Underwood.)

This photo shows President Wilson's sheep which were turned loose in the president's "backyard" which has long been known in Washington as the White Lot. Every one of the flock is a fine specimen of the Shropshire Downs breed. When this flock of sheep appeared on the greensward of the White House grounds a desire to "match the president" in helping to increase the country's mutton and wool supply was manifested by many whose responsibility covered big lawns, golf courses and city parks. Some of them began to ask questions of the department of agriculture. Flocks of sheep have been maintained in public parks in New York and Boston, and a flock once grazed around the Washington monument.

St. Paul Pioneer Press.

# Preserving Eggs in Water-Glass

The water glass method of preserving eggs was first made known about 21 years ago and ever since that time there has been an increasing demand for water glass for this one purpose. This method of preserving eggs has been found reliable and dependable, and there is no good reason why the method should not be continued, says Professor George A. Olson in Popular Bulletin No. 114 of the W. S. C. experiment station

The eggs should be collected daily from only clean nests and from healthy flocks. It is preferable to use infertile eggs and thereby eliminate the possibilities for embryonic development and subsequent spoiling. In no case should old, sun-baked, cracked or thin shelled eggs be used. Cracks are usually detected by gently tapping the egg or candling them.

Water glass or sodium silicate, sometimes called "egg keep," should contain approximately one part of sodium oxide to every two and seven-tenths parts of silicon dioxide and be of a consistency of about 38 per cent Beaume.

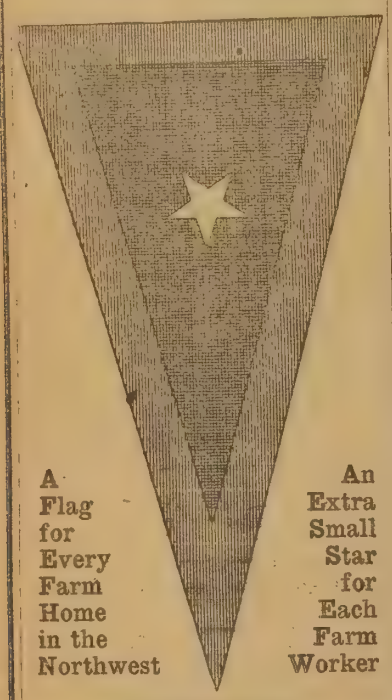
For preserving eggs the proportion of water glass to water required varies. The proportion to be used will depend largely upon the length of time desired to keep the eggs preserved. For the shorter periods perhaps the weaker solution will do, but it is safe to use a proportion of one part of water glass to 12 parts of water, but the best results have been obtained where the eggs have been preserved in a solution containing one pint of water glass to nine or 10 pints of water, although weaker solutions have been used more or less successfully.

It is advisable to boil the water used for diluting the water glass. The boiled water can be added to the water glass while hot or after the water has been allowed to cool. The latter method is preferred because no allowance for evaporation is necessary. Do not put the eggs in the prepared water glass liquid until it has cooled.

The question as to the use of water glass a second time has been frequently asked. Statements are made to the effect that by adding more water to the water glass liquid it can be used over again. While the statements may be correct we do not recommend the use of water glass liquid more than once.

Occasionally the water glass liquid changes from a liquid to a semi-liquid state. In that case the eggs will keep, although it is somewhat more difficult to remove them when the liquid has changed to the "gel" condition.

Generally glazed earthen jars, galvanized tubs or buckets, and wooden tubs or kegs are used. In case of wooden receptacles it is desirable to let them stand filled with water for several days, then empty and scald before using. The loss of liquid will be considerably reduced by keeping the eggs stored in cool, moist cellars.



Eggs preserved in water glass are easily detected. The eggs should, therefore, be sold as "water-glass" or "preserved" eggs and not as fresh ones. According to the state law, eggs which have been preserved, regardless of the method employed, shall be branded with the word "Preserved" before offering them for sale.

| Size of container | Will hold | Water-glass | Required Water-glass Liquid |
|---|---|---|---|
| 1 gallon | 40 eggs | 5.8 ounces | 3 pints, 10 ounces |
| 2 gallons | 80 eggs | 11.8 ounces | 7 pints, 3 ounces |
| 3 gallons | 120 eggs | 17.4 ounces | 10 pints, 13 ounces |
| 4 gallons | 160 eggs | 23.2 ounces | 14 pints, 6 ounces |
| 5 gallons | 200 eggs | 29.0 ounces | 18 pints, 0 ounces |
| 10 gallons | 400 eggs | 58.0 ounces | 30 pints, 0 ounces |

In conclusion it should be stated that eggs preserved in water glass can be used for boiling, frying, scrambling, cooking, as well as other purposes. When the eggs are not preserved too long the whites can be used for meringues, icings and angel food cake. A slight breaking down of the whites (indicated by cloudiness) can be corrected by the addition of bicarbonate of soda (baking soda). About one-tenth of a teaspoonful of baking soda to the whites of three eggs has been found ample in most cases to overcome this cloudiness. Eggs treated with the baking soda do not give quite as good results as those obtained with fresh eggs.

Above is a table giving convenient size jars, the approximate number of eggs they will hold, together with the number of uonces of water glass that will be required to make the water glass liquid needed in each case to cover the eggs.

## FARM SERVICE WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

**Designed by The Washington Farmer in connection with The Oregon Farmer and The Idaho Farmer for the farm and farm home that is increasing food production in helping to win the war.**

OFFER NO. 1.

A farm service war flag, 9x22, printed on heavy enamel paper, in full colors, will be postpaid to any one securing and sending in ONE NEW subscription to this paper. (One year 25c, three years 50c, five years $1.00.)

Send your subscription to

## FARM SERVICE FLAG.
### Hopes for Its General Adoption.

To the Editor: I like your design for a farm service flag. I hope it will be generally adopted.
KENYON L. BUTTERFIELD,
President.
Agricultural College,
Amherst, Mass.

No man has taken a deeper interest in the improvement of rural conditions than Dr. Kenyon L. Butterfield, president of the Massachusetts college. He He is a whole-souled man firstly and president of a college secondly. At one time, while at the Michigan Agricultural college, he was editor of the Michigan Grange Visitor, and later editor of the grange department of the Michigan Farmer. He has also been superintendent of farmers' institutes. He was chosen by President Roosevelt as one of the members of the country life commission and also appointed by President Wilson a member of the commission to study European rural credits.

**Design Very Beautiful.**

To the Editor: Your letter and farm service war flag at hand. The design is very beautiful. W. H. CLEMMONS.
State superintendent of public instruction.
Lincoln, Neb.

The above indorsement of the farm service war flag is especially pleasing as it comes from the superintendent of the department of public instruction of Nebraska, which is one of the great farming states of the west.

**A Size for Every Engine and Motor**

Piston rings prevent escape of gas and power. They must fit exactly or there is compression leakage, excessive carbon, and power loss. The scientific construction of

McQUAY-NORRIS
LEAK-PROOF
PISTON RINGS

assures equal pressure all around the cylinder walls. They are made in all sizes to fit every model and type of engine, automobile, tractor, etc.—every size accurately gauged to fit the particular model of motor.

Your local dealer or garage has—or can get—our data book of piston ring sizes of practically every engine and motor made. This will tell exactly what rings you need. Complete size assortments are carried by more than 300 jobbing and supply houses all over the country from which you can be quickly supplied. Over 2,000 unusual sizes and oversizes—all widths and diameters—are kept constantly on hand at the factory ready for prompt shipment anywhere.

McQUAY-NORRIS
Superoyl
RINGS

A special ring for engines that pump oil. Used in top groove only of pistons to control excess oil, with McQuay-Norris LEAK-PROOF Rings in lower grooves to insure maximum compression and fuel economy.

SEND FOR FREE BOOKLET
"To Have and to Hold Power"—a simple, clear explanation of piston rings, their construction and operation.

## This Saw Cuts 25 Cords of Wood in One Day

Write for booklet "How Dan Ross cuts 40 cords a day."

It is absolutely guaranteed—Hundreds in daily use.

Stocks Carried in Eastern Jobbing Points.

$165. THE WADE

Wade's Gasoline Wood Saw
4 H. P. Engine
(Portable)

This wonderful invention does TEN TIMES the work of TWO MEN in the woods.

With it you can make money out of your wood simply through the immense saving in time and labor. One man can handle it on a log and two can move it from job to job. Will cut a 40-inch log in five minutes. Write us today.

R. M. WADE & CO.
SINCE 1865
354 Hawthorne Ave., Portland, Ore. 910 N. Howard St., Spokane, Wash.

## Small Live Stock Ad Brings Steady Stream of Inquiries

A few weeks ago Leland Bros., of Wendell, Idaho, had some especially classy, highly bred Shorthorns for sale. They are now sold out. They write us under date of May 18, 1918—

We are perfectly satisfied that your papers can deliver the goods. It is impossible to answer all the letters that came from this small ad, and as we are sold out for this year will drop our ad at end of quarter, but will be with you next year strong.

To any breeder having good animals to sell we suggest an ad in this paper as the cheapest and quickest way to find buyers.

**The Washington Farmer, Spokane, Wash.**
Special live stock rate for Washington Farmer, Oregon Farmer and Idaho Farmer on application.
Over 80,000 circulation each issue guaranteed.

**When you write to advertisers, be sure to say that you saw their advertisement in this paper.**

# Trappers of the Ozarks

**The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana. Now the State of Missouri.**

**By LOUIS B. MILLER**

Copyright, 1914, 1915, by Lewis B. Miller.

**Summary of Preceding Chapters.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time an unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination—a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their salt making and hunting. After an exciting experience with a bear in a cave they find their first fresh sign of Indians—moccasin-tracks in the snow about their camp and the morning after they find moccasin-tracks in the snow about their camp. The Indians attempt to enter their barricaded cabin at night but are frightened away by a great earthquake. The boys are captured and taken to the Osage village. One day they are given one bullet and one charge of powder each and allowed to go hunting. They dare not attempt to escape for fear of starvation, but lose their way and are found the following day by the Indians who think they tried to escape and are taken to the camp under guard. Ben is tied to a stake and a fire built under him but it is only a ruse to induce him to take as his squaw Watermelon, for the time being an Indian widow, who cuts his bonds and proclaims herself his squaw. Ben declines. The boys make plans to escape by canoe. They accumulate some parched corn and dried meat, steal a canoe at night and paddling far up the river turn into a branch stream and hide in a cave. After two days and a night there they go back down the river, safely past the Indian village and turning into a branch find a cave high up in the rocky face of a cliff. Here they place all their belongings except the canoe, which they conceal. They are discovered by the Indians, and, retreating deep into the cave with their belongings, they find, over a mile from the opening through which they entered the cave, an exit, and start southwest, the Indians undoubtedly in pursuit. The second day a blizzard sets in and hungry wolves follow the boys. Toward dusk they reach a deserted settler's camp, the cabin burned but chimney standing. Here they build a fire and plan to stand off the wolves. A long, hard fight with wolves and cold ensues. This fight was hardly won when Snapping Turtle and his warrior band surround the boys, who later effect their escape unseen by their enemies, but only to renew their struggle with the cold and wild animals.

## CHAPTER XIX.

### A Blockhouse in the Wilderness.

After resting an hour, the travelers rose up and pushed ahead. They noticed some game and many tracks in the snow, but made no attempt to kill anything till about an hour before sunset. By this time their tramping on half-rations was beginning to be felt, and both admitted a certain peculiar weakness in the knees. Coming to where a little bunch of deer had crossed their course, they turned aside and followed the trail.

They were in some scattering woods—the best place for hunting that particular game. Now Ben, whose markesmanship was more to be depended upon that Jodo's, turned his pack over to his companion and went on ahead. Jodo followed, staying close enough to keep Ben in sight.

After following a mile or two, Ben discovered the game browsing at the edge of a ticket, a good distance away. Motioning for the man behind to halt, Ben put some trees between himself and the unsuspicious deer, then stole toward them. It was important that he get as close as possible before risking a shot.

When at length he found himself within easy shooting distance, the hunter steadied his rifle-barrel against a tree-trunk, then took a long and careful aim and pressed the trigger. But only a slight click followed.

Much disappointed, Ben turned and stole back as cautiously as he had crept forward. Jodo hurried to meet him. When the two were together, they exchanged guns silently. Then Ben stole toward the deer again. Both were anxious now. Suppose the other gun should fail to shoot! What was to keep them from starving? True their pistols were loaded; but they, too, might miss fire. And at the best they were accurate only at close range.

Again Ben reached the tree, again he steadied his rifle, and again, after careful sighting, he pressed the trigger. To his relief and delight, there was a flash from the pan, and then the gun cracked startlingly on the stillness.

When the hunter emerged from behind his tree and hurried forward, all but one deer were running away. And that one was lying on the ground. Now Ben turned and beckoned to his partner.

Jodo came running, so eager was he. "Is it all right? Did you drop 'im, Benoni?"

"No going to bed supperless for us tonight!"

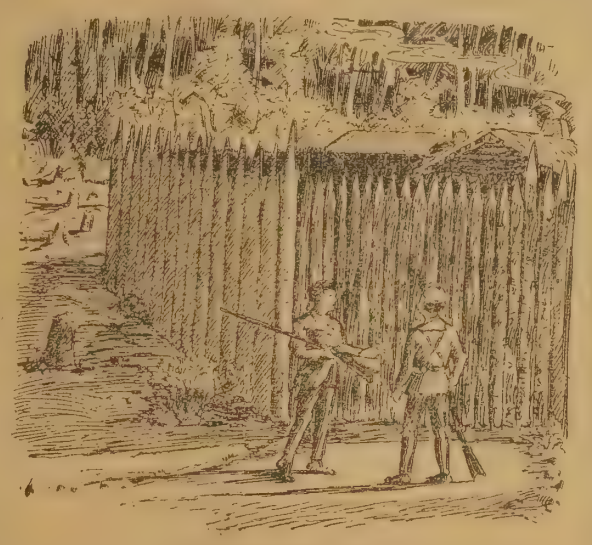
Jodo looked well pleased as he caught sight of the deer. "There's good eating for a few days. As this fellow cost us our last rifle-bullet, we must make 'im feed us till we run onto somebody's cabin."

"Our pistols will be all right if we can get close enough to something. And possibly I can pick my flint and make my rifle shoot yet. It seems to me I've been as careful with my gun as you have with yours."

Ben now drew his hunting-knife, and after cutting the deer's throat, opened the animal and threw away all that could not be used for food. Then he shouldered the game and started on. Jodo followed, with both packs.

Not till too late for their smoke to be seen did they stop for the night. Down in a dry ravine, in a spot where the sun had melted the snow, they made their camp. After taking the precaution to kindle not one camp-fire, but five, all in a circle, they sat down in the midst of their fires and proceeded to skin the deer. The game was not fat, and there was not much meat.

They cut off all the meat they could get off, to be jerked, or barbecued, and carried with them. The bones they broiled and feated on. After gnawing all the meat from them, they roasted the larger bones, cracked them with their tomahawks and ate the marrow. Even a less hungry person would have found the meal well worth eating.



Up with the first faint light of morning, they made another meal, mostly from the unjerked parts of their venison. Then they put out their fires with snow, and by the time they could see were tramping toward the southeast.

Their commissary bag was not heavy—not half as heavy as they wished it had been. And they tramped the faster as they realized the necessity of reaching a human habitation before their venison gave out.

All day long the two pushed ahead, with only a brief halt at noontime to eat and rest. Having now nothing to eat but meat, what they ate reduced their supply alarmingly, so that they had to allowance themselves. Ben had picked his flint and dried the priming-powder, and he hoped that his gun would now shoot. However, there was no certainty of that.

The weather continued rather mild all day, but the sun did not shine and the snow did not melt. Not long before night, while tramping through some scattering woods, the two distinctly heard the report of a gun. The sound came from the east, and seemed to be a good distance away.

Instantly they halted, and for a little while they debated what the shot meant. Of course, as they knew,

They Seek Admission.

it was possible that there were Indians encamped somewhere in the vicinity. But far more probably the gun had been fired by some white hunter. If the latter, that was just what the fugitives were in search of. So they changed their course and walked rapidly toward where the report had sounded.

They listened for another shot, but failed to hear it. They had tramped more than a mile when Jodo stopped suddenly and pointed to the snow ahead. Ben first halted, then walked closer and examined some tracks.

"No doubt about it, Jodo. Somebody has passed along here since this snow fell. And that somebody was a white man. Unmistakable boot-tracks, these are."

"Must be either a camp or a cabin close by—don't you say so, Ben?"

"Not a doubt in the world of it. And the way to find that camp or cabin is to follow this fellow's trail."

So, without further delay, they set out, tracking the man as fast as they could walk. Soon they came to where the tracks suddenly changed their course, doubtless because the hunter had discovered some game. Still following, the two trailers saw where their man had stood by a tree, perhaps to take aim. Fifty yards farther on the trail led to where some animal, probably a deer, had fallen in the snow. And a reddish blotch in the white meant that the deer had died where it fell.

Without going to the trouble to disembowel the game, the hunter had thrown it over his shoulder and set off homeward. From here on an occasional blood-drop could be seen in the snow, near the hunter's tracks.

"He's killed a deer and set off for camp with it," Ben remarked, as the two hurried on. "Now all we've got to do is to stick to his trail. It's entirely possible that we can sleep under a roof this very night."

"Provided there is a roof."

"If he stops to rest a few times, we may come up with him."

At length they did come to where the hunter had thrown this game down to rest. But the foot-prints led on, and the man was not in sight.

Dusk was now at hand, but Ben and Jodo kept trailing the hunter as long as they could make out his tracks. And still they had sighted neither hunter nor cabin. Now they paused and began to consider what they should do.

"Jodo, it's one of two things. Either we shall have to camp here till morning; or we shall have to light a fire till we can get some kind of a torch to blazing. After that we can track the boots by torch-light."

"We would both sleep sounder in a cabin tonight."

"Yes. But of course we may not be able to find anything that would make a good torch, dark as it is now. And the cabin or camp may still be miles away. Hunters often have to tramp far in their search for game. We know that from experience. And besides that—"

"Besides that what, Ben?"

"Well, you know there are said to be some outlaws over here in this White River country."

"What kind of outlaws?"

"Why, all kinds of runaway criminals, fugitives from justice, desperate characters that have run away from the states to save their necks, and would as soon murder you as to look at you."

"But even if we did happen onto such a gang, they wouldn't be likely to hurt us, would they? They wouldn't murder us unless they wanted to rob us. And we've got nothing they'd care for, except maybe our rifles."

"That's true. Still, I'd a little rather approach the cabin or camp in daylight. Then we can form some opinion of the people and can decide whether it's safe to sleep under the same roof with them. If they look suspicious, we'll inquire how far it is to their nearest neighbor's, and travel on."

"But, Ben, we're in such desperate straits we can't afford to go by any place where white people live, no matter whether they're outlaws or honest hunters. Starvation is so close on our heels, we'd better take some little risk. Supper and breakfast will use up the last bite of our venison. And we've got to allowance ourselves to have any for breakfast. After that, what? Especially if your rifle misses fire again. Still, I'm willing to camp here till morning if you think that's safest."

"I rather believe it will be. We've traveled far enough already today to have earned a good night's rest. Tomorrow we'll track the hunter to his lair."

The two had soon swept a patch of ground clear of snow and kindled a fire on it. Not being much afraid of wolves now, they contented themselves with one big fire. Hoping soon to be able to obtain other provisions, they divided their remaining venison into three equal parts. Two of those they ate for supper. And even with that both could have eaten more.

They slept peacefully enough, and were up and ready to travel by daylight. The air was frosty, but not particularly cold, and everything seemed to indicate that the bitter weather was at an end, at least for a time. The travelers had fastened on their packs, shouldered their rifles, and set out on the deerslayer's trail before the sun was in sight.

For two or three miles they followed those plainly printed tracks.

"If he lives much farther away, the sun may have the snow thawed and his tracks melted out before we can follow him home," Jodo finally remarked.

"Tracks or what not, we'll find the right place now. Yonder is where he makes his headquarters. Don't you see the sign?"

They were now on rather high ground, and Ben was pointing to where a feathery wisp of bluish smoke could be seen mounting upward out of the forest. Apparently it was about a mile ahead. As the hunter's tracks were now leading straight toward the smoke, the two trailers had little reason to doubt that they would find him cooking some of his venison by that fire.

They kept on through the forest. Most of the time the smoke was still visible. At length they caught sight of a small opening, or clearing, and could see where the smoke came from.

"There's a house, all right, Ben! I can make out the chimney, with the smoke pouring out of its top."

"Yes, it's a cabin, and not a mere camp. But before we venture up close enough to pull the latch-string, let's watch the place and see what we can learn as to who lives there."

Jodo was gazing through the leafless forest. Soon he said

"One thing I've learned already. The house has a stockade around it. Or at least it's around part—around one side. Doesn't seem to be any stockade on this side, though."

"So we've happened upon a sort of blockhouse here in the wilderness, have we? That will be a decided advantage if the Osages are still on our trail, and we have to fight them."

"Another thing I can make out. There are two cabins—two cabins joined together, I should say."

"Yes, the roof shows that. And that means that our hunter is not living a hermit's life. Now, the question is, Who keeps him company?"

"Why, his family, I'm guessing."

"Perhaps—and perhaps not. I can't make out any kind of an opening on this side—door, window, or anything else."

"No. Naturally, Ben, all the doors and windows would be on the side that's protected by the stockade."

"That's probably right. So let's move round till we can get a clear view of the other side. We shall not be able to see the door for the stockade. But there must be a gate there. And if we watch the gate long enough we'll see somebody come out."

"Not much doubt of that."

So the two drew back farther into the forest, then made a circuit and approached the cabins on the opposite side. Soon they were near enough to make out the gate, which was in the south wall of the stockade. The gate was still shut, and Ben and Jodo concealed themselves behind trees, where they could get a clear view, and waited for somebody to come and open it.

Half an hour or more went by. Smoke was still boiling out of the chimney top, but the gate remained shut.

"Ben, if the people living there should discover us spying on 'em like this, they'd be apt to take at least a shot or two at us, just on suspicion."

"Yes, maybe they would. But that's why we're behind trees. We want to see them before they see us."

"Why should you say they built this blockhouse out here in the wild country, Benoni?"

"Well, that depends upon who they are. If they're honest hunters and trappers, they may have built it as a protection from the redskins. If they're fugitives from justice they probably built it as a place to defend in case officers of the law followed them out here; or maybe to protect themselves from both officers and Indians.

(Continued on the following page.)

# Could We Grow Two Crops at Once?

## *Unique Method Reported a Success in England*

"A great discovery in agriculture" is what the London Times calls the result of the experiment of raising wheat and hay in one crop in England. It is claimed that the scheme means double production, economy in labor and fertilizers and the saving of much seed. The method is the discovery of an English farmer, and was tried by him with success on a small scale the last year. The new method is as follows:

"In July, by the use of a specially devised drill, a winter cereal and an artificial fertilizer are simultaneously drilled through any grass land intended for haying the following year. By September or October the cereal will have made a top growth of from eight to ten inches. This is then grazed off with the grass by whatever live stock is turned out upon it, and the grain, normally an annual, is thus turned into a biennial by virtue of its yield of valuable grazing in the autumn preceding the year of the normal grain harvest. The autumn grazing encourages and strengthens the roots of the cereal.

"Owing to the protection from frost given to the roots of the cereal by the covering of turf, normal spring growth begins earlier, more heads are thrown up, development is more rapid, and the grain ripens at the same time as the hay, both being harvested together. The harvesting is done by means of an ordinary mowing machine fitted with an extra knife at the proper height above the grass to cut the heads of the grain. The lower knife cuts the hay as usual and the upper knife acts as a 'header.' A carrier behind the 'header' knife deposits the grain in a separate swath.

"The advantages claimed for this method are many, among them being the following:

"The productive capacity of the land is doubled.

"Old and valuable grass lands are not only not destroyed but are improved.

"Economy of labor throughout; plowing and harrowing are not needed, both crops are gathered together, planting and rolling are done at the same time, and the grain crop is gathered with ease and certainty, as there is no green growth with the grain needing to be stood in the sun to dry.

"Economy of fertilizers, owing to the deeper rooting cereal taking up any washes below the roots of the turf.

"A saving of about one-half of the seed usually needed, as there is more uniform distribution, a much higher percentage of germination, due to July planting, no loss from birds and seed washed away by heavy autumn rains.

"The autumn grazing is of a fresh, nitrogenous character, at a time when ordinary grazing has the least feeding value.

"The passage of the drills through the turf improves the surface drainage and the deeper rooting cereal loosens the ground and adds to the humus in the soil.

"The equal mixture of straw with the hay for fodder.

"The great convenience of July planting to the farmer, who, having assembled his labor for haying, can use it for planting if the weather is unfavorable.

"It is claimed that under this method no permanent pasture need be broken up—rather that the larger part of the arable land might be put down to permanent pasture, only enough being allowed to a four-year ley to alternate in the fifth with roots. The permanent pastures and leys are in hay and corn one year and grazed the next. In the spring of the grazing year seeds of annual legumes can be planted through the pastures with the same machine as is used to drill in the grain, not only on account of their feeding value but also to increase the nitrogen in the soil for the following cereal crop. Seed winter wheat can now be supplied by the government, as there is a large stock on hand bought last year at 82s a quarter that would be unprofitable to send to the mill.

"The attention of the food production department has been drawn to the results of the experiments in this method of corn and hay farming, and the whole question is now being considered. It is revolutionary in character, but no convincing reason has been advanced why it should not prove of immense value in a country like England, where the needed extension of wheat growing can only be had through the sacrifice of valuable live stock feeding and hay ground. The drilling of the seed through the turf is accomplished by a small knife-bladed foot that can be attached to any drill in the place of the disc.

"The government experts have been so much impressed with the possibilities of the method that priority certificates have been granted for the manufacture of the fittings or the import of any parts which may be necessary if they can not be obtained here in time for this season's planting.

"There is no doubt that oats and wheat can be profitable grown in this manner. It may be that the straw of barley would be too short above the hay for the header, but it is true also that any grain will grow a taller stalk through the grass than when it stands in the open. Farming experts, both official and private, have been discussing this new method for some weeks past, and the only points raised for solution have been of a minor character easily disposed of and none of them fatal to the success of the operation as a whole. Owing to the simplicity of the tools needed there would be no trouble in having the method tried on an extensive and profitable scale this year if the work of preparation was begun at once."

Insufficient moisture would probably bar the new plan from the dryer non-irrigated lands of the Inland Empire, but that obstacle would not apply to western Washington and Oregon, and double cropping might be successful in the regions in the interior that have more generous rainfall.

If the method proves successful in England it will open up wonderful possibilities for the irrigated lands of this country. It is certainly intensely interesting, and should be thoroughly investigated by the United States department of agriculture and the agricultural colleges of the various states.

THE BEST LINIMENT

OR PAIN KILLER FOR THE HUMAN BODY

Gombault's

Caustic Balsam

IT HAS NO EQUAL

For the Human Body —It is penetrating, soothing and healing, and for all Old Sores, Bruises, or Wounds, Felons, Exterior Cancers, Boils Corns and Bunions, CAUSTIC BALSAM has no equal as a Liniment.

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

A Perfectly Safe and Reliable Remedy for Sore Throat, Chest Cold, Backache, Neuralgia, Sprains, Strains, Lumbago, Diphtheria, Sore Lungs, Rheumatism and all Stiff Joints

REMOVES THE SORENESS--STRENGTHENS MUSCLES

Cornhill, Tex.—"One bottle Caustic Balsam did my rheumatism more good than $120.00 paid in doctor's bills." OTTO A. BEYER.

Price $1.50 per bottle. Sold by druggists, or sent by us express prepaid. Write for Booklet B.

The LAWRENCE-WILLIAMS COMPANY, Cleveland, O.

# Trappers of the Ozarks

(Continued from the preceding page.)

Another half-hour passed by, and still nobody had opened the gate. By this time both watchers were becoming impatient.

"If it wasn't for that smoke, I'd believe they're all away from home," Jodo remarked.

"It's altogether possible that they are away from home. They may have started out early, and left their fire burning. That would account for the smoke."

"If they're all out hunting, they must have left the gate unlocked. We could go in and have a little look around before they come home."

"They've either padlocked the gate, or left somebody at home on guard, I'd guess. It's not probable that they'd go off and leave their stronghold for somebody to go in and take possession of."

"Possibly they've left some fierce dogs in there to guard it."

"Dogs couldn't keep out Indians, or officers of the law either. The fact that we haven't seen anybody in so long a time would indicate that not many persons live there. So I'm thinking we'll go in and have a little chat with them, whoever they may be. If they won't do anything else, perhaps they'll sell us a few rounds of ammunition, and tell us how far it is to the next house."

"All right, Benoni. We're in such a tight fix we're just bound to do something. So I'm ready to have a talk with the bad men whenever you are."

They walked boldly up to the gate, only to find it fastened somehow on the inside. Ben shook it, and then called "Hello!"

For a little while there was no response, and Jodo lifted up his voice and called more loudly. Soon footsteps were heard approaching the gate.

"Who's there?" demanded a gruff voice, from inside the wooden wall.

"Two travelers that want to get in!" Ben called back.

"What you want in fur? What you doin' here, anyhow?"

"We've just recently escaped from the Osages. They've been keeping us on the jump, and we're out of"—Ben started to say ammunition, but thought it better not to admit that—"out of anything to eat. For goodness' sake open to us! We're not dangerous!"

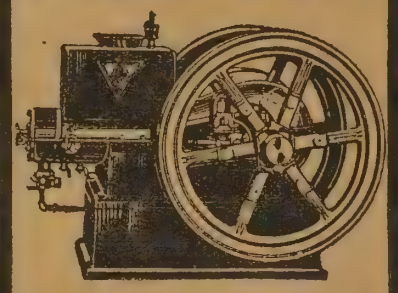
For a little while the two outside felt rather than saw that an eye was scrutinizing them at a crevice between two gate-timbers. They must have looked harmless; for presently the gruff voice said:

"Wait a minute, and I'll let you in!"

(To be continued.)

# Nonpartizan League

By GRANVILLE LOWTHER.



From several sources, I have had inquiries about the Nonpartizan league. "What is it?" "What is its purpose?" "Should I join it?" Many other questions are generally connected with the inquiry, most of which I do not feel sufficiently informed to try to answer. About six months ago, I was solicited by an organizer, to join the league. I had previously read something about it on both sides of the question; but had not reached a conclusion. The talk of the organizer was plausible, and in ordinary peace times, I have no doubt, I would have joined it. There is no question but they embody in their statement of principles, many things the people need and will some time be able to obtain. The question in my mind was, "How will these good things be interpreted and used by the leaders, in the great crisis through which we are now passing?"

There are many things that should be different and many wrongs that might be righted. However, we are now in the midst of the greatest war of history, a war for universal democracy as opposed to a world-wide autocracy. The one, great, all-absorbing issue is to win the war; and all minor questions, all political differences, all family quarrels should be held in check until the world is made safe for representative governments, and the protection of free peoples from international robbers and murderers. Interpretation and the application of principles are very important factors. For instance the Bible is a good book; but I could never respect its teachings as interpreted by some very good and devout religionists. I could not respect the principles of the Nonpartizan league as interpreted by I. W. W., pacifists, pro-Germans and Senator LaFollette, all of whom I am informed are operating through the league. This is not because I am in favor of war instead of peace; but because I know the only way to have peace is to compel the disturbers of the peace to respect the rights of others. This can not be done by writing essays, philosophising on social ethics or by making contracts that the disturbers regard as "scraps of paper," to be broken at will. In the hands and under the leadership of intelligent and loyal farmers or laborers, I would want to be counted in. In the hands of German pacifists, who are the most warlike nation on earth, except in countries they want Germany to conquer and rule, I want to be counted out. In the hands of the I. W. W., whose methods are impossible, count me out. In the hands of men of the views on the war expressed by La Follette, at a meeting of the league members, count me out. In the hands of real workers like the average farmer and wage workers, count me in. Because I was in doubt about its direction and the use of power by its leaders I did not join. However, my action is not intended to be a guide for others; it was only satisfactory to myself, with my present understanding of the subject.

### First War Insurance Paid.

The payment of government insurance for a soldier lost at sea has been made to George Moreno in Texas, whose son was drowned when the Tuscania was torpedoed. The son carried $5000 war insurance on his life. The father knew nothing about it until notified to make out the claim papers.

ALPHA

Gasoline Engines

1½ to 28 H. P.

For operating grain elevators, cutting feed, filling the silo, pumping water, sawing wood, or wherever DEPENDABLE power is wanted. Put a reliable, smooth-runing ALPHA at work for you. It will run right along day after day and not get out of order. It's an engine you never have to "fuss" with. It's always ready. Operates economically on gasoline or distillate. Full details on request.

# Knit Socks

## One Big Way for Women to Help

Knit socks! This is the cry of the knitting department of the Red Cross, and is one big way women can help at home during their few spare minutes. Here are the Red Cross directions:

**Medium Sized Man's Sock.**

4 steel needles No. 10, amber No. 3, or bamboo.

Set up 60 stitches, 20 on each of three needles. Knit 2, purl 2 for four and one-half inches. Knit 4 plain stitches, knit 2 together. Repeat this until the round is completed. There are now 50 stitches on the needle. Knit plain until leg measures 11 inches (6 1-2 inches of plain knitting). Take half the number of stitches (25) on first needle for the heel (leaving 12 and 13 stitches on the 2nd and 3rd needles for the instep), and on the 25 stitches knit one row and purl one row alternately for 26 times (or 3 inches), always slipping the first stitch. Begin to turn heel on the wrong side, slip 1, purl 13, purl 2 together, purl 1.

Turn work over, slip 1, knit 4, slip 1, knit 1, pass slipped stitch over knit stitch, knit 1, turn; slip 1, purl 5, purl 2 together, purl 1. Turn, slip 1, knit 6, slip 1, knit 1, pass slipped stitch over knit stitch, knit 1. Continue working toward the side of the heel in this manner, knitting one more stitch on every row, knitting stitches on either side of gap together until all stitches are on one needle. There should then be 15 stitches on the needle. Pick up and knit 13 stitches on side of heel. Now knit the 25 stitches on 2nd and 3rd needles on to the one needle, which becomes your second needle. With your third needle pick up and knit the 13 stitches on the other side of heel, and knit 7 stitches off your first needle, so that you will now have 21 stitches on the first needle, 25 stitches on the 2nd needle and 20 stitches on 3rd needle 1st needle (a) knit to within 3 stitches of end, knit 2 together, knit 1. 2nd needle (b) knit plain. 3rd needle (c) knit 1, slip 1, knit 1, pass slipped stitch over, knit plain to end of needle, knit one round plain (d).

Repeat a, b, c and d until you have 13 stitches on the 1st needle, 25 stitches on 2nd, 12 stitches on 3rd. Knit plain until sock measures 9 inches from back of heel. 1st needle (e) knit to within 3 stitches of end, knit 2 together, knit 1. 2nd needle (f) knit 1, slip 1, knit 1, pass slipped stitch over, knit to within 3 stitches of end. Knit 2 together, knit 1. 3rd needle (g) knit 1, slip 1, knit 1, pass slipped stitch over, knit to end of needle. Knit 2 rows plain (h).

Repeat e, f, g and h five times, then narrow every other row until you have five stitches on your first needle, nine stitches on your second needle and four stitches on your third needle. Knit the five stitches on your first needle on to your third needle. Your work is now all on two needles opposite each other. Break off yarn, leaving 12-inch end. Thread into worsted needle and proceed to weave the front and back together as follows, always keeping thread below needles and having thread coming from back needle.

Pass worsted needle through first stitch X of front knitting needle and slip stitch off. Pass through second stitch as if purling—leave stitch on, pull thread through first stitch of back needle as if purling. Slip stitch off, pass thread through second stitch of back needle as if knitting, leaving stitch on. Repeat from X until all the stitches are off the needle.

Sock when finished should measure:

Foot from tip of heel to tip of toe, 11 inches.

Leg from tip of heel to tip of leg, 14 inches.

Width of foot and leg, four inches or over.

Sock should be knitted loosely and elastic.

Tack socks together at top only, catching through one side of each sock.

**General Directions.**

Stitches should not be cast on too tightly.

Knitting should be done evenly and firmly and all holes should be avoided.

Joining should be done by splicing or by leaving two or three inches at each end of the yarn to be darned in carefully.

All knots, ridges or lumps should be most carefully avoided, especially in socks, as they are apt to blister the feet.

Wash and press socks, folding sides together.

Do not start any articles with wool left over, but return.

Please endeavor to finish and return in three weeks.

## Bakes in the Morning.

To the Editor: I do my baking in the morning before doing up my work thus saving fuel to heat up the oven and doing away with heating up the house in the summer. I make a soup of left-over vegetables. I put in any gravy I may have, as this helps to season it. MRS. E. H. ATHERTON.

Orofino, Idaho.

**An Addition.**

"Do you like songs without words?"

"Yes, and I would like them still more if they could be given by voiceless singers."—Baltimore American.

Awarded GRAND PRIZE at the P. P. I. E.

KOVERALLS

Reg. U. S. Pat. Off

Keep Kids Kleen

The most practical, healthful, playtime garments ever invented for children 1 to 8 years of age. Made in one piece with drop back. Easily slipped on or off. Easily washed. No tight elastic bands to stop circulation. Made in blue denim, and genuine blue and white hickory stripes. Also lighter weight, fast-color material in a variety of pleasing designs, all appropriately trimmed with fast-color galatea. All garments made in Dutch neck with elbow sleeves or high neck and long sleeves. Folder (in colors) showing different materials sent free on request.

$1.25 the suit

If your dealer cannot supply you we will send them, charges prepaid on receipt of price, $1.25 each.

Satisfaction guaranteed or money refunded.

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## What Causes Boils and How They Should Be Treated

Dr. Hirshberg.

The difference between tweedledum and tweedledee is about all that exists between pimples, boiles, whiteheads and furuncles. When several of these fuse into one or one becomes a bit larger, more vicious or angry than some of its lesser brothers, you may call it a carbuncle. In any event, a boil by any of these names will be as bad.

A scratch, pin-prick, cut, turned-in hair or the other condition and circumstance, invites the ever-present infectious germs—staphylococcus or steptococcus—to begin their work of invading your skin.

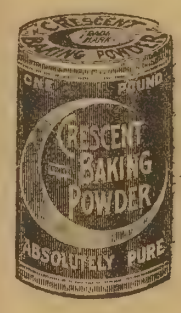
It is ignorance and sheer nonsense, the traditions of yesterday's discarded medical knowledge, which makes many persons believe that their "blood is in good condition," if a cut or scratch heals quickly and cleanly, or it is "in bad condition" if festerings, boils or carbuncles appear. These abominations are the result of infectious material, hidden and invisible, but always abundant in the air, water and soil and on the hands and skin, though the latter may seem to be as clean as soap can make them.

**Aids to Healing.**

When first observed as a white speck, a sterilized needle dipped into liquid carbolic acid should be used to puncture the boil, after which a drop or two of the acid should be spread over the center of it. A few drops of alcohol will neutralize the external effects of this.

If the boil is hard and not pointed with a white head, all the skin over and around it for some distance must, if possible, be kept germ-free with liquid soaps, and ether. This prevents the origin of other furuncles. Hot, diluted glycerine and some powdery or sandy material to hold it and the heat should be applied to the boil to hasten its poining or "coming to a head." Wax, paraffin or antiseptic oils, such as wintergreen mixed with some porous clay or like material, when applied hot to these focal infections seem to aid the white blood corpuscles and other tissue elements to destroy the bacteria concerned in boil formations.

Bichloride of mercury applications, still the standby of many, have been discarded by those experienced in more modern methods. Such antiseptics are bad treatment. They irritate the skin beyond measure.



When, as in the case of boils on the back of the neck, there is much hair in the neighborhood of these infections, it should be shaved off and the iodine painted once around the dry skin to do away with the chance of boil and pimple bacteria penetrating hair follicles.

**Completing the Cure.**

When, however, it is feasible, the boil or carbuncle, pimple or whitehead should be opened by a sharp, quick incision. In this way there will be a good evacuation of the matter in it, and recovery will be hastened. The old flaxseed poultice way of heat and dirt mixed delayed this for a week or more. With prompt incision and the employment of ammoniated mercury ointment as a dressing to destroy microbes, soothe pain and quicken the life blood the worst should be over in two or three days.

Bandages and absorbent cotton or gauze are to be changed three times a day. Thus no pus or matter will accumulate and be forced further into the nearby tissues.

See to it that the bowels are properly regulated and enough exercise and fresh air obtained, and a thoroughly well mixed diet carried forth. Also take 10 grains of bicarbonate of soda every four hours, and sulphide of calcium, 1 grain, after meals.

You can make light, wholesome bakings from any substitute flour, with

## Wheatless Shortcakes

Thousands of men and women have given up the weekly allowance of a pound and a half of flour, and are traveling a wheatless road to victory. Those housekeepers who make good use of this allowance in loaf bread and biscuit hesitate to turn even a dust of wheat flour into pie or shortcake and such extras. To these the recipes for shortcake worked out in the experiment kitchen of the food administration will be most acceptable.

**Barley Shortcake.**

1 cup liquid.
4 to 6 tablespoons fat.
1 tablespoon sugar.
1 teaspoon salt.
6 teaspoons baking powder.
4 cups barley.

**Corn Flour Shortcake.**

1 cup liquid.
6 to 8 tablespoons fat.
1 tablespoon sugar.
1 teaspoon salt.
6 teaspoons baking powder.
2 2-3 cups corn flour.

**Rice Flour Shortcake.**

Follow directions for corn flour, using 2 1-4 cups rice flour instead of corn flour.

**Barley-Corn Shortcake.**

1 cup liquid.
6 tablespoons fat.
1 tablespoon sugar.
1 teaspoon salt.
6 teaspoons baking powder.
2 cups barley flour.
1 1-3 cups corn flour.

**Barley-Oats Shortcake.**

Follow directions for barley-corn flour, using 1 1-2 cups rolled oats ground in food chopper instead of the corn flour.

**Corn-Oats Shortcake.**

1 cup liquid.
4 tablespoons fat.
1 tablespoon sugar.
1 teaspoon salt.
6 teaspoons baking powder.
1 1-3 cups corn flour.
1 1-2 cups ground rolled oats.

All measurements are level. Mix dry ingredients, cut in the fat and add the liquid. For individual servings, place dough on slightly floured board, pat to ¾-inch thickness and cut as for biscuit. If a large shortcake is wanted, place dough in well greased biscuit tin and pat to desired thickness.

An egg added to rice or corn flour makes a softer dough. The slightly acid taste of barley may be overcome by using a quarter teaspoon of soda dissolved in one cup of liquid.

Do not split these cakes, as they crumble easily. Pile strawberries or other fruit on shortcake. Add whipped cream, if desired, and serve. These shortcakes can be used instead of pie crust in a great variety of desserts.

**Family Reunion.**

Two brothers recently met in a Y. M. C. A. hut in London. They had not seen each other in two years. Subsequently in reading a newspaper they came across photographs of their mother, three other brothers, themselves and two cousins, all doing their "bit."

**Serving Front Lines.**

Horace Munger, an merican sailor, writing from France, says: "The Frenchmen call us 'Wild Americans' and the Germans call us 'brave fools.' The Y. M. C. A. is right up in the trenches. They carry the stuff right up in the front line for the boys that have to stay there."

SANITARY CANNING OUTFITS

Home canning is more necessary and more profitable this year than ever before.
Steam pressure canning is the safe, quick and easy way. Our complete outfit saves time, labor and fuel, **hermetically seals** the cans and **sterilizes** the contents.
We include instructions and a $2 book of recipes.
Write for free literature.

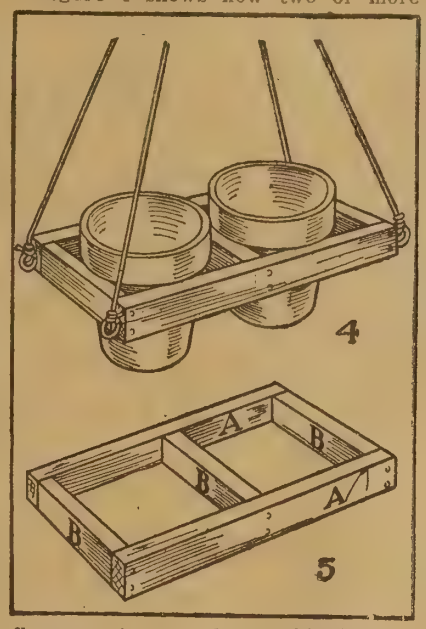
## Hanging Flower Boxes and Baskets.

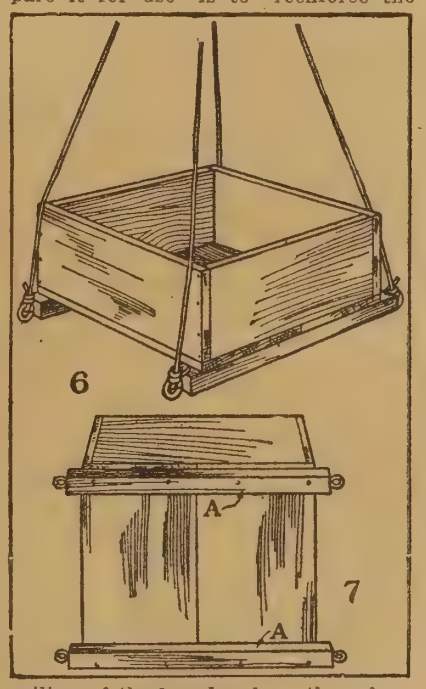
Pretty hanging boxes and baskets for plants and ferns may be made easily with materials picked up at home, as I am showing by the designs below. These boxes and baskets are



but a few of the many possibilities that may be discovered with a little thought.

The flower pot basket in Fig 1 is supported in a frame like that shown in Fig. 2, made out of lightweight wire. Stovepipe wire is a good kind to use, as it is easily bent and breaks with a few twists at the point desired, making a pair of wire cutters unnecessary.

First form the wire ring of the proper diameter to catch around the underside of the top flange of the flower pot, then attach the three wire sizes, but the one here shown is of the best proportions for a flower basket. All that is necessary to do is to line the inside of the basket with hangers to the ring, spacing them equidistantly, and join the upper ends in a hook as shown. If you can not find the wire for making the frame, you may use heavy wrapping twine for the purpose.



The basket shown in Fig. 3 is made from a wire egg basket. If you haven't an unused basket in the house, you can get a new one for 10 or 12 cents. They come in different shapes and moss, turning the mossy side out, so that the basket will retain earth, and then fasten two pieces of wire or cord to the handle for hangers.

Figure 4 shows how two or more

flower pots may be combined in a wooden frame for a hanging box, and Fig 5 shows how the frame strips are nailed together. Cross strips B should be of the length of the outside diameter of the flower pots, measured just beneath the top flange, and stripe A should be of the proper length to connect the cross pieces. After nailing the frame strips together, screw screw-eyes into the ends of strips A, to which to tie the suspending cords.

The hanging box shown in Fig. 6 may be made out of any shallow grocery box. All that is necessary to prepare it for use is to reenforce the

nailing of the boards where they show signs of loosening, and to provide it with hangers. The best manner of attaching the hangers is as shown in Fig. 7, which is a view of the box bottom. Strips A are several inches longer than the width of the box, and are nailed on crosswise with the bottom boards. The screw-eyes are fastened into the ends of the strips, and with the hangers tied to these the weight of the earth-filled box is borne by strips A instead of by the box bottom.

### Original Source.

Examiner—You are quite sure that this is a purely original composition you have handed in? I must say the wording sounds strangely familiar.

Plagiarist—Possibly you have run across some of the words in the dictionary."—Judge.

### The Rebuke Courteous.

Old Gentleman (dictating an indignant letter)—Sir, my shorthand typist, being a lady; can not take down what I think of you; I being a gentleman, can not say it; but you, being neither, can easily guess my thoughts.

Review Building. Spokane, Wash.

Letters from the following Corner cousins have been received the last week and will be published just as soon as possible: Eva Priddy, Dorothy Kane, Eva Hickman, Bernadine Hatfield, Annabell Van Hoy, Virginia Brockmiller, Ruth Bailey, Marian Willey, Elizabeth Cook, Clara Pohle, Alice Watson, Lawrence Barraford, Hazel Lackey, Maude Lackey, Lahville Fountain, Gertrude Wittine, Minnie Warner, Carl Dahlstrom, Lucy Mizer, Anita Hughes, Jessie Willey, Elma Moem, Elizabeth Odell, Margaret Kane, Helen Peterson, Sibelle De Cheane, Dorothy Cain, Annie Anderson, Wilma McDowell, Viola Powell, Elsie McGlaughlin, Leona B. Jacks, Bessie Kincaid, Zella Wilson, Della Davis, Helen Christina McKeen, Selma Lilliquist, Mildred Heidegger.

### Moscow, Dinah and Bonnie.

Dear Aunt Nellie: I am going to write to the Children's Corner again. I have not written for a long time. This is the fourth letter I have written. I was 11 years old February 23. I am in the seventh grade. Have I a twin? If I have I should like for them to write to me. We own a 320-acre wheat ranch. We have 17 head of horses and four head of cattle. I have three pets. They are a horse, named Bonnie, a little black 2-year-old cow, named Dinah, and a little dog, named Moscow. It does not seem like winter here. We have not had much snow here this winter. We have 115 Barred Rock chickens. I have four white ducks. I think they are very pretty. We have a lake near the house and they swim in that. I have no sisters or brothers. I like to go to school. The name of the school I go to is Vorhees. We had a box social at our school. My teacher's name is Miss Wood. I like her fine. There are only four pupils going to our school. They are Almeda Green, Gordon Green, Howard Green and I. I like to help papa with the chores. I also like to help mama in the house. I like to crochet, embroider and hemstitch. After I get through with work I like to read. I have read eight books this winter. The names of them are: "Adrift in New York," "Only an Irish Boy," "Paul the Pedler," the Childs Bible and the "Campfire Girl" series. Why do so many girls and so few boys write to the Children's Corner?—Thelma Louis Green, Hartline, Wash.

### Can Soon Plant His Garden.

Dear Aunt Nellie: This is the first letter I have written to the Children's Corner and I hope it will not be my last. My birthday is December 10. Have I a twin? If so I wish he or she would write to me. I live on a 40-acre ranch in the upper Puget sound district. We have five hens and get three or four eggs a day. We have one cow, two heifers and two calves. I have two rabbits and my brother has four. We both belong to the rabbit club of Long Branch. My brother is the president of the potato club here. I go to school and am in the eighth grade. There are about 20 pupils in our school. It is only a small school. The name of it is Greenwood school. Our teacher's name is Miss Brown. It is too cold to plant any garden here yet, but I am going to plant a big one. I belong to the junior Red Cross and to the United States food administration. I am janitor of our schoolhouse and I get $3 a month. I am just getting over the measles. It has been getting warm here so I guess I can soon plant my garden. My oldest brother is in the navy.—Herbert L. Moore, age 13, Box 62, Long Branch, Wash.

### Raffle Her Bantam for Red Cross.

Dear Aunt Nellie: This is the fifth time I have written to the Corner. I will be in the seventh grade next year. Our school was out April 12. I was 11 years old May 9. I am going to Yakima to take music lessons this summer. I am going to stay with my sisters. I have two bantam hens and one rooster. One of them set and has eight bantam chicks and the other one is going to set. The community out here is raffling a pig off for the Red Cross. I am going to raffle my bantam off next fall. We have 15 pigs, 50 chickens and 12 horses. We are sending for 100 baby chicks. I will write a few puzzles, but I know that every one of the Corner children can guess them. It is fun, anyway. What goes to the watering trough, but never drinks? What is it that has a bed and never sleeps and has a mouth and never eats? I bought a pint of peas and planted them and got two pints of peas. How many peas (p's) were there in the two pints of peas?—Glyness Simenson, Corfu, Wash.

### Brother Won Four-Minute Contest.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. Papa takes the Farmer. I like to read the letters. I am 8 years old and my birthday is June 16. Have I a twin? If so I would like to hear from her. I am in the third grade. There are 22 pupils in our school. I have two sisters and their names are Minnie, age 10 years; she is in the fifth grade at school. My other sister's name is Hazel, aged 5. My brother's name is Arthur and he is 12 years old and in the seventh grade at school. He is secretary of the Lincoln Junior War Savings society and won the contest for the speaker of the four-minute men on the war saving stamps. I have three-fourths of a mile to go to school and four miles to town. At school we girls are making a quilt for the Red Cross. I made myself an apron at school. We live on a 40-acre farm. We have five cows, one horse, one calf, two cats and a few chickens.—Thelma Heimen, Toledo, Wash.

### Likes to Tend to the Lambs.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I live on a 240-acre ranch. We have two cows. Their names are Beauty and White Face. We have three pigs. Hazel, Floyd and I have a pig. We have 18 old chickens. Hazel has a hen. We have eight old sheep and nine lambs. I like to tend to the lambs. They jump about and have a good time. Last year the lambs would get on a stump and jump off. We have a black lamb and when we chase him he will jump about just like he was going some place. Hazel, Floyd, papa and I all go to school. My papa is the teacher at the Waterloo school. We have 31 in school now. We are in the Waterloo district. Papa and mama belong to the Red Cross. I have 50 cents worth of thrift stamps. I am 7 years old. I will be 8 June 18. I have light brown hair. I have brown eyes. Have I a twin? If I have I wish she or he would write to me.—Ruth Cory, R. F. D. 1, Box 51, Daisy, Wash.

### Hunts the Cows After School.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old. My birthday is November 10. I have a twin. I go to Alder Grove school. We have a man teacher. His name is Mr. Leber. I am in the third grade. There are five in the third grade. There are six grades. There are 14 pupils. I have three brothers and two sisters. My sisters' names are Irene and Edna and brothers' names are Oscar, Tommy and Andrew. My brother Oscar is in the seventh grade and my sister Edna is in the first grade. My sister Irene is going to high school. We joined the Red Cross at school. All of us at school joined except two. My mother takes the Farmer, and so I wrote to you. We live on an 80-acre farm. We have seven cows, five calves, one pig and two dozen chickens. Oscar helps mama milk the cows. We have to hunt the cows after school. The Corner has been growing larger.—Ellen Nelson, R. F. D. 1, box 108, Tumwater, Wash.

### Make Joke Books for the Soldiers.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I was 13 on May 12. I am in the seventh grade. My teacher's name is Miss Margaret Maccauley. There are only four scholars in my grade and we are all girls. I have two sisters and three brothers. My sisters' names are Bonnie and Louise. Bonnie is 2 years old and Louise is 15. My brothers' names are Joe, Grant and Donald. I have joined the Junior Red Cross and I have been sewing little waists for the babies in Belgium and making joke books for the soldiers. I am also learning to knit. My best friend is Hazel Hillerud. She wrote to the Children's Corner last year. I was very glad to see such a large Children's Corner this time and I hope it will keep growing larger. I am going to grow a garden this year and I have most all of the other years. If I have a twin I wish she would write to me and I will gladly answer her letters.—Ethel Little, Box 27, Lawrence, Wash.

### True American Citizens Now.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. My father takes the Farmer and I enjoy reading the children's letters very much. Mother said that I could have all the roosters that I raised to buy Liberty bonds and help fight the mad dog of Europe, the kaiser. I have $150 in Liberty bonds and a War Saving Stamp started. I expect to finish it this month. Two of my great grandmothers and one great grandfather were born in Germany, but we are true American citizens now, doing all we can to help win the war. We went to Spokane a few days ago and went out to visit Fort Wright. There were lots of soldiers out there, too. We have a car and I enjoy taking trips in it very much. One time Mrs. Car got sick coming home from Medical Lake and we had to send for the doctor to come and doctor it us before we could get home.—Ina Miller, R. F. D. 1, Box 81, Davenport, Wash.

### Helps Mother Do All the Work.

Dear Aunt Nellie: This is the first time I have written to the Corner. I read the letters every week and they are very nice. They interest me very much. I am 12 years old. My birthday is November 18. Have I a twin? If so, I wish they would write to me. We have two cows, one calf, 12 hens and about 11 little chicks. We have two cats. Our cats' names are Molly and Mogons. Our cows' names are Jersey and Queen. We live in town but we want to sell this land we are living on and move out on our ranch. We have two and a half acres in town. It has a big house, a barn, chicken house, cellar, woodshed and a wash house. I have two sisters and one brother, but my sisters are married. My brother is 16 years old. I help my mother do all the work. I expect to write often. I will give you some riddles the next time I write.—Agnes Westlund, Ferndale, Wash.

### Has a Horse of Her Own.

Dear Aunt Nellie: This is the first time I have written to you and I hope it will not be the last. I was 11 years old December 11. I am in the fifth grade. My teacher's name is Miss Ella Faeber. I like her very much. I go to the Four Mile school. There are 20 scholars. Have I a twin? I have two sisters and two brothers. Their names are Della, Ralph, Charley and Mabel. They all are married. For pets, I have a cat named Bob, a dog named Jack and best of all I have seven little white rabbits and five old ones. We have three horses. Their names are Chub, Buster and Gip. Gip is my own.—Norma Oliver, route 4, Palouse, Wash.

### Baby David Is Full of Fun.

Dear Aunt Nellie: My father takes The Farmer and I have been reading the Corner letters and I am writing to the Children's Corner. I hope to see my letter in print. I go to school every day. I have but a short way to go. I am 10 years old and will be 11 next February 14. If I have a twin I hope she will write to me. I am going to a party today. There are seven scholars in the room. My teacher's name is Mrs. Nellie Hershey. I like her very much. We have two cows, two horses, three pigs and about 24 chickens. I have one sister and three brothers and I have one half-sister, and three half-brothers. My half sister is dead. I will tell you what their names are: Lee, Vest, Jay, Carl, Robert and David. David is the baby and is full of fun. I live on a 152-acre farm. I like to live on a farm better than in the city.—Jane Osborn, Ashford, Wash.

### Gather Up Clothes for Refugees.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope my letter is welcome. I am in the seventh grade and I am 11 years old. I weigh 115 pounds. My teacher's name is Miss Ritchie. She is the best teacher our school has ever had. I belong to the Red Cross and the War Savings society. I have knitted one pair of wristlets and have my second pair of socks nearly done. Some of the pupils' mothers have knitted two pairs of socks and a sweater. Our school, which is called the Cowlitz Bend school, gathered up a big boxful of clothes for the refugees of France. They are for the children except some socks for the men. We had a boxful of shoes too. The Corner was quite large this week. I hope my letter will help it to be larger next week.—Mary Lewis, Castle Rock, Wash.

### Hasn't Missed a Day of School.

Dear Aunt Nellie: This is the first time I have written to the Corner. I hope it won't be the last. I am 11 years old and in the fifth grade. My birthday is November 14. Have I a twin? If so I wish he or she would write to me. I have dark hair, blue eyes and dark eyebrows, and a dark complexion. We have two cows and one calf and one horse. I have knitted three napkins, one wash cloth and I am knitting a pair of wristlets. I haven't missed a day this year and I hope I don't. I have two war saving stamps. I have two brothers and four sisters. My teacher's name is Miss Irene Malone.—Violet J. Hamilton, Colby, Wash.

### Lives Three Miles From School.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading their letters. I am 13 years old and I am in the seventh grade. I live ona 640-acre farm. I live three miles from school. I have five sisters and four brothers. My sis-

## Busy and Loyal Little Cousins

Have you ever stopped to think how busy are the little cousins who are writing such fine letters to Aunt Nellie; how loyal they are to their country and in how many ways they are helping in Red Cross work and in buying thrift stamps? For example:

One cousin has joined the Red Cross and helps at home, too, by hunting the cows every night after school. Another tells about her brother, who is secretary of the Lincoln Junior War Savings society, and how he won the prize for a four-minute speech on war savings stamps. At school, she, herself, has helped to make a quilt for the Red Cross.

One little owner of thrift stamps says she likes to tend to the lambs and keep them out of mischief. Another cousin has a brother in the service. A pupil of a Mount Vernon school reports that they are doing Red Cross work, sewing quilt blocks. They have an agricultural club and a poultry club to which she belongs and is secretary.

A Corfu cousin is going to raffle off her pet bantam for the Red Cross next fall. The father of one of our girls has promised to buy her whole crop of potatoes at a cent a pound.

At a school near Lawrence the pupils are sewing little waists for Belgian babies and are making joke books to cheer the soldiers.

The Cowlitz Bend school has gathered up a big boxful of clothing and a boxful of shoes for the refugees of France.

A Davenport cousin's mother is going to give her all the roosters she raises to buy Liberty bonds and help fight the "mad dog of Europe," the kaiser. She already has $150 in Liberty bonds and a war saving book started. Two of her great grandmothers and one great-grandfather were born in Germany, but all are now true American citizens.

One girl is showing her patriotism in a different way, by helping mother do all the housework. Another cousin, who evidently didn't think much of Hoover's substitutes at first, declares she likes them all just fine now. This same girl sells milk to a neighbor and buys thrift stamps with the proceeds. She is also knitting quilts. The girls at Goldendale have formed a club and are sewing for the Armenian children.

One of our boys has a gun and likes to shoot gophers, incidentally ridding the farm of pests.

One cousin is backing up her brother in the army by saving money to buy thrift stamps.

Cousin Roy will work real hard in the garden this summer, but thinks he will try to snatch a little time off to go fishing now and then.

A Granite Falls girl has raised a large garden every year for a long time and this year has added chickens.

One ingenious little cousin, who eats six potatoes every day, which makes 2190 in a year, is going to raise just exactly that number, besiders a few cabbages, parsnips, peas and beans.

## Coat Lapel Button

for securing two subscription orders to the **Washington Farmer**

**617 Central Bldg.**
**Seattle, Wash.**

ters' names are Alda, Gladys, Ella, Anna and Elsie. My brothers' names are Robert, Clarence, Lewis and Lester. I will be 14 years old December 6. If I have a twin I would like very much to correspond with her or him. We have 13 mules, 10 horses and five colts. We have three cows and one calf. My father takes the Farmer and he thinks it a very interesting paper.—Grace Marie Bonwell, Box 24, Withrow, Wash.

**Likes the "Substitutes" Now.**

Dear Aunt Nellie: This is the second time I have written to the Farmer. The last time was about six months ago. I guess they all have forgotten what I told about, so will tell them again. I have one sister and one brother. His name is Elmer and sister's name is Cora. My brother is 2½ years old and my sister is 14 years old. I am going to write a little on Hooverizing. At first I didn't like the substitutes, but I like them fine now. I sell milk to one of our neighbors and that money I take for thrift stamps. I have a certificate now and am going to get more stamps. Mama is knitting for the Red Cross. She is making a sweater. My sister is going to soon. I am knitting quilts and am soon going to knit wash rags also. I am 9 years old and my birthday is February 21. I am in the fourth grade. My teacher's name is Miss Greene. If I pass this term I will be in the fifth grade. My sister will be in the eighth grade. Cora's teacher's name is Miss McCloud. If I have a twin I would like for her to write to me.—Marie Houk, White Bluffs, Wash.

**Will Go Fishing When Not Busy.**

Dear Aunt Nellie: I thought I would write again. This is the second time I have written. I do not think it will be the last time. I am going to write often for every time the Farmer comes the friends make me want to write. I am 9 years old and will be 10 January 30. I am in the third grade. Have I a twin? Our mother cat has five little kittens, four little white ones, and one little gray kitten. The mother is gray herself. I belong to the Red Cross. All the school children got a Red Cross pin. I got one besides an infantry pin. I have six little chickens. In summer I will work in the garden. While I am not working in the garden I will be fishing. There are lots of pretty flowers. There are yellow violets, blue violets, buttercups, candytuft, nightcaps, lady slippers, alakamas and wild bleeding hearts. Most of the children are getting the measles.—Roy Seger, Yelm, Wash.

**Brother Is in the Service.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 8 years old. My birthday is July 18. I have a brother who enlisted in the service and is at Jefferson Barracks, St. Louis, Mo. I have four sisters and two brothers. My father and mother are living. I like to ride horseback. I like to live on a farm, where I can have dogs and cats. I like to drive cows. I forgot to tell you that I came from Missouri. When I lived there I had a little dog named Trippy and a cat named Pussy. I had a pony also. Her name was Pinto and we had another mare, Bess. Have I a twin? If I have please tell him or her to write a line or two.—Verna Estaline Heald, care of Mrs. J. W. Green, Govan, Wash.

**Father Will Buy Her Potatoes.**

Dear Aunt Nellie: As it is a long time since I wrote last I thought I would write again. I am 9 years old and am in the fourth grade. My birthday is June 11. I joined the Junior Red Cross and also did the school. I did not have time to sew for it yet. We have about 125 pupils in our school. I have two miles and a half to walk to school. It is not much fun to walk that ways every morning and evening. My teacher's name is Miss Haveman. Our school will close June 7. I have a little garden planted. I planted all potatoes and when they are grown up my father is going to buy them at a cent a pound.—Stell Sturmans, R. F. D. 1, Box 21, Lynden, Wash.

**Will Tell More Next Time.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I live on a 135-acre farm. I have a cat and a dog. My cat's name is Pinkie. My dog's name is Bruser. I have knit four squares for the Red Cross and I am going to knit a wash rag. I have two brothers. Their names are Nelson and Howard. I had better quit for the first time. I will write a longer letter next time. I am ready for the fourth grade. I will be 9 December 15.—Elsie M. Ashmore, Monse, Wash.

**Glad to Have Graham Write Again.**

Dear Aunt Nellie: It has been a long time since I wrote to the Corner. How are the cousins? I am 9 years old and will be 10 June 16. Have I a twin? I got to playing with the cider mill and crushed the end of my finger. It is getting a little better now. I hope none of the cousins do that. We have two kitties. They are Tim and Ready. We raised Ready from a kitten.—Graham Potter, R. F. D. 2, Mead, Wash.

**Wants Her Twin to Write.**

Dear Aunt Nellie: I have been reading the Children's Corner. I am going to be 10 years old April 6. I have two sisters and three brothers. Their names are Agnes and Sofie, Frank, Hans and Roy. Have I a twin? If so I wish she would write to me.—Sarah Jensen, Kittitas, Wash.

# Here Are Important Health Books That We Want Every Reader of The Washington Farmer to Have, Entirely Free

**SEND FOR THEM TODAY**

## Uncle Sam Cannot Afford to Lose One Single Life Our Country Needs Every Man, Woman and Child

Water vitally affects your health and life and the value of your property. If it is not pure it causes many apparently unaccountable troubles.

It is to aid you in guarding against the evils of impure water, to preserve the health of your family, that we say to you—GET THESE BOOKS. REMEMBER—they are FREE.

**People Are the Country's Most Valuable Asset**

Each year thousands of people waste their lives and those of their loved ones through typhoid fever and allied diseases. People are the country's most valuable asset and simple precaution can prevent their untimely death.

## This Great Public Menace Must Be Publicly Discussed

An impolite subject, politely brought to your attention.

The United States Public Health Service has provided these simple and concise books on the care and protection of your water supply. Every householder in the country, rural district or small town, where the purity of the water is "up to you," can profit by these books.

Does your privy, stable or hog pen pollute your water supply or that of your neighbor's?

You may think that it does not, when in reality it is a spot of contamination for a large area.

## Save Many Dollars

Simple methods of prevention will save you many dollars in doctor's bills and long, weary, dragging illness and possible death.

## You Are to Blame

If your children die of typhoid or malarial diseases—YOU ARE TO BLAME. If you are made inefficient through the ravages of these diseases, YOU ARE TO BLAME.

Nothing but your own care can overcome these dangers. LOOK TO YOUR WATER SUPPLY. BE SURE THAT IT IS PURE.

THESE FREE BOOKS WILL TELL YOU HOW, and we want every reader of The Washington Farmer to send for them—TODAY.

Enclose a two-cent stamp for return postage and we will send you these books on Good Water and Safe Disposal of Waste Matter.

Be sure to write your name and address plainly.

Direct your letter to

# News for Breeders

## Public Sale Best

(Continued from page six.)

feature. There is a feeling of good will amongst cattle men, large and small, and they seem to be imbued with the feeling that they should meet occasionally and get better acquainted and find out more about each others' requirements. And in that way the cattle men sort of make their own market and are always in touch with it and with each other.

In view of the fact that public sales are more satisfactory to both purchaser and seller than private sales, and that there appears to be a real demand for a public sale at this time, A. D. Dunn of Wapato, Day & Rothrock of Sprague and Joe Turner of Meyers Falls, Wash., will hold a public sale at the Spokane Union stockyards, June 20, 1918, to which they will consign everything they have for sale at the present time. The offering will be select, and both bulls and heifers of much individual merit can be obtained, starting or enlarging any type of purebred Shorthorn or grade cattle herds. The consignors realize that this sale comes at a busy season and that the attendance and prices may not hold up to the usual standard. However, a new feature, in the Inland Empire, is being introduced which should offset any possible poor attendance. Dean E. J. Iddings of the University of Idaho, or C. W. Hickman, associate professor of animal husbandry at the University of Idaho, both of whom can be addressed at Moscow, Idaho, and are known to be men of excellent judgment and ability in the Shorthorn world, have agreed to act as bidding agents for any one who can not be present and who desires to have them bid for him. The catalog will contain a blank on which one can list his first, second, third and fourth choice and set his maximum bid on each one. It can then be sealed and mailed to Dean Iddings of Professor Hickman, and one of them will attend the sale and buy as cheaply as possible, and in no case exceed the authorized limit. All authority given to these gentlemen will be treated strictly confidential and no animal will be bid higher by them than its merit justifies.

There will be approximately 26 bulls and 14 heifers to select from, all choice, well-grown, well-bred and valuable additions to established herds or good material for beginners.

## Guernseys Sell Well

The A. L. Giles sale of Guernseys, held on the W. O. Reith farm at the edge of Astoria, Ore., was a successful sale. No sensational prices were received, but a lot of good cattle were dispersed among both new and old breeders, who will "carry on" the popularity of the Guernsey breed. Mr. Giles' Chicona farm is across the river from Astoria, and local dairymen who know the herd, paid the tribute to the herd by being good buyers.

While this is true, there were a number of outside buyers from both Oregon and Washington. C. L. Jamison, agriculturist of the Farmers' Savings bank of Walla Walla, bought three head for $750. His bank supplies them to dairymen, mostly beginners, in purbred cattle, on time, and is performing valuable services. C. R. Vander Griend of Lynden, Wash., took five, including two King of Medfield heifer calves, which he got for $200 each. F. A. Coffin of Monmouth, Ore., got four good ones at a cost of $790. The Red Cross bull that Mr. Giles donated went to L. E. Wilson of Astoria for $90. All the bulls were bargains.

The following is a complete list of the purebred animals sold, buyers and prices paid:

**Females.**

Netius' Sunlight, born May 5, 1912; sold to John Reith, Astoria, Ore., $220.

Golden Girl of Chicona, born December 4, 1912; sold to F. A. Coffin, Monmouth, Ore., $205.

Rosamond of Chicona, born July 9, 1914; K. F. Johnson, Astoria, Ore., $160.

Lucy of Alfalfa farms, born January 29, 1906; M. K. Johnson, $200.

Honey Lass of Chicona, born June 14, 1916; P. A. Larson, Astoria, Ore., $150.

Hazel of White Water, born December 3, 1905; Mike Seppa, Astoria, $115.

Lily of Chicona, born January 30, 1916; F. A. Coffin, $300.

Lolita of Chicona, born July 14, 1917; B. C. Vander Griend, Lynden, Wash., $180.

Beatrice of Chicona, born June 13, 1913; C. L. Jamison, Walla Walla, Wash., $280.

Roy's La Verne, born January 10, 1909; R. E. Wilson, Astoria, Ore., $180.

Bonita of Chicona, born April 28, 1917; B. C. Vander Griend, $260.

Merle of Chicona, born June 25, 1916; F. A. Coffin, $285.

Rosaline of Chicona, born November 4, 1910; K. F. Johnson, $265.

Butter Queen of Willowbrook, born December 13, 1912; Mrs. W. O. Reith, Astoria, Ore., $300.

Viva of Chicona, born November 25, 1913; W. O. Reith, Astoria, Ore., $400.

Victoria of Chicona, born July 22, 1917; John Spies, Beaverton, Ore., $150.

Buttercup of Willowbrook, born August 23, 1912; C. L. Jamison, $325.

Rosemary of Chicona, born August 9, 1916; B. C. Vander Griend, $125.

Linneta of Chicona, born July 13, 1917; C. L. Jamison, $145.

Martha of Chicona, born September 17, 1917; B. C. Vander Griend, $200.

Muriel of Chicona, twin of above; B. C. Vander Griend, $200.

**Bulls.**

Chicona Hero, born April 20, 1917; Orchard Hill Farm, Redmond, Wash., $180.

Chicona Byron, born April, 1917; A. H. Sale, Astoria, Ore., $105.

Chicona Neponset, born May 6, 1917; M. K. Johnson, $80.

Chicona Jethro, born April 28, 1917; C. Sinner, Katama, Wash., $80.

Chicona Norman, born July 25, 1917; C. R. Baker, Ilwaco, Wash., $105.

Uncatalogued bull calf, M. K. Johnson, $115.

Bull calf sold for benefit of Red Cross, L. E. Wilson, $90.

Twenty-one females sold for $4645, average, $221.19.

Seven bulls sold for $755, average, $107.85.

Twenty-eight animals sold for $5400, average, $193.20.

# Breeders' Department

## JERSEY CATTLE

### Jersey Home Dairy

Young bulls, winners at Washington State Fair, make good herd sires. Attractive prices for quick sale.

**Erickson Bros. Prop.**

North Yakima, Wash.

### ASHBURN FARM

REGISTER OF MERIT JERSEYS.

In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.

**J. M. DICKSON & SON.** **Shedd, Ore.**

**GOLDEN GLOW HERD**

Winner of 1st and 2d prize in butter test, Oregon State Fair, 1917, (all breeds, 20 entries); breeder and owner of grand champion cow in show ring, 1916; breeder of grand champion cow, 1917. Breeder and owner of world's champion 3-year-old, with 1115 lbs. butter, 80 per cent fat. Every female a daughter, granddaughter or great granddaughter of Golden Glow's Chief, sire of 34; 14 over 700 lbs.; 32 over 600 lbs.

**PICKARD BROS., Marion, Ore.**

**GOLDEN GLOW'S CHIEF**

Has 35 Register of Merit daughters and 40 grand-daughters, 4 proven sons, and a WORLD RECORD JUNIOR 3-YEAR-OLD DAUGHTER, who is dam of ONE OF OUR HERD BULLS by the old bull himself. Our second sire is also a son of Golden Glow's Chief, out of a Gold Medal Hood Farm cow. Write us for a young bull calf.

D. Brooks Hogan, Mgr., Iron Mine Farm, Oswego, Oregon.

**W. M. LADD, Owner, Portland, Oregon.**

### All High Record Blood

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.

**ED CARY,** **Carlton, Ore.**

Station, La Fayette, Ore.

### OAK RIDGE JERSEY FARM

Thirty years breeding Jersey cattle. Young bulls from Register of Merit dams. Also a few choice females.

**RILEY E. HULBURT, Albany, Ore.**

### Ashwood Farm Jerseys

Senior herd bull, Holger, whose daughters are qualifying for register of merit in six months. Junior herd bull, St. Mawes of Ashwood, a son of Poppy's St. Mawes. Write us about your wants or come and see our herd.

**M'ARTHUR & STAUFF,** **Rickreall, Ore.**

### LAST BULL SOLD

Three register of merit cows, freshen in March, two in April. Baby bulls are sold so reasonably you can't afford to buy a bull of service age. Raise your own bull and save money. Prices, pedigrees, photos, etc., sent on request. Can spare a few good register of merit cows.

**JOHN B. STUMP & SON, Monmouth, Ore.**

### WAIKIKI FARM

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

**IRA P. WHITNEY, Manager.**
Route 7, Spokane, Wash.

### JUST ONE CALF LEFT

on our farm, out of a daughter of Rosaire Olga Lad, with a record of 765 lbs. butter, and by Gerties Poppys St. Mawes. This calf has three crosses of Rosaire Olga Lad. He is a dandy. The last four bull calves brought us $250 each; all were from our herd bull G. P. St. Mawes. Our herd average now is 747 lbs. butter from the 11 head.

**DOERFLER FARMS,** **Silverton, Ore.**
F. A. Doerfler, Prop.

### ANOKA FARM JERSEY

We have for sale a bull calf dropped Oct. 25, from a register of merit cow. Solid color, good individual. His sire is a grandson of St. Mawes Poppy, with 1120-lb. record.

**R. B. SEELEY,** **Sherwood, Ore.**
R. R. Station, Wilsonville, on Oregon Elec.

## AYRSHIRE CATTLE

### Edgewater Farm

Government accredited herd, headed by Peter Pan 63d. Bull calves available.

**ELBERT M. CHANDLER, Burbank, Wash.**

**In writing advertisers, be sure to say that you saw their advertisement in this paper.**

## SHORTHORN CATTLE

### Herd Bulls

Imported Doune Radiance No. 609412
and
Gainford Perfection No. 442173.

### Hercules Shorthorns

We can supply you with choice, well grown bulls and females of breeding age. Your inspection of our herd is invited. Visitors always welcome.

**Day & Rothrock Company**

205 Exchange Bank Bldg. **Spokane, Wash.**

### SHORTHORNS

A few young stock for sale by such noted sires as Prime Prince, 421193, and Sultan Still, 493239.

**R. E. BOYCE.** **Baker, Ore.**

### Firlawn Shorthorn Farm

UNION, ORE.

We offer a young herd bull (registered), ready for service in four months, and 7 yearling heifers, all of imported Scotch blood. Bull and heifers unrelated. Prices reasonable. Write us and come to the Union Stock Show.

**SHERMAN & HUTCHINSON,**
Union, Ore.

### Shorthorn Cattle

Registered bulls and heifers of breeding age for sale. Some from extra heavy milking dams.

**A. D. DUNN.** **Wapato, Wash.**

### H. H. SCHILDMAN

breeder of registered Shorthorn cattle, Hampshire sheep and big-type Poland China hogs. **Filer, Idaho.**

### LELAND BROTHERS

Breeders of top registered Shorthorn cattle. Correspondence solicited.

**WENDELL,** **Idaho.**

### MILKING SHORTHORNS

with world records behind them for milk production.

**A. R. O. HOLSTEINS**

A son of the King of the Pontiacs at head of herd.

Can make special prices on young bulls of each breed.

**A. V. Bradrick & Son**
Palouse, Wash.

**REGISTERED SHORTHORN COWS.**

Young bulls and heifers, sired by Scotch bulls; liberal terms.

**CALDWELL CATTLE CO., Caldwell, Idaho.**

## GUERNSEY CATTLE

### Registered Guernsey Bulls

From heavy producing cows, most of them with A. R. records, among them 492 lbs. fat (472 lbs. 85 per cent butter) and 392 lbs. fat (461 lbs. butter), both with first calf. Good type, well grown. Prices reasonable.

**CHICONA FARM.**

**A. L. GILE, Prop.** **Chinook, Wash.**

### ORCHARD HILL FARM

"Home of High-Class Guernseys."
Dr. Park Weed Willis, Owner.
**Redmond, Wash.**

### FAIRVIEW FARM

Breeders of high class registered and grade Guernseys.

**A. J. SINNES.**

Route 5. **Mt. Vernon, Wash.**

## HOLSTEIN CATTLE

### CARNATION HOLSTEINS

Carnation Stock Farms

FARM—CARNATION, WASH.
Offices — 2080 Stuart Bldg., Seattle.

Over 300 in herd to select from. Herd has been under federal inspection for several years. Our herd sires are Matador Segis Walker, a grandson of King Segis, out of Matador Twisk Minette 4th, with record of 33.69 lbs. His first five two-year-old heifers, to freshen, have averaged nearly 22 lbs. in 7 days; King Segis 10th; Johanna McKinley Segis, the 40-lb. bull.

Write today your needs for a Holstein bull. Get them while they are young. Save money on cost price and on express charges. Careful attention given to mail orders.

**Visitors welcome. Correspondence solicited. Write for circular, Value of Pure Bred Sires.**

### 365-DAY HOLSTEINS

24,667 lbs. milk—1026 lbs. butter—is the 5. o. advance registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.

THE HERD WITH YEARLY RECORDS.

**WESTERNWOLD RANCH, Prineville, Ore.**

### LaConnor Flats Stock Farm

Pure bred registered Holstein cattle. Herd sire Segis Pontiac Acme; average of three of nearest dams; butter, 1 year, 1080.82 lbs.; milk, 24,380.3.

**J. H. HULBERT.** **Mt. Vernon, Wash.**

### Bargains in Bull Calves

Sired by Segis Riverside Pontiac, that sold in Pacific international sale, 1914, for $1025, and whose dam has A. R. O. record of 31.47 lbs. butter in 7 days; 118.89 in 30 days, and big records all through his pedigree.

**ERNEST JOHNSON,** **Scappoose, Ore.**

## HEREFORD CATTLE

## POULTRY

### White, Buff and Blue Orpingtons

**(Capt. De Bathe Strain.)**

Speckled Sussex and Anconas. All single comb. Aldrich strain Orpingtons, Sheppard Anconas. My birds took first prizes at all leading shows of Pacific Coast. Prices for stock, eggs and chicks reasonable. All from best laying birds. Finest lot of cockerels I've ever raised. A few White Holland and bronze turkey toms for sale.

**IRA N. DELINE.** **Olympia, Wash.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, June 3.—Submarine activities off the American coast brought about a rush of selling in the corn market today and formed the chief factor in a material setback to the lowest price levels yet this season. The close was unsettled, 1⅞c to 2c net lower, with June $1.28⅝ and July $1.31½ to $1.31⅝.

Notwithstanding that bearish sentiment predominated prior to the receipt of news about U-boats, the corn market did not show serious losses. Big receipts, though, had put the bulls under considerable of a handicap. All other influences, however, were virtually forgotten after bulletins began to appear telling of submarine developments. Subsequent rallies were ascribed to covering by shorts.

Oats was relatively firm as a result of bidding from seaboard exporters.

Provisions advanced sharply with hogs, but later reacted somewhat, owing to revised figures on warehouse stocks.

**Cash Quotations.**

CHICAGO, June 3.—Corn, No. 2 yellow, $1.62; No. 3 yellow, $1.56@1.57; No. 4 yellow, $1.32@1.42. Oats, No. 3 white, 72@72¾c; standard, 72½@73¼c. Rye, No. 2, nominal; No. 3, nominal; No. 4, $1.53. Barley, $1@1.26. Timothy, $5@8. Clover, $18@28. Pork, nominal. Lard, $24.07. Ribs, $21.50@21.87.

**Chicago Futures.**

**HOPS, HIDES, WOOL.**

NEW YORK, June 3.—Hops quiet; state, medium to choice 1917, 35@43c; 1916, nominal; Pacific coast, 1917, 20@23c; 1916, 14@16c. Hides and wool unchanged.

## Seattle Market.

SEATTLE, June 2.—Last shipments of Kennewick strawberries will be received here early next week, the season for that district having come to a close. There was a total of nine carloads marketed in Seattle alone, the record for the fruit on this market. More than twice the volume of Kennewick berries were sold here than for any former year and at higher average prices. Very little of the fruit changed hands at less than $4 per crate. Final quotations for the week are $3.75 f. o. b. Kennewick.

**BUYING PRICES.**

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 40@41c per dozen; eastern Washington, Oregon and Idaho, 38c.

Poultry—Broilers, 30@35c lb.; spring roosters, live, fat, 26@27c lb.; geese, fat, live, 18@25c; ducks, live, fat, 27@30c.

Beef—Buying prices: Prime beef, steers, 14@15c; cows, fat, 13@14c lb.; heifers, 14@15c.

Hogs—Light, 21c lb.; heavy, 19@20c lb.

Veal—Fancy light, 18@19c lb.; heavy, 15@18c lb.

Hides—Salted, 14c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 11c lb.; green calf, 23c lb.; dry calf (under 8 pounds), 29c lb.; bulls and dry salts, 4c lb. less; green bulls, 9c lb. Clean, long wool, western Washington flint-dry pelts, 39c per lb.; heavy to clean eastern Washington flint-dry pelts, 30@35c lb.

Asparagus—Kennewick, 12½@15c lb.; Oregon, 15@20c; Granger, 15@20c.

Apples—Winesaps, $3.50; jumble Winesaps, $1.25 box.

Potatoes—Puget sound, $17@22 per ton; eastern Washington, $30@35 per ton.

Feed—Bran, $34 per ton; shorts, $35.50; scratch feed, $78; all-grain chop, $74; oats, $72; sprouting oats, $78; rolled oats, $72; whole corn, $75; cracked corn, $77; rolled barley, $72; clipped barley, $77; alfalfa meal, $36; oil meal, $72; egg mash, $62.

Hay—Eastern Washington timothy, $36@37 per ton; do. double compressed, $38@40; alfalfa, $26; Puget sound, $26@27; straw, $15.

Strawberries — Kennewick, $4.25@4.50; White Salmon, $4; Olallas, $4 per crate.

## Portland Market.

PORTLAND, Ore., June 1.—The butter market is holding firm. The season of flush production is about on, but the demand from speculators is strong enough to give prices, if anything, an upward tendency.

In the egg market the advance is due to the decline in receipts, which have fallen below current needs. There is not much buying of eggs for storage.

Local strawberries are in heavy supply and have the call in preference to outside fruit. Prices range from $2.50 to $3 for good stock and $1.50 and $2 for soft fruit.

Poultry prices are weakening, as farmers are marketing more of their flocks, now that the egg laying season is over. Country dressed meats are steady to firm.

There is no business passing in the coarse grain market and prices are nominal, though fluctuations are posted at the exchange in line with the course of eastern markets.

Butter—Cubes, extras, 40c; prime firsts, 39c; prints, extras, 44c; cartons, 1c extra; butterfat, No. 1, 43c, delivered.

Eggs—Oregon ranch current receipts, 38c; candled, 39c; selects, 40c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 23½c; Young Americas, 24½c per pound; Coos and Curry, f. o. b. Myrtle Point; Triplets, 23c; longhorn, 24c per pound; ¼c discount to Portland trade.

Poultry—Hens, 23@24c; broilers, 28c; ducks, nominal; geese, nominal; turkeys, live, 27@28c; dressed, 37c per pound.

Veal—Fancy, 17@17½c per pound.

Potatoes—Oregon Burbank, $1@1.25 per hundred; New California, 4½@5½c per pound.

Hay—Buying prices, f. o. b. Portland; Eastern Oregon timothy, $29@30 per ton; valley timothy, $25@26; alfalfa, $24@24.50; valley, grain hay, $24@26; clover, $24; straw, $9@10.

## The Wool Market.

BOSTON, May 31.—The Commercial Bulletin will say tomorrow: "The government plan for handling the new domestic clip is being rounded into working order more and more fully, but there are not a few difficulties to be ironed out. It could hardly be expected to be otherwise, when the size of the scheme is considered. Manufacturers are anxious to get wool supplies, especially such as are chiefly needed for government fabrics, that is, the medium grades of wool."

Scoured basis: Texas fine 12 months, $1.72@1.75; fine eight months, $1.50@1.55. California: Northern, $1.70@1.75; middle county, $1.55; southern, $1.45@1.50. Oregon: Eastern No. 1 staple, $1.78@1.80; eastern clothing, $1.62@1.65; valley No. 1, $1.63@1.66. Territory: Fine staple, $1.80; half blood combing, $1.63@1.68; three-eighths blood combing, $1.40@1.45; fine clothing, $1.65@1.70; fine medium clothing, $1.55@1.60. Pulled: Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

**43½ Bu. Wheat Per Acre**

**Mr. W. Loat Writes:** "I had 203 acres of wheat that averaged 43.5 bushels an acre, 13 acres of oats that averaged 65 bushels, 25 acres of barley that averaged 50.5 bushels per acre."

Such remarkable reports are coming in every day from Western Canada. Farmcrops in Manitoba, Alberta and Saskatchewan are making records never before equaled.

| Bushels | |
|---|---|
| Wheat | 30 |
| Oats | 53½ |
| Potatoes | 148 |
| Barley | 37 |
| Rye | 27¾ |
| Flax | 13½ |

This is the 1915 average per acre from Government statistics.

**FREE!**

**128,000 Farms**

In this most fertile farming section you can get one of these 128,000 newly surveyed homesteads of 160 acres near the Canadian Northern—"The Road to Opportunity." You can get results as successful in grain growing, mixed farming or stock raising as did Mr. Loat.

**Best Farm Lands $15 to $25 Per Acre**

Rich, centrally located farms adjacent to the Canadian Northern can be purchased at from $15 to $25 per acre—easy cash payments, or part cash and part crop payments. Crops produced equal to crops on farms costing $150 to $200 per acre in more densely settled communities.

**Special Low Fares**

The Canadian Northern Railway, which takes you to all parts of this territory, provides special low fares to home-seekers and settlers.

**Send for FREE Book**

"Home-Seekers' and Settlers' Guide" contains valuable and interesting information based on government returns, and it tells you exactly how to make a home in Western Canada. Here is a home and wealth for you.

# What I Have Learned in Raising Rabbits

(Continued from page seven.)

mangel, a beet or a carrot, and it will pounce upon the root with as much eagerness as if it had eaten nothing for hours. I have found it well, therefore, to provide a variety of roots and alfalfa for the rabbits. With the roots and hay they ought to have a little grain. Just now, owing to high prices of grain, wheat particularly, and the war need for cereals, I am feeding bran and shorts mixed, and they are doing fell on it. They ought to have a little salt about twice a week. A scant teaspoonful of salt mixed in a gallon of the bran-and-shorts feed answers, in my experience, the salt requirement. Does a few days before and after their young are born, will drink sweet milk, and, if it is available, milk added to their feed during this period will contribute much to the health of both the mother and her young.

**Regularity in Feeding.**

Regularity in feeding and cleaning out the pens, quietness during the daytime, the elimination of dogs and cats that prey on the rabbits or frighten them, all are necessary. Get rid of the mice. One mouse in a mother rabbit's pen may cause her to neglect her young. Don't let strangers spend unnecessary time in the rabbitry. It is particularly bad to haul tiny rabbits out of their warm nest for people to look at, merely to gratify their curiosity.

Don't be noisy in the rabbitry. Don't enter the rabbitry at midday, for the rabbits want to sleep then. Don't feed them heavily at noon, for the same reason. They eat at night, are most active then, and should have their main feed of the day in the evening. Another lighter feed in the morning when you clean out and water the pens does very well.

Don't let sick rabbits run with well ones. Don't expose the rabbits to any conditions involving dampness. Dry cold in winter does not hurt them half so much as dampness. Don't weaken the stock by permitting one doe to rear too many litters during the year.

Don't let rabbits live wholly on green food. Don't give green food to them when it is wet with rain or dew. Don't put poisoned bait about their yards. Rabbits do not eat fresh meat, as a rule, yet may nibble at it.

The gestation period of a rabbit is 31 days. For best results in maintaining the vigor of stock, she should have eight weeks at least to nourish and care for a litter. This means a litter every 11 or 12 weeks—about five in a year. She will rear more than this, but five litters per doe ought to be considered sufficient, as this means, for one rabbit mother, from 35 to 45 or even 50 young. My does have had all the way from 5 to 12 at a litter. Their average has been close to eight.

Don't stint the mothers. The better you feed them, the better they will do by their young, and the quicker you will have young rabbit to eat or to sell. Give them good variety and plenty of it.

**Rabbits as Food.**

Rabbits have been compared by some to chicken; by others to venison. It is likely that the flavor of the meat can be varied by the feed that is given them.

The first rabbit we dressed and served in our home was a large, fat buck under a year old. We roasted it. It came out of the oven nicely browned with the most appetizing odor one could desire. Curled up in the pan, the roasted rabbit looked every inch like a cat curled up on a door-mat. To my mind at once came the mental picture of myself stepping away from our back-door holding gingerly by the tail, a huge white cat that had lapped up some cyanide in milk during the night; the said cat having found the saucer of milk and cyanide on its journey through our back yard to my rabbitry wherein it had already made costly nocturnal raids.

Many people object to rabbits because of such imaginings as this. They say rabbits look too much like cats—and dislike to eat them. This is no laughing matter. I confess that it was only by the exercise of a certain amount of will-power that I was able to put the big white cat buried three feet deep out of my mind and ask for the second helping of rabbit.

But it is amazingly foolish and unpatriotic for us now to cling to our beef and pork when these meats are vitally needed by our own soldiers overseas. When these boys are ordered into the air to fight the Hun's airships away from the allied lines, or the cities and hospitals back of the lines, no sentimental imaginings of what may happen to them up in the air deter them from rising to meet the enemy. The same obtains when the signal comes for them to go over the top.

**From a Boy in France.**

I read a letter from a boy I know, now in France. I should say that he is a man, perhaps, because he is a cavalry captain in France. But he and I were boys together in college, and we still think of one another as boys. I am here raising rabbits, with some help from my 8-year-old son, and a little bit of help from his small sister, aged 3. My boy-friend, the cavalry captain, is fighting in France to save my small boy and baby girl from the bayonets of the Hun.

He said in his letter that he and his troopers were getting pretty nearly their three square meals a day. Evidently the submarines of the Hun were not getting quite all that Uncle Sam was sending to him and the men that followed him in battle.

But he wanted me to be mightly sure to keep the "eats" coming in that thin line of ships across the Atlantic that now is preyed upon by deep-sea monsters that slaughter and kill a thousand miles from their lair.

He and his troopers want pork and beef. I imagine, sometimes, that this soldier-friend of mine and his troopers, hungry from a day and night of bitter fighting, have just asked the army cook for something to eat. The cook tells them that the quartermaster is unable to get any more bacon and beef from the United States; the people there imagine that nicely roasted rabbits look like cats and refuse to eat them. They want the beef and bacon themselves.

Imagining this scene over in France I forget my vision of the big white cat I carried by the tail away from the saucer of milk poisoned with cyanide. I ask my 8-year-old son how many he counted in his last litter of Flemish Giants. Ten, he say, proud as any father. Also, "mother and babes are doing well."

I smile.

## Want Ads

### HELP WANTED—FEMALE 1

WANTED — BY FARMER, 38 YEARS, housekeeper, age 30 to 39 yrs., fond of ranch life. D 6, Washington Farmer, Spokane.

SUMMER COURSE IN TELEGRAPHY opens June 10. Jenkins Institute of the Spokane Y. M. C. A.

### AGENTS—WANTED 9

POWERINE IS EQUAL TO GASOLINE AT 5c a gallon; salesmen and agents wanted; exclusive territory granted; powerine is guaranteed to be harmless, to remove and prevent carbon, doubling the life of all gasoline motors, saving repairs, adding snap, speed and power; an amount equal to 20 gallons of gasoline will be sent to any address in the U. S., charges prepaid, for $1. W. Porter Barnes, Santa Rosa, Cal., Dept. 8K.

### EDUCATIONAL 45

EARN MORE. ENROLL ANY TIME, AT Behnke-Walker, Portland, northwest's biggest business college, because best. Graduates assured positions. Write for catalogue.

### FARM LANDS—FOR SALE 651

SPECIAL.
THE FAMOUS BITTER ROOT STOCK FARM.

Estate of Marcus Daly, having completed the sale of their lands, now offer for sale their last division headquarters ranch, comprising 2600 acres, all under their private irrigation system; all fenced and in cultivation. Complete set of buildings, comprising house, bunkhouse, horse and cow barn, machine shed, blacksmith shop, hog department, in fact, everything one could possibly need. Buildings located 2½ miles from town of Hamilton, and N. P. Ry.

This ranch will grow enormous crops of anything that can be grown in Montana. Will put up better than 2000 tons hay or alfalfa. Surrounded by 1500 square miles of forest reserve. Available range this year for about 20,000 of sheep and large number of cattle.

Price $75 per acre, $30,000 cash, balance in 10 years at 6 per cent. Any one familiar with the Daly Stock ranch on which $3,000,000 was spent, further comment is unnecessary. Will divide this ranch in two lots of 800 and 1200 acres if desired.

W. P. Rice, sole representative, Hamilton, Mont.

HELP.

We still need a few more settlers to finish our 6000 acres, which is being sold in 40-acre farms at $25 per acre. Ten yearly payments at 6 per cent interest.

By selecting your future home in this splendid tract at Bryant, Snohomish county, you are not alone buying a fertile and productive piece of land, but you are buying the best investment in the state today. Railways, paved roads, schools, churches, canneries, creameries and mills.

The best proposition on the market for the man who wants a farm. For further information address the owners, BROWNELL LAND CO., 304 Third ave., Seattle, Wash.

DIVERSIFIED FARM.

240 acres; 3 miles from city limits of Spokane; 100 acres cultivated; live stream and spring; family orchard; 5-room house; barn for about 8 head of stock; all fenced; about 4000 cords of wood. This is a very desirable place. Price $10,000. Will take Spokane residential property up to $4000.

HOUSE & LAND ASSOCIATION.
514 RIVERSIDE AVE. SPOKANE, WASH.

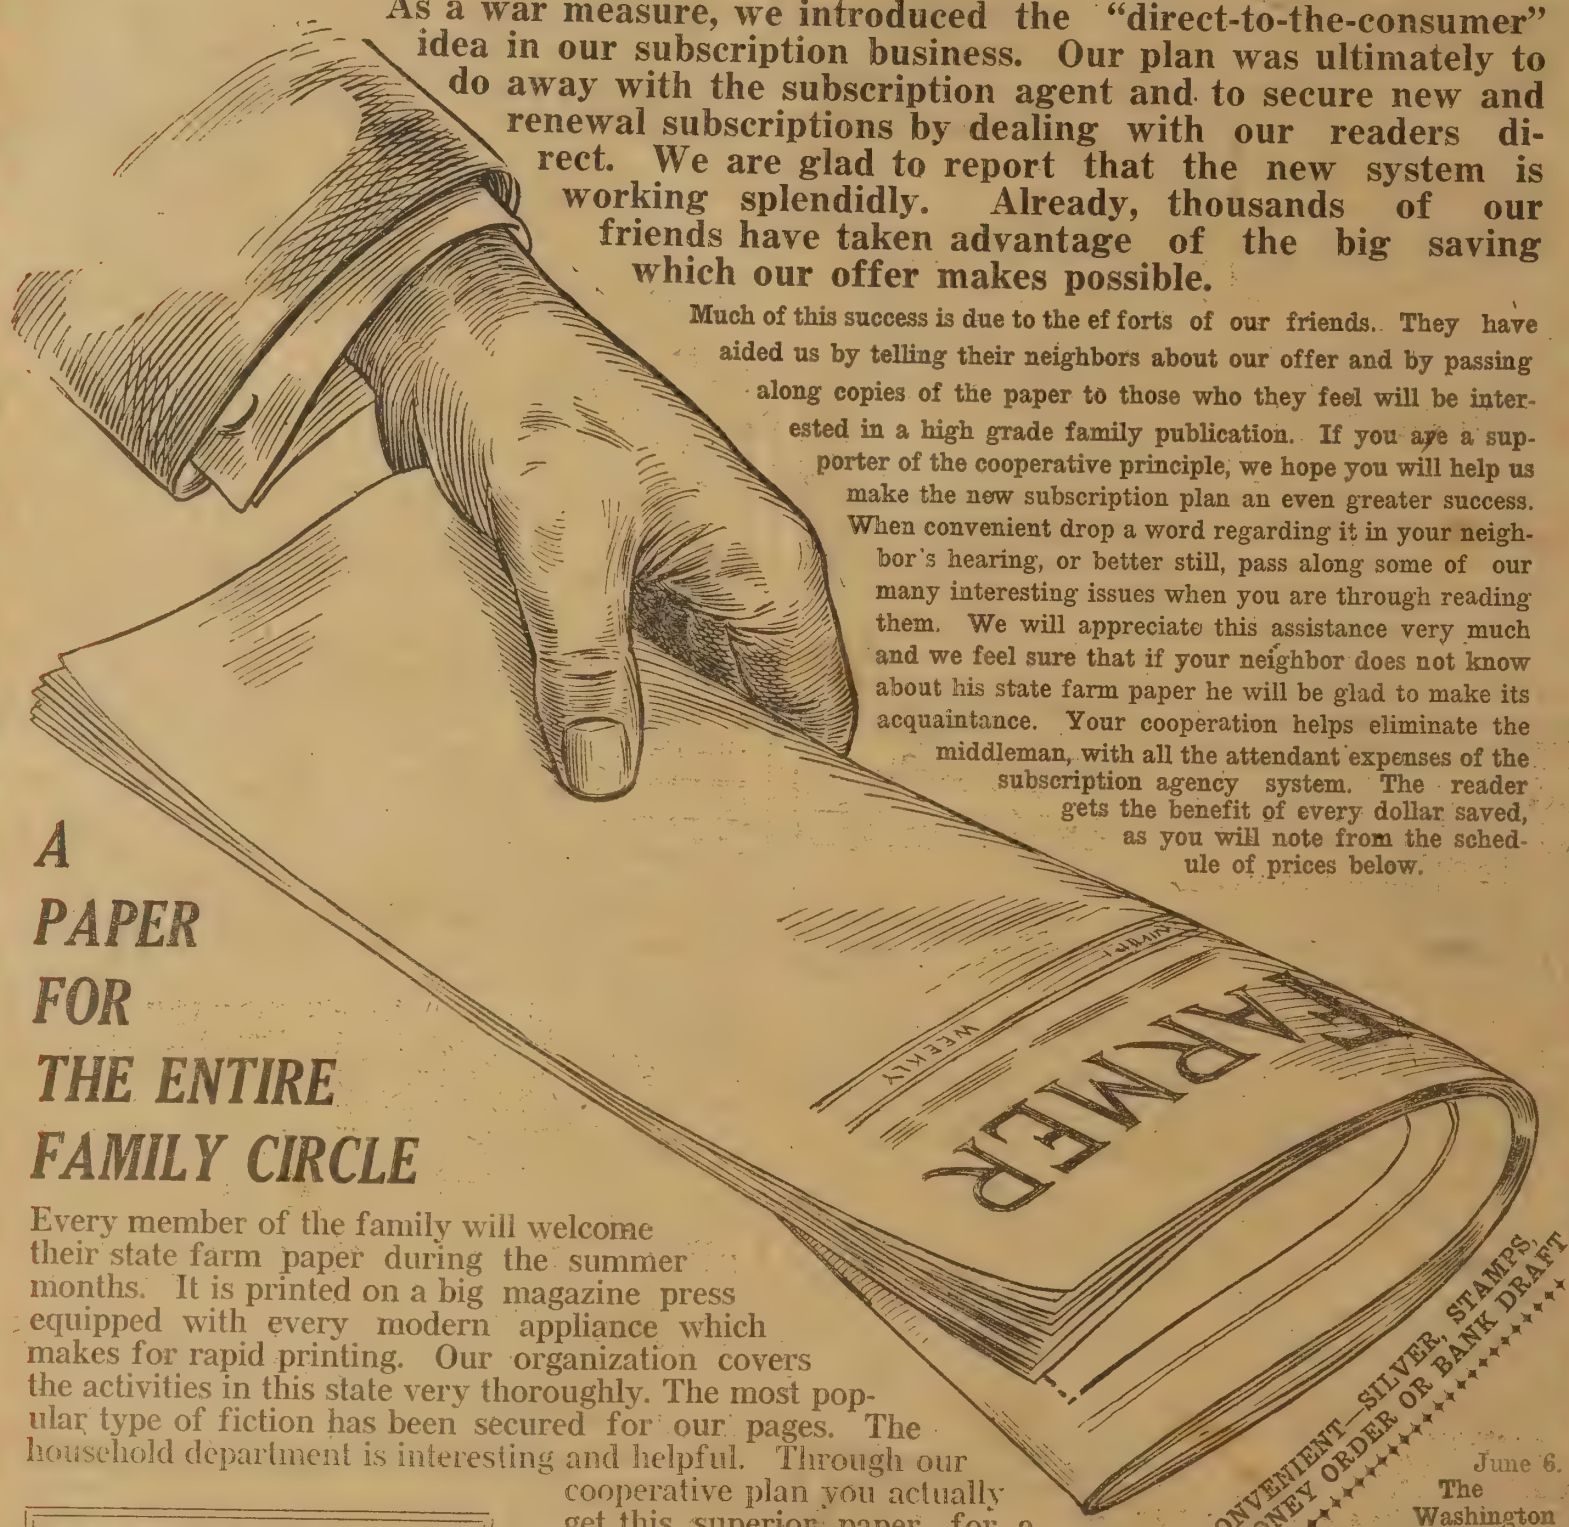
1000 ACRES; WILLAMETTE VALLEY stock farm; in splendid farming district; 90 miles from Portland, 4½ miles from good town, 3 miles from railroad; good auto road; school across road; good soil; well fenced and watered; 300 rough, 700 tillable, 300 cultivated; some fine timber, lots of good pasture; very good buildings; stocked with sheep and cattle. $10,000 worth personal property. Price for all $60,000. Terms. Call or write Neal Brown, 207 Panama bldg., Portland, Ore.

DAIRY FARM FOR SALE—NOW DOING $250 to $300 cash business a month; 14 dairy cows and all equipment for handling milk route. Price $3700 cash or terms. Young stock and horses can also be bought reasonably. A good opportunity to raise cattle. Lots of free range. For particulars write A. Enstrom, Box 330, Ephrata, Wash.

682-A. IMPROVED WHEAT FARM; SEVEN miles south of Hartline, Wash.; on Sunset highway; good land; all in cultivation except 15 acres; 300 a. in summer fallow; all fenced; large house, fine barn, good outbuildings; plenty water. Only $45 per acre. $6000 cash will handle. A. L. Tucker, Coulee City, Wash.

FOR QUICK SALE—ONE-HALF SECTION farm, 4 miles from Moscow. Price right to sell, and liberal terms. The place is all in crop, one-third of which goes to the purchaser. Possession given Oct. 1, 1918. If interested, write P. O. Box 393, Moscow, Ida.

FOR SALE — ALFALFA, WHEAT AND stock farms. If you want good, well-improved, irrigated farms at a price that will pay for itself in two crops, write me. John Hardwick Realty Co., Vale, Ore.



MY 79 A. IS TOO MUCH FOR ME TO work; all good land with water; 9 mi. from Vale. If sold at once, crop and land $6000, $3000 cash. Write my agent, O. E. Carman, Vale, Ore.

FOR SALE—IN BITTER ROOT VALLEY, Mont.; 20 a.; 8 a. orchard; 14 a. barley; prospects bumper crop. $3000 takes it. W. S. Schraedh, Corvallis, Mont.

GOVT. LAND, ORE., CALIF. BOOKLET. Joseph Clark, Sacramento, Calif.

# LET SOMEONE ELSE ENJOY IT

*SCORES OF OUR FRIENDS ACTED ON OUR SUGGESTION TO PASS THEIR PAPER ON TO A NEIGHBOR WHEN THROUGH READING IT. WE TRUST THAT MANY MORE WILL DO THE SAME WITH THIS ISSUE; AND CALL ATTENTION TO OUR MONEY-SAVING OFFER*

**As a war measure, we introduced the "direct-to-the-consumer" idea in our subscription business. Our plan was ultimately to do away with the subscription agent and to secure new and renewal subscriptions by dealing with our readers direct. We are glad to report that the new system is working splendidly. Already, thousands of our friends have taken advantage of the big saving which our offer makes possible.**

Much of this success is due to the ef forts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those who they feel will be interested in a high grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appreciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices below.

## *A PAPER FOR THE ENTIRE FAMILY CIRCLE*

Every member of the family will welcome their state farm paper during the summer months. It is printed on a big magazine press equipped with every modern appliance which makes for rapid printing. Our organization covers the activities in this state very thoroughly. The most popular type of fiction has been secured for our pages. The household department is interesting and helpful. Through our cooperative plan you actually get this superior paper for a mere fraction of what it has cost in the past.

## A Real Saving

*Following Rates Now in Effect for Subscription to The Washington Farmer*

**25c** *FOR ONE YEAR*

**50c** *FOR THREE YEARS*

**$1** *FOR FIVE YEARS*

## *Act Now!*

YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

June 6.

**The Washington Farmer,**
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

**Enclosed is $..... for ..... years' subscription.**

In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

VOL. XLI. NO. 24. JUNE 13, 1918. WEEKLY.

# Our Special Clubbing Offer

# FOR $1

## THE WASHINGTON FARMER FOR THREE YEARS, 156 ISSUES, AND THE TWICE-A-WEEK SPOKESMAN-REVIEW FOR ONE YEAR, 104 ISSUES—PRICE FOR THE COMBINATION ONLY $1.

This is a clubbing offer which is proving very popular.

If you subscribe for The Twice-a-Week in any other way it will cost you $1 per year. That is the regular established subscription price of this semi-weekly newspaper.

The Twice-a-Week Spokesman-Review is issued every Tuesday and Friday.

It brings you a complete, condensed and thoroughly reliable review of local, state, national and international news.

The Twice-a-Week Spokesman-Review has a big and efficient body of correspondents covering the entire Pacific Northwest. It also gives you the reports of the Associated Press, the greatest news gathering organization in the world.

The Twice-a-Week Spokesman-Review will keep you posted regarding the war.

If any of the young men you know are killed, injured, or taken prisoner on any of the battle fronts, you will be given the information in The Twice-a-Week Spokesman-Review as soon as it is issued by the military officials.

In times like these you surely need a complete and thoroughly reliable newspaper. The Twice-a-Week Spokesman-Review fills the bill.

Noteworthy events are taking place every week. Keep up with the march of events by sending in your dollar for the Twice-a-Week Spokesman-Review and your state farm paper.

## Why You Should Protest

### *Freight Rate Increase Means Higher Prices for What the Farmer Buys*

Here are extracts from Secretary McAdoo's order increasing freight rates:

Grain, wheat, 25 per cent, but not exceeding an increase of 6 cents per hundred pounds. Other grain, new wheat rates.

Flour and other mill products, 25 per cent, but not exceeding an increase of 6 cents per hundred pounds, and increases shall not be less than new rates on wheat.

Live stock, 25 per cent, but not exceeding an increase of 7 cents per hundred pounds, where rates are published per hundred pounds, or $15 per standard 36-foot car where rates are published per car.

Clifford Thorne, former chairman of the Iowa railroad commission, is protesting against the increased freight rates ordered by Director General McAdoo.

"The whole war increase of $300,000,000," declares Mr. Thorne, "could have been taken care of with a 5 per cent advance in freight rates and a 20 per cent increase in passenger fares."

Mr. Thorne declares that before the order was issued he wired Mr. McAdoo, "on behalf of organizations having a combined membership of over a million shippers, asking an opportunity to be heard. The request was ignored."

Mr. McAdoo says, however, that:

"The act of congress provides that the reasonableness and justness of such rates may be dealt with by the interstate commerce commission, so that no interests affected will be deprived of the opportunity for full hearing and consideration. In the nature of things, no such far-reaching step can accomplish ideal equalization as between the numerous interests necessarily affected, and doubtless the commission will find it proper to make readjustments to attain a nearer approach to such equalization. While, as far as practicable, the rates as initiated are designed to avoid unnecessary disturbance of relative rate bases, the director general will cooperate heartily with the commission in any readjustments needed to accomplish still further the object of avoiding undue preferences, which, nevertheless, may develop upon detailed consideration by the commission."

Mr. McAdoo, therefore, admits that his order is charged with inequalities, and acknowledges the patriotic right of citizens and interests that are unjustly dealt with to enter protests.

For reasons we have previously set forth, the order does a great injustice to the people of the Pacific coast. The sole and only justifiable basis of the order is to make the railroads self-supporting, so that the government will not have to pay a deficiency out of its treasury.

But if all sections of the Union were supporting their railroads as the Pacific coast is supporting its roads there would have been no deficit.

With a single exception, as we have shown by the records of the railroads and the interstate commerce commission, all the transcontinental railroads, from southern California to the Canadian border earned handsome profits in 1917, ranging from clear profits on the common stock of 9 per cent to 15 per cent.

It is a gross injustice to compel the shippers and consumers of the Pacific coast to pay yet heavier taxes to help the people of distant regions to support their roads.

Our producers should protest with vigor and determination. Remember that this enormous increase of 25 per cent applies not only to everything you produce, but also to everything you buy. It means higher prices for farm machinery, for fencing, for lumber, for food and clothing and for everything bought for the farm.

Protest to your senators, your representatives in congress, your state railroad commissions, to Secretary McAdoo and the interstate commerce commission. Protest through your grange, your farmers' union, your farm loan association, your nonpartizan league, your fruitgrowers' organization, your live stock associations.

### Fighting Root Maggots.

Late transplanting is one of the methods of fighting the root maggot pest, as the attacks of the maggot are less vigorous late in the season. Radishes for the family garden can be successfully guarded by raising them under netting. The use of cedar sawdust in the beds has apparently been helpful in some cases in western Washington, but it is too early to pronounce this method fully effective. The use of lye solution, one tablespoon of commercial lye to one gallon of water, and the use of kerosene emulsion, both of these remedies to be applied around the roots of affected plants, have been advised by some gardeners. Evidently the case of the Consuming Public vs. the Root Maggot is not yet closed.

### Stick Kills Cow.

Mrs. L. P., Castle Rock, Wash.: I see in the Washington Farmer that you are having trouble with a cow. I think the trouble is likely to be a stick in the ear. It may have got there by the cow striking at flies or in some manner running a stick in the ear and braking it off. I had the same trouble with a cow one time and she acted as you say your cow does. She was sick a year and then died. My husband skinned the cow, and when he cut off the ear he found the stick and the cause of her death. Since that I have saved a valuable cow from death from the same cause.

MRS. T. R. LUPTON.
Hillyard, Wash.

### Bull Brings Fabulous Price.

A report from Milwaukee, Wis., says that Champion Sylvia Johanna, 6-month-old blooded Holstein Friesian bull, auctioned there, brought the record price of $106,000, believed the biggest sum ever paid for an animal of that age The calf's mother, champion butter fat producer, once sold for $53,000.

### EIGHT IN ALL.

To the Editor of the Washington Farmer: Will you please find enclosed 5 cents in stamps, for which send me one of your home service flags. There are myself and wife and six children that help with the garden and potato and root crops, also the children help in the haying some. If they are counted as helpers please put the number of stars on the flag, which would be for eight helping to raise crops of different kinds.

R. B. BURNSIDE.
Alpha, Wash.

## Fathers' Day

### June 16, This Year, Set Aside

June 16, this year, is Fathers' day.

Mrs. John Bruce Dodd of Spokane, Wash., has the distinction of originating Fathers' day, and suggesting that a red rose be worn in honor of the fathers who are living and a white one in memory of those who have passed away. In 1909 Mrs. John Bruce Dodd crystallized her vision. In 1910 the Spokane Y. M. C. A. gave Fathers' day formal indorsement. Then followed the approval of Mayor N. S. Pratt and Governor M. E. Hay. In June the Spokane Ministers' alliance accepted the invitation of Mrs. Dodd, approving and adopting the plan, and on the third Sunday of June, 1910, many of the city pulpits observed the day. Probably the

Mrs. Dodd, who founded Fathers' Day.

first sermon on that occasion was entitled "The Knighthood That Never Retreats."

"We hear much and rightly of the mothers place in the home and in the training of the children, but the fathers strong hand is required quite as much as the gentle touch of the mother," says Leslie's Weekly. "The observance of Fathers' day could be made to mean much for the home, for religion and for patriotism. The proper place of the father as the head of the household, his part in the discipline and training of the children, especially the boys, who need the firmness of a man's guidance and the influence of masculine example, the safeguarding of the marriage tie and the protection of womanhood and childhood should all be emphasized."

## Get These Booklets

If you want to know how to make cookies or muffins or biscuits or any other of a number of delicious things out of potatoes, simply write to the information bureau of this paper at Washington, D. C., and ask for the booklet containing these potato recipes. Then if you want to know how to make 36 different delectable dishes out of cream cheese write the information bureau and ask for the cream cheese booklet.

On another page in this issue will be found a list of many booklets that can be secured from the information bureau at Washington. When writing for any one of them enclose a two-cent stamp for postage. If you are asking for personal information which will require a personal answer enclose a three-cent stamp. The information bureau at Washing will undertake to answer any reasonable question that you may ask.

### Wheat Substitute Mill.

A mill to manufacture potato flour, corn flour, rice flour, barley flour and other wheat substitutes with a capacity of 200 barrels output per day will begin operations shortly in Spokane.

## Farm Service War Flag

Here are a few more of the requests for the farm service war flags:

**MRS. MOLLIE M. RUGG, Lamont, Wash.**—Enclosed find 5 cents for which send me a farm service war flag, with five extra stars for farm workers.

**E. C. PIERCE, Silcott, Wash.**—Enclosed find 10 cents, for which please send me a farm service war flag, printed on enamel paper, with one extra small star for farm workers.

**E. H. DICKENS, Cheney, Wash.**—Enclosed find 5 cents for which please send me a farm service war flag, printed on enamel paper.

**OLEY MORRISON, Castle Rock, Wash.**—In renewing my subscription I overlooked your offer of a farm service war flag, so enclosed please find 5 cents in stamps to pay postage on same

**FRED G. BRUNNER, Winlock, Wash.**—Enclosed find 5 cents. Please send me a farm service war flag pennant.

## Washington Boys in War Service

From the Twice-a-Week Spokesman-Review.

**WILLIAM CLYDE WALLACE, Tenino, Wash.**—Enlisted in the navy August 13, 1917, and is now on board the U. S. S. El Captain, in transport service on the Atlantic ocean. His parents are Mr. and Mrs. Sidney Wallace.

**VERNIE SMITH, Malaga, Wash.** — Entered military service October 7, 1917, and is now stationed at Camp Kearney, near San Diego, Cal., in an infantry division. His parents are Mr. and Mrs. George Smith.

**ROBERT RAY CLARK, North Yakima, Wash.**—Has been in France since August, 1917, with the 5th field artillery, battery C. He enlisted April 20, 1917, when 19 years old. His parents, Mr. and Mrs. M. R. Clark, live on a farm in the Lower Naches valley.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on acconut of disease in stock sold through these columns.

## *Men Are Not Satisfied*

Men were born with eyes, but they were not satisfied, therefore they made microscopes that magnify 4000 diameters, and telescopes that multiply distance vision 8000 times.

The race has ears, but they made microphones which make the footfall of a fly sound like the tramp of a horse upon a pavement.

They have tongues and vocal organs, so that their voices can be heard into the next room, the next house, or a neighbor's field; but they have installed wireless telephony and talk to one another half way around the world.

The race has its sorrows, but those fit to survive rise above them. Civilization is strewn with the wrecks of fortunes, hopes and ambitions, but it rises out of the wreckage with higher ideals and greater wisdom.

Men find themselves in the midst of death, yet believe themselves to be immortal. They struggle continually against diseases and adverse conditions that tend to destroy them, and yet affirm that they will live forever. G. L.

## *How Much More*

It costs more to live now than it used to, but how much more? Uncle Sam, statistician, answers this question as follows, through his bureau of labor statistics:

"From February, 1913, to February, 1918, food as a whole shows an increase of 66 per cent. Every article shows an increase in price of 44 per cent or more. Corn meal increased 138 per cent; lard 113 per cent; potatoes 109 per cent, and flour 100 per cent."

It will be comforting to those with an appetite for the better things of life to know that sirloin steak, rib roast and butter have undergone the least price change, each of these being content with a rise of 40 per cent.

P. E. T.

## *Mustn't Compete With Uncle Sam*

One of the common errors of the day is the feeling that it doesn't make any difference what we spend our money for if we do not spend it for something that the government or this country's allies need. That is a grave error. Here is the truth about it: When we buy something that we do not need, we are employing labor in the manufacture of a nonessential and we are employing transportation facilities in the transportation of a nonessential. Suppose it were a new suit—one that we could get along without just as well as not. We have employed a man, or several men, in making it who could better be employed in producing food or building ships, perhaps; we have employed machinery that could better be employed making clothing for the armies; we have employed transportation facilities that could better be used in transporting wheat and munitions. Every time we buy something that we do not need we are placing a little handicap on our country in her war with Germany. It is a terrible price to pay for luxury.

## *Storage Is Vital This Year*

If there ever was a time when it was possible for a producer to market his products just whenever he wanted to, that time is past. He can not do it now. He must market them when he can, and he must be in a position to preserve them until such time as he can put them on the market.

That condition demands farm storage facilities of some kind in a majority of cases. Dampness and mice destroy grain that is not properly stored; heat and cold damage, if not ruin, root crops of some kinds, including that staple of war times, potatoes.

This is all aside from the question of the availability of sacks for handling products. Storage must be prepared somewhere. Unless there are adequate warehouse facilities known to exist within reach, it is the part of wisdom for every farmer to plan his own storage facilities. Whether he has to construct his own or not, he must, if he is to be sure of saving his crop, be sure that the facilities exist.

## *No Idler Should Be Fed*

The war department has ruled that every man of draft age must do one of two things: Serve in the army of workers, or serve in the army of fighters. That is an excellent ruling. It will be well for this country when a ruling like that can be applied to men of all ages. Every man who is able to work should be employed either by himself or by some other in constructive, productive industry. This is no time for a parasite. This is no time for a man to eat food and wear clothes and enjoy shelter provided for him by others. It makes no difference how much money he has. Money can win the war only when there is something for money to buy. What the allies need is not money, but food, clothing, munitions, railroad equipment, airplanes, ships. Money has no value in winning the war except as it contributes to secure such things as these, and the richest man, as well as the poorest, should have no other thought than to do his utmost to provide these essentials to victory.

HERE is a prediction: That the allies will conduct a successful defensive the remainder of this year, to be followed by an irresistible though not spectacular offensive one year from this spring that will mark the beginning of the end.

"BUT we are entitled to half a sack of flour," urged a protester. "We are not entitled to an ounce of anything that the army needs worse than we do," replied the patriot.

WE ourselves benefit from our giving only when we give till it hurts. Sacrifice does good both to the one who makes and the one for whom made.

DON'T forget the Red Star while you think of the Red Cross. The former is for horse; the latter is for man. Each is first, last and always humane.

MORAL courage at home is as necessary for the winning of the war as physical courage on the battle front.

NO individual can have a permanent interest that is not secondary to the interest of his country.

NECESSITY is the mother of conservation as well as invention.

COMING EVENTS.

August 19-25, national G. A. R., Portland, Ore.

**Fairs, Shows, Exhibits.**

September 2-7, Spokane Interstate fair, Spokane, Wash.
September 16-21, Washington State fair, Yakima, Wash.
October 1-6, Western Washington fair, Puyallup, Wash.
November 7-13, Northwest live stock show, Lewiston, Idaho.

**Live Stock Sales.**

June 20—Shorthorns, Day & Rothrock, A. D. Dunn, Joe Turner, Spokane, Wash.
June 26, Guernseys, E. R. Brady, Satsop, Wash.

## *What Does My Neighbor Do?*

Every one of us should be ashamed to ask the question, What is my neighbor doing? Every one of us should be proud to ask himself the question, What am I doing? if the answer can be given, I am doing my utmost. It is one of human nature's greatest weaknesses that we all want to measure ourselves by our neighbors, and our actions by theirs. Why are we content if we can attain just a common average? Why are we satisfied if our neighbor doesn't excel us?

Right now the question is not, Is my neighbor doing such and such to help win the war? It is rather, Am I doing my utmost? Am I overlooking any opportunity to help preserve and improve my community and my country? Am I neglecting any opportunity that I know lies before me? Am I as an individual, irrespective of the opinions of my fellowmen, doing everything, everything in my power to aid my country in this tremendous crisis through which we are passing?

## *Remember The Whirring Wheel*

One section of the great textile show that was held recently in New York would have delighted the grandmothers of America and been instructive and entertaining to the younger generation. It was the hand-weaving exhibit—an accurate reproduction of the spinning and weaving of wool as our grandparents knew the industry. Powerful modern automatic looms, running in another section, afforded a vivid contrast.

Many a man and woman now middle-aged has pleasant memories of the whirring wheel and its musical humming, heard, perhaps in the warmth and quiet of a long afternoon of summer as it was driven by the deft hand of an industrious mother or daughter of the household. Those of us possessing such memories have but to close our dimming eyes to hear again, in fancy, the rise and fall of the wheel's droning and the sounds of the spinner's footfall as she now advanced and now retreated. On winter nights how many millions of America's children have been lulled to sleep by that soothing sound floating upward into the homestead loft or attic.

Truly, "old times are changed, old manners gone," and we sometimes think that with the passing of all these olden customs something vanished that was fine and wholesome—something of ease of heart and peace of mind, and a nearer approach to contentment than ever will be known by this 20th century driven generation.

## *No Made-in-Germany Peace*

The people of this country are determined that one thing shall never bear the mark, "Made in Germany," and that is the terms of peace at the conclusion of this war. It is pointed out that Germany now has under her control in Russia a conquered territory embracing nearly twice the population of the United States, and that she is therefore ready to conclude peace on reasonable terms so far as the western allies are concerned. But no such terms can be countenanced, for it would mean a renewal of the world war a few years hence, when Germany would again seek world domination.

## *The Submarine.*

The submarine is a source of deadly peril. It is like some prehistoric monster, animated with a dull hate and uncontrollable because it operates in the dark. It is an assassin of the ocean, slipping up on its victims and destroying them.

The submarine in theory is a triumph of invention; in practice it bids fair to drive civilization back.

In the world democracy which we hope to see the submarines will have to be regulated in some way so that their menace may be removed and the possibilities for usefulness developed.

# Americans Help Hold Germans

## *U. S. Soldiers Throw Enemy Back on Front Before Paris*

Just where the several hundred thousand American troops are stationed along the battle front is unknown except to military authorities, but it is known that a part of them, maybe 100,000 and maybe half that many or twice that many, are entrusted with the holding of a few miles of the battle line directly in front of Paris, which Germany has just made such a strong attempt to take. Not only are they so entrusted, but they have proved themselves worthy of the trust by defeating the Germans before them and regaining a considerable portion of territory taken in the overwhelming drive of a week or ten days ago.

The portion of the line where the Americans, led by the marines, have given such excellent account of themselves lies just to the west of the Marne river, along which the Germans are seeking to drive to Paris. It is understood that they captured a considerable number of German soldiers and some equipment in their victorious counter-attacks. How extensive were the American losses is not made public.

The German drive on Paris practically ceased early last week. Reports seemed to indicate that the effort was stopped partially because of the strength of the allied resistance and partly for some sort of strategic reason on the part of the Germans and Austrians.

Early reports this week appear to indicate a resumption of the drive in the section to the northwest of the Marne river, the idea being apparently to straighten out the line before further direct efforts are made toward Paris. While the allies, including the Americans, have inflicted some reverses on the enemy during the last few days, it must not be understood that the Paris drive was stopped by superior force on the part of the French and Americans. It is more reasonable to accept the cessation as deliberately planned by the Germans to permit them to again fill up depleted ranks, bring up the base of supplies and otherwise organize for the resumption of the effort that is certain to be made. But the magnificent defensive retreat of the allies inflicted tremendous losses on the enemy hordes.

The outcome seems to depend, as the opinion has previously been expressed in these columns, upon the ability of the allies to keep the enemy out of the English channel ports and out of Paris until winter stops the fighting. The tide may be turned before then by the slaughter of Germans and the arrival of United States forces, but it is not wise to expect such good fortune before next spring. If, however, this country can be given some three months of winter in which to send troops but in which Germany can make no advances because of the impossibility of winter warfare, the chances for supremacy of the allied armies next spring are believed to be excellent.

### Submarines Continue Their Raids.

Though the wholesale activities of the German submarines that have invaded the waters just off the Atlantic coast subsided after the first series of attacks, it is apparent that there are still some of the divers at work. A total of 18 vessels, mostly small ones, have been destroyed up to this writing. It has not been discovered yet where the base from which the submarines operate is located, or if so it has not been revealed by the navy department.

It is a significant fact that the divers did not succeed in destroying any ships transporting soldiers to Europe, which was believed to be the original object of the expedition to American waters. The failure is taken to indicate the efficiency of the United States and allied navies in protecting the soldier ships from harm. It is also significant that none of the vessels destroyed were large freighters. Most of them were small boats, and several were merely engaged in coastwise traffic. While the raid was successful in springing a surprise on the American people in general, it was virtually a failure, and has served only to inspire this country to go into war-winning work of all kinds more enthusiastically and with greater determination.

### Young Men Register for War Duty.

On June 5, just one year from the date on which this country's first army draft registration was made, the second registration was held, and approximately 1,000,000 men who have reached 21 years of age since June 5, 1917, signed up with the government. It is the government's intention to call these young men only after those who registered last year are called, allowing them thereby to take their natural turn in going into the active service.

### Grind No More Wheat in Northwest.

The food administration appears determined to stand by its original ruling that no more wheat shall be ground into flour by northwestern mills until after harvest. The action is taken on the ground that the northwestern district has already ground more than its just proportion of the available grain of the country. Vigorous protests have been made by various interested parties, it being especially claimed that a great mill feed shortage is likely to result from the cessation of grinding. Grinding will be resumed immediately after harvest, under the terms of the administration's ruling.

### May Increase Taxes on Big Profits.

Secretary of the Treasury McAdoo has announced the desire of the administration to raise about one-third of the nearly $24,000,000,000 that must be raised by this government during the coming 12 months by increased income taxes and excess profit taxes, together with other forms of taxation.

### U. S. Manufactures Many Army Rifles.

The war department officially announces that during the last year there have been manufactured in this country nearly 1,250,000 rifles for the use of the army. The statement says that there were already some 600,000 rifles available, which brings the total now up to approximately 2,000,000.

### Alien Women Must Register.

The United States department of justice has issued an order requiring all German women in this country not citizens of this country to register. They must go to their postoffice, or to the chief of police if they live in a large city. Registration will begin Monday, June 17, and close Wednesday, June 26.

### Whisky Tax About to Disappear.

Whisky is disappearing from the market so rapidly as a result of the prohibition of its manufacture during the war that it promises to furnish a serious problem to congress in framing the new war tax program. Under existing law it is estimated the treasury department is collecting revenue from distilled spirits at the rate of more than $300,000,000 a year. Prediction is made by the treasury department experts that the entire supply of taxable whisky would be exhausted by the end of the next fiscal year. This means that congress must look about for new sources of revenue to make up the $300,000,000 or more deficit when the "hard liquor" is all consumed or cached safely against further taxation.

### Former Vice President Passes Away.

Former Vice President Charles W. Fairbanks died at his home in Indianapolis, Ind., the middle of last week.

## VICTORIOUS WHEAT CROP SEEN

### Official Estimate Is for Nearly a Billion.

A bumper wheat crop this year, which before harvest may develop into a production of 1,000,000,000 bushels, is forecast by the department of agriculture in its June crop report giving the first indication of the size of this year's spring wheat output.

Basing its estimate on June 1 conditions, the department forecast a total wheat production of 931,000,000 bushels, which would place this year's harvest as the second largest in the history of the country.

In June of 1915 a total wheat production of 950,000,000 bushels was forecast, and the quantity gradually crept upward until the final figures for the year showed the crop to be 1,025,800,000 bushels.

The acreage sown to spring wheat this year is larger by 2,000,000 acres than ever sown before, and 21.5 per cent larger than last year, aggregating 22,489,000 acres.

The condition of the crop on June 1 was 95.2 per cent of normal, or 1.5 per cent better than the 10-year average. A production of 344,000,000 bushels was forecast. That is 11,000,000 bushels more than harvested last year and only about 7,000,000 bushels less than the record spring wheat harvest of 1915.

Winter wheat, growing on the second largest acreage ever planted, showed a condition 3 per cent better than the 10-year average, with 83.8 per cent of a normal crop. A production of 587,000,000 bushels was forecast, which is 50,000,000 bushels more than forecast from conditions existing May 1. Such a crop would be the third in size grown in this country.

The oat crop also promises to be of record proportions. On an acreage 2.1 per cent larger than last year, when the record crop—1,587,000,000 bushels—was grown, June 1 conditions warrant a forecase of 1,500,000,000 bushels. Only last year's and the crop of 1915 exceeded that quantity.

Rye production will be a record, the forecast being 81,000,000 bushels.

## HOOVER PLANS MORE REGULATION

### Prices to the Consumers Must Not Be Too High.

Food Administrator Hoover has ordered a nation-wide movement to reduce the cost of food to the consumer, to compel dealers to observe the fair price list and to standardize methods, says a statement from Washington.

Lists will be published in every county, town and city, and consumers will be asked to cooperate with officials in forcing merchants to bring their prices to a uniform level.

In carrying out the new standardization plan the administration will establish price-interpreting committees composed of representatives of wholesalers, retailers and consumers.

The board will determine fair retail prices on basic commodities that comprise a large part of the nation's diet. The published lists will give the range of maximum selling prices, showing a reasonable price which will reflect the prices that should obtain in "cash and carry" stores and a higher price representing a fair price for the "credit and delivery" stores.

The local administrator for each locality will act as chairman of the price board. Each board will have detailed reports of actual wholesale prices and will ascertain fair margins of profit the retailer should be satisfied with.

Newspapers will be asked to cooperate by setting aside a particular porsition weekly for publication of the lists with footnotes on the food problem and the use of substitutes for the foods most needed abroad.

A close check will be kept on observance of the lists. Consumers will be expected to report to the local food administrator any store charging more than the established price for any commodity.

### Have Sold Enough Farm Loan Bonds.

A statement says that the federal farm loan board at Washington, D. C., has withdrawn all farm loan bonds from the market temporarily. No official statement of the reason is given, but it is understood that the sale of more bonds at this time is not necessary to carry on the business of the bank. The bonds are sold as a means of raising money to be loaned to the farmers by the farm loan bank.

## *Washington Gleanings*

Nine thousand more acres in additional reserve land in Yakima valley is sown with grain, of which most is wheat.

Mrs. Harriet Young, who died recently at Puyallup, left $35,000 cash for the erection of a Y. M. C. A. building.

O. J. Wingren, proprietor of a bulb farm on the Swinomish reservation, died a short time ago. He was well known throughout the northwest as an expert in flowers.

Washington had 39,093 men in the military and naval service of the United States on May 15, according to figures compiled by Captain L. I. Ziegaus, executive officer at Olympia.

One hundred and twenty-five registered delegates and 200 clubwomen attended the semi-annual meeting of the Yakima Valley Federation of Women's Clubs at Sunnyside recently.

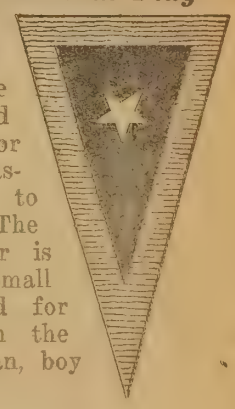
Len Jackson of the Pataha farm, near Dayton, reports his clip of wool this spring about 35,000 pounds, or about 4000 pounds more than last year from the same number of sheep.

James Newton Rogers, one of the pioneer ranchers of Pend Oreille county, has sold his ranch adjoining Diamond lake, the 490 acres being disposed of at a valuation of $30,000 in exchange on a $50,000 Spokane property.

A Montesano girls' canning club was organized in the Montesano schools recently with 25 members. The officers are: Dorothy Quimby, president; Marie Hattabaugh, vice president, and Clarisse Wilcox, secretary-treasurer.

To be used as a home for boys and old people, the Right Rev. Augustin F. Schinner, Roman Catholic bishop of the diocese of Spokane, recently purchased the 480-acre ranch owned by Martin J. Kalez at the southeast end of Liberty lake.

In response to the government's call for Yakima beans to feed American soldiers and sailors in Europe Yakima growers have already shipped five large carloads to federal storage houses in New York. Shipments to date have brought Yakima farmers $38,400.



A fruit tree census of Yakima county has just been completed under the direction of H. E. Waterbury, former district horticultural inspector. The totals show Yakima has 2,050,181 apple trees, about three-fourths of which are in full bearing. The prevailing varieties are Winesaps and Jonathans.

"The Altar Stone," a monument to the memory of Klickitat county men who give their lives in the war, is being erected at Maryhill. Names of all Klickitat county soldiers and sailors who die in the world struggle, together with the dates of their birth and death, will be molded on a metal plate on the monument.

Mrs. J. S. McKee, representative of women on the Washington State Council of Defense, told the war workers in Spokane recently that it was necessary for us to keep right on talking the same old conservation principles, though they have already been uttered a thousand times. Conservation must not be allowed to slacken, she said, but must be increased.

The farmers of certain districts of the state are raising a protest to the food administration against the closing of the flour mills as is announced for the next several weeks. They declare that to close the mills will result in a shortage of mill feeds. A movement is being made to reach National Food Administrator Hoover if necessary to secure a continuation of the operation of the mills in the northwest.

## *Your Farm Service War Flag*

Designed by The Washington Farmer in connection with The Idaho Farmer and The Oregon Farmer for the farm homes increasing food production to help win the war. The large star in the center is for the farm home. Small stars may be added for every farm worker in the family—man or woman, boy or girl.

**Convenient Order Blank.**

THE WASHINGTON FARMER, . . . . 1918.
Review Building, Spokane, Wash.

Enclosed find Five Cents (5c), for which please send me a Farm Service War Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Name .....

R. F. D..... Postoffice.....

Box ..... State .....

# State Grange Meets Handicap

## *Question of Political Alliance Policy Results in Unfortunate Situation*

"They are whole-heartedly back of the war, and are making every sacrifice to do their part. There is no complaining about the boys that are taken from the farm, and no kicking about the high cost of living." This is the conclusion expressed in a personal letter to the editor by our correspondent after mingling freely with the rank and file of the members of the state grange while in session at Walla Walla. It indicates the well-recognized fact that the steady and constructive loyalty of the farmers can not be shaken from its course, whatever troublesome and complex problems may arise.—Editor.

By PAUL E. TRIEM.

That the thirtieth annual session of the Washington state grange should have opened with a whole-hearted resolution, unanimously adopted, in support of President Wilson, the nation and the world in the fight for freedom, and that it should end almost in chaos, with the organization practically locked out by the city in which the session was held, is one of the ironies of these modern times. For better or for worse things were done during the four days which can never be undone.

The opening day, Tuesday, June 4, passed uneventfully. The resolution referred to was adopted and telegraphed to the president. State Master Bouck's address, a digest of which was printed in The Washington Farmer last week was delivered. An automobile ride into the country, a picnic lunch served by the commercial club, and a reception open to the public rounded out the social side of the occasion.

Wednesday afternoon memorial exercises were held, the most notable feature of which was the address delivered by George P. Hampton of Washington, D. C. Mr. Hampton is editor of the "Farmers' Open Forum," and was a friend of the late State Master Kegley during many years of the latter's active career. That the leader who is gone was more than a local celebrity, that he was indeed a man of national reputation was the text of the Washington man's eulogy.

**Nonpartizan Question Brought Up.**

Following the memorial exercises came probably the most momentous feature of the entire program, when Ray McKaig, past master of the North Dakota grange, spoke of the origin and growth of the nonpartizan league. He told of his first vague gropings toward grange affairs, inspired in large measure by the missionary efforts of Secretary Lewis of Tumwater, Washington, and of C. B. Kegley. He retold the now famous story of the North Dakota legislator who told a delegation of farmers, visiting the state house with a grievance, to go back to their farms and slop the hogs. And finally he told another story, also about hogs, which he said illustrated one big difference between the latter animals and their owners.

According to Mr. McKaig's story, a certain farmer had one smart hog which learned to get out of the pen and into the granary, returning to the pen after it had filled up. Eventually the farmer found out that the trick was done with the assistance of a hollow log, through which the hog made his way into the food room and back again. With the benevolent purpose of teaching the four-legged robber a trick, the farmer so changed the hollow log that both ends opened into the pen. When lunch time came, Mr. Hog entered the usual opening, ran through the log, and emerged —into the pen. Looking round him with some surprise, he turned and retraced his steps, landing again in the pen. Then he started to run, and for half an hour or so he sped through that hollow log, intent on catching up with the feed room, which he seemed persuaded was running away from him. At the end of a week, however, he had learned his lesson, and could not be induced to look at the hollow log.

"And that's just where he showed himself smarter than the farmer who raised him," shouted Mr. McKaig. "Farmers as a class have been running through the hollow log of politics year after year, voting first one ticket and then the other, but always finding themselves in the end with the same type of bosses over them. It has taken the farmer 30 years to learn what that hog learned in seven days!"

The nonpartizan league was born, said Mr. McKaig, to be a farmers' organization, with the frank purpose of dominating things political.

It was not until the following day that the logic of the McKaig address began to be argued among various groups of grangers, scattered about the streets. The verdict of these groups was almost unanimous, and doubtless would have been definitely formulated as the final decision of the convention had not developments made it impossible for the grange as a whole to act on the matter.

The verdict of the street groups was, "We are not called upon at this time to decide upon the merits of the nonpartizan league. We must simply decide whether or not an entangling alliance between two organizations, which differ radically in their basic principles and ultimate aims, is desirable at this time." I think it is safe to assert that if the meeting scheduled for Friday morning had not been prevented, the state grange would have gone on record as favoring absolute separation of the grange and the league.

This attitude found something of official expression in a statement made to the press by Secretary Lewis as follows:

"Many farmers who, including members of the grange who have combined themselves in the nonpartizan league in order more effectively to carry out the principles of nonpartizanship, are apt to feel that the grange is the proper place for boosting the league. We believe that it is unwise to bring the question of the nonpartizan league into the grange. We as individuals may be as active as we desire in both organizations, but let us keep the two separate and distinct, even though we feel that in many ways their aims are the same."

**Storm Breaks.**

Thursday evening the storm which had been gathering practically from the first day of the convention broke. The Walla Walla school board, which had granted to the grange the use of the high school building, rescinded this permission and gave the grange members 30 minutes in which to leave. This action was precipitated by a meeting of local business and professional men, who seem to have taken the attitude that the state grange had convicted itself of a doubtful patriotism by its attitude on the matter of the nonpartizan league. At any rate, the decision so reached was final, and after the first confusion, during which many of the grangers were unable to tell what was happening, the session was brought to a close.

Friday morning the confusion was increased, if anything. An attempt was made to resume the interrupted session in one of the churches, but this proved as futile as the meeting of the night before. Committee meetings were held throughout the day and a telegram was sent to Governor Lister, asking him to open the armory for the use of the grangers. No reply to this telegram had been received when it came time for many of the delegates to be leaving, and it seemed unlikely that anything farther could be accomplished. Throughout the storm there was little bitterness or anger manifested on the streets or in the hotel lobbies. Most of the grangers seemed to feel that their attitude and intentions had been misunderstood, and that if time had been given them to carry out their program in their own way, most of this misunderstanding would have been removed.

The next annual convention will be held in Port Angeles. Whether an adjourned meeting will be called for some other city than Walla Walla to complete the unfinished business of the 1918 session is not known at this time, though it is understood that the matter is being considered by leaders.

The report of Secretary Fred W. Lewis shows a total grange membership of 15,547, a gain over 1917 of 1316 members. King county leads, with 1357 members. Part of this gain Secretary Lewis ascribes to the cooperative buying movement, so prominent in King county. Lewis county runs second and Whatcom third.

## AS PEA RAISER.

### Spokane County Big Producer.

Figures are given from government reports showing that Spokane county is now producing about two-fifths of the seed peas sold in the United States. In four years the acreage has jumped from 500 to 40,000 and in addition the acreage of peas between Spokane county and the Snake river is increasing rapidly.

"Few people realize the importance and extent of the pea growing industry in Spokane county," said J. R. Shinn, county agriculturist. "The crop is proving of great benefit in more ways than for the value of the seed. The growing of peas is rapidly doing away with the summer fallow method of farming, giving farmers a crop every year. It has been often demonstrated that the crop of wheat following peas is as good and sometimes better than the summer fallow crop.

"The crop is valuable for feed as well as for seed, and will go far toward making this a pork producing country. Hogs in Washington can be fattened on peas as well and as cheaply as hogs in Iowa can be fattened on corn.

"In addition, the pea straw has a worthwhile value as a substitute for timothy and alfalfa as a feed for horses and cattle. A local dairy cut down the hay bill for its teams one-half by using three-quarters of pea straw to one-quarter of timothy hay."

## Here Are Resolutions Affecting Situation

Be it resolved, by Washington State grange, in thirtieth session, assembled in Walla Walla, Wash., this 4th day of June, 1918:

That we support President Wilson in his vigorous prosecution of the war, and we urge the putting in of the full force of our nation at the earliest possible moment, removing every restriction as to the size of the army, and, if necessary, increasing the draft age to include every man, taking into consideration the necessity of farm and other necessary labor, in order to properly care for our army and those of our allies.

To this cause we pledge the grange of the state of Washington.

WM. BOUCK, Master.
FRED W. LEWIS, Sec.

The following is a resolution adopted at a massmeeting of citizens of Walla Walla:

Whereas, The Farmers' union, the Patriotic League of Walla Walla county, and the patriotic people of this community have gone on record as being opposed to the Nonpartizan league, because of its disloyal teachings and utterances,

And, whereas, the grange of the state of Washington at its session in Walla Walla has permitted representatives of the nonpartizan league to have the freedom of its meetings and its floor, for the purpose of promulgating its doctrines and of expressing its open opposition to the methods of the administration in conducting the war and the war activities;

Therefore, be it resolved, that it is the sense of this meeting that while the state grange is affiliated and in cooperation with the nonpartizan league the grange is not welcome and that meetings of the league will not be tolerated in this city.

Be it further resolved, that we extend our warmest sympathy to that minority of the grange which has endeavored to keep it free from disloyal influences, and that we assure them that they, in common with all other loyal citizens, are at all times welcome in Walla Walla.

Be it further resolved, that we must heartily commend the prompt and patriotic action of the school board in refusing to permit the state grange to have further use of the school property for their meetings.

A. J. GILLIS,
J. H. MORROW,
HARRY TURNER,
Committee.

The following is the resolution adopted by the Walla Walla school board expelling the grange convention from the school building:

Whereas, the actions and public expressions of officers of the state grange, apparently approved by such grange, have been such as to make the loyalty of such organization at least doubtful, and whereas the said organization has expressed opinions in opposition to those of the county council of defense and the Walla Walla patriotic league, and we do not deem that the public property of this school district should be used for any purpose the loyalty of which is questioned by any considerable number of our patriotic citizens;

Therefore, the resolution authorizing the state grange to use the property of this district for any purpose is rescinded, and such organization notified to forthwith vacate the school property of this district.

A meeting of about 100 business men approved the school board's action by the following resolution:

Resolved, That those here assembled do hereby express their approval of the action of our school board in terminating the use of the school buildings and grounds by the Washington state grange.

The following resolution, adopted by a group of about 60 grange members, indicates the sentiment of a part of the membership on the political policy of the order:

Resolved, That the loyal members of the Washington State grange hereby protest against the action of some of our state grange officials in practically indorsing the nonpartizan league, believing some such action is in violation of grange law and policy. And we recommend that a copy of this resolution be sent to each subordinate master and to the state secretary and that this resolution be printed in the grange bulletin.

## FIX TWINE PRICE.

### Cost Higher Than Last Year.

According to a statement make by Charles J. Brand, chief of the bureau of markets in the United States department of agriculture, binder twine this year will cost the farmer probably 23 cents a pound, plus handling costs from the manufacturing plants to the local distributors and a reasonable profit to the local dealer. Chief Brand says that the food administration has arranged to purchase the necessary raw material to be delivered at tidewater at from 19 to 19 1-4 cents per pound. The price of twine on the cars at the manufacturing plants shall not exceed 23 cents per pound and it is estimated that one pound will average 500 feet of the twine.

### Want National Prohibition.

At a recent meeting of the Bee Hive grange at Wenatchee resolutions were adopted calling upon President Wilson to declare a national prohibition against the sale of intoxicating liquor during the war, asking the government to assume the control of prices upon what the farmers must buy, as well as what they produce, urging the county commissioners to renew the contract with the present county agricultural agent of Chelan county and asking congress to repeal the zone system law which fixes the postage on periodicals.

**Shell Kills Worker.**

A German four-inch shell penetrated a Y. M. C. A. dugout on the Flanders front and killed the secretary, Jack Lunsden.

## Free Information

### Also Some Valuable Books

The service rendered by The Washington Information Bureau, at Washington in distribution of publications is designed to be continuous.

From time to time new books have been listed, but those previously announced are still available.

Either of the following may be obtained for a 2-cent stamp to cover cost of mailing. There is no charge of any kind.

Book on Canning.
"German War Practices."
Book on Colds.
Garden Book.
Book on Knitting.
War Cookbook.
Book on Navy.
Book on Drying Fruits.
Book of Recipes.
Bread Book.
"How War Came to America."

Write today and ask for free copy. Inclose a 2-cent stamp for return postage and be sure to write your name and address plainly. Direct your letter to The Washington Farmer Information Bureau, Washington, D. C.

P. S.—The information bureau at Washington will answer any question you may submit. Answer will be sent by letter. Just inclose a 3-cent stamp for return postage. Note carefully the address given above.

## Wheat Farmer Purchases Purebred Jerseys

Here are shown some of the registered Jersey stock just purchased by George Cochran of Dixie. "The herd was raised in the Willamette valley, of well-known herds of this breed," says C. L. Jamison, agriculturist for the Farmers' Savings bank of Walla Walla. "It will be a start for better stock in the foothill country and it is hoped that other wheat farmers who are now running a few head of grades may do as Mr. Cochran and start with registered, high producing cows."

## Makes Grain Bags

### Penitentiary May Try Other Work

Asserting that no one can tell exactly how many grain bags will be used this season, because it has not been ascertained to what extent bulk handling will be followed, Warden Drum of the state penitentiary declared that in this year of shortage the million grain bags turned out by the penitentiary will be a great help to farmers, yet, under normal conditions, he questioned the value of penitentiary-made bags, either to regulate prices or help the supply. The penitentiary contracted in January, so Warden Drum informs me, to furnish 850,000 sacks. For a while it was impossible to secure jute to work the plant up to capacity, but now there is plenty of jute, and he expects 1,000,000 bags to be turned out. The contract price was 19 cents. The price for the surplus 150,000 sacks will be fixed by the state board of control. The price now quoted by dealers is about 30 cents, and may go even higher. The board will no doubt charge close to the current price.

The number of bulk elevators and grain bins going up is proof, says Warden Drum, that a large part of the crop will be delivered and moved in bulk, but no one seems yet to have expressed an opinion based on anything but a mere guess as to how much, or to what extent it will relieve the demand for sacks. It is known, however, that more second-hand sacks will be used than ever before.

The government allows 9 cents a bushel more for sacked grain than for that in bulk. As the sacks hold an average of two and one-fourth bushels, the grower should get an average return of 20 1-4 cents a sack, a little more than the penitentiary price, but decidedly less than the current price from dealers. Taking all considerations together, Mr. Drum expects a shortage, but thinks the farmers will manage to get along, with some inconveniences, whether the crop be short or normal.

The help the 1,000,000 sacks from the penitentiary will be this season is plainly apparent, and Warden Drum only wishes the number was greater. But he calls attention to the fact that in normal times it does not serve its purpose. A million sacks is about all the penitentiary can make. Dealers can wait until the penitentiary contracts are made and then charge what they please for the other sacks needed, says Warden Drum.

The making of sacks is simple work, easily done by women and children, and in India, where all labor is cheap, women and children are utilized and sacks can be produced more cheaply than by Washington's penitentiary convicts, who are capable of more useful and more complicated work. He favors the conversion of the machinery so that woolen and cotton goods can be manufactured. Some of the machinery is ready for that kind of work now. It would take only a very short part of the prison labor to make the clothes used by all the convicts. He would let the cotton thread be manufactured in the south and be woven into cloth here. The question of manufacturing farm machinery is worthy of consideration. Minnesota made a profit of $100,000 last year, after paying something to the inmates. Of course, the question of competition with free labor must not be overlooked. But Warden Drum is firmly committed to the proposition of the state paying the inmates for their tasks. It is both humane and a good business proposition, he believes, as it would increase the output sufficiently to pay the bonus.

Warden Drum has advocated a commission or legislative committee to investigate and report on some line of industrial enterprise that would be profitable to both state and inmates. He hopes by the time the war is over something of the kind may yet be done.

## DAIRY

Write to the Editor.

A. D. NYSTROM, Editorial Contributor

### Clothilde Nita Jessie.

The photo herewith shows the beautiful Holstein cow, Clothilde Nita Jessie, owned by Walla Walla college, College Place, Wash. She has an offici tl record of 31.25 pounds of 86 per cent butter in seven days, with best day's milk 102.4 pounds, made from March 6 to 12 inclusive. She was bred in New York state, but brought out while young and developed here. The college has a fine herd of Holsteins throughout, and has the highest cow and highest average in the Walla Walla Cow Testing association most of the time during the last year. They also have several other good A. R. O. records.

F. W. Peterson, business manager of the college, recently made a trip back east, during which he visited a number of the leading Holstein herds. He purchased from M. J. Smiley of South Dakota the young Holstein bull, Wescota Belle Mercedes, whose dam, Star Farm Belle Mercedes, has a record of 38.36 pounds of butter in seven days, and his sire's dam 35.38 pounds. He is a good individual, well marked, and should still further improve the herd.

The farm and dairy and Holstein herd are important college institutions. H. A.

### Pasteurization of Milk.

To the Editor: We will be much pleased if you find it convenient to publish the accompanying article on the pasteurization of milk as discussed by Dr. Ansel F. Hemenway, who is always remembered and valued here. We think the opinion of value. We take this opportunity to thank you for your valuable paper, which is always welcomed by a number of us and is safely placed on file after some months in our library reading room.

CAMILLA LEACH,
Assistant in Library.
University of Oregon, Eugene.

The following is the article referred to in the letter above:

Dr. Ansel F. Hemenway, native son of Lane county, Ore., and graduate of the University of Oregon and of Chicago, is now in charge of the department of biology at Transylvania college, Lexington, Ky. He has been asked by the city authorities of Lexington to give his opinion of required pasteurization of milk. He does not think it necessary when milk has to be transported a short distance, for milk unchanged in its natural qualities is best, especially as food for children. Milk heated to the boiling point, 212 degrees, is entirely change in its nature; pasteurization heats it from 151 degrees to 158 degrees and is an attempt to destroy the bacteria of milk without injury to its nourishing qualities. But these bacteria are mostly the lactic-acid bacteria that cause milk to sour, and good sour milk is known to be a healthful food, as lactic acid prevents the development of the bacteria which cause decay and old age.

Pasteurization is often a substitute for the eare necessary in handling milk, as, after pasteurization, it does not sour and may be kept too long.

Dr. Hemenway urges frequent inspection and strict enforcement of dairy laws from the herd to the consumer as necessary for safety.

### University Dairy Herd.

Within the last two months three new records have been made in the dairy herd of the Idaho State university at Moscow. In the full-aged class, the Holstein, Madison Anita, 179,297, produced 653.2 pounds of milk, 20.019 pounds of butterfat in seven days, replacing the recent milk record of Idaho Violet Porsch Ormsby, 337,275, of 593 pounds of milk, but the record of 22.05 pounds of butterfat of the latter cow, still remains the record. For the month of April this cow's milk production was 2632.8 pounds of milk.

In the senior 2-year-old class Idaho Favorite, 342,452, established a new seven-day record for this class by producing 482 pounds of milk and 14.444 pounds of butterfat or 18.05 pounds of butter.

In the junior 3-year-old class, a new seven-day record was made by Alaska Yukon Colantha 2d, 332,880, which produced 444.0 pounds of milk and 12,664 pounds of butterfat in seven days.

### Feeding Value of Buttermilk.

To the Editor: Will you kindly advise through the columns of the Farmer the feeding value of buttermilk taken from a creamery?

SUBSCRIBER.

Answer—Where no water has been added buttermilk is equal to skimmilk in feeding value. The water used in rinsing out the cream cans and vats makes creamery buttermilk slightly inferior to skimmilk. On the average it is safe to say that creamery buttermilk has about 85 per cent the feeding value of skimmilk. The value of skimmilk is usually rated at as many cents per hundred pounds as four times the value of live pork per pound; that is, when pork is 10 cents on foot, skimmilk is worth 40 cents a hundred. At the present time, and on this basis, skimmilk is worth about 65 cents a hundred when fed to hogs. This would make buttermilk worth around 55 cents a hundred. A. B. M.

Increasing the Value of the Farm
by Bringing it Miles Nearer the Market

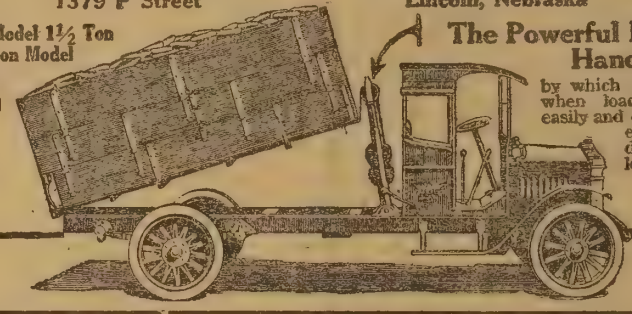
The value of a farm depends largely upon its distance from a good market.

Today distance is measured in minutes, not in miles.

The Patriot Farm Truck (Lincoln Model, 1½ tons capacity) readily transports much more in weight with several times the speed of a horse-drawn wagon. It lays down at market 15,000 to 20,000 pounds in practically the same time that a team will deliver 5,000 pounds, literally bringing the farm to about one-fourth its actual distance from market.

PATRIOT FARM TRUCK
Built for Country Roads—Built for Country Loads

The Patriot is the first motor truck built for farm work, and is equipped with a practical farm body, similar to what you have always used on your farm wagon.



It saves horses and high-priced feed. It brings better markets nearer, for with a Patriot you can readily drive loads to a market fifty or one hundred miles distant.

Business farmers can easily see how such perfect transportation greatly increases the value of their farms, to say nothing of the convenience in being master of roads and weather.

Every farmer with 160 acres or more should find out what a Patriot Farm Truck will save. Write for information.

# Values of Sheep Feeds

By E. L. Potter.

The rapidly fluctuating prices of feeds of all kinds, due to war conditions, has made it difficult to always know just what feed is the cheapest. Under normal conditions it was fairly safe to say that certain feeds were cheap feeds, while others were too expensive for general use. Now, however, prices have been so upset that the most expensive feed today may be the cheapest tomorrow. The table given herewith is an attempt to formulate a scale of values which will enable the feeder to quickly calculate the relative values of various feeds. The difficulty of such tables lies in the fact that feeds vary in their value according to the manner in which they are used. To meet this difficulty there has been put down opposite each value the way in which the feed is to be used and it must be distinctly understood that the values given will probably not apply when the feed is used in any other manner. All the ways in which the feed may be used are not enumerated, but only the more important ones and the ones in which one may be quite sure of results.

The following comparison is compiled with barley as the basis, barley being rated as 100 per cent. The figures given after each feed is its value in per cent on this basis:

Whole barley, 100; for fattening or not over 1-3 of the ration for growing stock.

Whole wheat, 100; same as barley. Must be fed with care.

Whole corn, 105; for fattening or not over 1-4 of the ration for growing stock.

Whole oats, 90; fed alone for fattening.

Whole oats, 100; 1-4 ration for fattening or 2-3 of the ration for growing stock.

Ground grain, same as whole grain but less palatable.

Bran, 76; for growing and for breeding stock. Not suitable for fattening.

Shorts or middlings, not recommended.

Oil meal or cottonseed meal, 200; in ration lacking protein.

Oil meal or cottonseed meal, 100; in a ration already balanced.

**Succulents.**

Small amounts of succulence added to a dry ration have a marked tonic effect and consequently a high value. Larger amounts are valuable only for the nutrients they contain, while amounts over seven pounds per day force the sheep to consume so much water that satisfactory gains will not be made. It is not usually advised to feed more than one succulent at a time.

Mangels or turnips, 14; not over 2 pounds a day added to a dry ration.

Mangels or turnips, 9.2; two to seven pounds a day.

Rutabagas, 17; not over two pounds a day added to a dry ration.

Rutabagas, 12; two to seven pounds a day.

Sugar beets, 25; not over two pounds a day added to a dry ration.

Sugar beets, 17.5; two to seven pounds a day.

Corn silage, 30; not over two pounds a day added to a dry ration.

Corn silage, 22; two to seven pounds a day.

Kale, 14; not over two pounds a day added to a dry ration.

Kale, 9; two to seven pounds a day.

**Roughage.**

Some roughage, either as hay, straw or grass, is required at all times and should be fed in about such quantities as the animals will clean up.

Legume hay (alfalfa, clover or vetch), 33; for stock on heavy feed.

Legume hay (alfalfa, clover or vetch), 42; for wintering or other light feed.

Timothy, cheat or other carbonaceous hays can not alone take the place of a legume hay, but require the addition of oil meal or similar feed to make a substitute for clover or other legume hay.

Eighty-two per cent timothy hay and 18 per cent oil meal, 33; for stock on heavy feed.

Eighty-seven per cent timothy hay and 13 per cent oil meal, 42; for wintering. The heads of timothy often cause irritation to the skin.

**Pasture.**

Good pasture has been found equivalent to a ration of one pound of grain and three pounds of hay. With tillable land renting at $5 an acre and grass land at $3 an acre the cost per day is $.006 per head. This is as cheap as would be grain at $6 a ton and hay at $2 a ton.

# Cutter's
*Refined*
# Germ-Free
# Anti-Hog Cholera Serum

***Produced in the Most Up-to-date and Best Equipped Anti-Hog Cholera Serum Plant in the World.***

**Does away with the risks** that necessarily attend the use of a serum that is not germ-free.

**It is 20% more efficient,** measure for measure, than the old type, "bloody" serum, is much more quickly absorbed, does not discolor the flesh at point of injection, and carries no liability of producing abscesses.

**80 c.c. of Cutter's Refined Germ Free Serum is just as efficient as 100 c.c.** of the best old type "bloody" serum.

**But we make the old type serum,** and do the job so well that though **we have sold several million c.c.** since we started production in 1917, there has been **not even one complaint of failure** to protect, or of bad effects following its use.

**So, whether you use the old or the new kind,** insist on "Cutter's," for in either case you will be getting the best that can possibly be produced.

**Remember, a serum may be "clarified," or "clear," and still not be germ free.** Such a serum is almost as dangerous as a "bloody" serum. **Cutter's Refined Serum is not only clear but it is Germ Free.**

**Write for our two new booklets,** "Hog Cholera Prevention," and "Special and Detailed Information Concerning Hog Cholera Immunization." **From the latter you will learn** what constitutes good work and why a competent veterinarian should be employed.

**Prices.**

**Cutter's Refined, Germ-Free, Anti-Hog Cholera Serum is** 2½ cents per c.c.

**Cutter's Regular, or "old type"** Serum, is 1½ cents per c.c.

**Cutter's Hog Cholera Virus,** for use with either type of serum, is supplied at 1½ cents per c.c. **It is dependable.**

**We prepay shipping charges.**

**Let your veterinarian order** for you and **encourage him to be liberal in estimating the amount of serum to use;** safety lies in giving more than may be needed rather than trying to figure too fine.

**Should he be prejudiced in** favor of some other serum, there is a reason that concerns him but not you, except insofar as it should make you more insistent that Cutter's Serum be used. **In such case do your own ordering direct from us.** You will get "Cutter's" promptly, prepaid.

# Veterinary

Dr. S. B. Nelson

**Tumor Near Eye**—I have a cow that has a lump by the side of the right eye. Has been there about three years and a half. The eye seems inflamed and waters, but she is not blind. It seems to itch, but the cow is perfectly well. The lump is getting a little larger the last month or so. The party that owned her said it started from a foxtail getting in the eye. Would like to know if you think it will be serious and what can be done for it.—E. H., Cache, Idaho.

It is quite likely that the cow has some kind of tumor growing near the eyes. Just what the specific type of tumor is I do not know, whether it is a simple tumor or whether it is malignant. If it starts to grow rapidly it is very liable to become serious. If it holds its own it will not, although many simple tumors at times become malignant and grow very rapidly and become serious. It is best to have things of this kind attended to while they are simple tumors. When you have opportunity you should have your local veterinarian see it.

**One Side of Udder Spoiled.**—Over a year ago our cow's udder on one side spoiled. Later it broke and run, and is now in a bad condition. The cow is due to have a calf soon. What would you advise me to do? E. R. B., Kooskia, Idaho.

There is only one thing that you can do with this cow at the present time and that is to allow the spoiled portion of the udder to dry up immediately after she calves. Allow the calf to suck the other side if you wish to or you could milk it and feed it to the calf, just as you wish. Then, when the cow is dry, there is only one thing to do, and that would be to have a veterinarian operate on the cow and remove the spoiled half of the udder, and that should be done after the cow is dry.

**Horse Has Lump on Shoulder.**—I have a 5-yearold horse with a lump on each side of his shoulder at the top about the size of a man's fist. This was done in the pasture last fall. I have worked him all spring, which does not make it any worse. The lump is soft. Can you please tell me what to do? B. M., Ukiah, Ore.

It is quite possible that the lump which you describe is an unbroken fistula. If, as you say, you have worked him and it makes it no worse, it may be the best thing to let it go this year, because a treatment would without doubt involve a surgical operation, opening the fistula and giving it drainage, and that might be a long, slow process. I would therefore recommend to you that you leave it alone until you can obtain the services of a veterinarian some time.

**To Stop Growth of Horns**—I have a heifer calf six weeks old on which I wish to stop the growth of horn. What shall I use?—J. I. J., Neppel, Wash.

The heifer is too old to stop the growth of the horn. That should be done about the time she was two to five days old. At that time the best thing to use is a stick of caustic potash. Apply a little grease around the horn knob and then dampen the stick of potash in a little water and apply thoroughly to the entire knob, being careful to not get it over the other tissues. When it is entirely black it will shrivel and not grow. If you do not get it thoroughly done and leave a small portion of the horn to grow, it will form a very irregular shaped horn. The thing for you to do now is to let the heifer go until she is about eight to ten months old and then clip off the horn with a pair of horn shears. Some people think it is better to do it at eight to 12 months old, because when it is done at that time the head gets somewhat sore and keeps the animal from bunting. The first time they bunt they get hurt and after that quit it, while if the horns are removed when they are calves they sometimes become vigorous bunters.

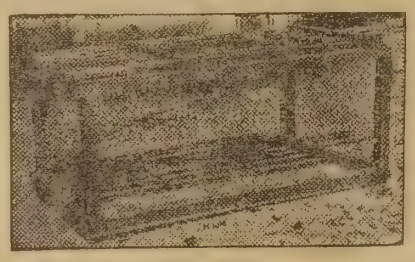
## GREEN FOODS

### Attention to Protein Content.

George R. Shoup of the western Washington experiment station, calls attention to the usually ignored protein content of green foods for poultry.



"Don't regard green food as valuable solely for its salts or its carbohydrates," warns the Puyallup expert. "The protein which it contains is highly valuable. Not all proteins are equally available physiologically, and those contained in such articles as clover, kale, mangels, etc., stand high when judged by this standard of availability.

"It is the ability of western Washington to produce cheap green foods almost the year through that makes it an ideal region for poultry raising," continues Mr. Shoup. "It is not very cold here in winter and not very hot in summer. Climatic conditions insure an abundance of green food. When you've said those things you've said a good deal, as far as poultry farming is concerned."

In connection with this matter of the superior availability of the protein contained in green foods, the following estimates of the percentage of protein found in some common green foods may prove interesting. This table is quoted by Professor J. L. Stahl from "Feeds and Feeding," by Henry and Morrison:

Kentucky blue grass, before heading, 5.3 per cent; white clover, 4.6 per cent, red clover (Rowen), 5.3 per cent; alfalfa, before bloom, 4.7 per cent; mangels, 1.4 per cent; kale, 2.4 per cent; rape, 2.9 per cent.

## Convenient Catching Coop.

**Catching coop used at the Puyallup (Wash.) experiment station for handling chickens during the day. The open end is placed against the gate of the run, while the trap door in the top makes it easy to handle the birds driven into the cage.**

## Eat More Eggs

One way to help win the war is to eat more eggs. Eggs will take the place of beef and pork to a large extent, and the more eggs that are eaten the more beef and pork can be shipped to the soldiers. Now is the time to eat them when they are cheap. A pound of egg costs about the same as a pound of beefsteak, or a little less at the present time. Why not eat the eggs and save the meat for the fighting men in France!

There would be double the number of eggs consumed on the farms were it not that eggs are a "legal tender for the groceries and other things purchased by the farmers' wives. They would be hard-pressed, many of them, for summer dresses, spring hats, shoes and hose, and socks and tobacco if they were to depend upon the "boss" turning over to them the cash he gets for the fat steer or hog or the load of spuds to pay for them. This is a question of household economy that needs correction, and will have to be corrected before many eggs are consumed on the farms.

When the war is on and while the red meats are needed by the soldiers let the farmer sell the red meats and from the money received pay for the groceries, the dresses, the hose and the socks and the tobacco. Then there will be fried eggs, poached eggs, boiled eggs, scrambled eggs at every meal, and if meat will win the war there will be meat enough.

Is it patriotic to compel the wife to pay the grocery and tobacco bills with the eggs and eat the meats that the soldiers in the trenches are calling for?

Correct this question of household economies and the consumption of eggs will be doubled, and the war will be won if meat will win it. J. D.

## Composition of the Egg

The usual analysis of eggs shows the following composition. The analysis of sirloin steak is also given.

| | Eggs per cent. | Sirloin steak per cent. |
|---|---|---|
| Refuse | 11.2 | 12.8 |
| Water | 65.5 | 54 |
| Protein | 11.9 | 16.5 |
| Fat | 9.3 | 16.1 |
| Ash | 0.9 | 0.9 |
| Calories | 635 | 985 |

This analysis gives the steak a little higher value than eggs, but there are other questions to be considered. Palatability must be considered in estimating the value of a food. It has been said that a mixture of wet leather and petroleum jelly will give the same result as meat by the ordinary food analysis, but such a mixture would not be very palatable. Then there is the question of digestibility. The stomach makes better use of one food than another, even though the composition may the the same.

But the egg contains a great many constituents other than those mentioned in the ordinary food analysis. There are different compounds of protein, and there are different kind of fat, and these vary in different kinds of food. So that to get the true value of the protein and the fat, etc., the chemist would have to analyze the protein and the fat. For instance, there are vitelline, lecithin, cholesterin, cerebrin, mineral salts, coloring matters, glucose, etc., in the yolk. What the function of all these things is the chemist and the food specialist have not yet told us. The egg has a high lecithine content. Laurie says: "Various preparations of lecithine are used in medicine, and even the value of fresh eggs as part of the diet in cases of nervous disorders is well recognized." Further, he says: "It is administered in cases of neurasthenia, various nervous diseases, diabetes, tuberculosis, tabes and general paralysis; also in all diseases producing a disturbance of nutrition, improves weight, augments blood corpuscles, etc." Further: "Cerebrin is present in the brain; its sugar is cerebrose. Extracts are made and administered in nervous diseases." The lesson is that if we would eat more fresh eggs this medical treatment might not be needed.

A good deal of this is Greek to us, but it is sufficient to show that if we wish to get a true value of the egg we must look further than the ordinary food analysis. J. D.

## Eggs Cheaper Than Salmon.

A farmer's wife took some eggs to market to sell at Corvallis, Ore. She was offered 28 cents a dozen for them. The storekeeper offered her a can of salmon for 25 cents, which weighed 7 3-4 ounces, about half a pound. She took the eggs home and ate them and didn't buy the salmon. She figured that 1 1-2 pounds of eggs were worth more than half a pound of salmon. The home economics department of the college gave her the following report on the values of the two:

"The dozen eggs contain 83.97 grams protein, 63.27 grams fat and yield 838.5 calories of heat energy. The can of salmon contains 44.22 grams protein, 17.01 grams fat and yields 335 calories of heat energy.

Eat the eggs and use the hogs and the steers for legal tender at the stores instead of eggs.

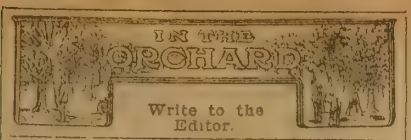
# Threefold Co-operation

Every telephone connection requires co-operation. The slightest inattention or indifference on the part of the person who calls, or the company that makes the connection, or the person who is called results in a corresponding deficiency in service. Each is equally responsible for the success of the service.



Not only is it to the advantage of the individual himself to use the telephone efficiently, but his conservation of the advantages of these national lines of speech benefits all telephone users.

Accuracy in calling, promptness in answering, clear and deliberate talking, courtesy and patience on the part of both user and operator are essentials of service, and must be mutual for good service.

Efficient telephone operation is vital to the war work of this country. The army, the navy and the myriad industries contributing supplies depend on the telephone. It must be ready for instant and universal use. The millions of telephone users are inseparable parts of the Bell System, and all should patriotically contribute to the success of the service.

# The Blooming Period

I was greatly surprised to discover upon my recent return from California, that the apples and pears as well as other diciduous fruits were as far advanced in the north as in the south. I went to California, about the 1st of January, reached Pasadena on the 10th. At the time I left Yakima, there was fear among fruit growers, lest the fruit would bloom in January. The weather had been warm, and the buds seemed swelling, and it seemed reasonable to suppose that if the warm weather continued, the buds would advance sufficiently so that a subsequent cold spell would injure them. I watched with intense interest all along the way. I got off the train at every station where there seemed sufficient time and examined every fruit tree I found near the station. When I reached California, I learned there had been no freezing weather. There was no freeze in southern California in the fruit sections, during the winter. At Pasadena and Los Angeles, where I spent most of the time, I think the mercury never dropped to the freezing point, and for most of the time it was warm and pleasant. Yet, the peaches, pears, apricots and apples did not bloom until April, and when I reached home on May 6, I found the trees had mostly dropped their petals, and the orchardists were spraying for codling moth. All along the line, I found similar conditions, Grant's Pass, Medford, and all down the Willamette, about the same.

I have known for a good many years, so long that I do not remember when I first learned it, that fruit trees tend to drop their leaves at a certain season of the year, and that the habit persists from generation to generation. I discovered when I was only 20 years old, that corn grown in Mississippi, and planted in Illinois, would not mature in the Illinois climate before frost came. It had been accustomed to a longer season in Mississippi and the habit of a longer season's growth, tended to persist. But we protected a few ears from frost, by wrapping them on cold evenings in a covering of gunnysacks, and in about three years, they became adapted to the new environment of Illinois, and the variety would mature in that northern climate before frost came.

I knew that there was a time for the falling of the petals after flowering, and the ripening and falling of fruit after maturity. But I supposed it depended mostly on stages of development, rather than on time. I presumed that these stages of development depended chiefly on whether the weather was warm enough to develop them, rather than upon any particular period of time called the dormant period. My former beliefs have not been entirely destroyed, but they have been pretty badly battered and bruised. It now seems that there is another law, that must work in harmony with those I have formerly trusted, and that is that there is a dormant period, for all deciduous trees, and that when these trees or their scions, are shipped into a southern climate and planted under conditions vastly different from those in which they formed their characteristics, the habits, or characteristics formed in the cold climate, tend to persist when they are transplanted into a semi-tropical climate. G. L.

## NO NEED TO WORRY

### Over Fruit Outcome and Markets.

The present prospects for apples and pears in the Pacific northwest is good. It is too early yet to determine the final results, and it will not be possible to do so until after the June drop. This "June drop," as the orchardists call it, is on account of a number of reasons. The principal reason is that the trees always put out more blossoms that become sufficiently fertile to germinate fruit in its early stages of development, than they are able to develop later and mature. On one fruit spur may be sometimes found six or seven small apples in the early stages of development, when the spur should only bring one to maturity. To allow more than one to remain on the spur is to diminish the size of the others, so that none of them are good commercial fruit. Then, too, there is the struggle for food that always results by overcrowding. In this case the strong survive and the weaker ones perish and fall off. This falling occurs mostly in June, and the extent of it depends on the amount of available food supply, the health of the trees, the weather and other conditions. Until after this period of the June drop no accurate guesses or estimates can be made.

**Peaches.**

It is reasonably certain that there will be a short crop of peaches. I have reportes from various sections of Oregon, Idaho and Washington that indicate less than half a normal crop. In the Yakima valley of Washington I do not believe we will have more than 25 to 40 per cent of a normal crop. In the Wenatchee valley M. L. Dean, state horticulturist, reports that they have escaped with but little damage. Professor Dean says further: "I do not think the cool weather has retarded the fruit as much as has the lack of moisture."

**Cherries.**

In the Yakima valley the cherries will be somewhat below normal, but will nevertheless be a fair crop, with good prices. The canneries are now offering to contract for 5 cents per pound, or $100 per ton. Cherry growers regard this a good living price, and if they could contract at that price for years ahead feel that they would have a stable industry that could be operated at a profit.

**The Market Prospects.**

There is everything to indicate a good market, except the factor of transportation. "Will we be able to get cars?" say the shippers. "We do not know." Well, neither do the fruit growers know. However, I have observed all through life that when people anticipated a calamity far enough ahead to provide against it it seldom occurs. This, I presume, will be true of the transportation situation. If it is not so, there is no need to worry, for worry will not prevent it. G. L.

**Playing Safe.**

Military Inspecting Officer—Now, sergeant, what precautions do you take against infected water?

Sergeant—Well, sir, first we boil it.

Officer—Good.

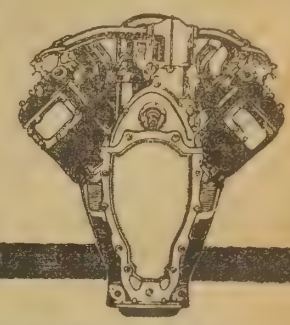
Sergeant—Then we filter it.

Officer—Excellent!

Sergeant—Then we drink beer!

The Choice of Those Who Know

Manufacturers and leading motor car distributors *recommend* ZEROLENE. The majority of motorists use ZEROLENE. ZEROLENE reduces wear and gives more power because it keeps its lubricating body at cylinder heat. Gives less carbon because, being refined from selected California asphalt-base crude, it burns clean and goes out with exhaust. ZEROLENE is the correct oil for *all types* of automobile engines. It is the correct oil for your automobile. Get our lubrication chart showing the correct consistency for your car.



*At dealers everywhere and Standard Oil Service Stations.*

STANDARD OIL COMPANY
(California)

ZEROLENE
*The Standard Oil for Motor Cars*

Correct Lubrication for the "V"-Type Engine

This, the "V"-Type of automobile engine, like all internal combustion engines, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

# Dairymen Pool Their Milk

## Five Thousand, About Half of Cows of Lewis County, Are Signed Up—Board of Directors Is Appointed to Sell the Milk

CHEHALIS, Lewis County, Wash., June 2.—Crops are not doing as well as desired. This is due to the cold and rather damp weather, though no crop is suffering for lack of water. Rather the reverse is true in most localities. The aphis is doing considerable damage to vetch and fall grain. In some places farmers are plowing up the fall grain and planting corn in its place. Silos and milking machines are important topics of discussion just now. There will be many of both of these improvements installed this summer; the silo because it is a feed saver, and the milking machine because it is a labor saver. Another matter of considerable importance and interest is the Dairyman's association formed here during May. The dairymen have agreed to pool their milk and have a board of directors sell it for them. Five thousand cows have been signed up. This is about half of the cows in the county. A. B. NYSTROM.

### Give Thought to Labor Question.

CATHLAMET, Wahkiakum County, Wash., May 31.—Crop and weather conditions during the past three weeks have been very similar to last year if not worse. Cows are doing remarkably well when we consider that the pasture is not as plentiful as usually is the case. Crops are not as far advanced as is desirable, although no uneasiness seems to exist as to the crop outlook. Wahkiakum county farmers talk more about Liberty loan and Red Cross just now. The county subscription to the Liberty loans and donations to the Red Cross readily give us to understand how the above statement is possible. The matter of the hay harvest is possibly causing some of the farmers to give serious thought to farm labor during that period. Community spirit is being promoted in almost every way. Wahkiakum county farmers never retire. They are in the harness until the last call and always are doing their bit. Gray-haired men will drive mowing machines this summer as in past summers. A. T. FLAGG.

### Cold Weather Is Damaging.

LA CROSSE, Whitman County, Wash., June 1.—Weather conditions during the month of May were far from favorable. Lack of rain since March 12 with much windy weather and several frosty nights were detrimental to nearly all plant growth. It seems almost impossible to get a garden started, nearly all tender plants being severely frosted May 26 and 27, when temperature dropped to 24 above, finishing practically all of the fruit. Pasture is very scarce and many farmers are feeding their work stock as no pasture can be gotten. Plowing for summer fallow is pretty well finished. Winter wheat is excellent except for some weeds, and is starting to head. Spring wheat is better than in years, where seeded in good season. Some late seeding is very poor. The tractor demonstration at Pullman was the chief attraction this week, many attending, and all felt well paid for the trip.
M. E. SCHRECK.

### Dairymen Form Association.

SOUTH BEND, Pacific County, Wash., May 29.—The weather has been very cool with a few light frosts, however these did not injure the crops. The Deuson farm at Holcomb was recently sold to Joseph Dahinden for $12,000. The Deusons will move to King county. They have lived in our valley for many years. On May 7 a meeting of the dairymen was held at Menlo, the object that of a cooperative association among the dairymen for higher price for their output. Milk was up to $3.25 for 100 pounds this winter, but a drop of 50 cents induced the producers to organize. Ten day later a large number of our farmers attended a meeting at Chehalis, where an organization was perfected between Lewis county and Pacific county dairymen to market the milk together. Over 500 men were present. In Pacific county the milk from 700 cows has been promised. All of the dairymen are greatly interested. Two of our dairymen are purchasing three very fine registered sires for their herds. These sires come from the Carnation Cream company's farms. The labor problem has been facing us for over a year and this spring labor was needed to plant the crops, but by careful planning and cooperation the farmers have met the situation and the crops are in. A few of the farmers have taken up war tasks; for instance one farmer has a position in the ship yards, the oldest son has gone to Camp Lewis and the mother and two younger children are running the farm. W. A. Cooksey has leased the Alta Vista dairy in South Bend and has started a milk route. The town has been without a milk route for over one year.
MRS. WINNIFRED BUCKINGHAM.

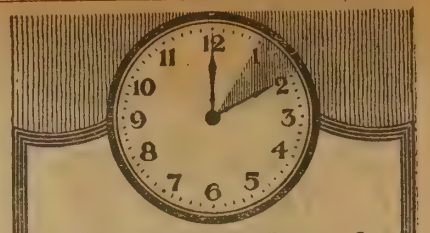
### Feel Lack of Rain.

FORT ANGELES, Clallam County, Wash., May 25.—Clallam county is suffering from a drought and abnormal weather conditions for this time of the year. Rain showers are generally copious during spring, but somehow they are lacking, and crops and fodder will suffer in some measure from this, to what extent is as yet not apparent. From what the writer can learn our county is solving several of the problems brought about by the war conditions and which the farmer has got to face in a very satisfactory way. The shortage of labor, so acute in other counties of the state, is remedied by the employment of older people of both sexes, and there are practically no vacancies among rural teachers. The Liberty loan was patriotically supported by our farmers, and the state bulletin gives our county sixth place among the counties of the state for the thrift movement. J. P. CHRISTENSEN.

### Help Problem Is Serious.

STEVENSON, Skamania County, Wash., May 24.—The weather conditions have been very favorable to all kinds of crops except beans and tomatoes, it being rather too cool for them. Grass is doing fine and will be a good crop, and will be ready to cut in a week or more. There are no new questions before the community at this time other than the war and the shortage of help. Strawberries are a leading crop in the eastern end of the county, and growers are considerably exercised over the help problem. Every fellow is digging in as hard as he can, and doing all he can, and what he fails to accomplish goes undone.
W. T. JACKSON.

### Crop Outlook Is Good.



PORT ORCHARD, Kitsap County, Wash., May 24.—The general crop conditions are good. Fall sown grains are looking fine. Spring seeding is coming along very nicely. It was put in very good shape this season due to the excellent spell of weather we had through the month of April. Weather conditions at the present time are cool and rainy, making good prospects for a big crop of hay. The clovers are growing very rapidly. Meadows that have not been pastured off to hold them back are getting too far along, and the crop will be ready for cutting before the weather conditions are favorable for haymaking. The ever present topic of conversation is the war outlook and the crop conditions for the coming season. Labor and price conditions are ever in evidence. The farmers are all against the importation of coolie labor, and are willing to work out their own solution of the labor problem rather than have to resort to such for their help. Community spirit is being fostered by the frequent calling together of the people and talking over their obligations, and all feeling that he or she, whoever it may be, has a part in the winning of the great task as set before us. People are continuing to turn out well to all meetings called for the various purposes, such as Liberty loans, Red Cross, etc., and are lending their best aid to the causes.
C. B. SPRAGUE.

### War Promotes Community Spirit.

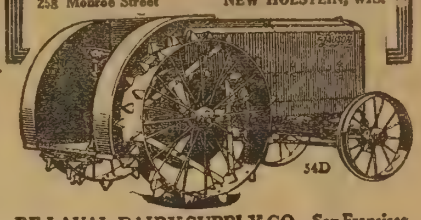
HUNTERS, Stevens County, Wash., May 23.—The dry weather was broken by rains on May 5, 7 and 8, and from May 14 to 20 there was considerable rain. We have thus had an abundance of moisture, but the weather has been cloudy and cold, so crops have made but average growth. At present the outlook for crops is good. The chief topic of conversation among the farmers at present is the administration's food regulations. The ruling that farmers had to sell their wheat by the 15th of May has stopped the feeding of wheat to hogs. This has been done to a large extent in this section as very little corn or barley is grown here. Wheat is generally the better crop in this section. The production of hogs is very much an the decrease due to the high price of feeds and because of the uncertainty as to whether the administration will permit the feeding of wheat to hogs after the new crop comes in. The war has certainly promoted community spirit here, and nearly every one has done his best in the third Liberty loan drive and in the Red Cross drive. This community had a Red Cross sale which netted $1000, this being the record sale in Stevens county. There have been very few retired farmers here, yet there are many farmers well along in years who are working hard in the fields because some have gone to war. ELIAS NELSON.

### Close to Front Lines.

Within 40 yards of the German trenches, a Y. M. C. A. dugout has been serving allied troops.

**Just One Hour's Demonstration**

That's all we need to prove to you the merits of The Lauson Farm Tractor. Write and let us arrange for the test.



The LAUSON 15-25 Full Jewel TRACTOR

is just right for the average farm. It contains no experimental feature. Every part is standard. Driving gears are enclosed and run in oil. *Twenty-four* Roller and Ball Bearings are used in its construction.

The engine, of course, is the main thing. Our four cylinder *Heavy Duty Valve-in-Head Engine* is a great power plant—economical in fuel, reliable and easily controlled.

*Write us or our distributor for name of Lauson dealer in your locality.*

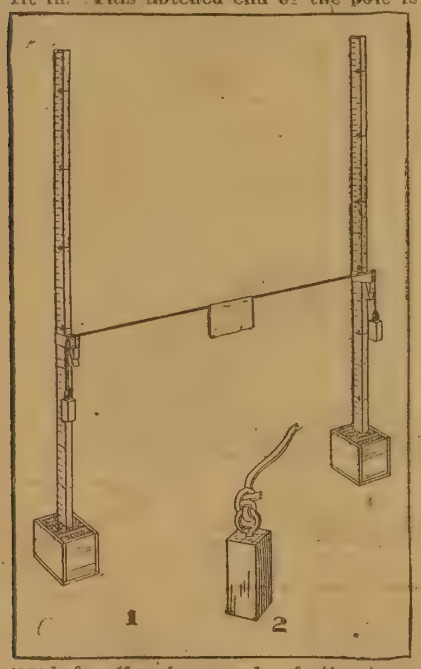
# Handicraft For Boys

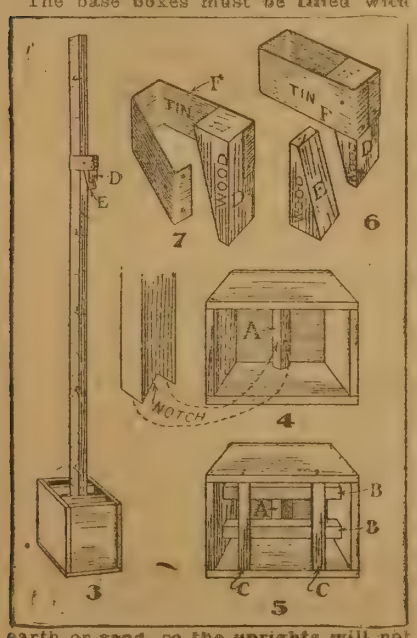
By A. Neely Hall



(Copyright by A. Neely Hall.)

## Jump Standards.

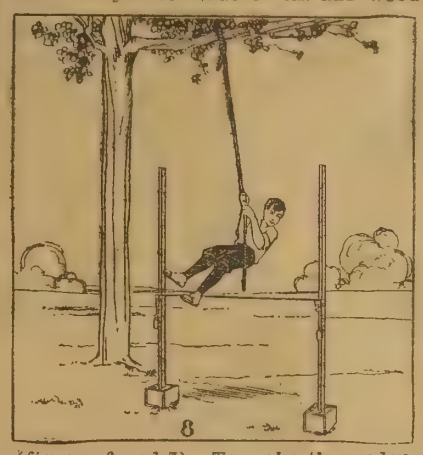
A pair of jump standards that will serve a boy's purpose just as well as the kind they use in gymnasiums may be made in a simple way, as will be seen by examining the drawings below.



Two poles six or seven feet in length are necessary for the uprights. Clothes poles will do nicely, and likely you can borrow a pair, as they are not to be damaged in the least, and can be slipped out of their bases in an instant, for use on washday. Two small boxes are needed for the bases. Starch boxes are of about the right size, but, if you can not get these or other small boxes, you can take a larger box, cut it in half, and make two complete boxes.

Figure 3 shows one completed standard, and figures 4 and 5 how the inside of the box bases are prepared to support the uprights. The upper end of a clothespole has a right-angle notch cut in it for the clothesline to fit in. This notched end of the pole is

used for the base end of the jump standard, and fits over a cross strip, A (figure 4), fastened between the sides of the box, in the center of the bottom. Cut a pair of sticks to fit lengthwise between the ends of the box (B, figure 5), and fasten them just far enough apart to permit the clothespole to slip down between them. Then cut the pair of sticks, C, of the same length as stick A, cross them over the pair of sticks B, and fasten between the box sides with just enough space left between to allow for the width of the clothespole upright.



The base boxes must be filled with

earth or sand, so the uprights will not overturn them.

It is not necessary to mark the height measurements upon the uprights. You can have an additional pole so marked, for the purpose of adjusting the cross bar or rope to heights desired. Still, it simplifies matters to have the poles graduated. Rule the "foot" divisions across the face and edge, the "half-foot" divisions across the face, and the "inch" divisions half-way across the face. Mark the "foot" divisions "1," "2," "3," etc.

The adjustable supports for the cross bar or rope are made of tin and wood

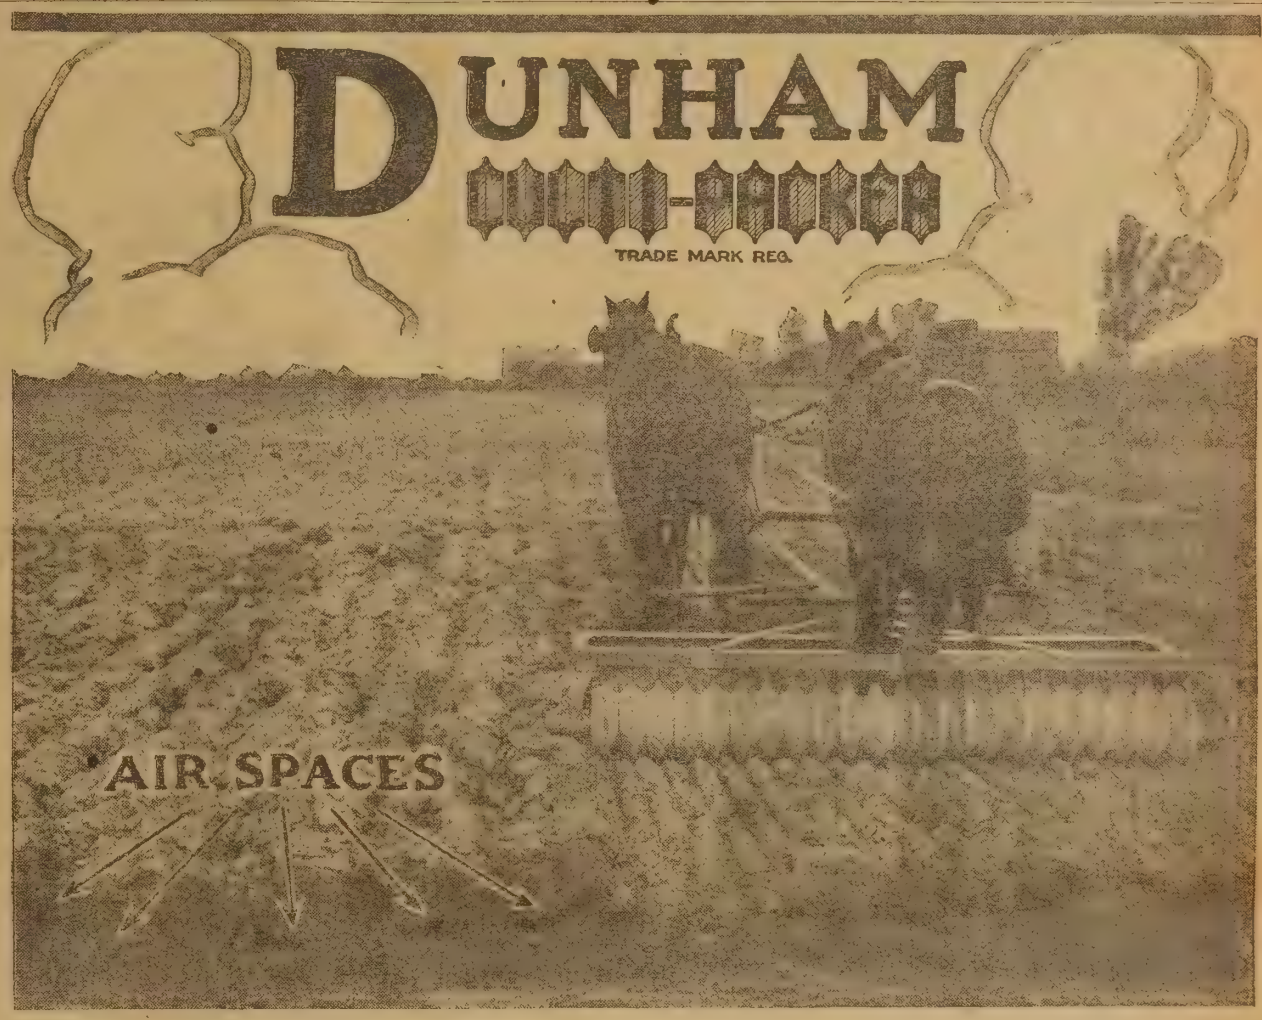
(figures 6 and 7). To make the wedge-shaped blocks, D and E, first cut a block of wood about 3 inches long, 1 inch wide and 1 inch thick; then saw it in half diagonally. Cut a strip of tin about 1 1-2 inches wide from a tin can, for the sleeve F; tack one end of this to the straight face of block D, bend it around the pole, make the other end meet the first end, and tack to block D. Make the sleeves fit loosely, so they will slide up and down the poles easily. To fasten them at the desired point it is necessary to slip the wedge E between the pole and block D and push it up until the sleeve fits tight. Use a light-weight stick, or piece of clothesline with a weight attached to each end (figure 2) to hang across the uprights.

Figure 8 shows a boy rope-vaulting. If you have never tried this form of leaping you must do so, because it is lots of fun.

## A Written Guarantee Desirable

When one buys a bill of goods, he often likes to have a written guarantee that each article is satisfactory.

Did you ever stop to consider that advertised goods in reality have this very advantage? The written guarantee is the advertisement itself. The manufacturer does not print a statement in an advertisement until he is fully able to back it up.



An oral promise may be forgotten; but a promise printed in black and white, as it is in the advertisement, gives the buyer something definite to go by. the manufacturer simply has to back it up.

This is one of the reasons why it will pay you to read the advertising columns of your state farm paper. You can depend upon the statements you find as being reliable. And remember, our guarantee makes you doubly sure of satisfaction in dealing with advertisers.

DUNHAM CULTI-PACKER

TRADE MARK REG.

Note where the Culti-Packer has passed over, that all lumps are crushed, all air spaces are firmed out and the surface is stirred and loosened just as a cultivator would do it.

# Culti-Pack Your Wheat

Without an hour of extra labor you can get the finest seed bed of firm, moist soil that wheat was ever drilled in.

The Dunham Culti-Packer does not add an extra operation—it helps your harrows and other tools to fit the seed bed quicker and better.

Use the Culti-Packer before and after seeding and it will give you quick sprouting, and a close, even stand of vigorous rooted plants to stand the winter. In the spring it will settle down any frost heaved plants, tuck the soil around the roots and prevent all loss from winter killing.

There is no guess work about what the Culti-Packer will do for wheat. It gives remarkable increases in yield, certified to by leading authorities on farming.

We have printed the facts in a 48-page book "Soil Sense", illustrated with 100 field photographs showing the Culti-Packer's work on wheat and every other crop.

Ask your dealer for "Soil Sense" or if he hasn't it write us direct. It will mean more wheat from every acre.
